"PUBLIC INSTRUCTION SHOULD BE THE FIRST OBJECT OF GOVERNMENT"

THE SUBJECT of consolidated schools is bound to bob up again and again until, through legislation, it is settled in every community in this state, therefore we feel that we are justified in again taking space to call this matter to your attention.

Teacher's salaries have not advanced as have other compensations, and right now that subject is receiving consideration at the hands of our public officials, and with their decision rests the question of whether we shall have competent teachers or not. If the salaries are not forthcoming, teachers will more and more desert this profession and girls graduating from high school will cease to fit themselves for the occupation of teachers. And what bearing has this on the subject of consolidated schools, you ask? Just this:

If several schools unite; conveyances are provided for the children and hot lunches, the cost of hiring the teachers will be spread over a larger area—the cost will not be burdensome, but the position can be made financially attractive enough so that the best teachers can be secured.

Legislation affecting this problem will necessarily dovetail very closely with that affecting good roads, for without one the other is impossible, so the subject is one which should have the thoughtful consideration of every woman of voting age.

Much interest is being shown in the coming conference to be held at Cedar Falls, Iowa, February 17-19 on this subject. At this conference the best educators in the entire country will be present and work out in detail plans for the consolidation of schools where the community will warrant it. In order that our readers may keep abreast of the times, we advise you to write to Mr. J .L. McBrien, Director of Rural School Extension, Bureau of Education, Washington, D. C., and request a report of this conference. It will be available soon after the conference. So far Iowa has shown more interest in the subject than any other state.

Here is the successful consolidated school at Otter Lake, Mich.

THE TIDES OF THRIFT

By EDMUND VANCE COOKE

When you look, in envious wonder,
At some plunger after plunder,
Now on top and now in under
In the whirlpool's drift,
Just remember there's a fraction
More of solid satisfaction
In the safer, surer action
Of the tides of thrift.

When you've had an extra earning
And you feel a sudden yearning
For the smoke of greenbacks burning
Steady! Not so swift!
Why not start a little pile, and
After while you'll smile and smile, and
Find you own a little island
In the tides of thrift.

When fate sends a shrinking dollar
And you want to make a holler,
And you're bound to show your choler
At the stingy gift,
Leave it with the lowly banker,
For there'll come a day you'll hanker
For the safety of an anchor
In the tides of thrift.

Oh, yes, dollars drive one dotty
And some financiers are naughty
And the bank cashier looks haughty,
As his eye-brows lift,
But some days the wolf comes prowling
And you meet him without scowling,
As you gently choke his growling
In the tides of thrift.

DISHES TO TEMPT THE APPETITE

Just at this season of the year we begin to tire of the same old routine of foods and wish we had "something different" to eat. After all, there isn't much different in the way of foods—it's mostly new and unusual ways of preparing what we have, for while it is true that we do not have the green vegetables in winter, still we have canned fruits and a generous variety from which to plan our menus. Perhaps you will find something new either for your regular meals in the following recipes or for company dishes when you wish to dress up the table—or for that Sunday night lunch.

Celery Stuffed With Cheese

Scrape and wash one head of celery. Take some cream or Canadian cheese, mix it with a little milk and work until creamy. Stuff the cheese in the celery with this and serve as a salad, being sure it is very cold when served.

Baked Corn

One can corn, 2 eggs, 1 tablespoonful of salt, pepper to taste, 1 teaspoon of melted butter, 1 pint of sweet milk. Mix the ingredients together, adding the well beaten eggs last. Turn in buttered pan and make in a slow oven until firm.

Cheese and Rice

One cup cooked rice, 2 eggs beaten separately, salt and pepper, 1-2 cup of milk, 2-3 cup of cheese, cut fine and grated. Put all together except egg whites and fold these in last. Bake twenty minutes or more, set in pan of hot water.

Date Sticks

Yolks of three eggs, well beaten, add 1 cup of granulated sugar, a pinch of salt, 1 teaspoon of vanilla, 3 tablespoonfuls of boiling water and beat well. Then add 1 cup of flour, 2 rounded teaspoonfuls of baking powder, 1 cup broken nut meats, 1 cup chopped dates. Mix well and add whites of the eggs. Bake in a slow oven having line the cake-pan with oiled paper. Cut in oblong pieces and roll in powdered sugar.

Pear Salad

Take halved pears (either fresh or canned) and fill the cavity left by the core with dates (whole or halved) sprinkle with chopped nut meats. Whipped cream may be used as a salad dressing on top.

Potatoes O'Brien

Boil in salted water 1-2 dozen medium sized potatoes until nearly tender, drain and chop in cubes 1-2 small can pimento shredded, moistened with good rich milk or thin cream, use paprika to taste, lump of butter, size of an egg. Turn into baking dish and cover top with 1-2 cup grated cheese.

OUR READERS' OWN COLUMN

Editor Woman's Department, M. B. F.

Dear Miss Ladd: I saw in one of the last issues of M. B. F. that you were interested in assisting farm women in every way possible and that in this particular case you gave instructions in the art of basket weaving from corn husks. I, too, would like to make some money. I can crochet, embroider and do plain sewing from corn husks. I, too, would is sale for such things in the cities. —*Mrs. L. W.*

My dear Madam: Yours is the second inquiry I have received within the past two weeks on this same subject. I have made a very thorough survey of the field in this city, and, although there are fancy work shops galore, I find this to be the case. Crocheted yokes, etc., had a great vogue two seasons ago and were so generally worn and much made that they were sort of worn themselves out so far as style is concerned, and this year there has been absolutely no sale for them. There is, however, sale for luncheon sets, etc., but no shop accepts them unless you join their shop, paying for displaying the articles and then take your chance on their being sold. Unless you can do a great deal, and are in a position to know just what the demand is, it would cost more than it is worth to try and market crocheted goods this way, as in almost any city of size there is what is known as a "Woman's Exchange" where articles are sold under this plan. Just before the holidays is, of course, the best time to sell articles that are handmade.

As for the plain sewing, that is greatly in demand, but the question of supplying you with work when you are far from the source of demand is a puzzling one. Were you in the city, you could put a liner ad in the evening paper and secure enough to keep you busy all your spare time, but there are very few who would send their work out of town, take a chance of your doing it as they desired it without a personal interview and in the case of children's clothes or plain sewing of that kind, which is the kind most in demand, there is the big item of fitting.

I do not like to discourage you—on the other hand, I am afraid that I would be entirely wrong to encourage you to build your hopes very high, on this sort of work.

SEEN IN CITY SHOPS

THE LIGHT weight wool and silk skirts which have just come in for the summer season are pleated—not the large pleats we formerly knew, but tight little pleats almost accordian size. And the skirts are so built that they are larger at the top than the bottom.

A dainty dress caught my eye as I was window shopping the other evening. It was blue taffeta, with a much ruffled skirt. And the top of each ruffle was headed with a bias fold—sort of a pipin of an Alice Blue linen. There was a yoke also of this same linen. It sounds funny to think of trimming silk with linen, but with the present high prices of linens and cottons, they are really as precious as the time honored silks.

Then again we saw a white silk shirt made of that Fan-ta-si silk just like they wore last year except that this one had a bright colored belt with tab ends of a rose pink. A friend who was with me and who is clever with the needle immediately conceived the idea or dressing up her old skirt by securing a length of Alice Blue and making a belt and tab ends similar, except that she

LATEST STYLES and New York Patterns

No. 2999.—Ladies' Dress. Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 38 requires 5 1-8 yards of 44-inch material. Dress measures about 2 yards at the foot.

No. 2998.—Girl's Dress. Cut in 4 sizes: 6, 8, 10 and 12 years. Size 10 will require 2 3-4 yards of 44-inch material.

No. 2991.—Ladies' House Dress. Cut in 7 sizes: 34, 36, 38, 40 42, 44 and 46 inches bust measure. Size 38 requires 5 3-8 yards of 36-inch material. Width at lower edge is about 2 1-4 yards.

No. 2979.—A New Coat for the Little Miss. Cut in 4 sizes: 6, 8, 10 and 12 years. Size 10 resuires 3 1-2 yards of 44-inch material.

Nos. 2973-2975.—A Pretty Costume. Waist 2973 Cut in 7 sizes: 34, 36, 38 40, 42, 44 and 46 inches bust measure. Skirt 2975 Cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. A medium size will require 6 yards of 36-inch material. The skirt measures 1 7-8 yard at the foot, with plaits extendtd. TWO separate patterns.

No. 2988.—Girl's Dress. Cut in 4 sizes. Size 10 will require 3 1-4 yards of 44 inch material.

No. 2994.—Ladies' Combination Garment. Cut in 4 sizes: Small, 32-34; Medium, 36-38; Large, 40-42; and Extra Large, 44-46 inches bust measure. Size Medium requires 3 3-8 yards of 36-inch material, with 3-8 yard for the ruffle.

No. 2666.—Girl's Dress. Cut in 4 sizes: 8, 10, 12 and 14 years. Size 12 will require 3 1-2 yards of 44-inch material.

will weight the ends with pretty pearl buttons.

It's a long jump of the imagination from silk dresses to cotton sheets—but I must tell you that if you haven't a goodly supply of these very necessary articles on hand, better stock up during the January sales, as the clerk who measured off a supply for me the other day told me that I shouldn't object to paying $1 per yard for such good wide sheeting now, and he advised me to get double the supply I ordered, for said he, "When we get our new supply in we can't sell it for one penny less than $1.25, and it looks now as if our supply would be limited." People work such short hours you know, that production is cut down and we have to pay for it." I opened my purse, counted my little roll of bills, resolved to forego the hot chocolate and cake I like to treat myself to when I am down town shopping ,and bought an extra length.

CHAT ON CHICKENS

I HATE to see people wasting their money, getting no results, and at the same time making their chickens sick by loading them up too heavily with expensive grain and other rich food, and for this reason I may be excused for harping so continuously on the need of roughage or green stuff.

Some time ago I stated that it would be a good deal better to mix one third sawdust with the grain ration for chickens, hogs, horses or cattle than to feed no hay or greenstuff at all. This is a new idea and has been ridiculed by some, but nevertheless it is a good point for you to consider.

If you cannot get green stuff in the winter, take clean, dry sawdust, finely cut hay or straw, or anything of similar nature. Put this in a pan in the oven and brown it well. It will do no harm if somewhat burned or charred.

Then mix this in the mash with the ground grain in an amount one-third of the total ration and you will find that the chickens will do better, thrive better and produce better than if fed the grain alone, and at a lot less expense.

The charred sawdust really forms a mixture of charcoal and vegetable fibre, which dilutes and makes more bulky the rich grain ration and provides the digestive organs and intestines with sufficient bulk to promote healthy action.

WATERPROOF APRONS

For many purposes a waterproof apron is desirable. Leather is expensive and so scarce now that its use should be confined to purposes for which substitutes are unsuitable. A material classed as a leather substitute is well adapted to this use. It has a cotton fabric base and is pyroxylin surface coated. It is more durable than ordinary rubberized goods; therefore, well worth its somewhat higher first cost. On the other hand, it is cheaper than leather.

BEAT HIM TO IT

The stranger on a walking-tour came across an "old, old man a-sitting on a gate" and began to ask questions:

"You are a farmer, I suppose?"

"No, not now. I used to be, but I gave it up."

"Well, you don't seem to be very busy. You have plenty of time on your hands, haven't you?"

"Lots of it."

"Ever do any work?",

"Once I did."

"What do you do now, if I may ask?"

"Don't do nothing. Hain't done nothing for nearly ten years."

"So. Why, you're in luck! If I did nothing for half that length of time I should be in the poorhouse."

The old man's face beamed with a glad surprise, and then, as one who knows his rare good fortune and values it at its just worth, he cried, delightedly: "That's just where I be!"—*Pittsburg Chronicle-Telegraph.*

AN ECONOMIST

"Pa, what is an economist?"

"An economist, my boy, is a man who tells what you should have done with your money after you have done something else with it."

CALUMET GRIDDLE CAKES — golden yellow, coated with toasty brown, light and tender. No other griddle cakes can be so delicious — for the one reason that no other baking powder is so good.
CALUMET
Baking Powder
Makes Most Palatable and Sweetest of Foods
It is absolutely dependable. It is always the same—always superior—always sure.
Its uniformity of quality — its powerful, unfailing strength, guarantee greatest baking success and savings.
You save when you buy it—moderate in cost.
You save when you use it—has more than the ordinary leavening strength—therefore you use less.
You save materials it is used with.
Produced in the biggest, most modern and sanitary baking powder factory in existence.
Contains only such ingredients as have been officially approved by U. S. Food Authorities.
Try it! Then you'll quit looking for something better — because you will know from results — from comparison — that CALUMET has no equal in quality or in economy.
One can will convince you.

The Children's Hour

DEAR CHILDREN: Many requests are still being received with reference to prizes and I want to again tell you that any prizes offered for Christmas can still be won on the same terms. One little girl has written to ask how many subscribers it will take to win a walking doll. She wants a big prize, but it can be won—people have won automobiles you know who devoted all their time and worked hard to get enough—and I want to tell this little reader of the Children's Hour that if she will secure forty new subscribers she can have one of these dolls. Perhaps she can get some of her relatives to help her and together they can win it.

I still hav on hand two of the flashlights I ordered for Christmas which were not won, and as it only takes two subscribers to win one, I hope that two of our boys will get busy and win these.

This week, true to my promise, we will begin our continued story which will run for five weeks and which I am sure you will find very interesting and instructive. Affectionately yours, Laddie.

Dear Laddie:—This is the first time I have ever written to you. I am a girl 11 years old and in the 6th grade. My teacher's name is Helen Conklin. I like her real well. I like to read the boys' and girls' letters and I also like the Doo Dads They are such funny people. I have two brothers and two sisters. My brothers' names are Alger and Russell, 16 and 6 years old; my sisters' names are Alice and Leah. For pets I have one old cat named Betty. I would like to have some of the members of the Children's Hour write to me. I hope I will see my letter in print.—Clara M. Gurden, Linden, Mich

---

Dear Laddie:—This is the first time I have written to you. I am a boy 9 years old and in the 4th grade at school. I live on an 120-acre farm. I have two brothers, Maurice and Thomas. For pets I have two rabbits and two cats; one cat got its leg in a trap. Maurice and my father found her in the trap. We live across the way from school. Our teacher is Mrs. Helen Ditto. I will close hoping to see my letter in print.—Laurence Dillman, Elm Hall, Mich.

Dear Laddie:—This is the second time I have written to you. I am 11 years old and in the 6th grade. I made two grades this year. My teacher's name is Miss Esther Delaney and I lke her fine. I have two brothers and one sister. They are: Ralph, aged 12; Helen, 9 and Robert, 6. We all go to school. Father takes the M. B. F. and likes it real well I enjoy reading the children's letters and stories.—Effie Holcomb, Swartz Creek, Mich.

Dear Laddie:—I have never written to you before. I am a boy 13 years old. In March I will be 14. I live on a 40-acre farm. My sister takes the M. B. F. Everybody likes it down this way. I am in the 6th grade at school. I have 1 1-2 miles to go to school. My letter is getting long so I will close.—Wm. E. Salo, Kaleva, Mich.

Dear Laddie:—As I never have written to you before, I thought I would try my luck in winning a prize. I am 11 years old and in the 7th grade at school. I live on an 80-acre farm. My father takes the M. B. F. and likes it very much and so do I. As I am writing a story I will not make my letter very long.—Marie Byrne, Burt, Mich.

Little May.

Little May stood for a long time watching her sister, until Alice looked up with a smile, and said, "what makes you look so sad, Little May?" "Oh, because I want so much to be big! How did you get so big, Alice?" "It is much nicer to be little, said Alice, laughing." "Oh, no! it is not," said May, shaking her golden curls. "It is dreadful to be little, for when you are little you can do nothing. I say to papa, 'If you please, papa, will you take me with you on your sailboat today?' and papa says, 'No. The wind is too strong. You cannot go, for you are too little.' And I say to mamma, 'If you please, mamma, may I go with you to walk?' And mamma says 'No. You cannot go. I am going for a long walk, it would tire you. You are too little.' And I say to grandma, 'May I go for a drive with you, if you please, grandma?' And she says, 'I am going to take a long drive, you cannot go. You are too little.' And if I should say to you, 'Alice, if you please, may I paint on your picture?' you would say, 'No' you are too little.' And I do not know how to grow big, for naps are of no use. 'But I will not say No, said her sister. 'You shall come and sit on my knee, and paint the cushion that pussy is lying on in my picture; and if you take your naps, and eat your porridge, like a good girl, you will wake up some morning and find that you are as big as I am.' This comforted little May very much and she sat on her kind sister's lap and painted a lovely blue cushion, and forgot all her grief at being such a little girl.

THE WONDERFUL ADVENTURES OF A RAINDROP

By Ethel Allen Murphy

THE Garden Lady, Nancy, Jane, and Tommy Thoughtful had run up on the back porch to get away from a sudden thunder shower that drove them in from the garden. They sat looking out on the fresh greenness that began to sparkle with rubies and diamonds under the beams of late sunlight that broke through the clouds.

"I heard a very pretty story last summer in the Golden Girl's Garden," said the Garden Lady, "and this rain reminds me of it."

"Oh please tell us!" cried June and the United States School Garden Army soldiers who clustered about the Garden Lady.

"One late afternoon, just after a rainstorm, I was walking down the grass path in the Golden Girl's Garden. I didn't mind getting my shoes wet, for they are shoes that nothing hurts, and I do love the garden after a rain. The sun had come out after a good, long, not-too-hard rain, and every flower and leaf was hung with little rainbows. The grape arbor ful for the nice, soaking rain, and I ful for he nice, soaking rain, and I remember thinking how fine it was that the rain had come, because if the thirsty grapes had not gotten a good drink just then, I am afraid there wouldn't have been any nice, quivering grape jelly, with its delicious flavor and lovely purple lights. And, of course, everyone knows that there is nothing nicer than grape jelly on a bread and butter sandwich in the winter.

"But how would the drought have hurt the grapes so there would not have been any jelly?" asked Tommy Thoughtful, who, being a boy, didn't know as much as Nancy and Jane about jelly making.

"Why," answered the Garden Lady, "jelly is made from fruit juice that has acid and pectin in it. It is the pectin in the fruit juice, which when it is cooked with sugar and acid gives, after cooking, just the right consistency to jelly." And the Garden Lady smiled mischievously as she used the big word "con-sis-ten-cy," and added. "It is a great disappointment when the jelly doesn't jell."

"You see, Tommy, when there is a drought it keeps the plant from storing up the pectin in its fruits. And no pectin, no jelly! But I started to tell you about the story I heard.

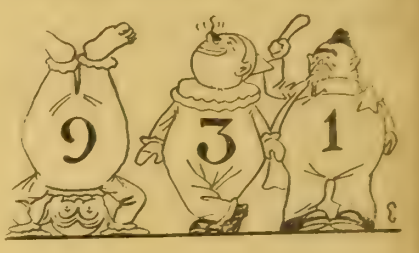
"I found myself looking down at a golden squash bloom, which had a very, very bright raindrop just hanging in its edge.

"Suddenly I heard the deep, mellow voice of my old friend, the Gallant Scarecrow. The Golden Girl calls him the Garden's Guardian Knight. It seemed to me that he had leaned over his pansy bed to call me softly.

"'The SPEAKING HOUR has come. Listen, Garden Lady!' he said."

(To be continued)

Answer to Last Week's Puzzle



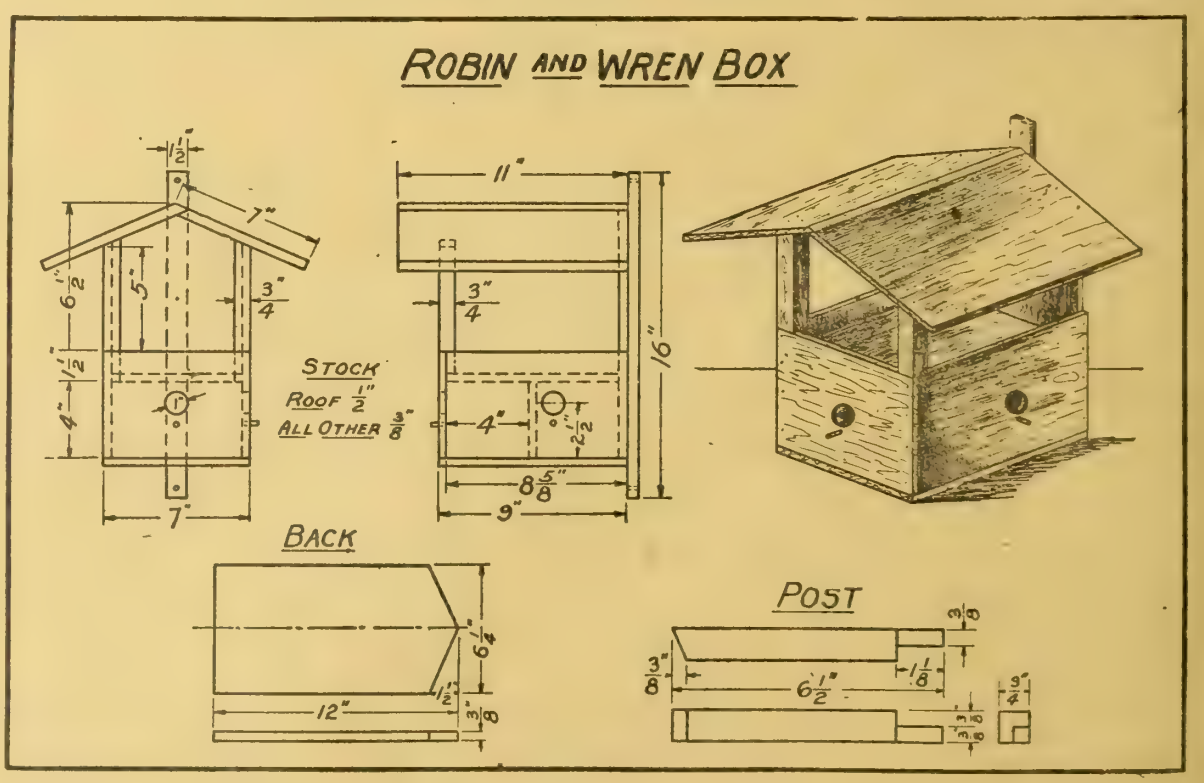
Dear Laddie:—This is the first time I have written to you. My father takes the M. B. F. We have a Shetland pony; his name is Sultan. I have two brothers and no sisters. We have a dog named Polly and a little cat. Baby Elephant. There is a big hill across the road. I like to slide down hill. I am 9 years old. I go to school and am in the 4th grade. Our teacher is Miss Morrison. My father is a veterinarian. We live in the little town of Winn. I hope I will see my letter in print soon.—Dorothy Augusta Fox, Winn, Mich.

Dear Laddie—I have been reading the boys' and girls' letters for some time, and now I will try and write a letter. I am eleven years old; have brown hair and brown eyes. I have two miles to go to school, and I am in the sixth grade. I live on a farm of one hundred and twelve acres. My father takes the M. B. F. I like the Doo Dads. I have two cats for pets. My cats names are Tom and Tabby, and my rabbit's name is Bunnie. Well, as my letter is getting quite long, I will close.Myrtle Besey, Butterfield, Mich.

Mary's Little Man

Mary had a little man,
Insure his life? Oh, no!
"Many better ways," said John,
"That I can use my dough."
After John "cashed in his checks,"
Mary paid the expense,
And found she had—just listen now,
Five kids and—thirty cents.
Merrill's Bulletin.

TOYS AND USEFUL ARTICLES THAT A BOY CAN MAKE



TWO YEARS ago a little wren bungalow was put out under the eaves of a garage. Not long after the bungalow was fastened in place a family of wrens discovered it and began building their nest. About the time the nest was finished along come Mr. Robin and planted his large nest right on top of the bungalow roof.

This prompted the designing of the combination house shown in the drawing, which was put up in place of the bungalow and inhabited by two families.

It is said that wrens will hatch twice in one season if conditions are favorable, and that they start building the second nest after the young are about ready to leave the first. For this reason the bottom was partitioned off making two compartments so Mr. Wren could stay at home, busy himself building the second nest, while Mrs. Wren was sitting on the first.

Material can be obtained from a pine shoe box. A shoe box is suggested because the material is about the thickness desired and the lumber dressed so very little planing is necessary.

Get out the back according to the details on the back drawing. Cut to the line and not on it, then carefully plane to the line, splitting it.

Make the side pieces 3-8 inches by 5 1-2 inches by 8 5-8 inches, and on one side only locate and bore the one inch hole. If you have no bit this size it may be cut with a knife. Do not make the hole larger than the dimensions given as the hole for a wren should not be larger than a silver quarter.

The front is 3-8 inches by 5 1-2 inches by 7 inches and has the same sized hole bored in the center. The center can be located by the intersection of diagonals drawn from corner to corner.

Assemble the parts already made with 1 inch No. 13 brads, the construction of which can be learned from the is-

metric drawing. Next fit and brad the floor in place.

The partition is 3-8 inches by 4 inches by 6 1-4 inches, and can be fastened to the floor and sides by brads. Next make the floor 3-8 inches by 7 inches by 9 inches, it should be fastened in place by screws or hinges and a hook, so it can be removed at the end of each season and the old nest cleaned out. The robins will use the old nest often, making some repairs.

The box ends are usually made of 3-4 inch stock and this can be used for the posts, which are next braded in place to support the roof. If 1-2 inch stock is not at hand 3-8 inch may be used for the roof and support which should be well fastened to the back.

Perches are not necessary, but if added for appearance, do not make longer than 3-4 inches as sparrows will light on them and bother Jenny Wren. The box may be covered with bark, twigs or painted gray, white or brown.

SAGINAW SILOS

THE fact that there are four different Saginaw Silos shows how thoroughly we are prepared to meet your silo requirements.

Only a company with our resources and manufacturing facilities can afford to plan and develop such a complete line. Each Saginaw Silo has been accepted as a standard of silo value—proved by years of use.

Substantial service is built into Saginaw Silos by careful selection of materials and experienced and skilled workmanship. The long established reputation of Saginaw Silos is your assurance of getting permanent satisfaction from your silo.

Undoubtedly one of these Saginaw Silos is just what you want.

To those interested in a silo we will send our 1920 Live Stock Calendar. Write for it.

The Silo Beautiful
That Lasts for Ages
Get the beauty and durability of vitrified tile in the Preston-Lansing patented block. Our method of construction gives enormous strength—block braces block in ship-lap formation. Between each tier is a thick layer of cement and twisted steel reinforcing. Only a thin line of mortar shows inside and out, giving a smooth, beautiful finish. Silage settles better—less chance for frost to penetrate. The dead-air spaces protect against extremes of temperature.
Fire Proof—Weather Proof
The beautiful, even color of the blocks lasts indefinitely. The steel hip roof gives extra silage space. Steel or tile chute—continuous doorway. The first cost is the only cost. Write for Catalogue and Prices.

LET US TAN
YOUR HIDE.
Horse or Cow hide. Calf or other skins with hair or fur on, and make them into coats (for men and women), robes, rugs or gloves when so ordered. Your fur goods will cost you less than to buy them and be worth more.
Our illustrated catalog gives a lot of information. It tells how to take off and care for hides; how and when we pay the freight both ways; about our safe dyeing process on cow and horse hide, calf and other skins; about the fur goods and game trophies we sell, taxidermy, etc.
Then we have recently got out another we call our Fashion book, wholly devoted to fashion plates of muffs, neckwear and other fine fur garments, with prices; also fur garments remodeled and repaired.
You can have either book by sending your correct address naming which, or both books if you need both. Address
The Crosby Frisian Fur Company,
571 Lyell Ave., Rochester, N. Y

5 GREAT NOVELTIES
20 cts.
The glorious crimson Woolflower recently introduced by us has succeeded everywhere and proved to be the most showy garden annual. Nothing can surpass the mass of bloom which it shows all Summer and Fall.
We now have three new colors—pink, yellow and scarlet, as well as crimson. All these colors mixed. 20 cts. per pkt.
With each order we send 1 trial pkt. each of Giant Kochia, most decorative foliage annual.
Salvia Hybrids, white, pink, striped, scarlet, plumed, etc., mixed.
Japan Iris, new hybrids, all colors. Magnificent.
Giant Centaurea, superb for garden or vases.
And our Big Catalog, all for 20 cts.
Big Catalog, free. All flower and vegetable seeds, bulbs, plants and new berries. We grow the finest Gladioli, Dahlias, Cannas, Irises, Peonies, Perennials, Shrubs, Vines, Ferns, Peas, Asters, Pansies, etc. All special prize strains, and many sterling novelties.

FARMERS SERVICE BUREAU

(A Clearing Department for farmers' everyday troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you.) Those desiring a personal, direct-by-mail reply (on legal questions only) are required to accompany their request with $1.

TAX QUERY

I have a 15-acre fruit farm with $1,500 debts on it. Last year (1918) my farm was valued at $1,200. I had $15.18 school tax and a total of $28.93 tax. This year (1919) my farm is valued at $1,300. My school tax $34.06 and a total of $60.27, on account of a new school being built. My son-in-law has 60 acres with $3,500 debts on it. His valuation in 1918 was $3,100, with $45.00 school tax, and this year (1919) his valuation was raised to $34.00, with over $106.00 school tax and a total tax $173.00. The advice I would like to get is this: Have they a right to raise the taxes on mortgaged farm to the same level as a man free from debts.—E. A. K., Eau Claire, Mich.

Your tax is undoubtedly legal and according to law. It is the same experience we all have. The great crisis we have been going through has required more money and the taxpayers are the ones who have it to pay. There is no deduction from your assessment to be made by reason of any mortgage encumbrance. That was a law at one time but it was repealed some time ago.—*W. E. Brown, legal editor.*

ILLEGAL SALE

A sells a farm to B on which is a pile of lumber which is verbally reserved. B sells the farm to C's wife, telling C ini his wife's presence, that the lumber belongs to A. C sells part of the lumber and forbids A's removing the rest. Has A any redress? If so, how proceed?—A Subscriber, Millington, Mich.

A has redress against C for the value of the lumber sold and may replevin the balance or he may hold C for the whole of the lumber if C has refused to give the lumber to him.—*W. E. Brown, legal editor.*

REAL ESTATE MORTGAGE

If there is nothing paid on a real estate mortgage for a certain length of time, does it outlaw the same as a note? —Subscriber, Sanilac county.

The statute provides: "When a recorded mortgage on lands or property has been paid and satisfied, or when fifteen years have elapsed since the debt secured by such mortgage became due and payable, or since the last payment made thereon, and no suit or proceedings have been institutted thereon to collect the same, the owner of the land or property may present a petition to the circuit court, etc.," and have an order entered discharging the same. —*W. E. Brown, legal editor.*

RIGHTS OF STOCKHOLDERS

Our Farmer's Co-operative Elevator failed. I was among those who bought non-assessable stock. The directors threaten to assess our stock 100-per cent. to make up the loss. They claim there is a state law by which they can do this. Is it true that there is such a law? They have hired an attorney and have notified the stockholders for a hearing in about a month. Should we not hire an attorney? I for one will not pay unless I have to.—A Subscriber, Mt. Morris, Mich.

There may be certain things that stockholders in a corporation are liable for. It depends upon what claim they make against the stockholders. It is certainly advisable to have the advice of a good attorney to determine your rights and liabilities.—*W. E. Brown, legal editor.*

TREASURER NEED NOT BE A FREEHOLDER

What is the law in regard to a treasurer of the school board? Is it necessary for him to be a free-holder? Can he issue orders on the funds of the school district without the consent of the board? —O. A. W., Pinconning.

The treasurer need not be a freeholder. Any qualified voter may be elected treasurer. The treasurer is not authorized to issue any orders on the funds. It is his business to pay the orders issued by the director countersigned by the moderator. Any violation would subject him to liability on his bond.—*W. E. Brown, legal editor.*

WIND UPSETS BUILDINGS AND CONTRACT

A bargained to buy a farm of B, Oct. 5, 1919, by paying $200 down to hold the bargain. A is to complete the deal Apr. 1, 1920. As A has the farm rented for money rent to that time. B pays all taxes, insurance, etc., to that time. Now the recent wind storm blew down the mill; blew the roof from some buildings and did other damage. Can B be compelled to repair the damage? Nothing was said at time of bargain for sale of the farm regarding up-keep.—Subscriber, Oakland County.

I am of the opinion that "B" is under no legal obligations to make any repairs to the property after the contract of sale. If there was a cyclone insurance I think that "A" would be entitled to have it used for making the repairs.—*W. E. Brown, legal editor.*

LEGAL FENCING

Does a farmer have to fence against sheep and hogs the same as other stock usually kept on a farm? Was a change made in the line fence law by the last legislation?—Subscriber, Lapeer County.

Sec. 2206, of C. L. of 1915, provides: "All fences four and one-half feet high and in good repair, consisting of rails, timber, boards, wire, or stone walls, or any combination thereof, and all brooks, rivers, ponds, creeks, ditches and hedges, or other things which shall be considered equivalent thereto, in the judgment of the fence viewers, within whose jurisdiction the same may be, shall be deemed legal and SUFFICIENT fences." I am of the opinion that it is necessary to fence against hogs and sheep but no different fence than above or for other animals need be constructed. I do not find any changes from the above made by the last legislature.—*W. E. Brown, legal editor.*

PURCHASER OF TAX TITLE

A party homesteaded a farm for 23 years and has kept up the taxes until 1917, but has not paid any since, and I guess said party is not going to. Now may I pay those taxes, go and live on farm—no buildings are on it—and put up a house and barn on it? If said party ever does want to sell will she have to settle with me and pay for my improvements? How long will it be before I can get a tax title or a state title, if I keep up the taxes, and to whom should I apply? How long will it be before the farm goes back to the state if the taxes are never paid?—Subscriber, Remus.

Taxes for 1917 would be payable in 1918 and would be sold probably about May 1921. Taxes returned in 1917 would be probably sold about May, 1920. A certain time after they are bid in notice must be served on the former owner if they can be found and posted if they cannot be found. After the lapse of a certain number of months the purchaser obtains a title from his deed. If you paid the taxes you would acquire no title except by virtue of the adverse possession for the number of years required by law. The mere paying of taxes would give you no legal right to the land. If you put buildings thereon without any right you could get nothing for them if the owner reclaimed the land.—*W. E. Brown, legal editor.*

A VERBAL LEASE

A rents farm from B for one year with privilege of more and has sown quite a lot of fall crops, 18 acres. All this was done with the understanding that A was to have the place the coming year and now A is obliged to move off, the place being sold. It was a verbal agreement. —R. H. M., Perrinton, Mich.

A verbal lease of farm for more than one year is void as to the excess unless you have entered upon the second year. If, in reliance upon your arrangement, you went to cost and expense, I am of the opinion that you may recover your damage by reason of his selling. The courts will not permit the statute of frauds to be used to perpetrate a fraud.—*W. E. Brown, legal editor.*

A FRAUDULENT TRANSACTION

In November I bought a cow, claimed by owner to be registered and due to calf in June. Dealer was to send papers in a few days but has not done so yet. December 24 cow calved. This is putting me to a great disadvantage and I am wondering just what redress I could get, especially as she does not prove to be registered.—A Subscriber, Lake Ann.

The statement made that the cow would "calf" in June and was registered, made for the purpose of inducing you to buy and you relied upon the statements, make them warranties. You can recover the damage done you by reason of the breach of warranty in both cases.—*W. E. Brown, legal editor.*

SENSE AND NONSENSE

COULDN'T HELP IT

Monk—I don't see anything to laugh at!

Hyena—If you were a laughing hyena you would.

The Widow's Spite

The Parson—"Mrs. Smithers seems very cross with me—didn't you notice she almost cut me?"

The Friend—"I'm not surprised!"

The Parson—"But why?"

The Friend—"Don't you remember when you were preaching her husband's funeral sermon you said he had gone to a better home?"

Another Miss-Alliance

Annie—"So Jack is engaged, is he? And is Mabel the bride-to-be?"

Fanny—"No, she is the tried-to-be!"

Passing the Buck

Overworked Husband—"You've been keeping me waiting around here like an old fool for an hour."

Wife—Well, my dear, I may have kept you waiting, but I had nothing to do with how you waited."

THEY'RE LOTS OF 'EM

Frog—Aw, everything makes me sick.

Snail—Croaking as usual, eh?

Comparative Luxury

"My dear, as you have been fairly prosperous this year, I think you might give me a few dozen eggs as a Christmas present."

"Can't afford it, darling. You will have to content yourself this year with just a diamond necklace."

Foot-work

Millie—"How did Mr. Bonds get his eldest daughter off his hands?"

Clarence—"By putting the man she married on his feet."

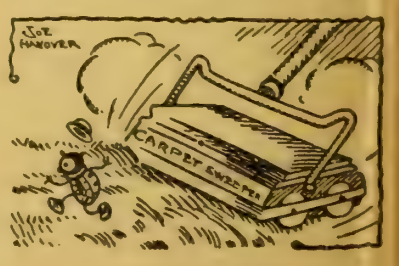
Ingenuity

Guest—"Waiter, this steak is like leather and the knife is dull."

Waiter—"You might strop the knife on the steak.

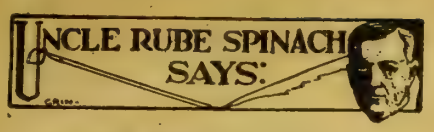
A Dentist's Epitaph

View this grave with gravity,
He's filling his last cavity.



NOTHING IN IT

Bug—Shucks—This "snug-as-a-bug-in-a-rug" business is all wrong!



OUR NEXT GUV'NER

I HEAR quite a considerable talk now days about having a farmer man for our next gov'ner an' I'm inclined to think mebbe it's gettin' time we had a change of some kind—most any change might be for the better y'know—but whether a farmer would be the right thing or not I d'know, do you?

Farmers, 'yknow, gener'ly speakin' are a kinda hard headed sort—not easily hoodwinked, so to speak, sort o' slow 'bout runnin' up expenses—you know how they be, seem to want to run things cheap as possible an' I d'no as we want that—y'see we've got kind'a used to extravagance now an 'any sudden change fer the better—the savin' of a lot of money to our taxpayers might not be good fer us, mebbe—'til we got a little used to it anyway.

Now if we wuz to have a farmer man for the head of our state goverment, why Milo D. Campbell would be all right with me, or Herb Baker—any of these good men would do with Milo D. as sort of first choice I reckon. 'course, now that we have our state boxin' commission, with men drawin' good fat salaries, to look after our important prize fights, an' such, an' sev'ral other equally inmportant commissions, that we've been deprived of all our lives an' had to skinch along without, why there ain't such an awful lot of things for a guv'nor to do—just a few more commissions to be created y'know—to take care of some of the political ringers for which there ain't no regular jobs—course y'know a quite a number of 'em has been taken care of durin' the last few years—mebbe you've noticed it by the way your taxes have jumped—but there is need of a few more commissions an' I'll name a few with the understandin' that I stand ready to take charge of any one of 'em at a salary, say, about $3,500 a year, I think I could manage to squeeze along on that seein' as how in most of these new commissions a feller can look after 'em an' keep right along with his reg-lar work—well I'd kinda like to see a commission appointed to look after the welfare of hairless frogs, and one fer homeless dogs and cats, a commission to learn why young women wear their dresses so low at the top, and so high at the bottom and so darn tight too. An' then a commission to learn why there are so many ol' maids an' grass widders unappropriated, when there are so many men running around without homes—oh, y'know it don't make so much difference what the commission is for—the main idea is to find jobs for the political wire-pullers—payin' positions for the faithful, as the feller says.

Now, from what I know about this Campbell feller, he wouldn't be the sort of man to go in for this kind of thing—I've always heard that he was a purty dum bright guy—a level headed man, a good feller, a friend to the laborin' man and the farmers, considerably interested in farmin' himself, a man with lots of backbone an a fighter for what he believes to be the right thing—that he has won many battles for the rights of farmers in Michigan, believes they should have a fair profit for their labor an' a fair price for their products—fact is, it is quite gener'ly conceded that Milo D. Campbell would make an A No. 1 Guv'ner an' that he could easily be elected—but I'm jest a little mite afraid we would not get any more of them commissions, that the tax rate would be lowered, that a lot of swivel chair fellers scattered in offices around the state, pullin' down good fat salaries for doin' nuthin' but shootin' hot air, might have to go to work an' that would be hard on the poor fellers after three or four years of milk an' honey, don't you think?

But jest the same an' nothwithstandin' although I might not get a job or any commission, 'cause there wouldn't be any, I believe the time has come when the farmers should be represented—not only in the governor's office, but in the legislature as well, many laws are needed now for the protection of the farmers' interests, something must be done to balance the relation between the producers of our foodstuffs and other raw material, and the consumers of it, an' the proper way to do the job is to get the proper men to represent us in our law makin' body.

Believin' then, that Milo D. Campbell is a good man for the job, I am castin' my vote for him an' I stand ready to support any good man or men who will represent the farmers' interests, an' see that they get the been patiently waiting for many weary years.

Everybody who pays taxes has prob'ly noticed that they are excessively high, too dam high, I say,—well if you're tired of this sort of thing jest look around you an' see what has caused such a large increase in the amount of money you pay to the state.

When you have discovered the cause jest to work an' help elect some man or men for our state offices who don't happen to have such extravagant notions—that had rather lower than raise state taxes an' you will find quite a change—well, a word to the wise is sufficient. Cordially—*UNCLE RUBE.*

THE COST OF PARTISANSHIP

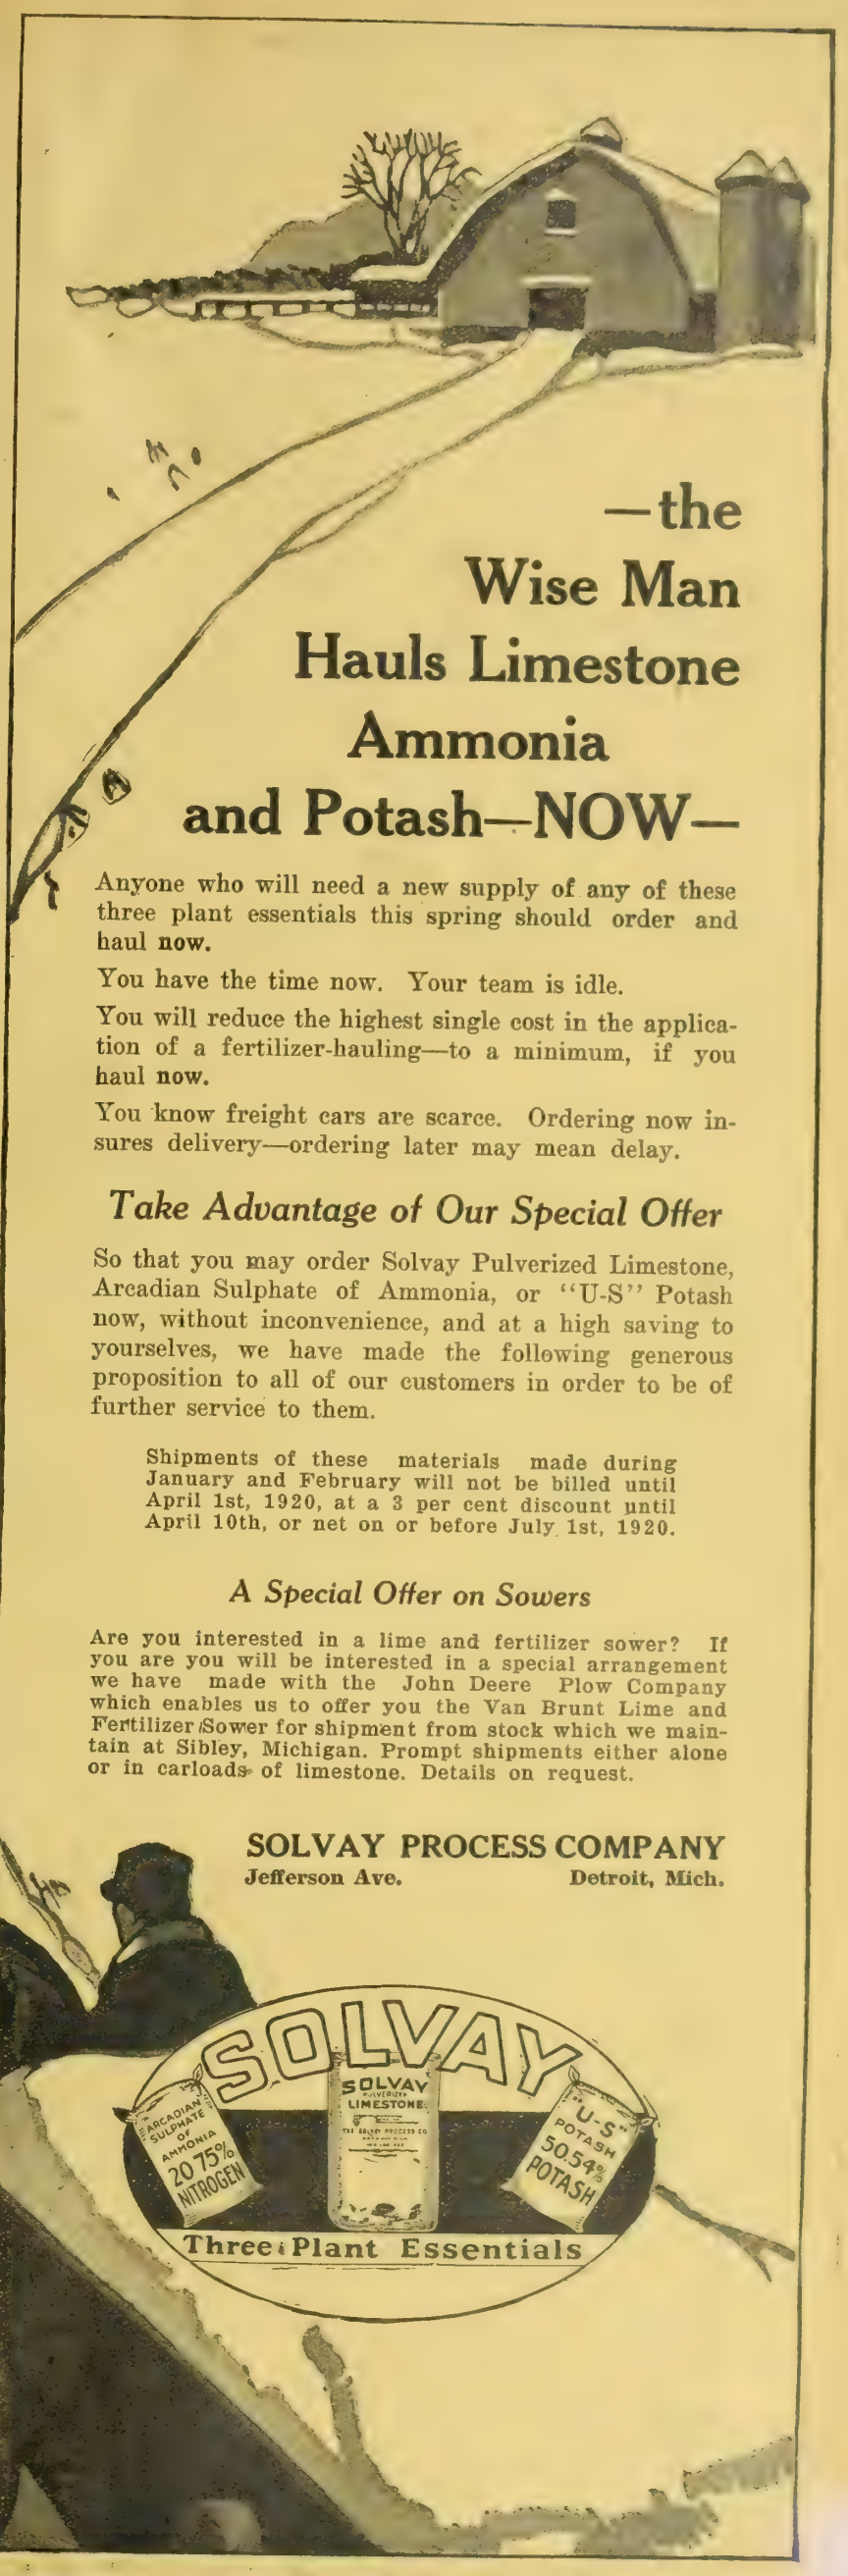
(*Continued from page* 17)

and still he may possess just the qualifications needed. The writer believes that a common man for governor one who has had to work his way through life would better represent the voice of the majority of people than any rich man, and this can apply for all offices, but how to go at it to nominate common people for the offices I do not know, and I wish for you to tell me if you can.

It takes money to run a convention; who puts up this money for these conventions? As far as I know from what I have read it comes from moneyed people. Is not this wrong? Should not the country pay for the expense of our conventions, and should not every person be given a show for office if they are so inclined? Can a common man get recognition? I believe not. Take some common person that you have never heard of and place him name along with the rest of the men you have mentioned for governor and he will not get a look in, why, because he is not known, and how is he to become known? Must he be a big business man, a successful lawyer, a rich man, a man known to the public, yes under the system we have at present he must be known. Who pays the papers for lauding men at the head of our government? Would these papers take up some unknown and laud him, especially if he has never held an office and is unknown? No. But it is the known man who receives the advertising. How are we to become known? By changing our system and allowing all men, rich and poor, the opportunity of filling office and let the papers say as much for the poor man as they do for the rich man, and what they say let it be sworn to, for we read so much today that we do not know what to believe. You cannot tell me that it is always the most successful man in making money, who are the wisest men. Circumstances alter cases.

I will close by saying that it is high time that the common people united regardless of any party and elected MEN and WOMEN to fill all our offices from the smallest to the highest, and such offices to be filled from the ranks of the common people.—*J. W. Aldrich, Falmouth, Mich.*

You express our opinions to a nicety. Political parties usually eucceed in clouding the issues instead of clarifying them as they claim. But not all people think alike on this matter. I had a very heated argument one day during the last session of the legislature with a member of the Senate, who insisted that political parties were absolutely necessary to the perpetuation of good government. "The more complex you make your election machinery" he said, "the safer is the democracy". When we see the kind of men who are frequently selected to office because they are good republicans or good bemocrats we feel like exclaiming, "Oh, partisanship, what crimes are committed in thy name". Why a farmer for Governor? Because the happy, Utopian day, when all men will gauge issues and political candidates strictly on their merits, has not yet arrived, and until it does arrive, farmers must take the same steps as all others employ to support men for office who are known to be in sympathy with their vocation. Sen. Baker introduced a bill in the last session limiting advertising for candidates to a campaign booklet to be published by the state, but it was defeated. This would have put the poor man on a parity with the rich man. Editor.



—the Wise Man Hauls Limestone Ammonia and Potash—NOW—

Anyone who will need a new supply of any of these three plant essentials this spring should order and haul **now.**

You have the time now. Your team is idle.

You will reduce the highest single cost in the application of a fertilizer-hauling—to a minimum, if you haul **now.**

You know freight cars are scarce. Ordering now insures delivery—ordering later may mean delay.

Take Advantage of Our Special Offer

So that you may order Solvay Pulverized Limestone, Arcadian Sulphate of Ammonia, or "U-S" Potash now, without inconvenience, and at a high saving to yourselves, we have made the following generous proposition to all of our customers in order to be of further service to them.

Shipments of these materials made during January and February will not be billed until April 1st, 1920, at a 3 per cent discount until April 10th, or net on or before July 1st, 1920.

A Special Offer on Sowers

Are you interested in a lime and fertilizer sower? If you are you will be interested in a special arrangement we have made with the John Deere Plow Company which enables us to offer you the Van Brunt Lime and Fertilizer Sower for shipment from stock which we maintain at Sibley, Michigan. Prompt shipments either alone or in carloads of limestone. Details on request.

Be Square with Your Land

BE SQUARE

That "Be Square" in the corner has been our trade-mark for nearly half a century. We've applied it in our dealings with you.

Are you sure you are applying it to the acres upon which you depend? Is your farm equipped with the implements you need to enable your land to produce to the utmost? Are you sure you

GIVE SEED A CHANCE?

Dropping it into loose soil where the roots cannot get hold of the earth, dropping it where clods kill the young plants; dropping it where air spaces exist under the furrows, or permitting the soil to evaporate the moisture isn't giving high priced seed a fair chance.

THE BURCH PULVO-PACKER

Overcomes just such conditions. It compacts the soil into a good seed bed, it pulverizes the clods, it fills the air spaces and it forms a dry mulch that preserves the moisture.

Made under new principles, its action is certain, the draft is light and it is so strong and durable that every farm should have it.

Write for our special catalog L3 and learn why this implement is such a money maker—a worthy member of the reliable Burch family of implements.

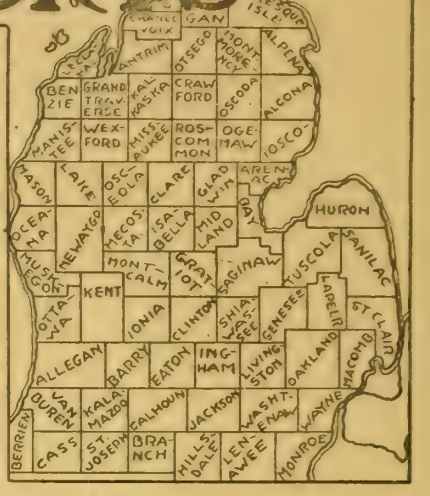
COUNTY CROP REPORTS



(W.)—The Farm Bureau movement has begun. Sentiment concerning this organization seems to be somewhat divided among the farmers. Man of them prefer to wait and see what the results will be before signing up for three years. If it does what is claimed it will solve many problems. The main work now is doing chores. There has been an unusual run of sleighing for the season. The weather has been favorable for feeding cattle. Fall grains are well covered with snow. Prices offered at Grand Rapids:: Wheat, $2.33 to $2.35; corn, $1.50 to $1.60; oats, 88c; rye, $1.55; hay, No. 1 timothy, $27 to $28; beans, (C. H. P. Pea) $6.25 to $6.50 per cwt.; red kidney, $10 to $10.50 per cwt; potatoes, $2 to $2.10 per bu; onions, $5 to $5.50 per cwt; cabbage, $5 to $5.50 per cwt; poultry, springers, 22 to 24c; turkeys, 34 to 36c; butter, 50c up; milk at condensary, $3.65 for 4 per cent; eggs, 70 to 72; live stock, sheep, 14 to 18c; lambs, 20 to 22c; hogs, 17 to 19c; beef steers, 16 to 18c; dressed beef cows, 12 t o16c; veal calves, 16 to 23c; wool, 55c; apples, $2.50 to $3.50.

ALLEGAN—Farmers in this section are not doing very much at present but their chores. Cold with scarcely enough snow for sleighing. Not much produce moving. About 40 representatives in Allegan, Wednesday, Jan. 7 and perfected the Allegan County Farm Bureau. Meetings were held in the various townships a week previous at which time directors were elected to represent the local organizations at this meeting. Other organizations represented were the Saugatuck Fruit Exchange, the South Haven Fruit Exchange, the Gleaners, the Grangers, and the Wool Growers' Association.—. F. The following prices were paid at Allegan:—Wheat, $2.35; corn, $1.45; oats, 85 rye, $1.65; beans, $6; hay, $25 to $28; wheat-straw, $9; potatoes, $1.60; onions, $2.50; hens, 17 to 20; butter, 58; eggs, 60 beef steers, $7 to $9; beef cows, $6 to $8; veal calves, $15; sheep, $8 to $10; lambs, $10.50; hogs, $13.50.

MASON—Cold with occasional snow storms. Some hogs and cattle being sold. Some potatoes are still being held. Weather is too severe to permit any great rush to market. The warehouse and elevator at Scottville, formerly owned by Lewellyn and Armour & Co., has been purchased by the Gleaner Clearing House Association. The Mason County Marketing Association will have possession of the warehouse until next June. The two farmer organizations will probably cooperate in the future. At a meeting of the West Amber Community Club, Jan.9, a solid vote was registered against the Kahn bill, which provides for universal military training. The secretary was instructed to write a letter of protest to our congressman. About 25 adults were present.—B. M., Ludington, Mich.

INGHAM—Very good winter weather, with little snow. Not much doing. Plenty of measles and chicken pox among the little folks to keep them thinking. A few hogs going to market; little stock moving; stock doing well. Fire recently destroyed two farm homes here. Some are looking for farms to buy, coming in from Ohio, Indiana and other parts. Quite a number of farms for sale here and good ones too.—C. I. M. The following prices were paid at Mason:—Wheat, $2.20@$2.30; oats, 80; rye, $1.74; barley $2.50; hay, $20; wheat-oat, $2; beans, $6.50; potatoes, $2.25; hens, 19@21; ducks, 12@20; butterfat, 63; eggs, 66; sheep, 7@9; lambs, 12; hogs, 14; beef steers, 8@12; vael calves, 15.

WEXFORD, (W.)—Hurrah for the real, sure enough snow. It's here and plenty of it. Winter started in rough so we hope for a good spring. Some wood cutting, but not very much produce is moving.—S. H. S. The following prices were paid at Cadillac:—Wheat, $2.20 to $2.25; corn, $1.40; 56 lbs. shelled; oats, 85; rye, $1.50; hay, $30; beans: Pea, $6.50; red kidney, $9; potatoes, $2.65; hens, 17 to 20; springers, 16 to 19; ducks 20 to 23; geese, 17 to 20; turkeys, 28 to 30; butterfat, 67; eggs, 55; hogs, 16 to 18; veal calves, 18 to 22.

HILLSDALE, (E.)—Cold with some snow. Farmers are harvesting ice and getting their year's supply of wood. Not much stock fed this winter on account of scarcity of feed.—A. J. B. The following prices were paid at Hillsdale:—Wheat, $2.18 to $2.23; corn, 70; oats, 70; rye, $1.70; wheat-oat, 11 to 12; hens, 19; springers, 19; ducks, 20; turkeys, 35; butter, 50; eggs, 70; sheep, $3 to $7; lambs, 15 to 17 1-2; hogs, 11 to 14 1-2; beef steers, 7 1-2 to 9;

MONROE (W)—Farmers are busy doing chores this cold weather. The ground is frozen quite deep. We have had very little snow so far this winter. There is some grain, mostly corn, being sold at present. Some hay for sale, but not moving yet. Roads are in fine shape for travelling. Prices offered at Petersburg are as follows: Wheat, red, $2.40; white $2.37; corn, ear, $2; oats, 84c; rye, $1.65; barley, per cwt., $3;.—W. H. L.

ST. JOSEPH—Farmers are chopping wood and putting up ice, and some are butchering. Weather is fine; snug and cold, but real winter so far. Had quite a snow storm recently which made sleighing. Farmers are selling quite a bit of wood now, also wheat, rye, hogs, calves, chickens, (28c alive for chickens by shipping through co-ops.)—W. W.

GENESEE—Farmers are not doing much besides their chores and working up wood. Roads are drifted full of snow in several places, but a fairly good road for sleighs has been cut thru the most of the roads. We are having zero weather again and also more snow. Some fields are mostly all bare while others are covered with a good covering of snow. Wheat and rye have suffered considerably this winter. Wheat will probably be short crop next year although several farmers are figuring on putting in some spring wheat. Auction sales are still quite plentiful.—C. W. S. The following prices were paid at Flint:—Wheat: Spring, $2.60; red, $2.48; white, $2.43; corn, $1.40; oats, 91; rye, $1.73; hay, No. 1 timothy, $24@$27; No. 1 light mixed, $21@$24; beans: pea, $6.75; red kidney, $11; potatoes, $2@$2.25; onions, $6.50; cabbage, $5 bbl.; cucumbers, $2.50 doz.; hens, 24; springers, 24; ducks, 32; geese 28; turkeys, 40; butter: dairy, 65@67; creamery, 70@72; eggs, 75; sheep, $7@$8; lambs, $10@$$11; hogs, $14.50@$15; beef steers, $8@9; beef cows $6.50@$7; veal calves, 17@$18; apples, $2.75@$3.

BAY—Beans are still moving on the market altho the price remains about the same. Farmers of this part are taking it quite easy about the beet contracts; none seem to be in any hurry and in other words if there is not a change the acreage will be cut a great deal. As I have heard many say they will grow some other crop as we all know that the sugar beet takes a good deal of strength from the soil, so we are not anxious to run our land out and receive nothing for it. Of course a few contracts have been taken but in all is small. The farmers here on hearing of Milo Campbell being the choice for governor are strongly in favor of Campbell at the next primaries and he is the man they should support and stand by.—A. A. G. The following prices were paid at Bay City:—Wheat, $2.50; corn, $1.45; oats, 86; rye, $1.64; barley, $3; hay, No. 1 light mixed, $25; beans, $6.75; potatoes, $2; hens, 20.

LAPEER—Farmers as a rule are cutting wood and doing chores and trying to keep warm. It has been very cold for the last two weeks, with hardly enough snow for sleighing and too much in some places for wheels. Not much of any live stock going to market; some hog moving with the price very good.—C. A. B. The following prices were paid at Imlay City:—Wheat, $2.35@$2.40; oats, 80@85; rye, $1.50@$1.65; hay, $22@$25; rye-straw, 7@$8; potatoes, $1.50; onions $2; hens, 22; springers, 22@24; ducks, 25; geese, 27; butter, 58; butterfat, 60; eggs, 60; beef steers, 8@10; beef cows, 4 1-2 to 6; veal calves, 17; sheep, 3@5; lambs, 13@15; hogs, 13 1-2.

CALHOUN—Farmers are cutting wood and logs. Hay and straw selling some. Now there is a call for potatoes at present. The farmers have been holding them for a better price. Some logs are going to the mill since the snow came.—C. E. B. The following prices were paid in Battle Creek:—Wheat, $2.48@$2.50; corn, $1.40; oats, 75; rye, $1.70; hay: No. 1 timothy, 28; No. 1 light mixed, 25; wheat-oat, 11; potatoes, $2.30; hens, 23; springers, 25; butter, 60; eggs, 75; lambs, 10@15; hogs, 14; beef steers, 8@10; beef cows, 5@7; veal calves, 10@16.

JACKSON, (N. E.)—Very little pleasant weather past two weeks; cold and stormy nearly every day with high winds. Farmers are doing chores. Ice has been all harvested and baling hay is in order when the weather permits. Some wood being cut and some was shipped out by rail. Very little being sold. Notice of the annual meeting of the Co-operative Live Stock Shippin Association has been sent to the stock holders.—A. F. W. The following prices were paid—Beans, $6.50 butter, 50@70; butterfat, 69; hogs, $13.50.

VAN BUREN—Trimming grapes is the important thing in this section. Last week the different asosciations had their annual meetings; all report a successful year. The co-operative spirit seems to be growing among the fruit growers for they decided to handle most of their supplies through the association. The Farm Bureau is advertised to meet this week. We find some throwing wrenches in the machinery already. Sleighing is good all but for the drifts. Feed raising and butter dropping.—V. G.

BUSINESS FARMERS' EXCHANGE

FARMS & LANDS

130-ACRE MIDWEST MONEY-MAKER, $8,800. On improved road, 1 1-2 miles RR town, high school, creamery, all advantages. 80 acres well-drained, strong tillage, clay subsoil; 50 acres wire-fenced pasture, estimated 1,000 cords wood, much fruit. LIVE STOCK SHIPPERS NEED ORGANIZATIO

(*Continued from page* 15)

repesenting producer, distributor and consumer, and fixed a price for milk based on the cost of production and distribution and the consumer, realizing the justice of the proposition, murmurs little. What the Michigan Milk Poducers Association has done for market milk in the Detroit market, the state and National Farm Bureau can do for agriculture in the whole nation.

Applying This to Livestock Industry

The breeder of pure bred livestock is interested in the price of wheat or potatoes ,etc., as much as he is in livestock. One branch of agriculture cannot prosper for long unless other branches prosper. All must go up or down together. With little or no profit in beef or pork there would be much less demand for pure bred sires because there would be no money to purchase them with. If there is little profit in wool or mutton, or in milk and butter and cheese the market for pure bred animals is seriously affected. So it is a question of united effort for the benefit of all.

Unless the farmers are united in a strong business organization, prices of food products will be forced down, down, perhaps to pre-war conditions, while the price of other products will remain high. Every time the Attorney General makes a drive at the "high cost of living" just one class of products are attacked—food products. The products the farmer produces and sells. Nothing is done to reduce the price of shoes, of clothing, steel or implements, or labor. The farmer's products are assailed because he has no organization like the National Council of Organized Labor.

Why did the market on live hogs drop eleven or twelve cents per pound? Did labor come down or hardware drop in price? Was the cost of production less or the demand even less? Was it not because farm products presented a weak front in the battle line and they knew it?

Michigan breeders of improved livestock, the future of your business and the future of all agriculture is just what you choose to make it. The world wants beef, good beef, and they are willing and able to pay a profitable price for it if you will conduct your business in a business-like way. The world wants pork, good pork and lots of it and they must be educated to pay a price that will warrant the farmer in producing it. The world needs mutton and wool.

The world needs dairy products. We never knew until recently how necessary dairy products are for the proper development of mankind. Dr. McCullum's researches in nutrition teach us that with a diet containing dairy products, man is more resistant to disease, he has more vitality. Milk contains vitamines that are almost life giving in their influence. Our War Department gave as a reason for purchasing butter for the army instead of oleo that it was found that wounds healed more readily where the patient had received butter in his ration. The world war has proven that children deprived of milk cannot develop normally. Knowing these things, why should we not use some of our money—lots of it—if necessary, to educate the people of the cities to the great importance of dairy products in their diet. The man who produces beef, pork or wheat, or fruit, for a living can afford to contribute to such a fund because he is sure to be benefited indirectly. Teach the wage earning men and women of our cities the real importance of dairy products. Cause them to see and feel that their children if well supplied with milk and butter and cheese.

To me, the future of the livestock industry and, in fact, the future of the whole business of agriculture looks bright indeed. The importance of agriculture has been brought to the attention of the world so prominently by the world war. The necessity of giving the farmer a square deal has been made obvious to the public and the lessons learned by our farmers has so filled him with hope and lifted him above sordid drudgery that he will, like our army on foreign soil, never retreat and these things that I have predicted will surely come to pass.

The world's welfare will be, to a great extent, determined by the dairy farmer's efficiency in the production of dairy foods.

(Signed)
P. M. SHARPLES

"There are no substitutes for dairy foods."

Does your present separator skim clean at any speed?
—SHARPLES *does.*

Does your separator produce cream of even density at any speed?
—SHARPLES *does.*

Has your separator a simple bowl, no discs, washed in a jiffy?

For Cows Only

KOW-KURE

W. Nicholls, Trempealeau, Wis., writes: "I have used KOW-KURE with entire satisfaction. The first box I used saved for me two valuable Guernsey cows which would not breed."

Most barrenness is caused by a weakened condition of the nerves and muscles of the genital organs. In such cases, KOW-KURE is an unfailing remedy, because it acts directly on these organs, giving them the strength to function properly. You take no chances in using KOW-KURE; it has a quarter century of success back of it.

KOW-KURE is equally valuable in preventing or treating Abortion, Retained Afterbirth, Milk Fever, Bunches, Scours, etc. Sold by feed dealers and druggists; 60c and $1.20.

Send for valuable free treatise, "The Home Cow Doctor."

Some Essentials in Profitable Growing of Beef Cattle

Certain Rules That Must be Followed if the Beef Grower is to Make Profits

THE SUCCESSFUL production of beef calves, and their development into profitable animals, whether for stockers, feeders, or finished animals for slaughter, is a phase of the beef-cattle business that concerns beef producers everywhere.

Closely associated with the growing, feeding and successful handling of the calves, and which also determine largely the profit or loss from the business, are the selection of the breeding herd and the feed, care, and management given it.

This article is intended to give in a general way the practices which successful breeders and feeders of beef cattle have found most profitable and which experiments have proved to be most reliable.

Selecting the Cow Herd

If a good cow, bred to a good, purebred bull, will produce a good calf, a better cow bred to a better bull will produce a better calf. With that idea clearly in mind, cows to be used in a breeding herd may be selected with a considerable degree of confidence. While the selection may not need to be made from native or high grade cows, yet the type of cow most desired is the useful kind.

It is advisable frequently for the beginner with little experience in handling or caring for beef cattle to select the most useful type from the cows available. As a rule it pays to start with as good foundation cows as possible, although the experience of the individual as well as capital and available equipment, are points which should naturally help decide. While there may be differences of opinion as to the type of cows to select, whether the selection is made from a bunch of natives or of high grades each cow should be a useful animal.

In either case the cow that proves to be the most useful, consequently the most profitable, is of the large, roomy, vigorous type, possessing a strong constitution as indicated by a wide, deep conformation with a good chest or heart capacity, strong, clean-cut muzzle, bright eye, and alert but gentle disposition.

Cows of good quality that do well themselves on limited feed rations, as indicated by their uniform fleshings, loose, pliable skin, glossy coat of hair, and are not coarse or rough in any respect, should be selected. Cows of that kind, when bred to the right kind of bull, usually reproduce regularly calves that will develop into good steers. Such cows also usually give sufficient milk to nourish their calves properly. It should be the desire, therefore, of the owner to select, for the breeding herd, cows that when bred to good, purebred bulls will gradually and consistently improve the average of the calves in the herd.

Cows that have proved to be nonbreeders should be eliminated. They should preferably be sent to the butcher to prevent their being resold for breeding purposes. "Shy breeders" also should be disposed of in order that no cow may board at the expense of the others.

Herd Management

Profitable beef production commercially depends upon the grade-cow herd and the use of a good purebred bull, managed so that each generation of cows selected is an improvement upon the preceding one. In order that this may be true the best heifer calves should be retained each year to take the place of barren or shy-breeding cows. All other calves produced may be sold either as weanling calves at 6 to 8 months old, as stockers or feeders at 1 or 2 years, or finished as baby beef at from 16 to 20 months, or as fat steers at an older age.

Small farms in a high state of cultivation and where large quantities of feed are produced may be stocked with breeding cows to a maximum carrying capacity and the calves disposed of at weaning time or fattened as baby beef to advantage. In that way practically no cattle other than the breeding herd are maintained, whereas if the calves are carried over as stockers and feeders to older ages more feed and pasture would be required. This practice is often found to be very profitable. If, on the other hand, a limited quantity of feed is produced on a farm of this kind, it would be more profitable to sell the calves at weaning time to men who make a specialty of feeding that kind of cattle for the market.

Breeders who operate large holdings where extensive pastures are available and feed enough is grown to carry the calves through the winter as stockers often find it more profitable to carry them to an older age so as to market the grass and feed with them and get more weight per head.

If in either case a certain method for disposing of calves is adopted, more than likely it will become necessary to vary from that method occasionally on account of changes in conditions. Unfavorable years for growing feed may make it necessary to sell the calves at weaning time. Also, on farms where it is intended to carry the calves over as stockers, pastures and winter feed crops may be cut short by drought or other unforeseen condition, making it necessary to dispose of the calf crop earlier than usual.

Three Systems in Vogue

The systems of handling beef-breeding herds which are more extensively practiced than any others are "beef," "baby beef," and "dual purpose." In the first two systems calves run with their dams until weaned, none of the cows being milked. They differ in that cows intended for producing calves for baby beef generally receive better care because their calves are to be fattened shortly after weaning, which makes it necessary to push them as rapidly as possible and to give them a good start.

The straight-beef system is primarily adapted to regions where pasture is plentiful and cheap. This system is more generally practiced in the United States than either of the other two.

The baby beef system is a highly specialized line and is peculiarly adapted to regions where a plentiful supply of fattening feeds is grown, together with sufficient pasture for the summer maintenance of the breeding herd and nursing calves. At present the corn belt is the most logical region where this system fits in best, but it is practiced in a limited way in other sections.

The dual-purpose system is practised extensively in many semi-dairy districts. In this system all the cows are milked and the calves are raised on skimmed milk and supplemental feeds. Often the dual-purpose idea resolves itself into trying to make dairy animals out of a strictly beef breed. From the standpoint of beef production the dual-purpose system is commendable if adhered to rigidly; otherwise there is little to recommend it. Dual-purpose calves as a rule do not possess the beef-type characteristics of strictly beef-bred calves, but when they are "grown out" and fattened properly they make very acceptable beef.

(The above article is taken from Farmer's Bulletin No. 1075. The second installment will be published in an early issue.)

Essentials in Growing Beef

SOME of the most essential items in growing beef on the farm are:

First. Plenty of pasture and feed.

Second. The right kind of cows—those that will produce good calves regularly.

Third. A good, purebred registered bull—one that will sire good calves persistently.

Fourth. A large calf crop. This means that all cows shall drop calves, and that the calves shall be properly cared for at birth.

Fifth. Proper care of the breeding herd and the calves.

Sixth. Selection of good heifer calves to replace old or inferior cows.

Seventh. Prevention of disease among the breeding herd and the younger stock.

Eighth. Shelter sufficient to protect the cattle from both severe cold and extremely hot weather.

Ninth. A practical knowledge of fattening cattle for market.

Tenth. Marketing to advantage.

Winifred Mutual Friend and Cantrella Houwtje Pietje, consigned to the East Lansing sale by M. H. Daniels & Son, of Okemos. The former was bought by Waters & Buth, of Grand Rapids for $1,250 and the latter by A. E. Jenkins, of Lansing, for $1,525.

Beet Counties Lining Up for Fair Beet Prices

Ten Local Associations With Over Thousand Membership, Organized During First Week of Sweeping Campaign

THE SUCCESS of the campaign for fair beet prices is now assured. When C. E. Ackerman, manager of the Sugar Beet Growers' Ass'n, wound up last week's campaign with over a thousand of the biggest beet growers of the district enrolled, the last vestige of doubt as to the final outcome disappeared.

The organizers have found nothing but enthusiasm. They have virtually combed the territory for those farmers whom the manufacturers declare are "entirely satisfied" with last year's contract, but they haven't found them. It is true they have found some who have signed up but even these express their dissatisfaction and give as their excuse that "they took what was offered which was better than nothing." At every meeting held so far a local association has been effected, with charter members ranging from fifty to two hundred. The locals are already busily engaged in making a thorough canvass of their respective territories and latest reports are to the effect that the membership lists are rapidly swelling. In addition many applications for membership have been received direct by the secretary, Mr. E. P. Reavey, of Caro.

Mr. Ackerman advises us that he is receiving 'phone calls and telegrams from all parts of the state expressing satisfaction over the campaign and offering assistance. "The only ones who object besides the manufacturers," says Mr. Ackerman, "are the politicians. Why is it that business,—the Farmer's business and politics cannot be done at the same time? The politicians say 'wait,' 'wait,' but we are ready now and are going ahead to success. Many growers are offering to speak at the meetings, but the politicians beg to be excused. If the growers all sit tight we will come through with flying colors."

The following local associations were organized from Jan. 17th to Jan. 24th, inclusive: Durand—Pres., C. E. Ackerman; vice-pres. Frank Mikan; sec-treas., C. S. Reed. St. Johns—Pres., D. S. Herriott; vice pres., H. B. Huey; sec-treas., Newton Barnhart. Lennon—Pres., Wellington Post; vice pres., William Cook; sec-treas., Earl West. Ithaca—Pres. Bert Mellinger; vice pres., Luther Carter; sec-treas., Bert Bangs. Owosso—Pres., Chas. Richardson; sec-treas., W. J. Hersher. Saginaw—Pres., Thos V. Price; vice pres., Wm. B. Hackett; sec-treas., L. S. Foote. Associations are also in process of organization or have just been completed in Swartz Creek, Henderson and Davison and the close of the present week will see many others formed. Genesee county is solid. So is Bay, and another two weeks will see Saginaw, Clinton, Gratiot and Huron thoroughly organized.

The purposes of the organization are declared to be as follows:

First—To protect the interests of the beet grower and to improve his condition.

Second—To promote intelligent, economic regulation of beet production to the end, that supply shall be so adjusted to demand that the producer at no time be required to sell his product at less than a fair and reasonable profit.

Third—To collect information as to local, state and national conditions to extend acreage, supply, and condition of crops and all other information of practical interest to the beet-growing industry and to disseminate the results thru the several sub-organizations to every member of every community together with directions as to the course to be pursued in order to secure the best results in view of the facts disclosed.

Fourth—To do all and singular, whatsoever may be conducive to the stability and profitableness of the beet-growing industry.

The manufacturers who at first gave no attention to the request of the growers and their preliminary efforts at organization are becoming plainly worried and they are as busy as bees trying to convince the farmers and the public that the majority of the growers made a pile of money last year and are falling all over themselves to contract on the same terms. Nearly every weekly paper in the territory has recently carried stories to this effect. This propaganda is intended to convince the farmers who have not signed up that it is useless to hold out any longer. If the farmers fall for that old gag and permit themselves to be coerced into a contract that gives everything to the manufacturer and precious little to the farmer, their case is hopeless.

Compare the two contracts:

The Manufacturers' Contract: $10 to Farmer, based on 9 cent sugar; $11 on 10 cent sugar; $12 on 11 cent sugar; $13 on 12 cent sugar; $14 on 13 cent sugar; $15 on 14 cent sugar; $16 on 15 cent sugar.

This Contract gives to the manufacturer nearly 50 per cent MORE than the farmer receives from each increase of one cent per pound of sugar. Is it FAIR?

At the present wholesale price of sugar ($13 per cwt.) a ton of beets (240 lbs. of sugar) is worth $31.20. Under the manufacturer's contract he pays the farmer $14 and keeps $17.20 from which to pay the cost of manufacturing, interest and profits. The Tariff Commission estimates that the total cost of producing a ton of sugar in 1918-19 when beets were purchased for $10 per ton, was $132.86, or about 6.6 cents per pound. At that time the wholesale price of sugar was 9 cents, leaving the manufacturers a margin of 2.4 cents per pound of sugar or $5.76 per ton of beets for INTEREST and PROFITS. Costs have increased little the past year but the price of sugar has gone up 4 cents a pound. With cost of beets then at $12.50 (the average for 1919 beets) and wholesale price of sugar at 12c (though the average is liktly to be higher), the manufacturers should have from their 1919-20 operations at least $11.28 from every ton of beets bought from the farmers

(*Continued on next page*)

President Kedzie of M. A. C. Extends Invitation to Farmers

Pres. FRANK S. KEDZIE

East Lansing, Mich.
January 22, 1920.

To the Readers of the "Michigan Business Farming,"

It may not be necessary but in any event I seize the opportunity to give you a most urgent invitation to be with us during Farmers' Week. Your editor has given you full information regarding the program and you will have noticed that there are a number of men of wide reputation who will be present and speak before our various audiences. Besides this, there is much that I am sure will interest you here on the campus in the line of exhibits so I feel that if you can arrange to be here for a day or two and visit us at that time, you will feel repaid for the effort and we at the College will appreciate your attendance and the interest which you surely will have in the meetings. There is every reason why the Farmers' College should be the center of interest for all the good farmers of Michigan during Farmers' Week.

Very truly yours,
FRANK S. KEDZIE,
President Michigan Agricultural College.

for INTEREST and PROFITS. (The increased cost of beets—$12.50—increases the cost of manufacture per pound of sugar to 7.3 cents, an increase of 10 per cent, but the advance in the selling price of sugar is 33 1-3 per cent.)

But the manufacturers are not willing to give the farmers ANY additional benefit of the higher sugar price. Is it fair?

The Beet Growers' Contract

$12 to Farmer, based on 9 cent sugar; $13.40 based on 10 cent sugar; $14.80 based on 11 cent sugar; $16.20 based on 12 cent sugar; $17.60 based on 13 cent sugar; $19 based on 14 cent sugar; $20.40 based on 15 cent sugar.

This Contract

Would increase the minimum $2 per ton, and would divide the increase over 9 cent sugar EQUALLY between farmer and manufacturer. Is that FAIR?

An Example

The sugar in a ton of beets is worth $31.20 today. Under this contract the farmer would receive $17.60,and the manufacturer $13.60. The cost of making the sugar exclusive of the cost of beets a year ago was $5.14 per ton of beets. Give the manufacturers a ten per cent increase in the cost of manufacture, and the total manufacturing cost would be $5.65, which added to the cost of the beets would be $23.25, leaving the manufacturers $7.95 to pay INTEREST and PROFITS.

None of the figures presented here take into account the value of the by-products, pulp and molasses. The Tariff Commission says these by-products equal more than 8 per cent of the total cost of producing the sugar, so that the manufacturers derive an additional revenue from YOUR ton of beets of $1.86, increasing their maximum profits and interest to $9.81 for every ton of beets manufactured into sugar. Is it fair?

MANAGER ACKERMAN DISCUSSES SITUATION

"IT WOULD SEEM from the figures submitted in paid advertising articles by the manufactorers that the net profits of the manufacturers would not warrant the administration to allow the price of sugar to go above 12 cents and at the same time be fair to the consumer and enforce the Lever Act, for at the time two years ago when the government ordered the manufacturers to pay the farmers what they asked, $10 per ton for beets, it was shown by the administration that sugar could be manufactured for 7 1-2 cents a lb. and pay the farmer $10 for beets and still make a handsome profit. Then the manufacturers became very patriotic and announced in the papers that for patriotic reasons they would concede the point and pay the farmer $10 for beets on 9-cent sugar. It is wonderful how patriotic some people become under certain conditions. They had said that $9 was the last word and they would close the factories before more was paid. They however, did not close their factories. It was proposed by the food administration that should sugar go above 9 cents the manufacturers should pay the farmer $1 extra per ton for each cent advance over 9 cents.

This was accepted by the farmer as being fair because it was proposed by the food administrator and not because it was based on any mathematical conclusion which would divide this extra between farmer and manufacturer fairly and justly. Now if the $10 proposition was based on the average beet content of sugar and if the 1 cent extra were a fair division of the excess, and did actually represent the cost of producing beets with a fair profit, would the government be justified in allowing the price of sugar to go above 12 cents per pound, and still enforce the provisions of the Lever Act which prohibits excessive profiteering It is folly to assume that because the farmers figured that they could and would and which they did produce beets at a cost of $10 per ton and for patriotic reasons that they can do so now. Land is higher. Labor is higher. Machinery is higher and if the $6 per acre extra which the manufacturers propose to charge for their beet labor be added to the average cost submitter at Saginaw of $106 and 10% managerial charge to which the farmer is entitled and the value of the phosphorus and potash which, according to three of the best scientists is $37.50 for a 10-ton crop of beets and a 15% advance in all costs over last year the actual cost of producing a crop of beets would be after returning the value of the tops to the ground or $15, the grand total of $160.63 which is a very fair estimate of the cost of producing an acre of sugar beets for the year 1920.

The farmers will be to blame for the troubles they will eventually find themselves into, for if they continue to grow beets on the old price regardless of the extra costs the government will have no reason to doubt but what they are getting a profit at the old price and will only be doing their duty if they reduce the sugar price to even below 12 cents per pound. Farmers have always been in the habit of figuring the gross receipts of their farms as profits and that is the reason why the bright, educated young men leave the farms and go where they do not have to compete with the millions that merely farm for an existance. Now, therefore, if sugar stays on the average at last season's price, a farmer will receive around $13 per ton for his beets, and if he secures an average crop of eight tons his crop will bring him $104 which will have cost him $160.63, to figure exactly, or he will stand a very reasonable chance of losing a neat sum of $56 per acre. Is the farmer warranted in putting up this campaign for more pay for beets? Is not the consumer interested that the farmer get a fair price so that the sugar shortage will not be still shorter and the eventual loss of a very important industry?

If the raw sugar refineries show that it costs 16 to 17 cents to produce cane sugar how can one show it costs as much when the government has the dope that beet sugar can be made at a handsome profit at 7 1-2 cent per lb.? When the farmer is paid what he has been asking, $10 for his beets which will be way below cost of production, will not the farmers turn to other crops that do not require such high prices and such a vast amount of labor and which do not deplete the soil as much and which do and will offer a better chance for a net return on the investment?

The manufacturers are endeavoring to hold out to the government and to the public and to the farmers that the way to do the trick is to allow them to sell their sugar for the same price as the cane refineries receive and still work under the old unfair contract of 1918, which would no doubt increase the farmers' price for beets, but it would at the same time increase the manufacturers' profits way beyond the meaning of the Lever Law and cause the public to pay an exorbitant price for sugar in proportion to the price received by the farmer for his beets.

Can you increase production of sugar beets and at the same time bring the beet sugar manufacturers under the Lever Law and not give them exhorbitant profits on the 1918 contract with a $6 labor cost added as proposed by the manufacturers in offering the 1920 contract? It must be conceded that the United States is not in a position to establish the price of sugar especially raw sugar when we buy three-fourths of all our sugar in foreign markets. And if raw sugar goes to 25 cents per pound all we can do is to bring the refineries under the Lever Act and compel them to charge only 2 cents more for that article. And if we farmers continue to raise sugar beets at $10 per ton the most we can expect of the government is for it to also enforce the Lever Act on the beet sugar manufacturers and hold them within a reasonable profit which will mean that the government cannot allow the price of beet sugar to go far above 10 cents per pound for when it is shown that net profits of around $10,000,000 are made something will be done one way or the other. Either the price of beet sugar must be cut or the farmer must be paid more for his sugar beets, and when the government and the public once really see the magnitude of the sugar shortage which no doubt will exist in the world for the next 10 years they will demand that the cost of producing sugar beets at a profit be paid so that the production will be promoted in the United States and especially in Michigan,—*C. E. Ackerman, Mgr., Michigan Sugar Beet Growers' Ass'n.*

Co-operative Congress Would Remove Food Middleman and Speculator

All-American Conference to be Held in Chicago Feb. 12-15, With Labor and Farmer Delegates Participating

THE ALL-AMERICAN Farmer-Labor Co-operative Congress has been called to meet in Chicago February 12-15. From indications it will be one of the most significant and important meetings ever held in the United States. Farmers, labor unions, and co-operative organizations are invited to send delegates and participate in what promises to be an epoch-making event.

The All-American Farmer-Labor Co-operative Commission was formed at the Chicago convention November 21 and 22, 1919, called by representatives of the three bodies named in the heading and composed of members of the four leading farm organizations: The Grange, Farmers' Union, Society of Equity and the Gleaners, with representatives from the various railroad brotherhoods, a large number of national and international trades union leaders, and representatives of Co-operative organizations from all parts of the United States.

The two principal results of the conference were, first, the calling of an All-American Farmer-Labor Co-operative congress, to convene in the city of Chicago, February 12 to 15, 1920; and, second, the election of a commission of twelve members to be known as the All-American Farmer-Labor Co-operative commission, and charged with the responsibility of arranging for the congress and outlining a general program of co-operative activity with the following objects:

1. To co-ordinate co-operative effort among the various producing and distributing groups of co-operators to the end that speculation, profiteering and all unnecessary intermediary trading and jobbing in the necessities of life should be eliminated and that there should be established, as nearly as possible direct buying and selling between original producers and ultimate consumers.

2. To educate the workers thru their organizations and press to the almost completely neglected method of increasing the daily wage by multiplying its purchasing power through co-operative trading methods.

3. Being both borrowers and lenders in matters of finance and outrageously exploited in transaction involving either operation by those who control the life blood of the business world, to undertake to establish among and between the organized farmers and industrial workers **a financial system of their own for the permanent use of their own money and credit** in co-operatively financing the means of production and distribution of life's necessities.

4. To teach and give the widest publicity to the contrast afforded between a system of industry directed on the one hand, by competition and self interest, and, on the other, by co-operative effort; and to show that, while the results in the first case have but naturally led up to the present frightful world conflagration, industrial democracy and mutuality in business are indispensable, if civilization is ever to abolish industrial and military warfare and usher in a new social order.

Sen. Herbert F. Baker was chairman of the first co-operative conference which was held in Chicago, Nov. 21st and 22d. It was erroneously stated in this publication as well as others that Mr. Baker was the chairman of the conference that was held almost simultaneously to discuss the formation of a new farmer-labor political party. Mr. Baker had nothing to do with this movement.

Resolutions and Committee reports adopted at the National Farmer-Labor conference at Chicago, November 21st and 22d, 1919.

1. The enactment of the Kenyon-Anderson bill to control the meat packing industry.

2. Government ownership and democratic operation for service and not for profit of the railroads of the country, and of the ships constructed by the government during the war.

3. That the government retain and develop, through democratic operation, all the natural resources of the country, still in public ownership, coal, iron and copper mines, water power, oil, gas, phosphate, sodium, etc.

4. Legislation to compel the financial beneficiaries of the war to pay, as far as possible, for the cost of the war, through imposing the highest rates of taxation levied during the war on incomes, estates, and war profits, until the full money cost of the war has been paid and imposing a tax on the value of land and other natural resources held for speculation.

We go on record as opposing the Oleomargarine Bill H. R. 10032, introduced by Congressman Sabath, of Illinois, at the last session of congress, which would permit manufacturers of oleomargarine, largely the big packers to sell olemargarine in unfair competition with butter, reduce the income which the fovernment derives therefrom, and compel consumers of the country to pay an exorbitant price for oleomargarine.

We believe that it is necessary to the preservation and extension of democracy in America that women of our country should vote at the earliest possible moment and since the federal suffrage amendment did not become a law in time for women to vote in the 1920 presidential elections, unless special sessions of state legislatures are held for the purpose of ratification, we urge that the governors of states which have not ratified this amendment call special sessions of their legislatures immediately for the ratification of the federal suffrage amendment, and that legislatures which meet in January, 1920, ratify promptly upon assembly.

ANOTHER SHIP-LOAD TO EUROPE MIGHT HELP.

—Brown in the Chicago *Daily News.*

How to Cut Cost of Threshing in Two by Co-operative Threshing Ass'n

By M. A. ANDERSON

Secretary-Treasurer, the Angell Threshing Ass'n.' Williamsburg, Mich.

ON JULY 30th, 31st and Aug. 1st and 2d we circulated a subscription paper among farmers on which we secured seventy-seven names with a total amount subscribed of $3,485.00. The subscriptions were based on the payment of two previous years' threshing bills to be paid to the treasurer on or before October 1, 1919, for the purchase of a threshing outfit.

On Tuesday evening, August 5, we called a meeting of the subscribers to perfect the organization. We adopted the Articles of Association and by-laws which we have filed with our county clerk. There were fifty-seven subscribers who stayed by and signed the Articles of Association representing a subscription of $3,080. We elected a board of seven directors to manage the affairs of the association and got busy to purchase the outfit. We had representatives of the different machine companies on the ground in short order, and in the meantime we learned of an old thresherman near Central Lake who had a complete outfit for sale, and on Monday, August 11, the seven directors went to visit this party and was satisfied with the proposition and made a deal with him for the entire outfit consisting of a Port Huron 15 horse traction engine, a Batavia 28x42 grain separator, self feeder and wind stacker, a Bidwell 34 inch bean thresher with self feeder, tank and wagon, complete outfit for $1,840.

We engaged the crew that were with the machine as they were then threshing, and after about two days they began to move toward our community, and began threshing on our first job on Saturday, August 16, and on November 14, we finished the last job.

By-Laws

Section 1—The threshing or such other work as may be done by this association shall be done for members only.

Section 2—The officers and board of directors of this association shall be charged with the faithful and honest supervision of the affairs and operations of the association and shall at all times endeavor to employ competent help and labor for the successful operation of all machinery used by the association, and that all work done shall be done in a good business-like manner.

Section 3.—The price or rates charged for threshing or other work done by the association shall be based on the actual and adequate expense incurred by operations, such as labor, repairs, necessary upkeep and depreciation of the machinery said price and charges to be determined by the board of directors.

Section 4.—All charges made by the association for all services performed shall be paid to the treasurer of the association or to the person in charge of the operation of the machinery as shall be designated by the board of directors when the job or work being done shall be completed and if not paid within ten days from date of completion of work being done, then one cent per bushel shall be added to said bill for all grain, ten cents per bag for radish seed, ten cents per bushel for clover seed and five cents per hour for silo filling work, for every ten days after the expiration of the first ten days, until the maximum or regular price as charged by the threshers' union shall be reached.

However all accounts must be paid before the first day of January of each year or said member shall forthwith forfeit all his rights and interest in the property or operations of the association.

This year we have paid from all of our labor expense, repairs, etc., (which are very expensive now) the following rates, three cents per bushel for oats, four cents for wheat, five cents for rye, five cents for buckwheat, six cents for beans, six cents for peas, $1.25 for clover seed and 85c per bag for radish seed, and we have a little surplus left from operations as you will note from the financial report which I will also submit below.

We had a late start this year and the grain threshing was not the best as they dry weather last season had its effect upon the grain crop here. However, we have threshed for our members the following number of bushels of grains: Wheat, 1,958 bu., rye, 3,519 bu., oats, 4,110 bu., beans, 2,045 bu., clover seed, 179 bu., radish seed, 419 bags, buckwheat, 432 bu., peas, 92 bu., speltz, 98 bu. and also filled ten silos.

I will also state right here that we have also purchased a clover huller and a silo filler and also built a new shed at Angell, Michigan in which to house our machinery.

Our financial report at the close of business December 31, 1919, which was read at the annual meeting held on the first Monday in January of each year at ten o'clock in the forenoon, (this year on January 5th) follows:

Total amount of subscriptions	$3080.00
Total received on subscriptions Dec. 31	3080.00
Total amount received, threshing and silo filling	1296.19
Total received	$4376.19
Total paid for machinery and tools	$2248.50
Total paid for building of shed	400.00
Total	$2648.50
Bal. on hand from subs.	$ 431.50
Paid for labor	$ 981.83
Paid for repairs	156.90
Paid for oil and bbls.	45.31
Paid for printing	12.70
Paid for postage	5.37
Paid for moving, feed, bd. and lodging	18 00
Paid for books	5.12
Error in part of bill refunded	2.42
Discount for extra expense	5.00
Total	$1223.65
Bal. on hand from operations	$ 63.54
Total bal. on hand including amt. in bank Dec. 31, 1919	$ 495.04

At the close of business on December 31, 1919 we had an absolutely clean slate, not one cent standing out either on subscriptions or accounts.

We anticipate much better results next year as we have the machines here and can have them in shape to start right out when the proper time comes, but as it is now we haven't got one dissatisfied member.

Up-to-the-Minute News From National Capital of Interest to Farmers

Packer-Control Legislation, Revisions of Federal Loan Act, Legalized Collective Bargaining, Regulation of Branding and Sale of Fertilizers, and Other Important Measures Now Before Congress

THE SECOND session of the 66th Congress will see the enactment of many laws of the utmost importance to agricultural interests. Such matters as the ratification of the peace treaty, the return of the railroads to private owners, the development of a new merchant marine, settlement of capital-labor disputes, loans to European countries, and similar wide sweeping arrangements will of course affect agriculture in common with the other industrial interests of the country, but in addition a large number of bills having a specific bearing on agriculture have been introduced.

Some of the more important of the agricultural bills include packer control legislation, revision of the Federal Farm Loan Act, legalizing collective bargaining by farmers' organizations, regulation of the branding and sale of fertilizers and commercial feedstuffs, regulation of public cold storage facilities, establishing uniform standards of fruits and vegetables, extension of the public highways system, and improvement of rural mail service.

Waterpower Bill Passes

During the past week the Senate devoted most of its time to hearings and debates on the Waterpower bill which was finally enacted, thus ending a ten year fight.

The bill provides for the creation of a federal waterpower commission composed of the Secretaries of Agriculture, Interior and War, which would be authorized after investigation, to issue 50 year licenses for development of water power or for the utilization of water for irrigation purposes. Heretofore licenses were issued on a year-to-year basis which tended to discourage large developments. Plants using less than 200 horsepower will not be charged a license fee.

The bill carries with it an appropriation not to exceed $25,000,000 to develop Great Falls, in the Potomac River above Washington, to supply power and light for government uses at Washington.

Packer Legislation Takes New Turn

Senators Kenyon and Kendrick have seized upon the situation arising out of Attorney General Palmer's agreement with the packers, to give their bill an entirely new twist.

The new form of the bill incorporates bodily the entire text of the specific agreement made with the packers. If enacted into law this would have the effect of taking the matter entirely out of the hands of the Department of Justice. The new bill provides for the creation of a body to be known as the Federal Livestock Commission which would take over the work of the Federal Trade Commission insofar as the latter body's duties pertain to livestock or the packing industry. In addition the Bureau of Markets, now a part of the Department of Agriculture, would be transferred to the livestock commission and used as an instrument to regulate and supervise livestock and meat marketing.

Legalizing Collective Bargaining

The Capper-Hersman bill making legal collective bargaining by groups or organizations of farmers is now before the judiciary committees in both the house and the senate. Because of strong opposition on the part of interests that fear the strength of the farmer when fully armed to fight through organized co-operative buying and selling, the bill will have its troubles.

Uniform Feed and Fertilizer

A bill of far-reaching importance is one introduced by Congressman Haugen providing for standard classification and regulation of sale and shipment of commercial fertilizers and feedstuffs.

The chief opposition of course will come from manufacturers who claim that such action would cause them to reveal their trade secrets. The fertilizer industry however is known to favor a uniform national law to replace the multitude of widely different state fertilizer control laws. It frequently happens that a manufacturer doing business in several states must mix, tag, list and store separately the fertilizers intended for each individual state in order to properly conform to varying laws. This entails extra expense in handling, bookkeeping and shipping—all of which is of course charged up to the farmer. A uniform fertilizer law of the right kind would be a decided improvement over the present plan.

Big Increase in R. R. Rates

Interstate Commerce Commissioner Robert W. Wooley declares that the return of the railroads to private control at the time now scheduled, March 1, will result in a substantial increase in the present high cost of living, as it will mean increased freight rates.

Commissioner Woolley says he is informed from reliable sources, that the railroad presidents have decided to ask for a general increase. He figures that the proposed increase in rates, if it goes into effect, will cost consumers of the United States, $4,375,000,000, and increase the family budget of the United States something like $215 per year per family.

Statement by Woolley

Commissioner Woolley was instrumental in having the president commandeer the roads at the time he did, December 31, 1917. His statement or the situation is in part as follows:

"The railroad executives are prepared to file application for a general increase in freight rates. I am informed that the measure of the increase will be at least 25 per cent. A few days ago an official of one of the leading New England lines said that the increase in New England would have to be as much as 39 per cent. Based upon 1918 freight receipts, a 25 per cent increase would mean $875,000,000 additional, which the shippers would have to pay annually. But the shipper passes this along to the consumer."

Would Mark Cloth

Senator Capper is fathering a bill to prevent deceit and profiteering resulting from unrevealed presence of substitutes for virgin wool. The plan is to have the composition of cloth so marked at the mill that not only the tailor but the purchaser in its final form can know just what he is buying.

Wool growers' interests claim that such an action would increase consumption of virgin wool, although it is admitted that "shoddy" or used wool has its place.

"What Happens When You Sell Your Farm"

"I notice in the Nov. 15th issue that you have an article on 'What happens when you sell the farm.' I think that you are wrong in your conclusions. The $5,000 is not income but working capital for the farmer has improved his farm for 6 years and brought it up to be worth $15,000. Suppose he took a mortgage of $10,000; the interest from this and the produce sold would be income and subject to tax if it amounted to more than $2,000. Please look the proposition over again and let us hear from you upon the subject again."—F. H. Carpenter, Allegan County.

AT THE request of our subscriber we referred the matter to the collector of internal revenue at Detroit, who in reply advised that the statement made in our Nov. 15th issue "is correct."

Improvements on farms cannot be made without the expenditure of money. The money thus spent is considered income which is taxable. Were investments in improving land, buildings and other property exempted from taxation everyone would put their surplus earnings in improvements and thus evade the tax. Improvements are held to be investments of capital and are held to increase the desirability or the capacity of the property thus improved to yield additional revenue. Even though this rule were not in effect and were made for improvements, it is hardly likely that the government would consider an increase of $5,000 in the value of a $10,000 farm in six years' time wholly attributable to improvements. Could the producing power of farm lands be increased at that rate, it would mean that their value would double every twelve years and that a farm worth $150 per acre in 1900 would be worth $600 an acre in 1924.

Article 1561 of regulations relating to the income tax reads: "For the purpose of ascertaining the gain of property the basis is (a) its fair market price or value as of March 1, 1913, if acquired prior thereto, or (b) if acquired on or after that date, it's cost or approved inventory value. In both cases proper adjustment must be made for any depreciation or depletion sustained. What the fair market price or value of property was on March 1, 1913, is a question of fact to be established by any evidence which will reasonably and adequately make it appear."

Article 545 reads: "Where property is acquired and later sold for a higher price, the gain on the sale is income. If, however, the property was acquired March 1, 1913, only such portion of the gain as accrued subsequently to Feb. 28, 1913, is taxable."

Winter Produce Markets Show Large Gain

Review of Situation Shows Better Prices, Notably for Potatoes, Cabbage and Other Items

By VERNE E. BURNETT

REVIEWING the past several months of the markets of the United States, one can find many surprises, pleasant or disappointing, ranging between unusual extremes. Take live stock shipping, for example. Few were the prophets of last summer who predicted such a low level as live stock has reached. Cattle topped at around $20 a year ago and now grovels around the $13 mark. But along with this, practically all prices of leading crops have jumped noticeably over those of a year ago. The produce market undoubtedly made the most prominent gains of any section of the trade in the last few months, and upon these important facts this article will expand.

The produce markets show important gains over last year in a number of ways. First and foremost there are big jumps in prices, which will be explained later. Then, too, the shipments are better. January shipments have been running a great deal higher than those of the same month a year ago. This applies chiefly to potatoes, apples, cabbage and cauliflower and the hot-house stuff. Of course, shipments are lighter than they were in earlier months of the winter and last fall. Last October, by the way, beat the shipments for the same month in 1918 by 10,000 cars, and the month of November, 1919 was 2,000 cars better than the November a year before.

In spite of this general flow of shipments in excess of those a year ago, the prices this season have gone ahead by leaps and bounds in most lines. Potatoes quoted in the jobbers' markets just before Christmas at around $3.50 rose to $4.50 a month later and the increases have kept up since. Cabbage has increased fifty per cent in value since the week before the holidays, while onions have advanced almost as rapidly. Sweet potatoes, too, have edged up 25 to 35 cents a bushel.

Potato Gains Lead

Potatoes have sprung the biggest surprise this winter in most of the leading market lines. The demand has been good and the growers have been much better organized and successful in their distribution methods. Mr. Dorr Buell, of the Cadillac Exchange, has informed the writer that the distribution tactics for spuds this year has been considerably different from last year. This winter much of the stock has been diverted to Chicago, whereas last year much more of the crop went east to Pittsburg and other big eastern markets.

The flow of supplies from the Michigan farms in general has been eastward The great Chicago market center is well supplied usually in most lines by the rich agricultural regions of the Middle West and the Michigan growers as a rule have found more profit by shipping to the industrial sections of the east. But this year exceptions may be noted to the rule. The West is not so well supplied with spuds for table purposes. In Idaho where the spuds used to go cheaply, this year the price is keeping right "up among 'em." In the Northwest a much larger amount of potato flour is being made this year, and the local demand in the Rocky Mountain regions seems to hold up well.

Speaking of better organization, a dispatch from St. Paul, Minn., should be of interest to every Michigan grower. Minnesota produce growers have banded themselves more strongly than ever together and joined up with the national association. The national association of Vegetable Growers of America is reorganizing itself.

The case of the Minnesota growers banding together to protect their marketing interests is typical of a movement over much of the United States. From Rochester, N. Y., comes the news that New York state growers are going to go into the produce marketing business co-operatively on a big scale. This movement accompanied by unusual success in the selling game is one of the most sunny conditions in the past year in the produce world.

During the final part of January shipments of potatoes have been dropping off in many sections of the country, partly due to weather conditions and car shortage. Occasional breaks have occurred in the spud market and others are entirely possible. For example for one week the Chicago market eased off, in the middle of January, and a drop of 50 cents per cwt. happened. But the market recovered and the upward movement went merrily on.

In reviewing the potato prices this winter, one finds that the procession to the peak started well on its way last November when prices were around $2.75 for No. 1 Northern round white stock, f. o. b., sacked in Michigan. By the middle of December the market price reached $3. Then occurred the biggest surprise to most spud experts. The usual holiday slump failed to occur, and the prices in four weeks rose to $4.25 and more by the middle of January.

Weakness in Apple Market

The apple prices this winter seem pretty high to the public and buyers don't show eagerness to make transactions at the present figure. Thus a weak tone is noted in most apple markets. Another fact which causes some doubt for apple handlers is the government report which shows cold storage holdings of apples on January 1, 1920 to be 2,714,605 barrels and 8,527,931 boxes compared with 2,581,949 barrels and 5,136,726 boxes on January 1, 1919. This represents an increase of 5.1 per cent in the barrel apple holdings and 66 per cent in the boxed apples over a year ago.

The most important holdings are in the Northwest, where several thousand carloads remain to be shipped. Growers and shippers have had much hard luck this winter in the way of frozen stock, and they often had to take what anyone would give them in order to get rid of poor stock. The Northwest is the controlling factor, having produced its greatest crop in history in 1919

Apples last fall went into storage at prices higher than ever before in history. The consuming trade therefore bought wildly because even higher prices were feared.

Sharp Gain for Cabbage

Price movement has tended upward since mid-October when the general jobbing range in three leading eastern cities was $22 to $35 per ton bulk. In November the range advanced rapidly closing the month at $45 to $65. In December the range to the middle of the month was $55 to $85, and by the middle of January the market had risen to $95 to $125, which may be compared with similar range of $30 to $50 a year ago. These prices are for the best, hard stock.

Shipments of onions during the past few weeks were about the same as for the corresponding weeks of last season. Movement showed a disposition to increase during early January. Price advanced 25-50 per 100 pounds to consumers.

In conclusion, it can be said that in general the farmers are getting higher prices for produce this season than ever before, but this does not mean they can congratulate themselves much. There is four times as much money in circulation today as there was a few years ago and the "fifty cent dollar" must be taken into account. Costs of production for produce on the farm are being worked out and show that the margin of profit is not so very much and nothing at all on some lines. One of the striking things of the present produce season has been the improvement in the operation of organized growers marketing associations. It is hoped that through this splendid means, the market review a year from now will show better all around conditions than ever.

Review of Produce Shipments and Prices

SHIPMENTS FOR CHIEF STATES

This Season

Potatoes	Dec. 12-Jan. 12, '20	82,409 cars
Potatoes	Nov. 12-Dec. 12, '19	133,124 cars

Apples (box) Jan. 15, $3.00; Dec. 15, $3.00

Eaton County Farm Boy Tells Why Boys Leave Farm for the City

By LAWRENCE HAMMOND

ONE CAN HARDLY pick up a farm paper or a magazine, but about the first thing that stares us in the face is the great glaring headlines on "How to keep the boy on the farm, or how to keep boys from going to the city." In fact, we have heard it threshed out at almost every Grange meeting or Farmer's Club ever since we can remember that we were boys. Now, I think it is up to us boys to get busy on the "great topic of the day" and start something new, for I have never seen in print or heard discussed "Driving the Boy Off the Farm."

You might ask a farmer boy what he is going to do when he grows up, and nine times out of ten he will say, "I am going to be a farmer like father." In turn, I want to ask some of the men who have left the farm and gone to the city, if you can remember how proud you were when you would go down to the field at noon or night and father would let you drive the team from the field while he walked alone behind.

It is almost every country boy's ambition to own and operate a farm some day. He loves to care for the stock, to break the calves, to harness and to drive around. Now fathers, can't you think what you did to shatter that boy's ambition to be a farmer and drive him off the farm? Perhaps it started when he asked you for a horse and buggy to go for a ride a little while. You said yes, but it was so long getting from that chilled heart of yours that it was an icicle long before it ever reached the boy. Perhaps you encouraged him to take a commercial course in the high school, afterwards sending him to some college to get him up for a big job in the city, when all the time he was yearning for a short course at the Agricultural College, or even some good practical work at home on the farm.

Lawrence Hammond, author of accompanying article and his brother.

Early in life father taught me my responsibilities as a farmer; he never interferes except in a business way, and has always been as honest with me as most men are with everybody else except their boys. It is not in him to do as some men I have read about who promised his boy a half holiday on Saturday if he would weed a certain field the preceding week. The field was finished at one o'clock Saturday, and he came to the house tired but in good spirits; but when dinner was finished, father presented him with his own hoe, nicely sharpened, and told him he could hoe the potatoes for the afternoon. Needless to say that the boy will soon be driven off the farm.

A boy starts out with all the care of a drove of 16 or 18 pigs. Dad says, "Go to it, son, and see how well you can do with them." Son gets busy. How he carries corn and mixes feed! By and by those pigs have become the banner bunch of hogs in the neighborhood. Some bright morning Dad and the boy lead the hogs into the rack; Dad climbs in with the hogs and disappears down the road, leaving the boy behind, his thought going something like this: "Well, there go the hogs and Dad, all the same bunch." The boy has been brimful of ambition and pride in his work, looking forward to the day he could drive down the road with his load. Now his ambition is blasted; his hopes are blighted, and the only way I can describe it is like pulling all the tail feathers out of a whipped fighting cock. The boy is driven off the farm.

It is perfectly natural for a boy to be close to nature and where is the spot to be found except it be on the farm? And every man whose boyhood was spent on the farm has many times longed to get back to the soil. How its sounds, its doors, its occupations and its associations,—how it comes back to the boy driven from the farm. He longs for the gurgling of the old brook, the old swimming hole,—he can almost feel the warm spring air flowing softly on his face. Ask him and I dare say he will tell you he was driven off the farm

Now, just a few words to the boy. You had better think twice and stop long enough to count ten. Perhaps in so doing you might see where you have been at fault, and by a good heart-to-heart talk with father, try to remember that father's ways are not your ways. Perhaps under his very he yearns for your success, and who you do anything worth while nobody on earth is prouder of you than your father. Of course, you may think in every respect he is not up to date and has not kept up with the procession, and a great many times he is firm and arbitrary, but the chances are he knows more about almost everything than we do.

WEEKLY AGRICULTURAL DIGEST

MAPLE SYRUP MEN PLAN CENTRAL CANNING PLANT

Maple syrup makers in the vicinity of Charlotte are interested in the plan for a central blending and canning plant which is to be launched at the annual meeting of the Michigan Maple Syrup Growers' Association, Feb. 2 to 6, in connection with Farmers' Week at M. A. C. Charlotte is in the center of one of the largest maple syrup producing sections in the United States.

By taking maple products out of the sugar market, where they are now forced to compete with the cheaper cane and beet sugar and supplying the demand for flavors, sweetening and high grade syrup, the growers hope to obtain prices sufficiently high to enable them to continue in business. Otherwise they will have to face constant losses, they say, and many already have considered cutting off the existing maple groves.

The new plan is to establish a central plant for the whole state which will perform the same function for the maple syrup men that the creamery does for the dairymen. The crude syrup will be sent in large cans to the blending plant. There it will be weighed and tested, like qualities assembled, and the whole product blended into two grades.

SHORT COURSES OFFERED FOR LIVE STOCK SHIPPERS

As a means of assisting live stock shipping associations toward a better understanding of market classes and grades of live stock, and the methods of handling co-operative shipments at the markets, and in order to improve and bring about greater uniformity in accounting methods, short courses of instruction for association managers, county agents and others have been scheduled for the following markets on the dates indicated: Detroit, February 10 and 11; Chicago, February 17 and 18; Omaha, February 23 and 24; Sioux City, February 25 and 26.

These courses are being arranged under the direction of S. W. Doty, Chicago representative of the U. S. Bureau of Markets, Administration Building, Union Stock Yards, co-operating with the National Federation of Co-operative Live Stock Shippers. Also one has been arranged for St. Paul January 28 and 29, under the direction of the Minnesota State Live Stock Shippers' Association. Similar courses, held at St. Louis, Kansas City and Denver during the fall under the joint direction of the U. S. Bureau of Markets and marketing specialists of Missouri, Arkansas, Kentucky and Colorado, attracted considerable interest.

Beet Men Hold Firm

An Owosso dispatch says that as the result of the sugar companies of Michigan refusing to grant farmers an increase in the price of beets, over that of last year that the beet growers' association has voted to "go to the mat" with the manufacturers and to refuse to make contracts for beets for the coming season. They are reported as saying that they must have more money for their beets in order to meet the increased cost of labor.

Emmet Farm Bureau Meets

The annual meeting of the Emmet County Farm Bureau was held in the Elks Temple at Petoskey, Thursday, Jan. 15. Bad weather kept the attendance low but those who attended were there for business and felt well repaid for coming. The county agent's report for 1919 was given and a discussion of work for 1920 taken up.

The following officers were elected: Pres., F. A. Zerbe, vice-pres., S. W. Barkley, Sec., J. F. Quinlan, treasurer, R. H. Comstock, G. L. Hicks, A. H. Washburn, J. C. Schmalzreid, William Connors, Earl Preston, George Carlton, Frank Stock and John Fochtman.

In the afternoon, Dr. Eben Mumford, state leader of county agents, gave an inspiring address dealing with the need of strong farm bureau organization and the work of the state and national farm bureaus. At the close of the meeting a vote was taken whether Emmet county would join the state farm bureau and put on a membership campaign. The vote was unanimous and application has been made for a spring membership campaign.

50,000 FARMS FOR VETS

From 30,000 to 50,000 former service men desirous of establishing farm homes can obtain 50-acre tracts on existing reclamation projects if congress grants the proposed $250,000,000 reclamation appropriation, the house ways and means committee was told by representatives of western states.

Governor Davis, of Idaho, said the 32 reclamation projects in the west might be extended so as to reclaim 3,000,000 acres of land. With governor Campbell of Arizona, he approved the proposed $250,000,000 government credits under which states would issue bonds for the project. Former service men would have a preference right of 60 days to settle on the land.

Richard F. Burgess, of El Paso, told the committee that each former service man would need $1,500 to $2,500 to provide a home, stock and implements adding that several western states were aiding the soldiers in this respect.

Poland China Breeders Meet

The Michigan Poland China Breeders' Association convened for its twelfth annual meeting January 14, at East Lansing. An address by Pres. P. P. Pope opened the session and R. J. Baldwin gave a splendid talk on the pure-bred sire campaign in Michigan. Tony B. Fox gave a very interesting talk. A general discussion with several short talks by different breeders followed. Officers elected for ensuing year are: President, John R. Hawkins, Hudson, Mich.; secretary and treasurer, J. K. Moystead, Osseo, Mich. sale committee, William J. Clarke, Eaton Rapids; Wesley Hile, Ionia; W. E. J. Edwards, M. A. C.

Hog Sells for $35,000

Chief's Best, a spotted Poland China hog, brought $35,000 in a sale at Noblesville, Ind. The hog belonged to Frank Wise and was purchased by Wycoff & Simason, representing and Iowa state breeder's association. This is said to be a new record price for one hog. A sow brought $8,000 at the sale. Forty head brought a total of $64,380.

A "Lemon" for Grasshoppers

Kansas has handed the grasshopper a lemon, according to G. A. Dean of the Agricultural Experiment Station of Kansas.

Half a million lemons and 8.3 tons of white arsenic were among the chief ingredients of the "grasshopper bait" which, Dean relates, was used last season in 39 Kansas counties, with an area of 40,000 acres in wheat. In those counties, he said, there was no loss by grasshoppers last season. Previously, the loss in single counties had been as high as $3,000,000 in a season.

This has an important bearing on the national food supply, Dean said, as one-fifth of the nation's winter wheat supply is from Kansas.

W. P. Flint, of the Illinois Natural History Survey, declared that in experiments conducted in Sangamon county, Illinois, he found that grasshoppers ate chopped newspapers treated with water, molasses, paris green and salt, four times as much as they did the standard bran mixture.

Fish Ponds for Farmers

J. S. Sackett, superintendent of the Ohio State Fish Hatchery, at Newton, a few miles east of Cincinnati, has begun a campaign to influence farmers to establish fish ponds on their places. He says that the propagation of fish is feasible and that, with proper management, such ponds will afford a food supply that will justify the expense of their construction.

Good farmers and good corn. Yield of silage 34.4 tons per acre on A. A. C. Fertilizer.

How Some Farmers Miss the Profit

Higher wages for farm labor and higher cost of seed, equipment and supplies make it necessary to secure a higher return on the money invested in producing crops.

But here is one source of profit that some farmers miss. In choosing fertilizer, remember that the form of the plant food is just as important as the analysis, for the materials used should vary according to the needs of the crop, the character of the soil and the climate. Two fertilizers alike in analysis but made of different materials often produce widely different results. Secure the best results and get the greatest profit by using

A·A·C· Fertilizers

They are made of materials that have given the best results in actual crop tests,—conducted on many farms in many states, under different soil and climatic conditions. A gain of thirty to forty bushels of potatoes per acre by using fertilizer best suited to the crop is not unusual. Equally good gains have been found with other crops. Our Agricultural Service Bureau is in charge of Dr. H. J. Wheeler, formerly Director of the Rhode Island Agricultural Experiment Station. It has helped many farmers to determine the best fertilizer for their needs. It is ready to help you. Write today for information—the service is free.

"How to Make Money with Fertilizers"

Is a valuable book of 56 pages—full of practical information on fertilizers, crops and soils. There are 46 illustrations. It tells you how to select fertilizer for most profitable results—what errors to avoid in buying and using fertilizer. It is a complete fertilizer manual. Every farmer needs it. Our nearest office will be glad to send it free, if you will mention this paper when writing for it.

If there is an agent near you ask him for our crop books. If there is no agent in your town, write us for the name of our nearest agent, or ask for an agency yourself.

Fertilizer is highly concentrated. It is many times richer than manure. It must be applied properly. When planting by hand, the fertilizer should be well covered by the soil or thoroughly mixed with it, before the seed is dropped.

If applied by machine select one that mixes the fertilizer with the soil thoroughly. Some corn planters have a special attachment for mixing the fertilizer with the soil. If you have one, be sure to attach it.

If fertilizer is applied broadcast, sow it evenly. Fertilizer should not be applied to grass or grain that is moist. Apply around, and not on, other plants.

—for all the farmers of Michigan

Big Business and the Railroads

A GOOD DEAL of the opposition to further government control of the railroads comes from the big business interests of the country. Like the ass who tried to imitate the roar of the lion they have brayed loud and long for the return of the roads and have all but convinced congress that their bray is really the royal voice of the people.

At times congress is stubborn as a mule, but in the hands of the financial interests who seek legislation for the return of the roads to private owners, congress is as docile and tractable as a lamb. Without consulting the wish of the rank and file congress has speeded up legislation and now has two bills in conference which will be compromised to meet every requirement of the private owners who are right on the job bossing the job. The country has recently been notified by its representatives in congress that it is now "too late" to reconsider legislation for the return of the roads, and the people are mildy scolded for waiting so long to make their wishes known. The reason why the people have delayed so long in expressing their sentiments is because they have felt up until very recently that they could depend upon their congressmen and senators in Washington to look after their interests without any prompting from back home. It now being apparent that this is not the case, the people are making a last minute but futile effort to impress their wishes on congress.

It would be interesting to examine into the motives of the business interests who demand the return of the roads and a twenty-five per cent increase in freight rates. In the first place, higher freight rates mean nothing in their lives. The consumer pays the freight. But they fear the effect of successful government operation upon other large business enterprises. They are afraid that if the government should prove that it can operate the roads giving maximum service at minimum cost, there might be a popular clamor for government operation of all public utilities and possibly government control of certain commodities which are so indispensable to the welfare and comfort of the people as to be in the nature of public utilities.

If the railroads are returned to the private owners under the pending legislation, the citizen and taxpayer will always have the feeling that the matter was disposed of in total disregard of their wishes and welfare and in response to the demands of a small, selfish group who were actuated by motives altogether foreign to the merits of the proposiion.

Brains or Beef

HUDSON MAXIM, inventor of explosives, fire-arms and other contrivances of destruction, is worried over the unrest of the masses. In a two column editorial that has been published in many newspapers, this disciple of the old school of bourbonism, says:

"Today, our situation respecting our needs for national defense is similar to what it was immediately before the world war, and our danger is even greater. The Huns and Vandals are now within our gates and in our midst. They are armed with a sharper weapon than the sword or steel, for they are armed with the ballot. * * * * It does not make a particle of difference whether a man is held up and robbed by a gang of gunmen who have the drop on him or held up and robbed by a gang of voters who have the drop on him. It makes no difference whether robbery is committed under the name of confiscation, indemnity or tribute, in war with a foreign government or committed by a home government through confiscatory taxation which robs the thrifty to aid the thriftless, or robs the rich to give to the poor. It does not make a particle of difference whether the rich be robbed to give to the poor by the formal method of Caius Gracchus or by the simple method of Robin Hood. It makes no difference whether predatory hordes armed with the ballot make themselves the government, and then give to themselves under the name of government ownership, the industrial wealth of the country, or proceed after the hellish hordes of old Attila."

This plea-maker for the rich might have added that it makes no difference whether predatory interests mount cannon to oppress the poor and rob the country of its natural resources, or buy special privilege with their money. But he didn't. In his entire article is not a word that acknowledges the wrongs and the grievances that exist because of the selfishness of capital. The burden of his complaint is that the rich and others invested with property are in danger of being deprived of their wealth by the ballot in the hands of the "ignorant masses." He is not in fact at all worried about the deprivation of the "inalienable rights" of a man who works with his hands and draws so small a wage that he will never be able to possess property.

Proclaiming against the rule by the majority, the writer exclaims, "Should we be governed by brain or beef? That is a pertinent question. Should we be governed by the majority of brain-power of the country or by the mere count of heads, regardless of brains?"

In other words, beef is good enough when there is a war to be fought to protect the property interests of those who have brains, but in matters of self government beef must give way to brains. Ye Gods, what a doctrine. It smells musty as though it had been resurrected from the Dark Ages. It reeks with the blood of countless battles that have been fought by the ignorant oppressed to throw off the yoke of the intelligent oppressor. They would have exiled a man for expounding such audacious theory back in the days of the Revolution. What shall we do with him today?

* * * *

Who Speaks for the Farmers?

WHO REALLY speaks for the farmers of Michigan? There are four farm organizations and two farm papers in Michigan, and all of them profess to represent the farmers. Realizing how easy it is for people to appoint themselves as spokesmen for others Michigan Business Farming has been very careful about advertising its own views as the views of its readers unless morally certain after a canvass of the sentiment of its readers that such was actually the case.

But Michigan Business Farming and the heads of the State Grange, the Gleaners and the State Ass'n of Farmers' Clubs, were recently scolded by the other farm paper of the state for advising the Michigan delegation in Congress that the majority of the farmers of Michigan were opposed to the immediate return of the railroads under the two bills now in conference. The inference was given that M. B. F. and the leaders of the farm organizations mentioned were self-constituted "representatives" and that they did not actually express the sentiment of the rank and file of the farmers.

It would be well to remember that the farm paper which raises this question is owned by Cleveland people who have a string of farm papers and who are personally opposed to further government operation of the railroads. This paper does not like to believe that the farmers of Michigan are opposed to its own policies on this important question, and is naturally a bit peeved to have them so express themselves.

So far as Michigan Business Farming is concerned it is perfectly willing to leave it to the judgment of all the farmers of Michigan whether M. B. F. and the farm organizations mentioned or the out-of-the-state owned farm paper comes the nearest to representing the wishes and welfare of those engaged in agriculture in this state. And in passing judgment let us not forget that all these organizations have in annual convention, through the most democratic machinery that is possible to have in an organization, unanimously endorsed the proposition which their leaders later laid before the congress and to which the out-of-the-state-owned farm paper takes exception.

* * * *

Who's Boss on Your Farm?

ARE YOU boss of your farm or is your farm boss of you? Do you drive your work or does your work drive you? Do you find work a pleasure or a drudge? Do you set out in the morning with a mountain of work in front of you, set your jaw, stretch your muscles and tackle it with a grim determination to reduce it to a mole-hill before night, or do you get a "pain in your back," drag yourself around like a sick calf, making this excuse and that excuse to yourself for your dread of the job that lies before you? It's mighty easy, you know, for a man to let his work get the better of him. As long as a man has the upper hand, drives his work every minute of the day, he seldom gets caught with his hay out in the rain. But work is an industrious fellow. There are no "off-days" for him. In sunshine and rain, winter and summer, he's always on the job piling up things for you to do. And if you don't do the job he has laid out for you today, you must do it tomorrow and there'll be tomorrow's job to be done also. There's no fun in working when work is boss. But the man who drives his work, from sun-up till sun-down, gets real joy out of his job, and is prepared for any emergency.

* * * *

Let George Do It

WHEN THE READERS of a publication want someone to pick the chestnuts out of the fire they say, "Let the editor do it." The average newspaper editor is as much in sympathy with the woes and trials of his readers as though he actually lived among them. Their troubles are his troubles and he never hesitates to rise in their defense whenever the opportunity presents itself. But where is there a newspaper editor who has not had the experience of being forsaken in the midst of the battle by the very ones who exhorted him to take up the cudgels. Imagine if you can the feelings of the general who in the thick of the fight suddenly turns to rally his soldiers and finds every last man of them taking to their heels leaving him to face the foe alone, and you will then be able to appreciate the feelings of the newspaper editor who leads you to battle only to be deserted at the crucial moment.

The newspaper that is not subsidized is a powerful force for good. Its voice carries far. It is the constant watchman of the people's liberties, the arbiter of their controversies and the avenger of their wrongs. If it has a mission, and of small value to the world, indeed, is the newspaper that feels it has no mission, that mission is to preach the truth and wage relentless warfare against the suppressors of the truth. It is the duty of the newspaper to ferret out wrongs and make an effort to rectify them even though it must fight the battle alone. But with how much greater vim it enters the battle and how much more effective is its fight when its readers bring up the rear in solid phalanx.

* * * *

A few weeks ago while talking to a merchant in the city I happened to mention "Farmers." "Say!" he says, "Them's the fellows that are makin' money; nothin' much to do only rake in the coin. Pretty soft." Why should the farmer go to the city and work 48 long hours every week for $1.00 or $1.50 an hour when he can take life easy on the farm and only work 100 hours a week for $45 or $50 a month and board, we want to know. "Nothing to do but rake in the coin." Yes, pretty soft, all right.—M. J. G.

WHAT THE NEIGHBORS SAY

INCONSISTENT

In your issue of Jan. 17, 1920, and in his fifth proposition, Judson Grenell says that women voters should scan carefully bonding propositions so "that the tax burdens laid may be borne by those directly benefitted." Elsewhere in the same article he says that "the immediate and greatest beneficiary of an expensive highway ought to be taxed in proportion to benefits conferred." And now comes the question, who are the ones mostly benefitted by our big highway bonding bill. Surely not the farmer for most of the state highways are being built to please resorters and other tourists. If a farmer happens to get on one of these big through lines he must keep near the ditch or be constantly ordered out of the road by the honks of the rich men's cars.

Then there are the men who supply the wants of the resorters, etc. The resort cities are much more prosperous than they could be were it not for the resorters patronage and this is greatly increased by the good roads. Then there are the big truckers and the big road jobbers. Where a lot of money is being spent for the public you must expect to find big grafters and big grafting and last, but not least, are the automobile makers. How much they have been benefitted can best be estimated by considering that autos cannot be used with much satisfaction on bad roads and then considering the remarkable growth of Detroit, the great center of the automobile industry.

A Detroiter recently told me that Detroit was now the fourth city in the union and that it was the automobile business that caused this big growth and it was expected that in ten years more Detroit would be the second city in the U. S. According to Mr. Grenell's 5th proposal, these are the classes that should pay the heft of the bond taxes.

This is fair not only because of the great benefits they get, but also because of the great harm they do to the roads.

But unfortunately, he does not mean what his says, for in the very next sentence (6th proposition) he proposes to encourage thrift by untaxing wealth, and that would let the whole job lot out of all taxation and what would there be left to tax after letting the rich out. Even with the help of the rich the tax burdens of the poor are almost unbearable. In this (Mecosta) county alone is a long list of places (mostly farms) for sale for taxes and the list would be far greater if this wicked proposal of letting the rich escape taxation should go through.

It would be class legislation of the worst sort and unconstitutional. It would intend to enslave the poor and middle classes and there is too much of that already. Why do the Fords, Armours, Goulds, Vanderbilts, Morgans and Standard Oil millionaires and others need help to build up greater fortunes? It is the number of happy homes in a country and not the number of millionaires in it that make it great and it is the sight of these great unearned fortunes that spreads discontent and helps pave the way for violence and a red revolution which will surely come if there is no hope of a more just distribution of the products of labor.

Finally, it would be well for the lady voters to remember that he has said in this same piece that a man will stick to his class prejudices when he is elected to office. We all know that Judson Grenell's prejudices are with the rich and he will certainly double cross the farmers if he gets a chance. Already he is throwing cold water on the plan to run farmers for state offices and why such a man should be put up to write for a farm paper I cannot understand for he is not a farmer and not in sympathy with farmers' ideals and his statements are often misleading.

It will take a lot of farmers chock full of farm ideals to equalize the prejudices already in the legislature in favor of other classes so that we can get a fair deal. Had we as a class been so inclined we might have got together long ago and had lot of class laws passed. Instead we listened to the smooth talk of other class men and elected them to office and they passed a lot of class laws that need repealing or amending. Look for some samples later.—*F. G. S., Blanchard, Mich.*

Mr. Smith and Mr. Grenell have been scrapping for a long time over "Site-Value" taxation, and in the heat of the controversy sometimes overlook the essential points. I am prepared to say in defense of Mr. Grenell that his prejudices are NOT with the rich as claimed by Mr. Smith. I am prepared to say further that he is a student and a thinker and that his heart is with the "common people." His treatise "What women should know about politics" which is running in installments in our Farm Home Section is positively and without exception the BEST contribution on political economy that I have ever read. It is written so simply and clearly that the reader is immediately impressed with the thoughts presented. Every male voter would find it to his alvantage to read the series on this subject. As for Mr. Grenell's views on taxation matters, they are held by millions of other people, laborers, farmers, professional men and organizations representing the various trades, whose very numbers and humble station in life make it ridiculous to charge that they are in "cohoots" with the rich to secure exemption from the payment of their fair portion of taxes. We do not endorse site-value taxation. Neither do we condemn it, but we believe in an unrestricted discussion of the subject by such readers as desire to express themselves, so long as they keep their remarks within the bounds of truthfulness and courtesy to those who dissent from their views.—Editor.

HOW TO GET RID OF THE REDS

I have long been a reader of your valuable paper and, thank you many times for your invaluable assistance to the farmers of the state.

Organized labor all over the country is going on strike after strike. One is hardly settled until another is on. We have seen in the last few months the steel workers and miners' strikes, and now comes the threatened strike of the railroad men.

There is another kind of strike more dangerous than the common strike of organized labor, that is the "Job Action or Sabotry" of the I. W. W. and other extreme radicals, which means to slow down or do as little as you can and get as much for it as you can. These men draw their usual wages while carrying on a more or less effective strike.

Such men have declared war to the end on the present system, and numbers are increasing very fast.

The farmers are carrying on a more effective strike than most people are aware of. When a farmer strikes he usually quits for good.

There are thousands of deserted farms in this country. Which means more mouths to feed and less farmers to grow the food.

In 1775 our forefathers declared war against a powerful nation, because the government of that nation in which they had no representative was trying to make them pay a three penny tax on tea.

Today in this country the farmers are paying a 2 per cent tax on the full valuation of their farms. Which, in many instances is more than the land will sell for.

How many representatives have the farmers and laborers in our state and national governments? Are we the descendants of the men of '76 going to sit still and allow a band of pirates and robbers to rob and plunder the nation that these man gave their lives for.

I agree with Mr. Marsh in that the farmers and laborers have much in common and that they should get together for political action. The men who are in control of our government today will do all in their power to prevent such a consolidation and any man who advocates it will be called a crank and a radical if nothing more. Lincoln said. "you can fool all of the people part of the time, part of the people all of the time, but not all of the people all of the time."

It is time that some of us at least stopped being made a fool of. They sent two million of us to France, many of whom never came back to make the world safe for democracy. What have we gained, thousands of the boys dead or disabled, the nation saddled with debt and now the government is trying to fasten on us the same military system from which we freed Germany.

The Big Interests are making the same mistake today that tyrannical governments have always made. Drunk with wealth and power they are trying to silence the rest of the people by force, which history shows never has been done and never will be. They are doing their best to drive this country into a war the like of which the world has never seen. The trouble in Russia would be but boy play in comparison.

Now my friends it is up to you, the farmers and laborers, of this country to prevent this trouble that is coming to our great nation. The only way to do it is by united political action and that speedily.

We want a government of the people, by the people and for the people, nothing more.

That would give us industrial justice and then we need have no fear of the red radicals.—*O. J. B., Hesperia, Mich.*

Unfortunately the most active elements in organized labor who seek a political alliance with farmers and are in a position to put it into effect are the very "reds and radicals" whom you criticize. Let organized labor clean house and sweep out into the rubbish pile the preachers of sabotage and syndicalism, and then they may have a fit place for farmers to enter.—Editor.

SELFISHNESS

Your appeal for good government is mighty good for a hungry soul who is waiting for the lack of good government.

I believe that the "chief purpose" of human life should be to learn the art of good government and is not this the "divine purpose" of our creator, God, when he told our first parents to multiply, replenish and subdue the world, to subdue the world means to govern it, not to destroy it by selfishness and iniquity.

There should be no conflict between true government and true religion. All true government like true religion comes from within the human heart, not from extreme radical parties. It seems to me that our body politics must have a change of heart to save the life of Uncle Sam, and the same may be said of all other political governments on earth.

You cannot govern others to a greater degree than you can govern yourself, and you cannot govern a people by a higher system of government than they are able to appreciate. All good government comes only from within each individual, never from external sources. Therefore, I say that indivdual self government is divine government and constitutes the kingdom of heaven. Be thankful for the grand opportunity here presented to prepare ourselves for the kingdom of righteousness by self government. The spiritual light of a new day has come. Human life in this world at present is ungoverned. Absence of government is anarchy, chaos,, confusion, disorder. A national government is no better than that of the individual who compose it, therefore, seek ye first the kingdom of self government and all else will be added thereto.

Principles of a reconstructed government are, first, a change of heart, which means a change of mental attitude in our fixed habits of thinking and though habits are the chief directors of human life and energy, therefore, to change your mental attitude is to change the direction of your life. Simple enough. Second, trust your conscience. Conscience is the voice of God, the more you trust it, the more it will serve and guide you. Third, learn to love your enemies as yourself. Try to realize that in the marriage of good and evil all things are divine. All evil is but ungoverned good. Like fire and water, it is evil only when ungoverned and good when governed. Chas McKay says: "There is but one victory worth the struggle; there is but one world to conquer; the victory over self; the world within."

The science of good government leads to the science of immortality plainly defined as follows: "To re-create and reconstruct the body as fast as it wears out, is death swallowed up in victory; is immortality realized." Wishing you abundant success and prosperity—A. G., Quimby Mich.

You are right. A nation is nothing more than a big family, whose rules of conduct are prescribed and administered by a central authority called the "government." The government will be exactly what the members of the family make it. A nation of selfish people cannot, it is quite manifest, write an unselfish and just code of laws. The importance of individual fitness to govern becomes immediately apparent.—Editor.

FARMERS DUE FOR AN INNING

Mr. Milo Campbell, of Coldwater, will have my hearty support for nomination for governor. Have known of him for some years as I am a Granger also a Gleaner. I have met him two or three times at state conventions. Believe he would make a fris' class executive of whom we would all be proud and would be a splendid representative of the farming class. The farmers of Michigan are showing the state that they are advancing very fast from what they were known as the "Old Moss Back" and are showing those who used this name in derision and contempt that they are as good business men as they. Surely they are entitled to this now for they need a governor who is in sympathy with their interests.—*Henry Motles, Mecosta County.*

If all the farmers have the same spirit as you, and stay by the men who are entitled to their support they will sweep everything in the next election.—Editor.

Campbell Not Member of Illinois Manufacturers Association

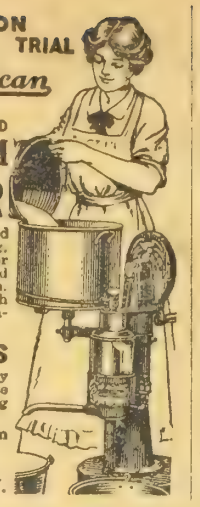
The writer has enjoyed reading your paper very much and emphatically approves your stand about the financing of the State Fair Bureau It is absolutely necessary, in bold to have the confidence of the people of the state, to divorce the organization from "Big Business," so called altho the financing of the bureau may have been harmless and well-meant. I note that Mr. Milo Campbell has been "nominated" by the farm organizations for governor at a meeting in Detroit. The writer was told while in Chicago attending a Public Ownership Conference, that Mr. Campbell had recently joined the "Illinois Manufacturers' Ass'n," and while I did not believe it, I think it should be at once cleared up if Mr. Campbell is to be our choice for governor. I do not know Mr. Campbell personally at all but know he has done much good.

However, I do not believe that a man who is a member of the I. M. Ass'n would appeal to the farmer electorate, do you? I have no other choice myself for governor but want to get this straight.—*E. L. Woodhams "Mentha Plantatia," Kalamazoo County.*

Your letter was referred to Mr. Campbell who replied as follows:

I am not in any manner associated or connected with the Illinois Manufacturers' Association. Some months ago I received a long distance telephone message, asking me to attend "Our Country First" conference at Chicago, as a representative of the farming interest. I did so, associated with more than a thousand manufacturers and associations of the country. The meeting was called through the initiative of the Illinois Manufacturers' Association, as I afterward learned. I was placed upon a committee of resolutions and prepared all of the resolutions, including the preface that referred to farming. I made a fight upon the floor for the adoption of the collective bargaining resolution for farmers, and won out. I have received more compliments from farmers and farm organizations over the country for this effort than for almost any other, in the last few years. I am sending you a copy of the resolutions and have marked the paragraphs that I prepared and succeeded in getting adopted. I think the place to fight is where the [illegible] is located—in the cities and among business men is where I find located more or less the opposition, or misunderstanding of the farmer—It is in such bodies and face to face, I have been fighting the battle for the farmers of this country. I am sure that Mr. Woodhams will approve of this course when he knows the facts. —*Milo D. Campbell, Coldwater, Mich.*

$19.95 Upward ON TRIAL
American
FULLY GUARANTEED CREAM SEPARATOR



A SOLID PROPOSITION to send new, well made, easy running, perfect skimming separator for $19.95. Closely skims warm or cold milk. Makes heavy or light cream. Different from picture, which illustrates larger capacity machines. See our easy plan of

The Farm Home
A Department for the Women

AMERICA FOR AMERICANS

By MABEL CLARE LADD

JUST WHEN we began to think that this country of ours was fast becoming a mecca for the derelicts of all the old countries of the world, and the Bolshevists began to think that they could indeed run things here, the long arm of the law reached out and gathered them in—and as the muscles of the law's arm tightened, they were drawn into the circle which ended in New York where they were put on board ship after ship and sent back home.

While we women are making a study of how to vote, it is interesting to note the topics of the day and see where in proper legislation could remedy present evils. Surely the question if immigration laws is one of them.

In a recent meeting held under the auspices of the Y. W. C. A. and Y. M. C. A. in New Jersey, Major General Wood advances the following suggestion which it would seem would be a speedy and lasting solution of this vexing problem of un-Americanism which has been felt more keenly since the great world war than ever before:

"Smash the red flag; bar the nation's gates to undesirable immigrants and Americanize the desirable ones; teach Americanism in our schools and see that the teachers are properly paid and cared for; tolerate but one flag, and one language. There is a great deal of uneasiness right now in our country. This is no time for experiments; this is no time for new theories; this is no time for loose thinking. The watchword of this country today should be 'steady' and the slogan should be 'law and order,' the rights of property, the courts, the constituted authorities, all of these things."

General Wood declared that the red element can be readily disposed of thru deporting those who are aliens and turning the citizen portion over to the court "We must look very closely into the quality of our immigration and look into it before it comes aboard ship and comes over here. We are very proud that America has been called for generations, 'the refuge of the oppressed.' Let us be very careful to see that America does not become the dumping ground of the degenerate.

"What is the use of bringing these people in here who are unfit to be citizens, who are moral degenerates or descendants of criminals?

"We have had a good deal of labor trouble in some sections of the country lately. We find 95 percent of American labor to be clean, square and sound. But we find the vicious element from the other 5 percent and while we are getting rid of a bad lot, don't let us take in any more unless we know who they are."

And another thing which we as law makers must take into consideration is the men whom we elect as our immigration officers. Unless they are Americans—through and through, what good to make laws concerning this vital point. We who are born in this country would prefer that this officer be American born, for while we have all respect for the foreign born who comes to our shores and takes out his papers, still we have a feeling that he cannot have the same viewpoint as a dyed-in-the-wool American.

We hold the ballot. We can demand that men be nominated whom we wish to elect and can demand that laws be enacted which will make of this what it's title stands for "The Land of the Free" as well as the land of the oppressed.

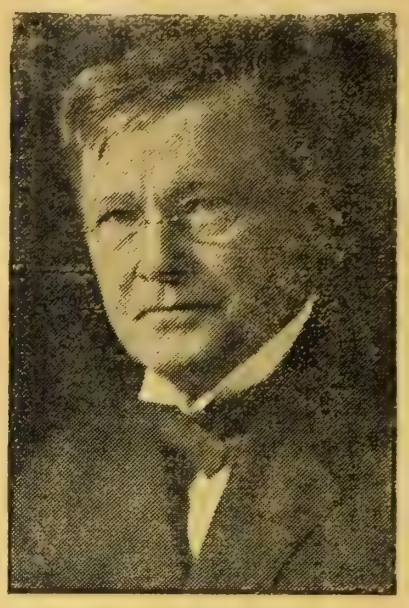
FIRST AIDS

WHEN A child gets a bad fall, peel and grate a raw potato and lay on and the swelling will be reduced in a short time.

The white of an egg applied to a burn or scald is most soothing and will cause the wound to heal quickly. If the burn is severe and you are near a druggist, get an ounce of carbon oil.

If your clothing has caught fire; don't run, especially down stairs or out of doors. Roll on carpet or wrap in a woolen rug or blanket. Keep the head down so as not to inhale the flames. Dirt, sand or flour is the best extinguisher or smother with woolen rag, blanket, tablecloth or carpet.

Fainting—Lay patient flat and loosen tight clothing around neck, chest and waist. Allow free access of air. Bathe face and hands with cold water. When conscious give tea or black coffee.



Mr. Judson Grenell

WE BELIEVE that our readers will be interested in meeting Mr. Grenell, who has been conducting this series of very comprehensive articles on Women in Politics, and so we take pleasure in presenting him to you this week.

Club women of the state as well as liberal minded men everywhere concede that Mr. Grenell's treatment of the subject "How to use the Ballot" is absolutely the best that has been written. We will depart from our regular series from his Brochure this week and print his latest terse challenge to us women:

IS THE INDEPENDENT WOMAN VOTER GOING TO BE A FACTION?

(By Judson Grenell)

Strenuous efforts are now being made by both the Republican and Democratic parties to capture the votes of the newly enfranchised women of America. There are something like 13,000,000 of these votes of which at least 700,000 are in Michigan—enough to capture every office in the gift of the people, if they were united.

Mrs. Carrie Catt, president of the National Woman Suffrage Association, is counciling women voters to be independent of party affiliations. She says it is the only method by which the ideals of government for which women stand can be realized. If they tie themselves to parties, they will lose the most of what they have gained by being franchised.

This is excellent advice. A woman voter tied to a party, and especially a party so thoroughly organized as is the Republican or Democratic party, will lose most of her influence and at least half of her vote.

Political ambitions make cowards of politicians. It interferes with initiative. It stifles freedom of expression. It changes an otherwise competent public servant into the puppet of those who control special privileges.

Too many men inherit political beliefs and party affiliations, and if women voters are to become the victims of the same policy, it would be better had they never voted—better for themselves, better for the state, better for the entir country.

The women of America have a great political future before them if they will vote intelligently and independently and wisely on the social, industrial and economic problems facing the nation.

But they will never do this if they tie themselves to the old parties.

Potatoes on the Half Shell

Cut baked potatoes in halves lengthwise. Remove centers carefully. Mash, season to taste with salt, pepper and butter. Moisten with hot milk. Pile potatoes back lightly in the shell. Put in oven to reheat and brown slightly.

Parsnip Fritters

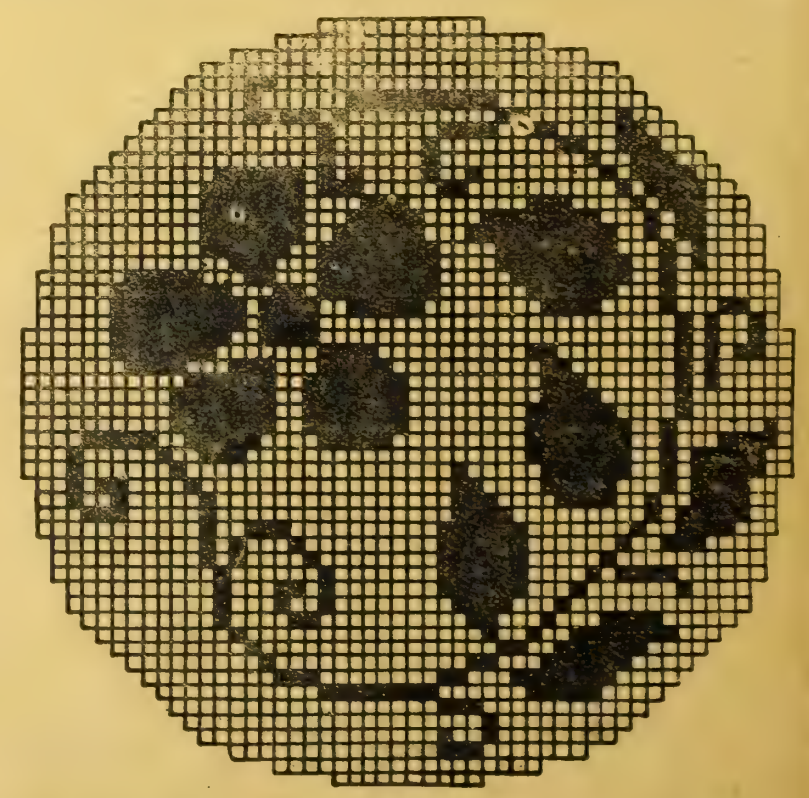
Wash parsnips. Cut in pieces two inches long. Cook in boiling salted water until tender. Drain, plunge into cold water to remove skins easily. Mash, season with salt, pepper and butter, shape in small, flat, round cakes, roll in flour, fry in butter or drippings.

Host—"Yes, I get rid of a lot of these cigars during the year—giving 'em to my friends, y'know."

Connoisseur—"H'm. Get rid of a lot of friends, too, don't you?"

"You used to hate work."

"I hate it yet," replied Plodding Pete. "But I'm goin' to keep at it. If you get in the habit o' loafin' now, some member of the I. W. W. is liable to step up any minute an' call you 'brother.'"—Washington Star.



ROUND PILLOW

These pillows are very attractive when made with a central filet crocheted insert. The one shown—the wild rose pattern has been very popular. The cushion is made of silk or satin in your favorite color. These cushions fit the back and seem to just fit that hollow corner in chair or davenport. Crochet cotton No. 30 is used.

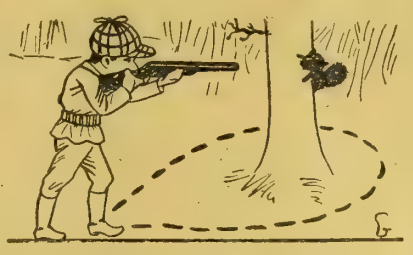
The Children's Hour

DEAR CHILDREN: I want to urge more of you children who can draw or are studying drawing in school, to enter the contest for prizes, for it will help you and when others see what you have done, they too, will want to compete for prizes. The other day a great big man came into my office. And you can't guess what he wanted, so I will tell you. As a young boy he had entered a drawing contest conducted by the Gleaner and had won a prize. Although he was grown to manhood, the influence of his boyhood achievement lingered in his memory and he was anxious to go through the files at the office and see once more the old drawing. So we looked it up for him, and found that that paper used to group four wrawings each month and print them, and I will do the same if there are enough good ones received with the names of the winners underneath each drawing. Now let's see if we can't have enough to form a group in our paper once each month.

Draw your picture only in black and white as the colors won't reproduce and use black ink if possible—but if you haven't it, use a good lead pencil and we will have our artist trace the drawing so it can be photographed and printed. Remember this is open to girls as well as boys. —Affectionately yours, LADDIE.

Dear Laddie:—This is the first time I have written so I cannot be expected to fit my thinking cap on very tight. I am a boy of 13 years; weight 114 pounds, and am 4 feet and 10 inches tall. I have two brothers and four sisters. We live in an extensive farming country and take interest in your paper. For pets I have a pair of rabbits and a fox hound. I take a great interest in the boys' and girls' letters and would like boys of my age to write to me. I am interested in stamp albums and would like to hear from some boy that is too. Well, goodbye and good luck and I surely hope to see my letter in print.—Louis Gardner, Frederic, Mich.

Dear Laddie:—I am a girl 9 years old. I am in the 4th grade. We are driven to and from school in a school bus. For pets we have a canary bird, named Bridget, one cat, Jet, and a dog, Shep. I have two brothers and one sister, Russell, Howard and Beth. We live on a 40-acre farm. I would like to see my letter in print—Ruth Cunningham, Winters, Mich.



OUR PUZZLE CORNER

The Hunter and the Squirrel

A hunter sees a squirrel on the trunk of a tree, and tries to shoot it. As fast as he moves around, the squirrel moves also, and always keeps the tree between himself and the hunter. The hunter walked around the tree. Did he go around the squirrel?

THE LONG WINTER TRAIL

Ho, there's ice on the streams, there's zest in the air,
There's an undefiled blanket of snow everywhere:
There's frost on each twig and each roadside weed
Is burdened with rubies and diamonds for seed,
And through the long stretches of deep forest lanes
A tense white crystalline silence reigns.
So come with me now over hill over vale!
Come away with me now on the long winter trail!

Ho, the storm-clouds are tumbling thick in the sky,
Flinging their pellets of sleet as they fly!
The snow-wreaths are slithering swift in the road.
The hoary old wind from the North is abroad!
Out of the arctic waste, barren and vast,
Rushing with fury—a terrible blast
Come along with me now—push into the gale!
Come along with me now on the long winter's trail!

Oh, there's beauty to me in the soft, rounded lines
Of the snow-moulded hills and the fleecy-crowned pines;
There's music to me in the squeak of the snow,
And the gurgle of streams as they hurry below
Their blankets of ice. And there's joy in the fight,
In matching my strength with the storm-monarch's might.
There's health in the open—hearty and hale!
Ho! Come with me now on the long winter's trail!

—The Cave Scout in the January *Boy's Life.*

THE WONDERFUL ADVENTURES OF A RAINDROP

Part II.

WHEN I heard millions of silvery voices chanting to a music that was like the tinkling of little guitars or ukeleles—
Between the rain and the rainbow
A magic secret lies—
When the sun and the rain are meeting
Across the cloud skies.

Here in the heart of the Garden
A magic wonder wakes
Hark to the voice of the raindrops
Before the rainbow breaks!

"Then out of the raindrop floated an airy form. I can hardly tell you anything about it, yet it seemed to my inside eyes to be a very beautiful dream-figure, with deep blue eyes and soft floating hair that changed every minute with gleaming lights and rippling shadows, and its dress was soft and floated like mist full of rainbow colors. The figure seemed to rise until it swayed gently just in front of me, looking deep into my eyes. Then it began to speak in a sweet, silvery voice like the voice of a little brook in the quiet woods.

"'This is the speaking hour, Garden Lady, as my friend, the Scarecrow said, and I will tell you some of the many adventures of the Raindrops.

"'Indeed, so many adventures have I had that I can not remember when they began, but part of them come back to me now, as I look into your eyes, Garden Lady, and what I remember I will tell you if you will lend me words. You see a raindrop can not speak in words.

"'Out of a mist and darkness I worked to find myself in a blue, blue cradle that was swinging to and fro over what looked like another cradle as blue as itself, only prettier.

"'I let myself slip from the blue cradle into the other one, and found myself in a little hollow place among rocks, about which fringy green things and bright nodding bluebells grew. It was from a bluebell cradle that I had slipped into the other blue cradle in the hollow. There I found many more like myself, all shining and floating about. But darkness dropped down on us, and out of the darkness came a great sputtering and splashing and hundreds of little fairy creatures dressed in silver leaped in among us, spreading out fringy skirts as they danced and skipped about. We all laughed and took hold of hands just as the raindrops did that fell in the shower a few minutes ago.

"'Then suddenly we were all joined in one, yet separate, too, in a way! and we went floating, flowing, out and down—down, crying out, singing and laughing as we ran. We were frightened a little, because we didn't know where we were going. And where do you think we were going Garden Lady?'"—By Ethel Allen Murphy.

(To be continued)

Make those Home Interior Improvements NOW

THIS is the season when we most appreciate the home comforts we have—and it is likewise the season when we can best add those home comforts we lack. Interior remodeling and refinishing and the making of built-in furniture (which lasts as long as the house) can be accomplished best at this time, when outdoor construction is interrupted by bad weather.

IF you have remodeling to do and interior home comforts to add, do it now—and when you go to your home lumber dealer for the material, ask for

Southern Pine

"The Wood of Service"

SOUTHERN PINE is not only the most workable and economical highgrade wood for general building purposes, but it has a varied and beautiful natural grain, and, properly treated, it takes and holds perfectly paints, stains and enamels.

ASK your home dealer to quote you prices on short-length Southern Pine material that is perfectly adapted to many uses in interior finish and trim, yet costs less than the standard long lengths. And ask us for the handsome and valuable book, "The Interior of Your Home," which will be sent FREE, promptly on request and which tells all about how to treat Southern Pine with paints and stains

No. 2 Red	2.30	2.30	2.38
No. 2 White	2.28	2.28	2.34
No. 2 Mixed	2.26	2.27	2.33

Wheat has not changed in price to speak of, during the past week, altho it has shown a general condition of shortage. Millers simply cannot obtain enough of the product to operate as they desire. Their customers are demanding deliveries, but without the grain there can be no flour. Three of the greatest milling companies in the nation are closing down a total of ten mills, because of this shortage.

WEATHER RULES CORN

CORN PRICES PER BU., JAN. 27, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.70
No. 3 Yellow	1.54	1.54	
No. 4 Yellow	1.52		
PRICES ONE YEAR AGO

No. 2 Yellow			1.40
No. 3 Yellow	1.25	1.22	1.37
No. 4 Yellow	1.20	1.18	1.35

Long ago the shortage of cars and power had its effect upon the corn movements and markets. This month is featured more than ever by the scarcity of rail equipment and coal. One of the outstanding results of that condition during the past week was the embargo which hit grains with a bang. The bulls grew alarmed for a day or so, but then the news arrived that the embargo soon will be off. Moreover, the weather man stepped into power in the corn market at the close of last week and the opening of this. The weather is bad over the areas supposed to ship corn, and movement is getting less and less in numerous centers.

Bears are going over in flocks to the bull side at the opening of the corn markets this week. Bullish news includes the reports that they are not such great stocks of corn left in the hands of farmers as supposed.

Although corn is not active at this time, it shows great reserve strength and the price is a few cents above that of a week ago. Continued cold weather and car shortage difficulties are forecast for some time to come, indicating a prospect of firm prices.

OATS WAY UP

OAT PRICES PER BU., JAN. 27, 1920			
Grade	Detroit	Chicago	N. Y.
Standard	.90	.89	1.01
No. 3 White	.89	.88	.99
No. 4 White	.88	.86	.97
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
Standard	.58	.56	.67
No. 3 White	.57	.54	.65
No. 4 White	.56	.53	.62

Oats have been doing the fancy aeronautic stunts at the market arenas in the past week. In the New York markets, oats are now quoted at more than a dollar a bushel. Prices would go up higher still were there any to be had to give life to bidding, says a Detroit market expert. A dispatch from Minneapolis says that elevator men are unloading some of their corn and wheat, but none of their oats, which they are holding for a still higher figure than offered at present. No. 2 white in Detroit has gone up to 90 cents per bushel with bullish predictions shoving it higher. The shortage of the crop is being realized more fully every day.

RYE AND BARLEY

Compared with last week's figures, rye and barley have scarcely budged in price levels, rye dropping one cent and barley remaining the same. Rye has been easy, due to foreign export news, but the prices seem inclined to drop no farther. Detroit quotes rye quiet and steady with cash No. 2 at 1.73; barley, cash No. 3, $3@$3.20 per cwt.

LAST MINUTE WIRES

DETROIT—Corn and oats firm; rye weak owing to let up in shipping demand. Hay firm. Beans easy. Cattle dull. Hogs strong.

CHICAGO—Corn weak and lower due to increased movement. Wheat, oats and rye inactive. Cattle and sheep strong.

Weekly Trade and Market Review

BUSINESS in many ways was never better than at present, but along with this are many obstacles which cause hesitancy in investment. A great financial expert last week told several hundred manufacturers and financiers in Detroit that they should prepare against the panic likely to come in 1921. Here are the chief obstacles which business and trade are bucking just now: Feverish attacks against the "high cost of living," conducted by society women or politicians, usually not well grounded on the fundamentals of business; car shortage; famine of motor power; poor transportation; rumors of great strikes; social unrest; bad foreign exchange conditions; presidential campaigning and uncertainty as to America's future relations with Europe.

Along with these conditions we find the steady rising of prices. Heavy buying and orders are being placed on all sides. Considerable building is going on, and there is enormous demand for raw materials, the supply of which is entirely too small. Production is low and consumption great.

The Seventh Federal Reserve Bank of Chicago, reports great prosperity generally for the Middle West, including most of the agricultural districts. Big industrial cities, located in the agricultural districts, have created huge demands for foodstuffs of all kinds. It is believed, however, that good times must find a turning point before long.

Grains in general have been boosted by bad weather and small offerings. Oats made notable advances, and corn gained a few cents. Wheat stayed at about the same prices as a week ago, and beans dropped a little.

BEANS DROP A LITTLE

BEAN PRICES PER CWT., JAN. 20, 1920			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.25	7.75	8.00
Red Kidneys		15.00	14.75
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
C. H. P.	8.00	8.75	6.75
Prime	7.00	7.75	9.00
Red Kidneys	12.00	12.50	13.25

Beans, after a pretty steady condition for a week or so, eased off ten cents in the Detroit markets at the close last week with the figure at $7.25. There has not been much activity in the bean market, however.

The following interesting news item appears in the Huron County Tribue:

"That beans are still one of the best paying crops for Huron county farmers, notwithstanding the fact that they are not quoted as high on the market as they were when the peak was reached three years ago, when the war was in progress and an extraordinary demand was created, is attested by the large number of farmers, who were interviewed on the subject this week, and who unhesitatingly endorse this as one of the staple money crops for Huron county farmers."

SPUDS HIGHER AND SCARCE

SPUDS PER CWT., JAN. 20, 1920		
	Sacked	Bulk
Detroit	4.90	4.80
Chicago	4.90	4.80
Pittsburg	4.85	4.70
New York	4.80	4.60
PRICES ONE YEAR AGO		
Detroit	2.00	1.90
Chicago	1.95	1.85
Pittsburg	2.30	2.20
New York	2.50	2.30

Demand for potatoes is keeping up well at most markets and prices are inclined upward. It is hard to get the quantity and quality desired. Stormy weather has played havoc for some retailers and shippers, inasmuch as towns have been snowbound and all shipping has been delayed.

The potato situation in Michigan is somewhat unsettled. The prevailing high prices induce many growers to offer their stock, but others are indifferent and prefer to hold, expecting even higher prices in the spring.

The shortage of cars is curtailing movement because dealers do not wish to stock up at present prices with no certainty of a car supply. Dealers appear anxious to sell, but are being forced to reject orders on account of car shortage.

Wide range of price prevails at different loading stations, some growers receiving as high as $3.50-$3.65 per 100 pounds, although bulk of sales are made from $3.25-3.35 and some as low as $3. Dealers located in districts served by two or more railroads and consequently able to obtain cars, are willing to pay more to growers than dealers depending on only one line. The indifferent attitude of growers, the car shortage, and the cold weather of early winter are the principal reasons for the comparatively light movement from Michigan, compared with some other potato-producing states, although Michigan usually moves a large percentage of its crop during the months of April and May.

There is a greater demand for hay than there is supply. The cold weather and car shortage are largely responsible for this condition, it is believed. Very firm markets prevail for hay in most parts of the country. In Detroit prices went up around a dollar a ton in the past week.

DETROIT PRODUCE MARKET

Butter is easy and a little lower. Offerings are increasing and consumers are not active buyers. Receipts of eggs are increasing, but there is a corresponding increase in demandand the market holds steady. Storage eggs are active. The poultry market is firm in all its lines. Receipts are not large and there is a brisk demand, especially for chickens and hens. Apples are dull and easy. There is not much doing in any line of fruit.

Butter — Fresh creamery firsts, 61 1-2@62c per lb.; fresh creamery in 1-lb. 61@63 1-2c per lb.

County Crop Reports

GENESEE—Farmers are working up wood, doing team work, opening up the roads and doing various chores on the farm. The weather has been very cold for the last several days and we have had quite a little snow. The snow covers the ground quit high in the roads. Several men and teams have been working on the main roads and will get them in good shape in a day or so. Wheat and rye are not taking any harm now. The farmers around Swartz Creek had a meeting a couple days ago and have formed a co-op rative association, and expect to buy the elevator at Swartz Creek. Prices at Flint are: Wheat, spring, $2.60; red, $2.50; white, $2.48; corn, $1.40; oats, 91; rye, $1.60; hay, No. 1 timothy, $24; and $28; No. 1 light mixed, $22 and $25; beans, (C. H. P. Pea) $6.75; red kidney, $11; potatoes, $2.25 and $2.50; onions, $7; cabbage, $5 per bbl; cucumbers, $2.50 per bu.; poultry: hens, 24; springers, 24; ducks, 32; geese, 28; turkeys, 40; butter, creamery, 68 and 70; dairy, 60 and 63; eggs, 75; live stock, sheep, $7 and $8; lambs, $10 and $11; hogs, $15; beef steers, $8 and $9; beef cows, $6.50 and $7 50; veal calves, $17 and $18; fruits, apples, $2.50 and $3.50.—C. S., Fenton, Mich.

MONROE, (N. E.)—We are having fairly nice winter weather with some storms. Wheat has a nice covering of snow. Farmers are doing chores and some are making up wood. The last piece of standing timber of any size left here has been sold and will be cut off soon. Everything is quiet around here now. Farmers are not selling much; mostly sold out; not many auction sales. Markets are picking up some and we expect them to hold firm with few exceptions. Farmers are quite unanimously agreed on trying to elect a governor and legislature that will give them an equal chance with other industries.—G. L. S. The following prices were paid at Newport:—Wheat, $2@$2.35; corn, $1.85; oats, 82; onions, 7; cabbage, 6; hens, 24; springers, 27; ducks, 29; geese, 24; butter, 60; eggs, 70; sheep, 8; lambs, 12; hogs, 13; beef steers, 10@12; beef cows, 6@7; veal calves, 18.

TUSCOLA— Farmers are laying low this weather, just keeping fires going and doing chores. No ice is being cut yet. It is about 20 inches thick now. Weather very cold with quite a lot of snow. We are not selling much but a few hogs and some corn, holding beans for a higher price. Most of us have our taxes paid, so we can stay one year more. Two more farmers have quit and gone to town, can't make both ends meet so they say. More are going in the spring, if taxes keep on going up there won't be any farmers left. The farms will be run by city guys who don't know a plow from a buck saw. The prices offered at Caro are as follows: Wheat, $2.35; corn, $1.78; oats, 81; rye, $1.65; hay, No. 1 timothy, $26.00; No. 1 light mixed, $25; beans (C. H. P.) $6.25 per cwt.; potatoes, $1.30; poultry, hens, 25; springers, 26; geese, 26; ducks, 26; geese, 18; btuter, 56; eggs, 50; beef steers, $5; beef cows, $5.—K. B. C., Caro, Mich.

SANILAC, (Central)—Are having real winter weather, at present, rather cold, with quite a bit of snow in some places and then none on others. There is still some hay being baled and it is selling around $20 a ton to the farmer. Not much stock moving at this time. Most of the farmers are busy doing chores and getting up some wood. Not much sickness in the farming districts as yet. Stock seems to be healthy.—A. B. The following prices were paid at Sandusky —Wheat: red, $2.25; white, $2.22; oats, 83; rye, $1.62; barley, $3; peas, $2.25; clover seed, $28 bu.; hay No. 1 light mixed, $20; buckwheat, $2.25 cwt.; seed Alsike, $$28; timothy seed, $4.50; beans, $6.75; butterfat, 60; eggs, 64.

MONTMORENCY—Weather cold with much snow. Farmers who have hay are selling at $30 per ton. No market close for dressed pork; a fair amount of cattle being wintered and most all in good shape. Fields have been bare most all winter. Most farmers are working in the woods as wages are extremely high here this year.—P. H. The following prices were paid at Atlanta:—Wheat, $2.40; corn, $2; oats, $1.10; hay: No. 1 timothy $31; No. 1 light mixed, $30; wheat-oat, 17; potatoes, $2; onions, $2.50; hens, 25; turkeys, 45; butter, 50; butterfat, 70; eggs, 70; lambs, 15; hogs, 12; beef steers, 7; beef cows 6; wool, 60; apples, $2.

GRAND TRAVERSE—No mail went the latter part of last week so missed sending report. We are having nice weather at present. Farmers are mostly doing chores and putting up wood. Another old resident died here Jan. 10th, Mrs. Edgar Pray. She had lived here 58 years. Not much being sold at present as roads are bad.—C. L. B. The following prices were paid at Williamsburg:—Wheat, $2.25; corn, $1.50; oat. 85; rye, $1.50; hay, $$32; potatoes, $37.5; butter, 50; butterfat, 69; eggs. 55.

JACKSON—The butchers in Jackson are paying 18 and 19 cents for dressed pork and 12 and 14 cents for dressed beef but they are still charging 35 and 40 cents for it, the same as last summer when pork brought 24 cents alive before the investigation. Down with investigations! They do no good to anyone only the packers.—B. T. The following prices were paid recently:—Wheat, $2.30; oats, 83; rye, $1.65; hay, $27; rye-straw, $11; wheat-straw, $11; oat-straw, $11; potatoes, $2; hens, 35; butter, 64; butterfat, 70; eggs, 75; beef steers, 12; beef cows, 8; ;veal calves, 18; sheeu, 9; lambs, 18; hogs, 12 1-2.

MANISTEE—The farmers are busy doing chores, cutting wood and breaking out roads for it snows the most of the time. Pototoes keep moving a few at a time as the price keeps raising. Some are buying hay but the most of the farmers are feeding straw and the stock shows it. This county will have a lot of thin stock next spring. Lots of horses dying in these parts from different causes. If I were to have a guess it would be too much rye, straw and not enough grain. Another auction sale this week.—C. H. S. The following prices were paid at Bear Lake:—Wheat, $2; corn, $1.40; oats, 90; rye, $1.50; hay: No. 1 timothy, 35; No. 1 light mixed, 32; straw-rye, 10;; wheat-oat, 62; beans: pea, $6.25; red kidney, kidney, $10.50; potatoes, $3; hens, 22; butter, 55; butterfat, 65; eggs, 56; hogs, 12; beef steers, 7; beef cows, 5.

MIDLAND—The people are hauling wood and cutting same. The weather is rather cold this week with some snow and wind. The ground is frozen with about two inches of snow in some places. It is also drifted in places. A few beans and corn going to market. Coal is very scarce. Many of the farmers are selling or have rented their farms and have moved to town.—J. H. M. The following prices were paid at Midland:—Wheat: spring, $3; fall, $2.36; corn: shelled, $1.40; ear, 60 dry; oats, 83; rye, $1.64; hay, baled, per ton $$22.26; straw-rye, $11@$13; beans, $6.75; potatoes, $1.75; onions, $1.75;; hens, 17; springers, 20; butter, 60; butterfat, 70; eggs, 60; sheep: live, 8; lambs, live, 10; dressed, 20; hogs: live, 12; dressed, 16@17; veal calves, live, 12; dressed, 20.

MONTCALM—Farmers are hauling ice and farm produce. Soil is getting bare as the high winds have blown the snow in heaps. Farmers are holding potatoes at present because the market is flooded. —G. B. W. The following prices were paid at Lakeview:—Wheat, $2.50; corn, 68;oats, 90; rye, $1.50; hay:No. 1 timothy, $30; No. 1 light mixed, $25; straw-rye, $10; wheat-oat, $12; beans, pea, $6.50; red kidney, $16; potatoes, $3.50; onion, $1.50; cabbage, 8; hens, 19; springers, 21; ducks, 22; geese, 24; turkeys, 25; butter, 60; butterfat, 68; eggs, 60;; hogs, 19; veal calves, 15.

COOK, (Ill.)—A light snow has covered the ground since the last of November. The motor trucks that haul the milk to the Chicago market have been traveling back and forth daily and have not been laid up as in former years. We have had some heavy cold zero weather for a long time. All the ice houses were filled before Christmas with 14-16-18 in. thick ice. Rural school teachers scarce; salaries range from $80 to $125 a month. Many empty and scarce feed lots are to be found all over northern Illinois. No hogs are being raised or kept for next year because hogs are cheap and corn is high.—D. F. T. The following prices were paid at Arlington Heights, Ill.—Wheat, No. 1, $2.75; corn, $1.41; oats, 82; rye, $1.60; hay, $29; rye, $15; wheat-oat, $13 @$14; potatoes, $3.20 100 lbs.;; hens, 26 hogs, 12 1-2; veal calves, 18@22.

ARENAC, (East)—Weather cold and stormy with the mercury down to 22 below. Roads drifted badly. On Jan. 22, E. Spencer, one of our prosperous farmers, had the misfortune to lose his barn by fire. Fire is thought to have been caused by gases while hulling clover. The barn was a new one and full of hay. All stock and tools were saved. No insurance and loss will reach $2,000. Farm products are just about holding, excepting hay which is very high and scarce. Live stock being sold at low prices. Auction sales are plenty and bringing good prices.—M. B. R. The following prices were paid at Twining:—oats, 80; beans, $6.50; hens, 20; springers, 20; ducks, 22; geese, 22; turkeys, 25; butterfat, 58; eggs, 63; hogs, 12 1-2.

GRAND TRAVERSE—It is very quiet among the farmers and fruit growers here. Some are cutting wood. A few logs are being hauled to market but the weather has been very bad for business in the country. Farmer are buying quite heavily through the co-operative association. Fertilizer, spray dope, hay feed of all kinds and flour are the principal commodities purchased and quite a saving is realized on almost everything. People quite healthy so far this winter;; no flu here.—A. C. The following prices were paid at Traverse City:—Wheat, No. 1, $2.25;; corn, $1.45; oats, 85; rye, 88; hay, $35; straw-rye, 17; wheat-oat, 18; beans, $3.75; red kidnye, 11; potatoes, $2.10; veal calves, 18; apples, $2.

MIDLAND—The following prices were offered on Jan. 23rd by the Orr Bean & Grain Co., at Midland—Wheat, fall, $2.50 shelled, $3; corn, shelled, $1.45; oats, 84; rye, $1.64; buckwheat, cwt., $2.85; beans, $6.75; barley, cwt., $3; peas, cwt., $4.—O. B. & C. Co., by C.

SHIAWASSEE—The storms of the past week accompanied by high winds have blocked the roads to such an extent that farmers have to turn out and break the track to allow the rural carriers and milkmen to make their regular trips. It is unusually cold here, the thermometer for the past four days showing from six to ten degrees below zero, with prevailing high northwest winds. Loose hay is in lively demand at $20 at the barn, at stack.—D. H. M. The following prices were paid at Corunna:—Corn, $1.52; oats, 82; hay: No. 1 timothy, $21; No. 1 light mixed, $20; straw-rye, $10; potatoes, $2.25; butter, 60; eggs, 70.

THE CAR OF ECONOMY

GRANT SIX

Economy is a relative term. Many people confuse economy with cheapness. But to the thinking man or woman there is little chance for such confusion of ideas. For economy is not cheapness. The things which cost least are often most wasteful. And wastefulness is never economical.

The Grant Six is an economical car. It is a high grade motor car. It delivers exactly what buyers of its type want. It brings you beauty from which springs a feeling of pride in ownership. It brings you satisfactory performance, quick acceleration, marked flexibility, hill climbing ability, ample power.

It brings you riding comfort. It brings you dependability founded on correct engineering and high grade construction. It brings you freedom from worry because of its substantial construction. It brings you freedom from costly repair bills.

Its simple, accessible mechanism requires little time or effort to look after properly. Its makers have incorporated in the Grant Six design every known feature that will contribute to your comfort, pleasure and permanent satisfaction.

Its light weight insures low tire cost, low gasoline cost, and its great strength insures long life.

Therefore, because it brings you what you want at an honest, fair price, because it brings you real value for every cent of your investment, it is a truly economical car.

Write for new illustrated catalogue and name of Grant Six dealer in your community.

FARMERS SERVICE BUREAU

SEVEN PER CENT HIGHEST LEGAL INTEREST RATE

What is the usual rate of interest on first or second farm mortgages now? I understand it is 7 percent or 8 percent. Am I correct? Can a wife hold a mortgage on property owned jointly by her and her husband? To whom would this mortgage go at her death?—Subscriber, Grand Ledge, Mich.

The usual rates on farm mortgages is different in different parts of the state. However, seven per cent is the highest rate allowed by law for either first or second mortgage. A wife may hold a mortgage upon property owned jointly by herself and husband. In case of her death, it would descend as other personal property, if not disposed of by will. If she has but one child after payment of debts and administration expenses it would be divided one half to her husband and one half to the child. If she leaves more than one child one third would go to the husband and the rest be divided equally among her children.—*W. E. Brown, legal editor.*

MARKET FOR WOOD

Do you know of any reliable wood-fuel company in Detroit or Flint? I have several car loads of wood for sale. It is maple, beech, birch and ash and I don't care to sell it to local dealers for their prices.—A. M. B. Farmer, W. E. R., Curran, Mich.

The United Fuel and Supply Co., of Detroit, is considered a reliable concern and it quotes prices as follows:

"While we handle wood, we cannot quote a definite price on the same inasmuch as the market on wood changes almost daily. At the present time we are in the market for beech and maple, seasoned body wood cut in either 16 in. or 4 ft. lengths. We could pay you 12 per cord f. o. b. Detroit of 128 cubic feet for 16 in. wood and 10 per cord of 4 ft. wood, f. o. b., Detroit. We sell also pine or hemlock slabs in four foot lengths but are not in the market for any at the present time.—*United Fuel & Supply Co., Detroit Mich.*

CUTTING DOWN SHADE TREES

I have a row of large trees standing just outside my fence in the road and they are a great damage to my land for about 30 feet inside the fence. I intend[ed] to cut them down this winter but [a]me say I have no right to cut them so [I] am writing for your advice.—H. M. W., [Ha]nnville, Mich.

Sec. 4467, C. L., 1915, provides [t]hat all shade trees that are now not less than 23 feet nor more than 25 feet from the center of the highway shall remain if they are 60 feet apart and shall not be injured or destroyed, without consent of the highway commissioner. However, the law also provides that they may be removed with the consent of the commissioner and the owner of the land. If you desired to remove any that were separated more than 60 feet apart it would be better to obtain the consent of the commissioner; and to not injure them if he refuses to give his consent.—*W. E. Brown, legal editor.*

CENSUS REPORT

Is there any way I can make my census report direct to headquarters as I do not care to give it to the enumerator for this district as he is a man who cannot be trusted to keep the information confidential?

There should be no reason for hesitancy in giving this information to the enumerator, as all such reports will be regarded as strictly confidential. The enumerators are under obligation to observe the strictest secrecy, and are subject to heavy fine if they do not do so. None of this information will be communicated to any tax assessor. It would be impossible to have individual returns made to this office on account of the complications which would arise in the office work of handling so many separate reports.—*W. M. Stewart, Assistant Director, Bureau of Census.*

RATIONS FOR DAIRY COWS

Will you please balance a ration for my dairy cows? I have Timothy hay, corn stalks and silage, oats and peas mixed.—A. W.

I am substituting the following ration: Feed per cow per day: 35 lbs. ensilage, 5 lbs. timothy hay, 10 lbs. corn stalks or all the cows will eat up clean.

Feed one pound of the following grain mixture to every 3.5 lbs. of milk produced: 800 lbs. oats and peas mixed, ground, 100 lbs. corn meal, 200 lbs. cotton seed meal or oil meal.

Not knowing the proportional amount of peas in the oats and pea mixture it is difficult to figure a ration very close. However, I have assumed that 50% of the oat and pea mixture was peas. It is impossible to balance the ration without adding some highly protein feed. This I have done by adding 200 lbs. of cotton seed meal to the mixture.—*F. T. Riddell, Assistant in Dairying, M. A. C.*

MARKET FOR MUSKRATS

I am enclosing $2 for renewal. I heartily commend your attitude on the question of free speech. I wonder if you could furnish me with the names of two firms who handle (buy) muskrat carcasses as a food product.—Subscriber. Hastings, Mich.

We are advised that Wm. L. Benjamin, of 471 Gratiot Ave., Detroit, buys muskrat for food purposes.—*Editor.*

SENSE AND NONSENSE

Clever Miss

"Mr. Grabcoin spent thousands of dollars on his daughter's education. She attended some of the most expensive schools in America and Europe. She was taught to sing, to paint, to play various instruments, and to speak three or four languages?"

"Fine."

"But let me tell you how shamelessly she repaid her father's tender care. She came back home and married his chauffeur."

"Splendid! A girl possessing her wealth and with her accomplishments might have married a broken-down duke."

Why He Was Content to Go

An uncanny prediction is reported by an Iowa paper. "Shortly before the end came," runs the obituary, "he folded his hands and said that everything was going higher, and quietly and peacefully he fell asleep."

As a Warning to the Living

A man died owing a Missouri editor six years' unpaid subscription to the paper. The editor did not send any flowers. He attended the funeral and placed a plain-leaf fan and a block of ice on the casket.

Applied Hydraulics

Mixie—"A friend of mine fell asleep in the bathtub with the water running."

Trixie—"Did the tub overflow?"

Mixie—"Nope, luckily he sleeps with his mouth open."

There was a Reason

"I know a man that has been married thirty years and he spends all his evenings at home."

"That's what I call love."

"Oh, no, it's paralysis."

The Easier Replaced

Mrs. A—"I am going to get a divorce."

Mrs. B—"Can't you get along with your husband?"

Mrs A—"Yes, but the cook can't."

Applied Anatomy

"The human anatomy is a wonderful bit of mechanism," observed the Sage.

"Yes," agreed the Fool, "aPt a man on the back and you'll make his head swell."

Charity Begins at Home

Charity Collector—"Have you any particular use for your old clothes?"

Citizen—"Sure. I'm wearing them."

BUSINESS FARMERS' EXCHANGE

FIVE CENTS A WORD PER ISSUE. MINIMUM size accepted, 20 words. To maintain this low rate, we are compelled to eliminate all bookkeeping. Therefore, our terms on classified advertising are cash in full with order. Count as one word each initial and each group of figures, both in the body of the ad and in the address. The rate is 5 cents a word for each issue, regardless of number of times ad runs. There is no discount. Copy must reach us by Wednesday of preceding week. You will help us continue our low rate by making your remittance exactly right.—Address, Michigan Business Farming, Adv. Dep't, Mt. Clemens, Michigan.

FARMS & LANDS

Selling experience not necessary (but a help.) as Company will help and work with you. X-CELL-ALL COMPANY (of Illinois.) 316-318 S. St. Louis Ave., Chicago.

Review of World Feed Situation

By R. W. CHAPIN, Pres. of Chapin & Company

(From his address to Breeders conv ened at East Lansing January 14)

Continued from last week

I REMEMBER, in 1919, I sold a Holstein breeder in Ohio, dairy feed at $1.50 per hundred, and he wrote me that he was selling his milk for $1.50 a hundred and that for every bag of feed he bought of us, he got $6 worth of milk, which left him $4.50 to pay for his roughage, expenses and profit. One hundred per cent of dairy feed will not always make 400 per cent of milk. It depends on the kind of feed used, how good the roughage is, and also, the cow has something to say about it. A good grain ration, however, will make four times its weight in milk and the average ration will make three and one half times its weight in milk, i. e., average Holstein milk, which is apparently the kind that everybody wants.

The price of milk is always lower in remote districts than it is around large cities. It is rarely that condensaries, butter and cheese factories can pay as much for milk as the city consumer. I believe the wholesale price of milk in the Detroit market today is around $4 and I also believe that you can take this $4 and buy more than 100 pounds of a mixed dairy ration all ready to use. By "mixed dairy ration," I mean a mixture of protein feeds and farm grains say about 70 per cent of dairy feed at $82 and 30 per cent corn and oats at $50. The cost of the resulting mixture would be about $72 per ton, or $3.60 per hundred. I believe if you will look back about five or six years and see what you were paying for this kind of a mixture, and the price you are getting for your milk, that your milk prices are not out of line with the price of the feed. Now, if you grow this corn and oats, there is certainly a profit in growing it, and selling it to your dairy at $50 a ton, but if you don't grow it, some other farmer is making this profit.

You are also selling your farm roughage to the dairy at pretty fair prices. Ensilage has no market value, but you do know what it costs to produce it, and you know also, if you didn't grow ensilage, an acre of land would produce a certain percentage of profit in growing something else, and you are entitled to just as much profit off that acre of land growing one thing as another. The same is true of hay, which, while it has a market price, doesn't mean that all the farm hay could ever be sold. It has to be used where it is grown, or it has no particular value.

I am not trying to get into a discussion of how much profit there is in making milk. Some times there is some and some times there is none. It all depends on whether a man has good cows and is a good manager, or has poor cows and is a poor manager, and some times there are other things which unfortunately keep him from making a living profit but I do believe the farmer is getting a pretty square deal in selling his milk at the present time, for unfortunately some of the feed is low priced, like corn and oats.

We have a pretty fair corn crop this year, but I don't think it is a bumper crop. We must not forget that when the government says we have grown 2,900,000,000 bushels of corn, that about 700,000,000 of this is not corn grain, but will go into the silos in the shape of ensilage, and ensilage is, of course, a roughage or hay substitute.

It looks like we are growing less corn and more ensilage every year, which is a good thing. We were so short of corn last year that it was hardly obtainable, and we had to eat up nearly all our oats and barley last summer to get along.

You are, of course, always interested in what prices are going to do. It is a large order for any one to make a prediction. A feed manufacturer has to be right on the question of prices most of the time, or the sheriff and the poorhouse would be waiting for him. There is nothing in the world handled so cheaply or on so small margin of profit as grain and feed. Once in a lifetime, like the last war period, prices keep on going up most of the time and it was very difficult for the sane man who dealt in these commodities to lose money, but year in and year out, there are just as many downs as there are ups, and there is no business I know of in which you can work for eleven months, and lose everything you have made in the twelfth month, other than that of feed manufacturing. The daily fluctuations in feeds are 2 per cent and 3 per cent and this is more than the average profit that is made in handling them.

We are not of the opinion that any commodities are going down for a long time to come. They will go down some time, but it is not desirable that they should go down now, because if prices go down, we will have to cut everybody's wages, and there will be a great deal of distress, while the readjustment is being made. If this happens gradually, it will not be so serious. Royal Meeker, of the United States Bureau of Census, says that prices will not go down, and as he is a statistician and a student, his judgment is worthy of some respect. Some of our government officials, mostly lawyers, have predicted right along that prices would go down, and as they are not practical men, there is no reason to pay any attention to their guessing, as that is all it is. It is quite possible that prices may even go higher before the winter is over. In the first place, bran is almost sure to go higher, as we have a short wheat crop, especially in the northwest. Good wheat is selling at over $3.40 a bushel or over $110 a ton in Minneapolis. Bran is selling at nearly $10 a ton under the price of cornmeal. In the past, bran has usually sold at anywhere between 60 and 80 per cent of the price of wheat.

There will not be any more cottonseed meal produced. Our western linseed is about all crushed up, and for the rest of the winter, we will have to draw our linseed meal from the east. Freight rates are going to advance some more, of course, because, while everything else is doubled since the war, freight rates have only come up 50 per cent, and it is to be expected that they will also double. Taxes keep on increasing, and they generally fall on the necessities of life chiefly, so it is a very safe estimate that prices will be higher before they are lower.

The best time to buy dairy feed is usually in the early summer. Nine years out of ten, a man makes good interest by doing it.

(At the close of the Holstein meeting, Mr. Chapin offered substantial help to the association in the form of a check for $500.00 *The money goes to promote the proposed organization of the Holstein industry of Michigan, as outlined by President D. D. Aitken.)*

LICE ON HOGS ARE COSTLY

LICE ON hogs are extremely expensive. The fact was proved in experiments recently concluded by the Bureau of Animal Industry of the United States Department of Agriculture. It was shown that lousy hogs not only consume more food and make less meat, but that they are uneasy or restless, a condition that doubtless lessens the pork-producing abilities of the animals. When not eating, the lice-ridden swine spent most of their time rubbing themselves or running around. If strangers came near they were noticeably excited. This did not hold true of the hogs free from lice.

But the lice-ridden hogs can not make up for the blood sucked by their parasites. For instance, at the beginning of one experiment, 15 hogs with lice weighed a total of 1,167 pounds, and 15 hogs without lice weighed 1,025 pounds. At the end of the experiment the lousy hogs weighed 2,872 pounds and the clean hogs weighed 3,150 pounds, although the total feed consumed by the clean hogs weighed only 203 pounds more than that eaten by the animals with lice.

The Department of Agriculture will be glad to supply farmers with publications that tell how to free their hogs of lice.

NO longer is there any question about farm engine value. Long ago engine power made a secure place for itself on the good farmer's farm. Made itself the indispensable worker at a dozen or a score of small jobs we need not name here. You know them too well. They are a part of the routine of your life.

Nor need there be any question as to *which* engine power will serve you best for the longest time.

Tens of thousands of power users will tell you if they have the opportunity that the best answer is "International Kerosene Engine!" On the day you read these lines many new Internationals will start work for new owners. These engine investments are made on the strength of rugged Harvester reputation, kerosene economy, quality of materials and construction. And you will have the sureness of International service at your service whenever you may call for it.

The figures at the top are the sizes in which International engines are made. One or another of them will serve you. See the International dealer.

CATTLE

HOLSTEIN-FRIESIAN

Bankers Buy Purebred Holstein Cattle

To promote general prosperity and their own business bankers in many parts of the country are buying purebred Holsteins by the carload and selling them on time to the farmers of the community.

Every year it becomes clearer that with large yield cows the cost of milk and butter production can be brought down to a point that makes dairying profitable.

A herd of purebred Holsteins is an investment that combines safety with large dividends.

"—for *all* the Farmers of Michigan!"

MICHIGAN BUSINESS FARMING

An Independent Farmer's Weekly Owned and Edited in Michigan

VOL VII, No. 22 | MT. CLEMENS, MICHIGAN, SATURDAY, FEBRUARY 7, 1920 | $1 FOR ONE YEAR (3 yrs $2; 5 yrs $3)

Read in this issue, "Shall the State Fix Price of Milk?" by John D. Miller of N. Y. Dairymen's League

Put it in Your Barn NOW

HOW many farmers have been unfortunate enough to hear "Sorry — but I'm all sold out." In these days, the dealer, in spite of his best efforts, cannot always foresee the demand nor keep ahead of rapidly changing conditions. If you wait until spring to get your fertilizer, it may be too late—and crops planted without fertilizer are likely to prove unprofitable. Of course, you want "A A Quality," as you always have. Don't be disappointed. Be on the safe side—see the local agent now about your supply of

A. A. C. Fertilizers

The coal shortage, transportation and labor difficulties and reduced production of many essential materials—all point to a fertilizer shortage in the spring—for the big rush is still to come.

The demand for fertilizer is unusually heavy. And the supply is limited. Even with our exceptional facilities—late orders will have to take their turn. There was a net shortage of 38,267 box cars for the week ending Jan. 7, reported by the U. S. Railroad Administration. We urge you as strongly as we know how to take no chances, but order at once. If your dealer has A. A. C. Fertilizer in stock, *go get it and put it in your own barn now.* If he is sold out, give him your order at once for the quickest possible shipment.

If you have not received a copy of our 63 page book "How to Get the Most out of Fertilizers" write for it today. Should there be no A. A. C. agent in your vicinity write for the name of our nearest agent or ask for the agency yourself.

Shall the State Fix Price of Farmer's Milk?

Legislation Proposed in New York Would Put Dairy Industry at Mercy of State Commission

By JOHN D. MILLER,
Vice-President and General Counsel of Dairymen's League, Inc., New York.

THE REPORT of the Governor's so-called "Fair Price Milk Committee" makes certain recommendations which may be summarized as advocating the control by the State of the prices of milk to be paid to farmers and by consumers, and recommends the creation of an expensive organization to execute and enforce such price-fixing powers.

It recommends that "the power to fix rates be delegated to a new, separate State Board, composed of three officials, removable at the pleasure of the Governor, with authority to subpoena producers and dealers in milk and milk products, and their records, and to fix the prices paid to the farmer and charged by the distributor to the consumer."

Among the powers to be granted such Commission are:

a—"Power and control over the dairy and milk industry of the State of New York."

b—"If the Commission finds prices charged by farmer or distributor are not fair and reasonable, the Commission shall fix prices to be charged by both."

c—"To supervise the milk industry from the cow to the consumer."

d—"To require every producer of milk to register with the Commission and to report to the Commission at stated periods."

e—"To require the operators of every milk shipping and manufacturing plant to register with and report to the Commission."

f—"To prohibit the sale of milk in whole or in part for manufacturing purposes and to divert it to the shipping stations to be sold as fluid milk."

g—"To enforce its orders, directions and regulations, a violation of which shall be a misdemeanor, punishable by a fine of $500 or a year in prison for each offense or both."

We will here discuss only the expediency and not the constitutionality of laws vesting such powers in a Commission.

It is here proposed that the farmers "power and control over the dairy" owned by him, shall be taken from him and vested in three men, who shall also fix the price the farmer shall receive for his milk, and if the farmer refuses to submit to such "power and control", or to accept such price, he will be punishable "by a fine of $500.00, or a year in prison for each offense, or both".

Program is Bolshevistic

This ambitious program differs from the Bolshevic program in Russia only that there all property is to be nationalized, while here only farms and herds are to be nationalized. In principle they differ not at all, but only in degree. He who has the "power and control over the dairy and milk industry of the State" becomes thereby the beneficial owner of the farms and herds engaged in such industry. To deprive the farmer of the "power and control" of his property, strips him of every attribute of ownership save only the privilege of paying taxes.

The question naturally suggests itself, why if the State is to fix prices of food, should it not also fix prices of all other necessities.

A man standing naked on Broadway this zero morning would perish, although surrounded by food.

It may be stated that in this climate the necessities of life are food, clothing, fuel and shelter. If the State is to fix the prices upon one, why not upon all. We may go farther than this. The refinements of our modern complex civilization are such that other things may be fairly classed as necessaries. We assume that the Committee will admit that medical attendance are necessities. If the price of milk is to be fixed by the State, why not the fees of the physician who prescribes the amount of milk in the diet, be also fixed by the State.

The law of supply and demand fixes a rough equilibrium, so that the price of one essential commodity usually bears a fair relation to the price of all other essential commodities.

The arbitrary fixing by the State of the price of one commodity if it has any effect, disturbs the equilibrium and can be only destructive. If the price so fixed be less than that dictated by the influence of supply and demand, then producers are wronged; if higher, then consumers are wronged; if exactly the same, then the result of the price fixing power is nil.

Milk Industry Political Foot Ball

The committee proposes to give a milk commission of three political appointees, "power and control" over the billion dollars worth of property owned by other men, with power ti fix prices on the products of such properties, which in effect is fixing the prices upon the properties also, for the value of a farm is measured by the value of its products. The owners of these farms, however, are to have no voice in fixing such prices, on in naming the men who are to fix them.

As political propaganda the report may satisfy its authors, but as a solution of an industrial and economic problem, it is hopeless.

If the power to fix prices of milk, or any other farm products be given to a commission, then of necessity, such commission should at the same time fix prices on the labor, farm machinery, implements, vehicles and other farm supplies, as well as upon the clothing, sugar, tea, coffee, and other family necessities that the farmer must buy.

To compel the farmer to sell his product in a regulated market and buy all of his supplies and necessities in an unregulated market, not only violates every principle of justice, but would result in intolerable confusion and chaos that would at once be reflected in an appalling decrease in production.

If a commission is to exercise "power and control over the dairy and milk industry of the State", it must of necessity have control over the men engaged in such industry, but unfortunately for this program, the days of involuntary servitude are past.

Such milk commission is also to have power to make orders and rules, violations of which shall be a misdemeanor. This means that the legislature will be asked to delegate to three political appointees of the Governor, the power to enact criminal laws. This proposal will make Lenine grow grey with envy.

No government, except an autocratic one, can execute such powers, and the more such powers are conferred upon government, the more autocratic it will become.

The whole plan is designed to substitute a government by bureaus, for a government by legislation; a government by bureaucratic rules, for a government by law.

Class Regulation

There is no reason why milk should be singled out for State regulation. At present prices, it is cheaper than beef, mutton, poultry, eggs or any other form of animal fat food. It has advanced in price less than other foods and less than clothing or shoes. The price of milk paid to farmers is less as compared with costs of production, than the price of any other essential commodity.

The Fair Price Committee had presented to it an opportunity to perform a real public service by treating the milk problem as an industrial and economic one, that should as far as possible be divorced from politics, and it is to be regretted that they threw this opportunity away in order to make a report that betrays both producers and consumers and will encourage only those who have initiated the milk agitation, hoping to capitalize the resulting discontent into terms of votes

Farmers of the nation are aroused upon this question. The organized dairymen of the country met at Chicago on December 16, 1919, and there adopted the following resolution:—

"Resolved that farmers should not be required to sell their products in markets regulated by law and compelled to buy their supplies and necessities in un-regulated markets, but that if Federal or State Governments undertake to fix prices on any one essential commodity they should at the same time in common justice fix prices on all other essential commodities."

The milk industry should no longer be considered a political question. It is in nature industrial and economic. The two great classes most vitally interested are producers and consumers, and we again urge that consumers perfect their organization, from which milk dealers and political agitators shall be excluded. They can then appoint representatives to meet representatives of this organization and together solve the milk problem.

Do You Believe in State Control of Food Prices?

THE ACCOMPANYING article describing the proposed regulation of the milk prices in the state of New York, should be of special interest to farmers of this state just now. At the last session of the Michigan legislature a bill was introduced to create a milk price commission and legalize its decision. Several of the officers of the Michigan Milk Producers' Ass'n sponsored this measure, but it died a natural death. Attorney General Groesbeck has resurrected the essence of the idea and now proposes a paternalistic scheme of a state commission with wide powers of price-fixing. Mention is made of his special desire to bring the milk industry under the regulating thumb of the state.

This is an important question, and one on which the farmers should freely express their opinions. Is it the desire of the farmers to have the state fix the selling price of their products and leave unregulated the prices of the things they buy? We should like to hear from our readers upon this subject, and especially invite the milk producers to present their views.—Editor.

Where do We Stand Today on Packer Question?

Farmers Mistrust Palmer's "Settlement" and Insist on a Finish Fight to put Packers Forever Beyond Control of Life's Necessities

By O. M. KILE
(*Special Washington Correspondent*)

MOVES and counter-moves relative to the packer problem have followed one another with such rapidity since Attorney General Palmer made his spectacular "compromise" announcement in December, that even the interested live stock producer—to say nothing of the casual reader finds it somewhat difficult to figure out just where we stand on the whole matter and what the probable outcome will be.

The announcement from the department of justice that the government would drop the prosecution of the packers, followed by a statement from the Federal Trade Commission to the effect that the commission would continue its legal processes, was confusing to say the least. Then when delegations from western cattlemen's associations came to Washington and protested to President Wilson against the "settlement," insisting that the whole thing be overthrown, and this was followed a few days later by Senator Kenyon's announcement that he would proceed with the Kenyon-Kendrick Bill designed to regulate the packers, more cause for conjecture arose Now, early in January, we have a new Kenyon-Kendrick Bill before Congress—or a bill so radically changed as to amount to a new one—and the situation is yet more complicated.

Whatever may have been the underlying motives or set of conditions which brought about this rather extraordinary action by Mr. Palmer—whether, as asserted by some, it was largely a political stunt designed for campaign purposes — whether the packers feared the ultimate enactment of pending federal legislation and sought thus to forestall it—whether the packers were so completely tired of being so constantly harassed and troubled that they were willing to surrender some of their legal and business rights for the sake of harmony—whether the packers bank on a change of administrations to revoke or render the ruling ineffective before elapse of the two years allowed for readjustment—or whether it is believed that the "divorcing of interests" need be in name only and that the control and revenue of such interests may be retained within the Big Five family—whatever may have been the underlying reason or reasons, I say, the net result has been to crystallize action and I look to see enacted during the present session of Congress some form of permanent legislation covering the entire problem.

Where the Federal Trade Commission Comes In

The Federal Trade Commission points out that it is acting under instructions of the president given in 1917 and later incorporated in an act of Congress. The action taken by Mr. Palmer is a direct result of the evidence developed and reports made by the commission. This is the regular course of proceedure prescribed by law. But beyond this the commission has its own direct powers to be exercised in cases relating to abuses of the Clayton and Sherman Anti-Trust Acts.

The commission has as recently as January 14th made complaints against Armour & Company in connection with deals consumated in 1915 and 1916 which tended, it is alleged, to create monopolistic conditions in the hide, leather, cottonseed oil, and lard substitute trade in Tennessee and North Carolina.

In case these complaints are sustained the final effect would no doubt be to cause these acquired interests to be given up by Armour & Company. If in the meantime this entire line of business had been given up under the Palmer agreement, there would of course, b no occasion for further action by the trade commission. If on the other hand, Armour & Company had not at that time yet divested themselves of these intersts and had not made the proper effort to do so, then the commission would be in position to force such action at once.

In this way the continued activity of the Federal Trade Commission may serve as a kind of check on the pro- ith that section which requires the packers to give up the retail meat business.

The chief grievance presented to President Wilson by the visiting representatives from the western cattle growers' associations was that no provision is made for preventing the daily or periodic fluctuations of prices at the stock yards, alleged to be caused artificially by the packers through manipulation of their purchases from day to day. This fluctuation works a severe hardship on such shippers as may happen to strike the low spot of the market the day their stock arrives.

It is also felt that the department of justice is not the proper vehicle to carry out the supervision of the readjustments contemplated. The functions of the department of justice are judicial rather than executive, and there is the further objection of too direct exposure to political influences.

Then again it cannot be denied that considerable doubt is felt as to the sincerity of purpose on the part of the packers. Whether rightfully or wrongfully the misgiving is harbored ter—and that the interpretations be not left to the whims and vagaries of political appointees but be studied thoroughly and sympathetically by some person or persons charged with that specific duty for a long period of years.

Senator Kenyon's New Plan

Senators Kenyon and Kendrick now come forward with a radically revised form of the so-called K-Bills. It has been rather generally conceded that the Kendrick Bill could not be passed so long as it centered control of the packing industry in any one man—the secretary of agriculture was suggested. Other stringent regulatory measures also made its acceptance doubtful.

The opportunity now seems to present itself to enact into permanent legislation the chief features of the Palmer ruling and thus take the administration of the ruling out of the hands of the department of justice. The revised Kenyon-Kendrick Bill proposes to create a Federal Live Stock Commission consisting of three men to be appointed by the president and to serve for a term of five years. In all important respects this commission would function in practically the same way as the Federal Trade Commission having power to summon witnesses, inspect books and property and issue orders correcting any legal violations of the act. These orders could be set aside or modified only through the Circuit Court of Appeals.

In fact the specific duties of the Federal Trade Commission insofar as they relate to the packing or the live stock industries would be taken over by the new commission. In addition, this commission would have jurisdiction over the Bureau of Markets now attached to the detartment of agriculture. Through this bureau live stock and meat markets and price fluctuations would be closely supervised.

Section 7 of the bill reads: The commission shall have all the powers and duties heretofore exercised or performed by the Bureau of Markets in the department of agriculture relating to the acquisition and dissemination of information regarding the production, distribution, and consumption of live stock or live stock products. It shall investigate and ascertain the demand for, the supply, consumption, costs, and prices of, and all other facts relating to the ownership, production, transportation, manufacturing, storage, handling or distribution of stock or live stock products, including operations on and the ownership of stockyards. It shall compile and furnish to consumers, producers or distributors, by means of regular and special reports, or by such other methods as it deems most effective, information respecting the live stock market and the demand, supply, prices, and other conditions affecting the market."

Objectionable Features in the New K-Bill

But the new K-Bill still retains the highly detailed section relative to just how a packer shall or shall not conduct his business, which to many who have studied the problem, seems entirely unnecessary and objectionable. It would seem, for instance, that the questions of financial standing, railroad connections, shipping facilities, division of a plant's facilities between local and foreign patrons, etc., etc., are all matters which the individual owner must be allowed to work out as circumstances demand or opportunity offers. These are matters to be regulated by natural economic forces and not by edicts of a commission.

The revised bill also retains the section requiring the packers to give up all privately owned refrigerator cars. This plan would undoubtedly increase the cost of meats—and never forget that each increase in the retail price of beef means less consumption and consequently less demand for live stock. Certainly, enough has already been done along this un-economic line in the way of increasing the cost of living, by compelling the packers to give up their efficient methods of handling groceries and canned goods. That action was a sacrifice for the sake of a principle. Our government desires to establish the principle that when any concern or group of concerns becomes so big as to be in position to threaten monopoly of any food product, that concern or group must be curbed.

On the whole it might seem that we are right back again where we started on the whole packer problem, but careful summation shows that considerable progress has been made. Mr. Palmer's ruling will, of course, hold until superceded by an act of Congress. The idea of one man control of the industry has definitely been given up and it is highly probable that before any bill succeeds in passing Congress the entire idea of "control" in its narrower sense will also be given up.

The plan for a permanent commission to see to it that the spirit of the law is carried out, to uncover and correct any abuses that may occur, and to act in a general "supervisory" capacity, both of the livestock and packing industry, seems to be a happy and logical solution of the problem. Numerous features, including the ownership of refrigerator cars, are still to be fought out, but but with the creation of the commission there should be displayed a willingness to leave some of these points for further study and recommendations after the commission has been at work a year or two.

The New Secretary of Agriculture

E. T. MEREDITH
Secretary of the U. S. Department of Agriculture.

THE President has appointed Mr. E. T. Meredith, publisher of "Successful Farming," of Des Moines, Iowa, to succeed David S. Houston who becomes secretary of the treasury. Mr. Meredith's long service in the farm newspaper field has undoubtedly given him that sympathy and understanding of the problems of farmers and farming which are prerequisites of a successful administration of the Department of Agriculture, and protect him from a repetition of the blunders of his predecessor.

In a statement Mr. Meredith said one of his first undertakings as head of the agricultural department would be to work out some method of getting crops to market "without too much lost motion."

A brief biography of his life is given as follows:

Edwin Thomas Meredith was born in Avoca, Iowa, December 23, 1876. He was a student at Highland Park College in 1893 and 1894. Two years later he married Miss Edna C. Elliott of Des Moines. From 1896 to 1902 he published the Farmers' Tribune in this city and in 1902 he started Successful Farming. He was a candidate for United States senator in 1914 and ran for governor of Iowa four years ago.

Mr. Meredith is president of the Associated Advertising Clubs of the World, a former director of the National Chamber of Commerce and director of the Chicago Federal Reserve Bank. He was a member of the recent labor conference in Washington and of the United States Labor Mission to Europe in 1918. He is a thirty-third degree Mason, a member of the Za-Ga-Zig temple, Nobles of the Mystic Shrine and other fraternal and social organizations.

World Bean Review Forecasts Stronger Market

Situation in Various States and Countries Shows Bullish Factors Likely to Aid Growers With Holdings

By VERNE E. BURNETT

SOME MEN who have studied the world bean situation have grown very cautious during the last few years. Many of them did not believe beans would rise so high as they did during the war, and others did not think the price would tumble so hard as it did some time after the signing of the armistice. There were unforseen and terrific factors in the bean world, such as the importation of great quantities of cheap oriental beans by the United States government, which have "spilled the beans" for more than one good bean market prophet. The good quality and record acreage yield in Michigan fields the past year came as another surprise to many.

So one is on rather treacherous ground, when trying to prophesy about the bean market nowadays. Nevertheless, all good business men do for themselves considerable prophesying. If they don't look ahead at what's coming, based on present and past facts, they aren't good business heads, as a rule. Therefore, there are three phases of the bean market "dope," which pay every farmer connected with the bean business to know. The first phase is a review of existing facts throughout the bean world, including the stocks of beans on hand, the probable planting next year, the activity of demand and so on. The second phase is a review of the statements of established authorities on the bean market. And third there is miscellaneous information, including the readers' and writer's own deductions from the facts gathered.

The World's Bean Bin

Supposing all the world had a great bin to contain the supply of beans which it should normally have on hand. From most of the facts as to stocks on hand throughout the world at this time, it looks as though the world bean bin would be pretty low, with the members of the universal family pretty hungry for the crop.

Take first the most famous state in the history of the bean market, Michigan. This state, it is estimated by scores of reliable sources, has finished off a good season, so far as production to the acre is concerned. Between 12 and 13 bushels to the acre is the splendid record for the Wolverine state this year, whereas it was much lower last year and in many preceding years. But this fact was offset by the greatly reduced acreage. Farmers had become disgusted of the manipulations of the bean bears and had sought out something more likely to pay a fair profit. Therefore the total output of Michigan beans this year was rather small.

Together with the fact that Michigan grew a very small acreage of beans in 1919, more than half of the bean crop is estimated to have passed out of the state. Some dealers estimate that 60 and even 75 per cent of the bean crop has left the hands of Michigan men. The remainder of the beans, it appears, is being held in strong hands among the growers, who are waiting confidently for great increases in prices, possibly to ten cent beans or better. Jobbers seem to be pretty generally aware that the farmers should be getting better prices; otherwise the production will stop.

If the beans in the hands of the growers are few, the amount with the dealers seems to be even smaller. One very prominent jobber, in fact, has made the statement that a six-weeks' railway strike would tie up the country so that not one dealer in ten would have a sack of beans on hand.

One of the conditions which caused this lowness in stocks was the unusual holiday trading. Tradition has taught the trade that the season around Christmas is a bad one for the markets. Buying slumps and interest declines. But this year the interest in the bean trade kept right up, and even the January inventories failed to have the predicted depressing effects. Demands from the wholesale grocery trade are said to be picking up and deliveries from growers have come almost to a standstill at many points in Michigan. The buying by the grocers is thought to have been the strong factor during the holiday season, because of the fear that prices would ascend considerably later this winter.

The condition prevailing in Michigan is somewhat parallel to that in other great bean districts. Take California, for example, which for the last year or so has made Michigan take second rank in the bean growing business. The acreage was greatly reduced along the Pacific coast in 1919. Coupled with that, a small output per acre is reported for many sections. Growers in the San Joaquin Valley who had been expecting 12 to 20 sacks per acre got only half that amount. This practically doubled the cost of production for many farmers, and nine out of ten of the bean growers in that section are reported to have sworn off raising any more beans. One big dealer at Modesto, California, estimates that production was only 40 per cent of that of 1918 in his state.

A rather peculiar situation exists in California this year, due to the excess amounts raised by the growers and not bought by the government as had been expected. Accordingly the holdover stocks are larger than usual, but this factor is offset by the shortage of the new Oriental crop.

New York has sent reports from many parts of the state that its bean supply has just about been exhausted. The demands from Europe, we are informed, has helped to clean out both the home-grown and the kotenashis. Red kidneys have been especially short, while the navy beans have not been so hard to get. Kotenashis rose a dollar a cwt. in New York City around the holidays.

To show the export and import figures as given by the government, we quote the following:

"For the twelve months ending June 30, 1919, 1,667,996 bushels of beans and Lentils were exported from the United States. These were valued at over $8,000,000. For the twelve months ending June 30, 1918, 901,878 bushels of dried peas were exported from the United States. These were valued at almost $4,000,000. For the twelve months ending June 30, 1919, we imported 4,015,860 bushels of beans and Lentils, valued at very nearly $6,000,00. Imports of beans and dried peas after the same term were 4,982,625 bushels, valued at almost twenty-eight million dollars."

From Colorado, one of the big bean growing states, we gather the following bullish report:

"The dealers feel that the crop is about cleaned up and there will not be much movement until higher prices prevail. We will be very much surprised if you do not see 10-cent beans before the new crop comes in. If you wish we can show you the figures for this prediction."

Oriental Crop Short

For a long time reports have come from the Orient telling of shortage of the crop of beans in Asia during the past year. In Manchuria great drouths swept down over the bean crop and in other Oriental sections floods and too much rainfall ruined the stand. Of course, the complete figures are not yet available, and the friskiest of the bulls may be likely to run away themselves on the Oriental situation. But taking it all in all, the Far East seems to have fallen down miserably in its output this past year.

The following report sent from Kobe, in Asia, is reprinted from *The Bean Bag*:

"We have had stormy weather three times in the Hokkaido followed by flood, which gave much damage to the new crop of beans and peas. Arrivals of crops are exceedingly late this year. Except a small quantity of green peas, we see no important arrivals of new crops of beans for export yet. Recent flood in Hokkaido destroyed roads and bridges in the interior and the transportation was greatly hindered or in some quarters was totally stopped for some considerable time, and this materially accounts for the delayed arrivals of new crops in the market.

"People over there have been fully occupied in the reparation of the damage sustained, and there appears to have been little time to make very close investigation into the matter so that no accurate figures are still obtainable, people varying in their estimates. The following, however, are what we have so far been able to gather, and hope they may be of interest to yourselves.

"Regarding the white beans in general, no official report is still available as to how much quantities will come up to the standard of exportable quality, and even at this moment when this kind of beans come out to the market in the ordinary year, there are no market quotations.

"Owing to the rains, large quantities of white beans were perished or colored, while colored beans were likewise perished or the color faded, and the damage appears to be very serious. Decrease of 20 per cent off the first estimate is expected on the total yield, of which there will be only 60 per cent coming up to the standard which can be hand-picked for export, and in this operation of hand-picking, there will be further 20 to 30 per cent waste.

"In view of the limited quantities available, there is very little business going on."

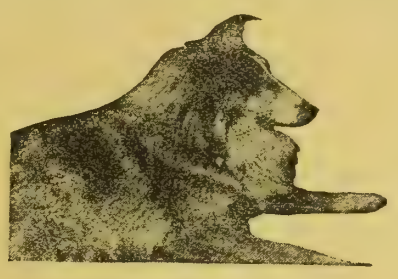
What Prophets Say

We now have taken up some representative facts concerning the world bean situation, based on news reports. Along with this the ideas of numerous so-called prophets or experts on the world bean situation have already been expressed.

In summarizing several dozens of reports made public by big bean dealers, by heads of growers' associations and by market writers the vast majority proclaim the coming of better prices for beans this winter, although a cautious note is linked with nearly all predictions of this sort these days. There are too many possible though perhaps remote factors which enter in the considerations such as big strikes or financial depression. But the tone on the whole is one which should warm the heart of the weakest of the bulls.

As for the deductions which each business farmer will make for himself—well, that is up to him. It is sure that some of the reports are exaggerated and statements from men prominent in the trade are often likely to be influenced by the desire rather than the logic of the situation. Nevertheless, the hard-headed farmers who are keeping strong hands upon their bean holdings very evidently are willing to take their chance in the market gamble and hold out for the higher prices.

In conclusion, it is a pretty safe safe bet for anyone in the bean industry to figure out at long distance that there is a basic principle upon which the market is bound to turn. That principle is the well known need of cost of production plus a fair profit to the producer. When manipulated markets refuse year after year to give to the grower that right, the result is non-production and finally a big rally in price. Time alone will tell if the rally will occur during this year, and it looks now like a pretty safe prediction that the present year ought to tell the story.



"It's time to get my License."

A Summary of the New Dog Law

"WHEN the tax was put on dogs a number of years ago, it was one dollar, and now it is three. I understand that the tax on dogs was for the purpose of paying for sheep that were killed in this section of the country. They don't raise sheep any more. What I want to know is whether they can compel a man to pay dog taxes or not. I don't kick on one dollar but three dollars is too much.—Sam Riley, Grand Traverse County.

Yes, you will have to pay the higher dog tax or take a chance of losing your dog. The new law is generally looked upon as a needed and constructive measure, and has the endorsement of all farmers who own sheep or have had their flocks wiped out by marauding dogs.

The following summary of the new law may be of interest to all dog owners. It was compiled by Mr. Thos. D. Megginson, prosecuting attorney of Antrim county. Farmers desiring to secure a complete copy of the law may do so by writing to Mr. H. H. Halladay, State Sanitary Live Stock Commissioner, Lansing, Mich.

WHAT THE NEW LAW REQUIRES:

1. *Apply in writing to your Township or County Treasurer for dog license and tag.*
2. *Application must state breed, sex, age, color and markings of dog, and name of last previous owner.*
3. *Application must be accompanied by a fee of $3 for male, and $6 for a female, and $2 for an unsexed dog.*
4. *Treasurer will deliver you a license tag and metal tag.*
5. *Metal tag is to be affixed to collar of dog and worn at all times except when hunting with owner.*
6. *This must be done before January* 10, 1920.
7. *Keep your dog confined on premises from sunset of each day to sunrise of next day.*

The circular calls attention to the facts that it is unlawful:

1. *To keep a dog without license.*
2. *To keep a dog without collar and tag attached.*
3. *To allow your dog to stray behind your premises at any time unless under the control of some person.*
4. *To violate any of the provisions of the Dog Law.*

Under the heading Penalty, the circular calls attention to the four following points:

That police officers are authorized to kill all dogs running at large unaccompanied by owner.

That the Sheriff and State Constabulary are requested to locate and kill all unlicensed dogs.

That the Prosecuting Attorney is to prosecute all who fail to comply with this law.

That the fine is not to exceed $100, or not to exceed three months in jail.

In a closing paragraph, Prosecuting Attorney Meggison says the law is workable and will be enforced; that the sheriff will not call upon the owner for the tax. *"It is up to you to pay it and get the tag,"* he says succinctly and adds: *"If the sheriff has to call, it will be for the owner of the dog and not for the dog."*

"Let us all work together to enforce this law," is his final appeal, *"so that it will be possible to raise sheep in Antrim County."*

Official Data Reveals Profits of Sugar Industry

United States Tariff Commission Makes Public Cost of Sugar Production for 1918-19

ONE OF THE greatest handicaps encountered by the beet growers in their periodical controversy with the sugar manufacturers over the terms of the beet contract is their lack of knowledge of the costs of manufacturing sugar from the beets. A few figures, more or less authentic, are available from this source and that, and the grower is obliged to piece them together as best he may to arrive at an approximate conclusion of the manufacturers' profits. Farmers' costs are fairly easy to ascertain. Agricultural colleges and cost finding experts have conducted experiments and made these costs public from time to time, and if anyone is then in doubt about the matter all they have to do is to plant ten acres of beets and at the end of the year they know what it costs to grow them. But farmers can hardly be expected to build a sugar factory in order to find out what it costs to manufacture sugar. And the manufacturers themselves are usually as silent as the grave upon the subject of costs. Official statements are not over-illuminating, and so the farmer is left to ascertain for himself upon such meagre information as he can uncover with these costs and profits are.

Alma Sugar Plant Manager Explains Costs

The only sugar plant manager who has had the courage to make public any of the costs entering into the manufacture of sugar is "Farmer" Allen, manager of the Alma plant of the Michigan Sugar Company. In a recent article in the Alma Record, Mr. Allen writes:

"We will pay the farmers this last year for 87,933.29 tons of beets and dirt, and we have made from this beets and dirt 18,688,415 pounds of sugar, which gives us 212.5 pounds of sugar per ton of beets and dirt. Now I know this to be the truth myself, as I have taken these figures very carefully from our books. The average sale price of our sugar I do not know exactly at this time, but think it will be a trifle over $11 per 100 pounds in car lots as we sell it.

"Now let us figure again: We made this last campaign 4,380 1-2 tons of dried beet pulp from the 87,933.29 tons of beets and dirt for which we paid the farmers, which gives us just 20.07 tons of beets and dirt for one ton of dried pulp. Then again, we made 3,086.42 tons of molasses from the above amount of beets and dirt, which gives us 22 tons of beets for one ton of molasses.

"Now let us tabulate our figures:

Sugar, 18, 688,415 lbs. at 11c	$2,055,725.65
D. P., 4,380 1-2 tons at $50 ton	219,025.00
Molasses, 3,086.42 tons at $20 ton	61,728.40
	$2,336,479.05
87,933.29 tons beets at $12 per ton	1,055,199.48
Freight paid during the year 1919	123,941.12
Wages paid during the year 1919	345,291,35
	$1,524,431.95

To manufacture the 87,933.29 tons of beets and dirt into sugar, dried beet pulp and molasses, it took the following list of material:

18,126.19 tons coal, 5,934.25 tons limestone, 691.20 tons coke, 27,200 pounds sulphur, 4,796 pounds muratic acid, 4,000 gallons lubricating oils, 700 gallons cottonseed oil, 8,080 cutter knives, 566 Frasier files, 20,470 yards filter cloth, 18,000 sugar barrels 18,000 sugar barrel linings, 1,360 paper linings, 2,100 pounds barrel nails, 199,000 sugar bags, 1,400 pounds bag twine, 85,200 pulp bags, 21,000 pulp bags 21,000 pounds dunnage paper, 60,000 feet dunnage lumber, 10,800 pounds boiler compound.

The above list is only some of the larger items of material used around a sugar mill. I cannot tell you the costs of this material and much more that is not enumerated in the list, but do know that it has cost us into the hundreds of thousands of dollars, and still further, are the hundreds of thousands of dollars to be added to this last amount for the material and repairs of the mill, the replacing of worn-out machinery, the renewing of parts of partially worn-out machinery, piping, shafting, valves, couplings, unions, nuts, bolts, brass and copper screens, copper tubing, running into thousands of more dollars every year. No one knows anything about the terrible expense in the repairing and fitting up of a sugar mill who has not had the actual experience."—*Farmer Allen.*

* * * *

The only items of expense in Mr. Allen's article that are of any value are those representing beet, freight, and labor costs. Note that the total of these three is $1,524,431.95. Compare these with his estimates of the receipts, $2,336,479.05. There is a difference of $812,047.10. He cannot, he says, "tell us the cost of material used," so he merely gives us figures showing the variety and the quantity of material used, trusting that their vastness may lull the reader into an acceptance of his inference that these materials represent an outlay of money which practically eats up that difference of $812,047.10. The entire weakness of his argument is found in his closing paragraph when he says: "No one knows anything about the 'terrible expense,' etc., who has not had the actual experience." The time was when that word "terrible" conveyed an idea of magnitude, but today its the actual figures that count.

What the Tariff Commission Says.

Since Mr. Allen cannot or will not give us the cost of the miscellaneous items of expense we must turn to official reports upon the subject. The United States Tariff Commission gives us the latest and most dependable data upon this subject. Its findings are based on voluntary reports from 69 sugar beet factories, gathered for the purpose of justifying existing tariffs on sugar imports. Let us examine this report and see what we can find.

The average estimated cost per ton of sugar for 1918-19 by factories was $157.11, and by tonnage, $132.86. Sixty-eight per cent of this cost represented the cost of beets. Applying this percentage to the Alma plant's cost of beets, $1,055,199.48, the total costs of that plant would be roughly $1,540,000 leaving a balance of $796,479 for profits. But we will be charitable enough to accept such figures as are given by Mr. Allen, and use the Tariff Commission's report for the figures which he does not give. Moreover, we will take the highest average, the cost by factories. The Commission says that coal represents $8.62 of the total cost, coke, $1,20; limestone, $2.27; sugar bags, $5.35; barrels, $2.42; filter cloth, $1.82; other supplies, $4.59; general expenses, $1.60. Applying these averages to the Alma plant we have:

Costs of beets, freight, wages (as given by Mr. Allen):	$1,524,431.95
Coal	80,545.28
Coke	11,212.80
Limestone	21,210.88
Sugar Bags	49,990.40
Barrels	22,612.48
Filter Cloth	17,006.08
Other supplies	42,888.96
Gen'l Expenses	14,950.40
Depreciation (10 per cent on $1,000,000)	100,000.00
TOTAL	$1,884,849.23
Receipts, (as given by Mr. Allen)	$2,336,479.05
Total Cost	1,884,849.23
Balance for interest and profits (or) 45 per cent investment of $1,000,000	$451,629.82

Tariff Commission Differs With Mr. Allen's Figures

We find a wide discrepancy between Mr. Allen's figures and those submitted by the Tariff Commission. Of course the figures of the latter are averages, but that hardly accounts for the great difference. Perhaps Mr. Allen has made a slight mistake in adding up his figures. But without assuming to explain the difference we will give the Tariff Commission's figures and let our readers draw their own conclusions.

The Commission places the cost of producing sugar for 1918-19 at $157.11. The Alma plant produced 18,588,415 pounds or 9,344 tons of sugar this season. At the Tariff Commission's estimate the total cost of producing this sugar in 1918-19 would have been $1,468,035.84. Assume an increase of ten per cent in manufacturing costs (beets cost no more) and we have a total estimated cost for 1919-20 of $1,614,839.42, which deducted from the receipts would leave $721,639.63 for interest and profits, a return of better tha 72 per cent on a million dollar investment.

Hypothesis

Suppose the manufacturers accede to the growers' demands, then on the basis of the 1919-20 operations what would be the costs and profits of the Alma plant? The increased cost of beets on 11 cent sugar would be $2.80 per ton, and the total additional cost of 87,933.29 tons, $246,213.21. Deduct this from net returns based on Mr. Allen's and Tariff Commissions figures and we have left $205,416.61, or a net income of 20 1-2 per cent on investment of million dollars. Deduct the additional cost of beets from the net returns as estimated by the Tariff Commission only and we have left $475,426.42, representing net income of 47 1-2 per cent.

Additional Facts

But the story is not all told yet by any means. Mr. Allen reports that the average wholesale selling price of sugar at his plant is slightly above 11 cents a pound, but he used exactly 11 cents as the basis of his computations, and the reader must see for himself that a price even one-quarter of a cent higher would yield additional returns of $46,720(while 11 1-2 cent sugar would mean the tidy sum of over $93,000 which is alone a fair net return on a capital investment of a million dollars.

There appears to be some question about the average price the companies will receive for their sugar. In a recent advertisement in the Owosso Press, the Owosso Sugar Co., states that it will be allowed to charge only $12.43 per cwt. for sugar. This figure does not hitch very well with Mr. Allen's. Should the average wholesale price amount to 12 cents per pound, it may be readily seen that the returns of the Alma plant, for instance, would be increased $186,000 (less the additional cost of beets under the old contract, $87.933.29) or approximately $100,000 over the profits resulting

John Ketcham Chosen President of United States Beet Growers' Federation

JOHN C. KETCHAM, master of the Michigan State Grange, was signally honored last week when he was elected president of the United States Beet Growers' Federation at a national convention of beet growers in Salt Lake City, Utah. Over 200 delegates from every beet growing state in the union were present at the gathering and formulated plans for the intensive organization of all beet growers into local and state associations for federation into the national body. A board of control, consisting of five members were elected. Other members of the board besides Mr. Ketcham are Geo. Harms, Nebraska; Fred Cummings, Colorado, who is also vice president; Fred H. Rundquist, Utah; Jas. Clemmens, Wisconsin. Mr. C. G. Patterson of Salt Lake City was hired as general secretary and will be the active force back of the organization campaign.

Mr. Ketcham was chosen chairman of the meeting and described the contract and plan of dues promulgated here in Michigan. The Michigan contract won immediate favor with the convention and was adopted as the standard contract for 1920 with but a single change. That change would give to the grower $1.50 per ton of beets for every cent increase in the price of sugar over 9c instead of the $1.40 figure which the Michigan growers are asking. The amount of dues was fixed upon the same basis as used here in Michigan, viz., 1 cent per ton of beets.

The importance of the meeting may be attested by the fact that government officials representing the Federal Trade Commission, Department of Agriculture, and the Attorney General, were present and took part in the discussions. Mr. Ketcham states that the representative from the Attorney General's department was much impressed with the figures that were presented showing the relative profits secured by growers and manufacturers from the sugar industry, and promised that if the figures could be verified the beet growers would have the assistance of the Attorney General in their fight for fair prices.

Which?

pense as estimated by Mr. Allen and the Commission. By the simple process of addition and subtraction, we can asecrtain that the possible profits of the Alma plant during the season just closed ranged anywhere from $250,000 to $400,000.

We should be pleased to examine Mr. Allen's sworn statement of the profits of the Alma plant, or his income tax return, and then we shall be able to discard all our other figures.

Investment of Labor and Money in Sugar Beet Production

Mr. Allen has given us some approximate figures of the total supplies required in the manufacture of 18 million pounds of sugar from 87,933.29 tons of beets. They look huge but when compared to the costs of labor and investment involved in the production of those beets by the farmer, his figures dwarf into insignificance. We asked Mr. C. E. Ackerman, manager of the Michigan Sugar Beet Growers' Ass'n, and a practical beet grower, to give us an estimate of the value of the land, machinery, labor, etc., required for the production of that many beets. Referring to the official report of the average yield of 5.62 tons per acre for the year 1917, Mr. Ackerman points out that it would have required 15,000 acres to have produced 87,000 tons. He estimates the value of the land and the machinery employed as follows: Land, 15,000 acres at $200, $3,000,000; horses, $600,000; harness, $75,000; plows, $20,000; cultivators, $60,000; beet plows, $18,000; wagons, $75,000; rollers, $30,000; beet racks, $30,000; harrows, $16,000; disc harrows, $120,000; floats, $7,500; miscellaneous, $10,000; Total, $4,600,900.

Actual Expense

Rent of land, $300,000; plowing, $75,000; fitting, $75,000; drilling, $15,000; seed, $75,000; cultivating, eight times, $210,000; rolling, $30,000; company's beet labor, for thinning, etc., $390,000; house rent for laborers, $7,500; fuel, $30,000 transportation of laborers, $7,500; garden patch for laborers, $3,750; upkeep of fences, $30,000; pulling beets, $60,000; hauling, $300,000; fertilizer or value of fertility taken from soil, $337,500; managerial ability, $210,000; interest on money, 6 per cent for six months, $60,000; depreciation of machinery, $75,000; miscellaneous, $75,000; Total, $2,370,000, cost of producing 15,000 acres of beets, or $158 per acre.

Some farmers will discount the items of managerial ability, depreciation, etc., but when they do so they are only fooling themselves. Every other industry in the world, of necessity, figures in these items of cost and the farmer MUST follow suit or lose out in the end.

"He that is not for Me is Against Me"--A Distorted Vision of Justice

THE ACCOMPANYING article was not published in a sugar manufacturer's trade journal, but it sounds as if a sugar manufacturer might have written it. Nothwithstanding the author's studied efforts to maintain his comfort, dignity and equilibrium astraddle a picket fence of neutrality, it is plain to be seen that he is rapidly losing his balance and will sooner or later desert the farmers altogether and flop over into the camp of the sugar manufacturers.

By way of explanation, the accompanying article was published on the editorial page of the Jan. 31st issue of the *Michigan Farmer*, the owners of which live in Cleveland, Ohio, and the Michigan manager of which is a close personal friend of W. H. Wallace, Michigan's sugar king, and associated with him on the Michigan Board of Agriculture.

The editorial is a typical example of the peculiar philosophy of the above named farm journal with respect to price controversies between farmers and the middlemen who handle their products. It seldom, if ever, fully comprehends the complete justice of the farmer's position, but is readily convinced by the arguments of the farmers' disputants. The editorial should have the closest examination of every farmer, for the influence of such doctrines may have a far-reaching effect not only upon the beet growers' present efforts to secure a fair contract but upon all the efforts of farmers to better their economic position.

What the Editorial Really Says

The first part of the editorial means nothing. Its purpose is to serve as an appetizer for what follows. To be sure the question of whether last year's contract is equitable is "a very proper matter for inquiry and investigation," the determination of which is a "proper and desirable function" of beet growers, to be arrived at by "proper study and investigation." "Honesty is the best policy," too, but why preach honesty to honest folks when thieves are abroad in the land?

The author of the editorial is ignorant of his facts when he calls the efforts of the beet growers to secure fair prices for his 1920 crop, "belated" efforts. Does he not know that the mass meeting at Saginaw this year was held fully a month earlier than the first meeting two years ago which culminated in a victory for the growers? Nevertheless, such is the case, and if there has seemed to be any lack of aggressiveness on the part of the leaders this year to bring the issue to a head it had been thru a desire to give the manufacturers every reasonable opportunity to present their side of the case, rather than to force their hand. The manufacturers are sagacious, however. Realizing that the farmers were entitled to a better contract and divining that efforts would be made to secure it, they entered the field early this year for their contracts.

The writer of the editorial is plainly more worried over the danger of farmers' repudiating an uncompleted contract and thereby forcing the manufacturers to pay them a fair price than he is over the probability of thousands of farmers losing thousands of dollars under a contract, in the making of which they had no voice and will return to the farmer six dollars less per acre than he received under the 1919 contract.

When is a Contract Not a Contract?

No suggestion has been made in the campaign for better beet prices that the farmers "repudiate" their "contracts." But the author of the M. F. editorial makes no such distinction. In his extreme anxiety to thwart the success of the campaign he proceeds on the hypothesis that farmers WILL be urged to renounce their contracts. Hence, he moralizes, and exhorts the farmers to be good little boys and mebbe next year or the year following, or sometime in the distant future when sufficient time shall have elapsed for conducting "proper inquiry and investigation," the opportunity will ripen for determining "equitable distribution of the rewards in the growing of beets and the manufacture of sugar." And in the meantime, the production of sugar may have increased, may have dropped, the sugar manufacturer will have had this inning and there won't be any profits to divide.

"When is a contract not a contract." The manufacturers claim that they have a large share of the acreage signed up. That is to say, their field men have presented contracts to farmers who have signed them, and they are now reclining in the pockets of the field men. Without the manufacturer's signature and embodying a clause virtually releasing the manufacturer from the terms of the agreement, there is a question whether it can be called a contract." Why haven't these contracts been signed by the manufacturers and a copy returned to the farmers? This is our guess: The manufacturers must have an early approximate idea of the amount of acreage they can depend upon next year. Hence, they circulate "contracts" at the psychological time when the farmer is flush with his returns from the previous year's crop. But the next season's run is a long way off. Many things may transpire between the circulating of the contracts and the harvesting of the beets which may make it desirable for the manufacturers to draft a new contract so as to protect themselves from a possible drop in the price of sugar. And does the M. F. think for a moment that the manufacturers would scruple to tear up their contract if developments showed they could not afford to pay the price agreed upon? Why be so almighty particular about cautioning the farmer against breaking HIS "contract" with an individual who retains that contract for an indefinite period of time for the evident purpose of avoiding its terms if it serves his purpose to do so? The contract is the preparation of the manufacturer. When presented to the farmer it should have the manufacturer's name signed to it as evidence of his good faith. THEN the farmer who signs is bound, but otherwise not.

The concluding paragraph of the editorial is a slander upon the sugar beet growers and should be resented as such. Farmers are pretty much sick of this "producing for patriotism" stuff. They produced for "patriotism" all through the war when everyone else except the soldier boy was producing for "profits." It's high time that the good sense of the people should reassert itself, sweep away all this camouflaging and "weazel" talk and get down to brass tacks once more. If there's a curtailment in the production of sugar next year it will be because the manufacturers, in their greed for great profits, will not have paid the farmers enough to encourage them to grow the crop. Why in the name of justice, does the M. F. slap the farmers in the face and put them in the class with the striking coal and steel workers, for asking a FAIR price for their beets without a single reference to the responsibilty that rests upon the manufacturers for trying to force upon the farmers a contract that gives to the manufacturers the lion's share of the profits? Every farmer's voice in Michigan should echo "why?"

Sugar Beet Contracts as Seen by a Michigan Farm Paper

ALMOST commendable, but belated effort is being made by the farmers in several counties of Michigan to secure a more favorable contract for their next season's crop. This effort is commendable because, under present conditions the producers of foodstuffs are laboring under a handicap which justifies the use of every reasonable and proper means to secure an equitable price for their products. It is a belated effort, because its leaders apparently did not awaken to the opportunity to serve the beet growers in this emergency until the contracts had been signed for the major portion of the 1920 acreage. Whether the present price of ten dollars a ton based on nine-cent sugar, with an additional dollar per ton for each cent per pound of the average wholesale price of sugar above nine cents per pound, is an equitable price is a very proper matter for inquiry and investigation by the farmers of beet growing sections, who have not yet contracted to grow them at that price. But the repudiation of contracts entered into in good faith is no more commendable on the part of the farmers than on the part of labor organizations, or on the part of beet growers than it would be on the part of the sugar manufacturers.

We hold no brief for the sugar manufacturers in this controversy. Rather we believe that the presumption of right is with the producers of the raw material, but the facts are capable of being fairly arrived at by proper study and investigation. This is a proper and desirable function of organized as well as individual beet growers, which should be vigorously pursued. Even if a large percentage of the farmers in beet growing sections have determined that the present price is compensatory to them, as is evidenced by the general signing of contracts for the 1920 crops which is reported in many localities, every effort should be made to fairly determine equitable distribution of the rewards of labor and capital invested in the growing of the beets and the manufacture of the sugar. Then it will be possible to fairly and inteligently negotiate a new contract with the manufacturers without needlessly jeopardizing production in what has come to be an essential industry, as would a general repudiation of contracts already made. The leaders in a movement looking toward such action are assuming a grave responsibility in the curtailment of production of this essential foodstuff in a time of present and prospective shortage, which is comparable to the responsibility for the curtailment in the production of steel and coal by similar means.

Crop Improvement Ass'n Buys Alfalfa Seed

By J. M. NICHOLSON, Sec'y.

I HAVE just returned from a trip through the middle West where I visited sections in Wisconsin, Minnesota, Iowa and North Dakota. I visited A. B. Lyman, of Excelsior, Minnesota, and also looked over the seed as certified by the North Dakota Alfalfa Growers' Association, 5,000 pounds of which has been ordered for Michigan.

I obtained a lot of first hand information on the way alfalfa seed is handled in the various regions it is produced, in the Dakotas, Montana, Idaho, etc., and I think this seed we are getting from the North Dakota Association is the best buy on the market at the present time for those who want absolutely genuine Grimm Alfalfa Seed.

All through the West alfalfa crosses more or less readily and in most of the sections both Common and Grimm are grown fairly close to each other. The result is there is some crossing and then there is some mechanical mixture through the use of the same threshing machine. In the section of North Dakota from which our seed comes these conditions do not prevail. Only Grimm Alfalfa is grown in this section and this seed has the additional advantage of being grown in a climate that eliminates all weaker strains. If any common alfalfa has been mixed with the original seed used or if any common alfalfa has been mixed with the original seed used or if any common alfalfa is sown in this locality, the winters are so severe that the Grimm is all that is left after a short time. Winter wheat and apple trees will not survive where this seed was produced. On the other hand the other people who offered Grimm Alfalfa for sale in most cases had it produced in Montana, Idaho, and such states, where common alfalfa will survive, where winter wheat is grown, where there is some chance for mixture by crossing and where the weaker plants are not necessarily eliminated.

As far as I can find the North Dakota association is the only one at the present time that can absolutely guarantee purity, origin and quality of the seed of the type we are getting from them.

Many commercial firms and indi-

Storage and Conservation of Water in Soils

Proper Use of Rotation, Deep Tillage, Dams, Etc., Can Pay Big Dividends, if Used Intelligently

By M. M. McCOOL

(A continuation of his series of articles on the subject of soils.)

CROP PRODUCTION over large areas is limited as much by the water supply as it is by other conditions. Growers realize the great importance of an abundance of rainfall, just previous to, during, and shortly after the blossoming period, with respect to the yield of corn. Investigations in three counties in Ohio over 16, 20, 30, 40 and 50 day periods, showed that high average rainfall during the thirty days from July 11th to August 10, and thirty days from July 21st to August 20th, gave greatest yields. The most important 40 day period was from July 11th to August 20th and the most important 40 day period was from July 1st to August 20th. The most important 20 days period was found to be from July 21st to August 10th. Moreover, rainfall during the first 10 days in August gave as high yields as any other 10 day period and the most critical period during the corn's development is the 10 days after blossoming.

A study of the yield of corn and the climatic conditions of Ohio during the period from 1854-1915 reveals that when the July rainfall is one inch or more greater than the normal or close to four inches, the probability of a good crop is 93 per cent. On the other hand when it is one inch less than the normal there is a probability of a good corn yield of only 19 per cent!

In addition, the effect of precipitation in the four great corn producing states, namely, Indiana, Illinois, Iowa and Missouri has been studied. These studies show that the average yield has been 23 bushels per acre with a July rainfall from two to 2.5 inches, whereas it has been 33 bushels with a July rainfall one-half inch greater, or a ten bushel per acre higher yield for an average increase of one half inch of rainfall, during the most critical stage in the development of the crop.

A high precipitation in spring or the early part of the growing period usually results in large yields of hay. Who has not observed large yields of clover following high spring precipitation on lands that produce very small yields if any, during years of low spring precipitation.

Few, if any, of the larger agricultural regions are not visited by drouths of longer or shorter duration, thereby limiting to a greater or less extent crop production. It is fully recognized that the storage and conservation of soil water are essential for the utilization to the fullest extent of millions of acres of land extending westward from about the 100th meridian to the Cascade Mountains.

Moisture control then becomes one of the chief agricultural problems.

Storing Water in Soils

One of the first considerations in connection with moisture control is its storage, or getting rain, or irrigation water into the soil and holding it there until it is made use of by some crop. This is governed primarily by the texture, surface condition, the nature of the subsoil, and the distribution of the rainfall. These I propose to discuss in this article.

The depth of penetration of a given amount of water into the soil should be considered. If it is retained, mainly in the upper layers, more of it is likely to be lost to crop production than if it penetrates more deeply. Observations taken 36 hours after a one inch rainfall in July revealed that moisture had penetrated a heavy clay loam to a depth of four inches, and a sandy loam approximately seven inches, and a coarse sand soil about 15 inches. If a two or three inch soil mulch is formed it is at once evident that much of the moisture in the clay loam would be lost as far as crop production is concerned.

The amount and depth of penetration of a given volume of water in the soil depends much upon the surface condition, i. e., whether it is porous or compact, moist or dry. If the surface is smooth and firm more water is lost by run off from sloping land than if it is loose and porous. I have examined soils as to their moisture content after rather heavy rains and have observed that where the surface sloping land was compact and rather smooth that the majority of the rainfall ran down the slope and was either lost in drainage channels or accumulated in the lower and more nearly level lands. On the other hand where the land was loose or porous and somewhat roughened the run-off was decidedly less. It is doubtless true that the unproductivity of some rolling lands some seasons can be attributed to an insufficient supply of moisture due in a large measure to the run-off as well as the lack of plant food caused by erosion. Thus proper tillage seems to be of inestimable value under such conditions.

Where a soil was sampled just prior to and 24 hours after a rainfall of a little more than one and one-half inches the water was found to have penetrated more deeply and the run-off less with tilled land than with sod. No gain in the water content was found in the second foot of soil under the sod whereas the same layer beneath the tilled crop gave more than five per cent.

If the rain falls gently far more of it penetrates into the soil than if it falls very rapidly. It was observed near Lansing, Michigan, that 95 per cent of a one inch rain penetrated a sloping clay loam soil when it came down gently but when the same amount fell in about one hour 80 per cent was lost by surface run-off. This is further exemplified by conditions that exist in much of the Pacific Coast region. Although the total precipitation is great, 45 inches or more, the amount of water that runs off the surface is indeed small in comparison with other humid regions. This accounts for the utilization of much very hilly land for the production of cultivated crops in that region.

This run-off water is lost so far as crop production is involved. Moreover in "seeking its level" this water does much damage by the removal of surface soil, commonly spoken of as erosion or soil washing. This is a matter of tremendous national and local importance. Those who have traveled with open eyes through the older settled rolling or hilly agricultural regions as well as some of more recent occupation appreciate the statement that this affords the greatest single source of loss in many of these sections.

Trees protecting a hillside from washing, near Kalamazoo. Hilly muck land should be protected by trees.

Navigation is hindered or impeded by the clogging of our large streams and harbors with eroded soil. This of course is one of the national phases of this problem and the abandonment of millions of acres of land because of their unproductivity due to loss of the surface soil is another one.

There are two kinds of soil washing—gullying and sheet. Where the land is rather steep and rolling or spring tooth harrow the water rolls off the ridges and passes into the soil at the lower levels leaving a dry mass of soil below the ridge. This phenomena has been observed after as much as two inches of rainfall. Of course it is desirable to have the water penerate deeply into the soil and thus the roughened surface is a decided advantage.

The nature of the subsoil governs to some extent the storage of water in the soil. If the subsoil is very compact and fine in texture the soil above may become saturated with water and the rain that falls thereon lost by run-off, and by evaporation into the atmosphere. Again, a very porous or gravelly layer below the surface, may permit water to pass deeply into the subsoil and a small amount be retained within striking distance of the roots of the crops.

It has been recently observed that the surface, whether smooth or rough or sand soils greatly affects the penetration of a given amount of rainfall. Where the soil is rough as left by a corrugated roller or where there are well defined drainage channels a large portion of the water from heavy rains flows into them and in its rapid movement picks up and carries away loose soil over which it passes. This washing away of the soil from the bottom of sides of the channels may quickly cause the formation of gullies, ditches or ravines. Although it is the more striking it is perhaps less serious than the sheet erosion.

Sheet erosion means the washing away of the immediate surface soil without the formation of appreciable gullies or with a heavy downpour the land is subjected to the action of a large volume of water which as it seeks its level may pick up and carry with it much surface soil. This form of erosion may and often does during a single season remove as much or more organic matter as would be replaced by the turning under of two or more clover crops in addition to the other soil constituents.

The causes of erosion are numerous. Of course a very important and probably the chief cause is the slope of the land. Then too the rainfall, its total amount, distribution and manner, that is whether gentle or torrential are of utmost importance. Soil texture and structure or tilth because of their influence upon the rate of penetration of water are likewise to be considered. The things that alter the structure of the soil were discussed in an earlier article and need not be mentioned at this time. Moreover too many tilled or row crops, methods of culture and small amount of organic matter should be included.

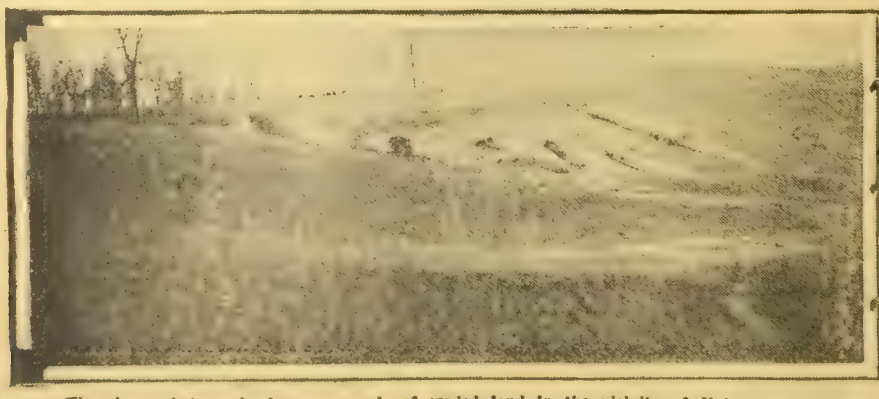
The situation has been outlined. Now what is the constructive side of this proposition. It would be useless to call attention to these conditions if much of the damage were not preventable. At no time in the history of our agriculture has the great need for soil conservation been so strongly agitated. In Michigan this problem is one for the individual farmer. In fact there are few farms that do not have a small acreage, at least, of land that washes. Preventable measures are important yet where the washing has occurred remedial measures only are left.

Rotations that leave the land bare as short a time as possible comprise the most fundamental preventative measures. In addition the importance of having the surface soil filled with fibrous roots and other forms of organic matter should be mentioned. The organic matter binds the soil together and permits of a ready penetration of rainfall into the soil. Many rolling lands should not be devoted to a tilled crop more frequently than about one year in four or five.

Deep tillage is usually advisable because of its effect upon the soil structure. Moreover, the surface of the soil should be roughened so as to check the water that falls upon the land. However, tillage operations such as dragging or harrowing wherever possible should run across the slope rather than with it. It is not uncommon to see hillsides that erode badly because the grain drill ran with the slope rather than across it. Of course, some of these methods are rather awkward and lose time yet in the long run they are profitable.

The methods to be used for stopping of washes, or gullies in fields depends upon the size of them and the material at hand. Small ones may be filled with straw or other

(*Continued on page* 29)



The above photograph shows a sample of eroded land in the vicinity of Kalamazoo. Water has had free sway with the soil.

Most Michigan farms have spots like this, eroded when cropped. The water runs off and the plot is left unproductive.

"When Reuben Comes to Town"

Some Comments on Dungfork Democracy in Ontario, Where the Farmers Have Combined With the Laborites

By H. F. GADSBY

YOU Americans have had in your middle west your farmer legislatures and know just about how they function. They all come in crying "We are pure," get plastered with the mud of office, and pass out, having added to the sum of human progress nothing but a few laws in their own interest. They profess to know nothing about party politics—although their sophisticated methods give them the lie—but they are willing to take on the job.

When the farmers deny that they are politicians they get themselves in wrong with old-fashioned people who believe that just as dentistry is left to the dentists and blacksmithing to the blacksmiths, so should politics be left to politicians who are honest enough to be proud of their profession and keen enough about the greatest game to which a man can bend his mind not to disclaim it.

All of which is to say that the United Farmers of Ontario are on top in the banner province of Canada and unless they come a cropper in the next few months, are likely to rule as for the next four years. This is a greater experiment in dungfork democracy than anything you have undertaken in the United States, where this after-the-war cow-pox on the body politic is confined to the middle west, and where the farmers have thus far steadfastly refused to enter into a combination with the labor organizations. The Ontario case shows the epidemic spreading eastward in the Dominion, and is very much as if one of these bush-lot witanagemots took possession of the capitol at Albany, N. Y.

However, the two grand old parties, who are now jointly and severally in the wilderness—and who may yet have to make common cause to turn the bucolic intruders out—are not downhearted. They say the U. F. O.—short style for Us for Ourselves—is not a government, but a disease, the last phase of a world-wide neurosis which only time can heal. They look forward confidently to the day when reason shall resume its throne, the people will discount the farmers' counsels of perfection by 50 per cent, and liberals and conservatives will line up again as they did in the piping days before the Hun broke loose.

Meanwhile what can't be cured must be manured. In other words, the U. F. O. government is to be given ample room and verge enough to accomplish its own destruction. It is to be egged on rather than egged out, because the chances are that if the farmers were forced to hold another general election at this moment they would come back stronger than ever, shedding by the way their troublesome side-partner, the independent labor party, whose complement of 11 members—two of them cabinet ministers—alone makes the U. F. O. government possible. The U. F. O. government has a majority of two in the house—one of its own and one the speaker, who has a casting vote only when it is needed—stolen from the liberals. An accident might happen to a majority as small as that.

THEREfore the liberals who lost the election thru being too trustful of the farmers, and the conservatives, who lost it thru being too distrustful of Premier Hearst, will not pool their misfortunes, but will let the U. F. O. talk and legislate its fool head off in the hope that the farmers' movement will crucify itself in the small field of Ontario before it ventures into the larger field of Dominion politics where it can play hob with the tariff and other questions of national importance. The provincial legislature is nothing more than a glorified county council. The matters within its purview are domestic and intimate, but not of the first magnitude. The Dominion parliament, on the other hand, is an arena of great issues such as free trade, protection and national ownership, and the farmers make no bones of saying that they have their eyes on it and that it is their next world to conquer.

The U. F. O. government is having its own troubles. To begin with, it is not as pure as it cracks itself up to be. It got into office by double-crossing the liberals, who withdrew candidates in many constituencies to give the farmers a chance. Puffed up by their success—they expected 30 seats and they got 45—they went back on their old friends, the liberals, by uniting with whom they would have had a good working majority, and took up instead with the independent labor party, which alliance gives them a shaky majority of two.

The obvious inference is that the farmers were afraid that the liberals, under the brilliant leadership of Harley Dewart, K. C., would be clever enough to swallow them. They knew nothing about parlia mentary procedure and were not particularly vocal in any case, so they refused to take their natural allies, the liberals, preferring the independent labor party, a small but restless bedfellow who is already yelling for more than his share of the quilt.

The minister of labor for example, the Hon. Walter Rollo—nicknamed Rollicking Rollo for the free way he has with the people's money—already has a program of old age pensions, unemployment insurance and widows' annuities which would set us back $2,000,000 a year. Of course the farmers will never stand for that any more than they will for that eight-hour day on the farm to which the independent labor party aspires in the city. Even a blind man can foresee trouble here, when the U. F. O. kicks the I. L. P. out of the bed, as it eventually will. On that day of wrath many will arise to say to Premier Drury, "I told you so."

Though pure as the driven snow, the U. F. O. government is continually getting its feet in the mud. Another act of perfidy is its effort to form a distinct party, the "people's party," though pledged by its constituents to avoid such appearance of evil and to conduct government on absolute principles of right and wrong, regardless of expediency or the personal equation. Another factor in this farmers' millennium was to be the abolition of patronage, but the saints from the side lines have not ruled three months and they are in a patronage row up to their chins.

It seems that when they said they would abolish patronage they meant that they would take it away from the local organizations and center it in Toronto. Whereat, as Mr. Shakespeare might remark, they all said, "Like h—l you will." It seems hard for any government, however pure, to kill the impulse which prompts us to reward our friends—that is to say, to do unto others as we would be done by, which after all is what patronage amounts to.

For a government which sniffs at the two old parties as corrupt and selfish, the U. F. O. shows considerable skill in trying to strengthen itself and weaken the other fellow by kidnapping liberals to bolster a majority which is practically only one and a half, because the speaker, a kidnapped liberal, has no vote except when the result is a tie. The U. F. O. would like to get about 10 more liberals to come acress, and to this end is prepared to promise anything that is not nailed down, including U. F. O. nominations for the next federal election, which they advertise as a sure thing for the farmers' cause.

THE U. F. O. government tries to steal liberals for another reason—because it is half in and half-out of office. At present three cabinet ministers—Premier Drury, Hon. Manning Doherty, the minister of agriculture, and Hon. W. E. Raney, the attorney-general—the brains of the rustic gathering—lack seats. The government will not be all set until these three—none of them candidates at the last election except Mr. Doherty, who was soundly walloped in his own county—find a firm base to rest on. They are talking and counselling, but not so to speak, ex cathedra. The chairs are yet to be provided.

The strange thing about it all is that the U. F. O. members of the legislature, the elected representatives of the party of unselfishness, unanimously refuse to give up their seats to their three homeless leaders, who will have less than Noah's dove to perch on unless certain weak-kneed liberals make room. The farmer M. P.'s have a natural desire to try what life in the city is like—one hopes that they will get a new light on the cost of living—and they do not propose to forego the pleasure for their own comrades. It will require all the innocence and purity of Premier Drury, who comes of an old political family; of Mr. Doherty, who has a past as a government contractor, and of Mr. Raney, who is an uplifter with one brown eye and one blue one—it will require the conjoint innocence of all three, I repeat, to battle with this reluctance on the part of their followers to give up the bird in hand.

It is conceded that Mr. Raney, the attorney-general, will have a hard job to make the grade, although, having one blue eye and one brown eye, he can always have two eyes single to any purpose he undertakes. He is not only an uplifter, but a Methodiviki, if you know what I mean, and mutters awful threats under his breath like betless race-tracks and a Plimsoll mark of two gallons of hard stuff—and not a drop more —in the cellar. Mr. Raney—what a name for the drouth-compeller—is against all our little wickednesses. I don't think they will stand for him in North Victoria.

* * *

Artless though it is, the U. F. O. government has attempted two grand stand plays within the last six weeks. One came through and one didn't. The one that (*Cont. on pg.* 26)

See Yourself as Others See You

THE FARMERS of Ontario have wrenched control of the government from the political gang that has bossed Ontario elections and made its laws since time immemorial, and naturally the dethroned politicians don't like the change. Politics are some men's bread and butter, some men's religion and others their all. To have the avenue to their bread basket and their pew cluttered up by a lot of farmers was a thing quite shocking to the silk hats and swallow tails, and in their displeasure they have resorted to insults, ridicule and bitter denunciation of the "bucolic intruders."

A sample of their childish scolding was published in a recent issue of the Detroit Saturday Night. The author, H. F. Gadsby, has a streak of humor in him which may some day prove his undoing. His tirade of insults against the farmers is occasionally illuminated by a bit of philosophy. Take this, for instance: "When the farmers deny that they are politicians, they get themselves in wrong with old fashioned people who believe that just as dentistry is left to the dentists and blacksmithing is left to the blacksmiths so should politics be left to politicians who are honest enough to be proud of their profession and keen enough about the greatest game to which a man can bend his mind not to disclaim it."

The Ontario author believes that the farmers are a bunch of hypocrites masquerading as reformers who preach loudly against political rottenness and special provilege to provide a cloak for their own evil designs upon the state's exchequer. But here Mr. Gadsby makes a blunder and discloses his ignorance of the rural mind. He has been contaminated by too much city life. He cannot understand that out in the clean spaces of the country are people who believe in giving an honest day's work for an honest dollar, and look upon the robbing of public funds as great a crime as the looting of a bank. He cannot understand how a man could consecrate himself to the service of his state and nation without being paid for the job, or being assured of privileges which he might pass out to his relatives and friends. So he does not comprehend the true significance of the farmers' desire and efforts to take a hand in the administration of government. Truly, Mr. Gadsby has much to learn.

After reading Mr. Gadsby's satire, one wonders why the farmers and laboring men of Canada have been so slow to organize against the politicians for whom Mr. Gadsby evidently speaks. Here in the United States the majority of farmers seem to steer shy of political alliance with organized labor, feeling that they can best work out their ideas and ideals of good government alone. But, if the politicians of Michigan or any other state for that matter, resist with so poor a grace as the Ontario irreconciliables the farmer's natural desire to take his proper place in the politics of the state and nation during this period of high taxes and governmental abuses, no one can predict what leaven may be set to work in the ranks of organized farmers and laboring men.

Read Mr. Gadsby's article. Take a look at yourself, Mr. Farmer, as others see you. It may "larn" you to stay at home and slop the hogs and leave politics to the politicians. And again, it may not.

Gleaners Hold Sucessful National Convention

1,000 Delegates from Several States Stage Rousing Sessions at Kalamazoo Last Week

THRONGING Kalamazoo thruout the greater part of last week, more than 1,000 delegates of the Gleaners from several different states held their bi-ennial convention with splendid success. The sessions were run off in business-like style and the all-round accomplishments were many.

More than 1,000 Gleaner delegates assembled at the armory for the opening session of the convention. State Senator Herbert Baker presided. Among the speakers was Milo D. Campbell, farmers' candidate for governor of Michigan. In a splendid address, he emphasized the need of cooperation among the various organizations.

"It was a splendid convention," declared Mr Campbell in an interview following the final meetings, "and I believe the wide attention it attracted throughout the Middle West thru he press, helped show the public the true importance of the great, growing Gleaner organization."

Tuesday evening a session was held at which Senator Baker gave an address on "The Farmer and Legislation"' He showed the great need for farmers in Michigan and other states to take a more active interest in politics and to stand united on certain big issues vitally affecting all farmers alike, irrespective of party

Nathan F. Simpson, general manager of the Gleaner Clearing House Association, which has begun its big expansion program for co-operative marketing throughout the Middle West, was also on theh program. His speech on "Things coming our way" showed how the Gleaners by sticking together and by plugging were overcoming all sorts of obstacles for success.

Warden Hulbert, of Jackson Prison, at which the famous Gleaner Binder Twine industry has been operating so successfully, gave an address on "The Gleaners." These addresses were followed by a memorial service, and the first day's program closed with fancy drills given by women of various arbors, and executed in beautiful style.

The program of the second day started off with the presentation of the "Story of the Gleaners," a moving picture of some several thousand feet of film, showing the thousand and one activities of the Gleaners. The work in the field, the picnics and drills, the routing of work through the Great Gleaner Temple at Detroit and many other interesting phases of the Gleaner work were shown, not omitting the important co-operative side. This film has been taking a swing around the various arbors in the nation and has made a great hit wherever it went. The show given in a Kazoo movie house was free to Gleaners.

In the afternoon of the second day, the business started, and the various officers gave bi-ennial reports to the delegates. In spite of the losses by war and by the flu epidemic, the financial condition of thhe organization was demonstrated to be in the most excellent shape. The extent of the victory of this continued onward progress against great odds is shown by this statement of an official of the Gleaners: "During the war the Gleaners were faced with hard problems. The conscription act practically put a quietus on the field work. Government insurance hampered the fraternal week of the Gleaners, many thousands of whom enlisted or gave practically all their time for serving their country. Meetings had to be given up to a large extent and arbors halls were turned over to the Red Cross and other war work. Then for five months the flu epidemic stopped all meetings and caused thousands of deaths, adding $264,000 to the normal payment of death claims for that period. Otherwise thhe Gleaner report would have shown that much more to the already excellent standing."

Wednesday evening was taken up with the school of instruction. Splendid teams gave all of the degrees, followed by the instruction school. A very large number received the degrees and with Miss Lucia Bellamy in charge of the degree teams, the work was of especial interest.

Deploring the present tendency toward autocracy in government as manifested in unwarranted limitation of free speech, freedom of the press and freedom of assembly, the Gleaners in the business sessions which closed the convention, adopted resolutions demanding a return to our time-honored policy in these matters, unswerved by the influence of organized revolutionists on one side and by associated profiteers on the other.

The legislative program of the Gleaners for the next two years was adopted along lines suggested by the following:

1. Extension for two years of government operation of the railroads.
2. Enactment of more efficient corrupt practices act.
3. Referendum on constitutional amendment to permit the expenditure of $5,000,000 for purchase of terminal warehouses.
4. Ratification of the peace treaty without reservations.

Declaring countless officials, easily sheltered, are shaking down the luscious fruit of public office, the convention adopted a resolution demanding a house cleaning at Lansing as follows: "We invite the good citizenship of Michigan to make an investigation of the facts here set forth, feeling assured that, through their findings, they will join with the organized formers in checking the present expensive and extravagant management of state affairs, by placing the business of the state on a sound basis. This, we feel, can only be accomplished by a thorough house cleaning at Lansing, to the end that a multitude of commissions and boards may be done away with and countless so-called public officials placed where they may become producers instead of tax-eating consumers."

The resolution made to endorse the National Farm Bureau movement was defeated at the Gleaner sessions. Prominent Gleaners gave as a reason the belief that there is no need for both organizations, inasmuch as the present program of the Gleaners embodies about all that the Farm Bureau promises, together with much more, which has been in tried-and-true operation for many years.

The convention voted to raise the annual fees from $1 to $2. The increase was forced because of the increase in membership and a widening of the activities of the organization.

The concluding order of business was the election and installation of national officers. Grant Slocum was elected president. Ross L. Holloway was made secretary, and John R. Hudson, of Middleton, treasurer. The supreme council includes: Herbert F. Baker, Cheboygan; J. J. England, Caro; Frank C. Goodyear, St. Louis; H. J. Zimmer, South Bend, Indiana; George L. Strachan, Muir, Mich., and Mrs. Effa Munn, Grand Ledge.

J. Floyd McKinstry, of Grant Park, Illinois, was elected chief Gleaner, and Mr. H. H. Hough, of Wauseon, Ohio, vice chief Gleaner; Mrs. Mary B. Holderman, of Kankakee, Illinois, chaplain, and Wm. Harris, Mt. Pleasant, conductor.

Delegates have returned to their respective communities with enthusiasm for the great branching out of activities for the Gleaners and are confident that the present year and those following are going to be the greatest in the expansion of the national Gleaner organization.

This trio holds its head pretty high, except at feeding time. These individuals are proud because they make up the undefeated Aberdeen-Angus calf herd of 1919, owned by the Woodcote Stock Farm, Ionia, Mich.

Northeastern Development Bureau Celebrates Seventh Birthday

Enthusiastic Members Assemble for Get-Together Dinner and for Successful Annual Banquet

THE ANNUAL meeting of the Northeastern Michigan Development bureau was held in Bay City Jan. 23. followed by banquet at the Wenonoh, in the evening attended by about 160 guests who came from all over the district, with a number of others from outside of Northeastern Michigan, including men from Grand Rapids, Lansing, Flint and Pontiac.

At the annual meeting in the afternoon, James L. Snody was re-elected president of the organization; John Yuill, of Vanderbilt, first vice-president; Robert Rayburn, of Alpena, second vice-president, and Marius Hanson, of Grayling, treasurer.

The report of Secretary Marston reviewed the work which has been done during the past year and Treasurer Hanson's report showed that the bureau has been using its money to advantage.

President Snody, in a short address, reviewed the great growth of the district and some of the especial features of the bureau work which had been contributed to that growth. He also outlined some of the things which he would like to accomplish in the future and among other things advocated the offering of substantial pries for the best samples of grains and other farm produce to be sent to the bureau and exhibited at its annual meeting. Mr. Snody promised a personal donation of $25 toward a special prize for the best sample of corn and suggested that others might do likewise, and the bureau could supplement these donations with other prizes. The one condition he attached to the prizes is to be that the samples submitted should become the property of the bureau, to be used for exhibit purposes.

Regret Saginaw's Defection

Directors of the association expressed their regret at the failure of Saginaw county to retain its membership in the bureau. "Saginaw is one of the trading centers of the entire northeastern Michigan district and it ought to be deeply interested in the effort of these northern counties to develop their territory and to assist in that work for what helps one part of the district cannot fail to be a benefit to all of the others," said one of the directors.

The board of directors, as selected by the various counties of the district, is as follows, the first named being the member of the executive committee:

Alpena—Robert Rayburn, A. B. Crow, Alpena; Moses Sharp, Cathro.

Arenac—H. A. Chamberlain, Standish; A. H. Townsend, Twining; Jno. Donnelly, Sterling.

Bay County—W. G. MacEdward, Frank A. Hewitt, Bay City; John Anderson, Crump.

Cheboygan—F. E. Skeels, Wolverine; Al. H. Weber, E. L. LeBlanc, Cheboygan.

Crawford—Marius Hanson, Grayling; J. E. Kellogg, Lovells; Charles Craven, Frederic.

Gladwin—J. Foster, A. J. Stevens, F. L. Prindle, Gladwin.

Iosco—C. F. Prescott, Tawas City; C. A. Pinkerton, East Tawas; Ernest Crego, Whittemore.

Midland—Leslie Madill, H. H. Dow, Midland; James Carty, Coleman.

Oscoda—A. W. Bissland, Ben J. Watters, Mio.

Ogemaw—O. L. Rakestraw, Rose City; Wm. Hodgins, Selkirk; C. S. Blin, West Branch.

Otsego—John Yuill, Frank Randolph, Vanderbilt; Sim Lewis, Johannesburg.

Presque Isle—James R. Snody, Onaway; Paul H. Hœftt, E. D. Vincent, Rogers.

Roscommon—A. J. Price, Mert McClure, Chas. H. DeWæle, Roscommon.

W. G. MacEdward was appointed a a director to represent the transportation companies.

Following the meeting of the directors the executive committee re-elected T. F. Marston as secretary.

The Banquet

The annual banquet was served in the large dining room of the Wenonah hotel and was one of the most enjoyable of the seven similar affairs held since the development bureau was organized.

Following the excellent dinner President Snody introduced Geo. L. Lusk, secretary of the Michigan Public Domain Commission, as toastmaster and Mr. Lusk welcomed all present, as a Bay Cityan, to his home town.

Gov. Sleeper was on the program to speak on "The Michigan Park Commission" but the governor was out of the state and he was represented by his secretary, Major Ralph Duff, who gave a short talk on the plans of the new park commission and said that he believed the future would show that this state park plan, fathered by Governor Sleeper, would be looked upon as his greatest work.

N. P. Hull, president of the Grange Life Insurance association, who was on the program to speak on "The Farmer," was unable to be present. Julius Beal, member of the Board of Regents of the U. of M. and of the public domain commission, spoke on "A New Bird Discovered in Northern Michigan." He told of the efforts of the public domain commission to make the most out of the state-owned lands through opening them for settlement, where available for farming purposes, and through re-forestation plans. He told of the work of fire protection, carried on jointly by the state and the federal government and his "new bird" was the use of the aeroplane for patrolling the forest regions and discovering fires in their incipiency, a plan which has proved successful in the far west.

State Aid Clearing Act Would Speed Development of Cut-Over Lands

How State Could Use Its Credit With Adsolute Safety to Aid in Northern Michigan Development

By JOHN G. KRAUTH

EDITOR M. B. F.—I am pleased to hear that a State Aid Land Clearing Act appeals to your good judgment. I cannot understand how the reactionary interests in the legislature so many years neglected the very best interests of the state in not paving a way to enable the land hungry to connect with the stump land. I feel confident that if the M. B. F. urges a State Aid Land Clearing Act to stimulate the back to the land movement, the resolution necesary from the legislature to permit an amendment submitted to the people, will meet with little opposition. That it will carry when its interest is fully understood is absolutely sure.

There is a land hunger in our midst always—regardless of statements to the contrary. If we don't know it, Canadian land missionaries in our midst always are fully alive to the fact.

As to the draft of a clearing act, I an unequal to the occasion. The best I can do is to give you a crude outline only, but it is so simple that you will have no trouble finding some one capable of whipping it into workable shape. I took up the matter with Senator Baker early last year. He expressed a desire to father the bill in the Senate, but was interested at the time in a corrupt practice act, also a warehouse act and could not properly care for it, but he will, I know, be glad to put it over.

Now get the idea clear in your mind—this is not a State Clearing Act, but a State Aid Land Clearing Act. The state is in no way to be involved in performing the clearing. Here is the idea: A State Aid Clearing Board, composed of the Public Domain Commission and Soil Department of the M. A. C., empowered to contract with settlers, direct or with outside bidders to clear at least one-quarter of settler's land, upon application by the settler only. This can be broadened. The state to set aside a certain sum of money, say $250,000 or more as a "Revolving Fund," to finance settlers, at low interest, as low as possible and cover expenses. The state to be secured upon land improved, not merely that part improved, but the whole tract. You might say, the state is practically loaning sufficient money to the settler, to clear a part of his land, but to be sure the money goes into clearing as intended, a contract is made with that purpose in view only.

The idea is to assist the settler in clearing at least one-fourth of his land upon application, in the following manner:

Upon application to the Clearing Board for state aid, the soil expert of the Clearing Board, furnished by the M. A. C., will pass upon the land, and if land is properly classified as farm land, the Clearing Board will contract with the lowest bidder to clear said acreage, at least one-fourth of the land, and by all means permit the settler to bid on the work as this money is very necessary to stay him over the year he will be employed clearing. It would even be policy to give him the work, though his price were a little the highest of the bidders, for the reason stated above, as he will have to pay for it in the end. It does not look reasonable, that he would rob himself. The amount of money so advanced by the state, to be a lien upon the whole farm, and payable in about 20 or 25 annual payments, in the form of a drainage tax

Another fact to bear in mind no land known to be approved by the Clearing Board will revert to state for non-payment of taxes. Speculators will see to that, if the owners do not. So the state is really taking no risk, nor are the taxpayers called upon to do a charity act as the settler is paying for the use of a service that is benefitting the entire state. In making application for clearing under this act, the settler and all other parties having an interest in the land, will be required to join in the application, to make the state's security o. k.

Further, under this act, owners of partly improved farms will enjoy the same privileges, in their case, the security will be all the better. And more acres cleared, the better for county and state. The state will in no way be hampered with a land clearing crew, a cumbersome and costly method, nor called upon to supply dynamite and stump pullers, settlers doing this work will in a measure co-operate. They can afford to invest in stump pullers, etc. In many counties in the state the county farm expert could co-operate with the Clearing Board. The idea is to make the work as simple as possible, cutting out as much expense as possible and at the same time protecting the state's interest and serving the settlers.

Land dealers to pay for the expense of classifying their land.

Can you not see the protection to fool land buyers, if said buyer refuses to buy farm land, not approved by the Clearing Board?

The reputable land leaders can advertise farm land, subject to clearing aid, as approved by the State Clearing Board, a protection to the banker, investor, and the state's good name, so badly smirched by crooked land dealers. The time is coming, in a very few years when pine stumps will be eagerly sought as fuel. They will first serve many years as fencing, and replaced by wire, when settlers will be better able to invest in fencing, but the fuel value of the stumps; the fencing value of the stumps aside from clearing field, will amply compensate the settler or his progeny, for investing in a stump puller, when the stumps on white pine, and white pine up here is found on good agricultural lands as well as the poorest.

If a temporary aid is available to a new settler for a start in his clearing operations, enabling the settler, with this first aid, to manager the rest unaided.

Is not the state benefitted by this imperishable improvement that costs the taxpayers not a sou?

Such an act benefits every land owner and every man desiring to own land and every merchant in the state, not forgetting the transportation system, and the hungry bellies that must be fed.

It is not a local class issue, it is state wide in its effect. I have been paying taxes on the same land for twenty years and they are fierce. It is costing 10 per cent annually, interests and taxes to carry wild land. It is eating itself up every ten years. Increase in values does not keep pace with carrying charges. Northern Michigan's interest, except in mining and lumbering, have been neglected because they are our poor relations.

Is Not This a Worthy Enterprise?

NORTHERN Michigan is a rich empire of undeveloped wealth. It has magnificient agricultural resources that await the settler's ax and plow. The development of wild lands has ever been the work of the pioneer and it will always be so. Men who have not the stuff of pioneers in them will never tackle the stumps and underbrush of the cut-over lands. The pioneer is essentially a man whose principal assets are ambition, hope and determination. Lacking capital he works at great odds and frequently becomes discouraged.

M. B. F. has persistently argued that the development of Michigan cut-over lands was a job for the state to assist. It has recommended the issuance of State Development bonds to create a fund from which money could be loaned to settlers. Mr. John G. Krauth, of Millersburg goes us one better and suggests a State Aid Land Clearing Act. We asked Mr. Krauth to give us his ideas of how such a law would work out and the accompanying article is his reply.—Editor.

Congress Gets Bill to Prevent Shoddy Being Sold as Virgin Wool

Measure Aimed at Deception of Fabric Manufacturers in Interest of Producers and Purchasers

WOULD IT not be a step in the right direction to urge through M. B. F., that we write our congressman to vote for the Truth in Fabric Bill? I would also suggest that we have petitions passed through each local farm organization for same.—W. W. Terry, Osceola County.

* * * *

HON. BURTON L. FRENCH of Idaho, introduced the "Truth in Fabric" law in Congress, Jan. 7. This act would make it compulsory to identify shoddy and cotton in cloth and clothes, and would free the wool growers from unfair competition with shoddy and would protect the public against those who would sell shoddy as virgin wool and charge virgin wool prices for it.

The following table and bulletiin entitled "Why Clothes Are So High" graphically shows the root of the cause of the present exorbitantly high price of clothes. This table also shows why fabric manufacturers divert from the wool growers to the shoddy and rag industries the people's demand for virgin wool.

The Truth in Fabric Law introduced by Mr. French would right this wrong.

Why Clothes Are So High

Showing how the fabric manufacturer, by failing to tell the wholesale merchant to whom he sells the fabric that the fabric contains shoddy, is able to secure from wholesale cloth merchant the unjust price of $15 for an All-Wool Woolen suit length of 3½ yards containing 80% of shoddy, which, because it contains 80% of shoddy instead of being all virgin wool, the fabric manufacturer could have profitably sold for $10 and for which the wholesale cloth merchant would not have paid more than $10 had he known that the cloth was 80% of shoddy.

Also showing how, without any profiteering on the part of the wholesale cloth merchant or the retail merchant, the unjust price of $5 charged by the fabric manufacturer more than doubles by the time the public is reached.

Please note that the same percentage of markup, 60%, is used in the case of both basic prices on which computations are made, namely:

1. The fabric manufacturer's price of $10, which is the legitimate price he should have charged the wholesaler.

2. Fifteen dollars, the unjust price, which he was able to secure only because he permitted the wholesaler to believe the fabric was made exclusively of virgin wool.

Price at which suit length could have been profitably sold by fabric manufacturer to wholesale cloth merchant	$10.00
As an example—if normal and legitimate markup of wholesale cloth merchant were	6.00
Wholesale cloth merchant's price to retail custom tailor	16.00
As an example—if retail custom tailor's normal and legitimate percentage of markup were 60%	9.60
Retail custom tailor's legitimate price to the public	25.00
$15.00 Unjust price which fabric manufacturer was able to secure from the wholesale cloth merchant, only because he permitted the wholesale cloth merchant to believe he was purchasing a fabric made exclusively of virgin wool.	
60 % As an example—if normal and legitimate markup of wholesale cloth merchant were 60%.	
9.00	
15.00	
24.00 Wholesale cloth merchant's price to retail custom tailor.	
60 % As an example—if retail custom tailor's normal and legitimate percentage of markup were 60%.	
14.40	
24.40	
38.40 Retail custom tailor's legitimate price to the public made necessary by the $5 excess and unjust price of fabric manufacturer.	
25.60 Retail custom tailor's legitimate price, possible only because the initial charge—the fabric manufacturer's charge—was just.	
12.80 Excess and unjust price to consumer that has resulted from initial overcharge by the fabric manufacturer of $5, an overcharge that has forced both wholesale cloth merchant and retail custom tailor to become a party to an unjust price, but without the slightest advantage either to wholesale cloth merchant or to the retail custom tailor.	
5.00 Fabric manufacturer's excess and unjust charge.	
$ 7.80 Excess and unjust price that naturally accrues during process of distribution.	

The following resolution, passed unanimously at the recent annual meeting of the Fleece Wool State Growers' Association and subsequently endorsed by the Pure Breed Associations throughout the United States clearly defines the issue and precisely indicates the good which would result to the People, the Natio, and the Wool Growers, from the passage of the "Truth in Fabric" Law now before Congress.

"Whereas, a large part of the raw material used in manufacturing woolen fabrics and apparel sold as 'all wool' is shoddy, and not virgin wool as the 'public' believes;

"Whereas, the 'public' does not even suspect that the term 'all wool' may mean wool that has previously been used in cloth;

"Whereas, the term 'all wool' is a mere general term that may include shoddy;

"Whereas, even the most inferior shoddy may be 'all wool;'

"Whereas, the term 'all wool,' because it fails to distinguish between shoddy and virgin wool, places both the public and the wool growers at the mercy of fabric manufacturers; deprives the people of their right to choose between shoddy and 'virgin" wool;' deprives the people of the knowledge of whether they are purchasing shoddy or virgin wool—the knowledge that is the people's sole protection against those who would charge virgin wool prices for shoddy; and thus robs the public and

"Whereas, the unrevealed presence of substitutes, especially shoddy, in fabrics and clothes abrogates the law of supply and demand, places a premium on deceit and profiteering and violates economic law and outrages moral law;

"Therefore, he it resolved that this Association of Fleece Wool States earnestly urge, in the interest of Truth and Justice, and for the protection of both the Public and Sheep Husbandry, that the U. S. at the earliest possible moment enact legislation making it compulsory to make known the presence of substitutes for virgin wool, especially shoddy, in fabrics purporting to contain wool and apparel made from such fabrics; and in order that this worthy object may be speedily accomplished in the interests of all the people, we request the earnest co-operation of all who desire to see 'right' prevail and honest practice established in all branches of business."

By a vigorous support of the Truth in Fabric law, those who desire that Truth and Square Dealing shall prevail; that the people shall be protected in their right to choose between shoddy and virgin wool, and that one of our most essential industries—sheep husbandry—shall secure justice, can secure all of these objects and render the people,, the nation, and the sheep industry an inestimable service.

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL9

MARKETS ARE PLANNED FOR OAKLAND COUNTY

"The plan of the Oakland county Farm Bureau will be to establish co-operative marketing associations in the various small communities of the county," says B. F. Beach, recently appointed business manager for the bureau. "After the community organizations are functioning properly we will get them to buy and sell together and later it may be possible to have counties banded together for buying and selling.

"Many people have the idea that co-operative marketing associations are designed to boost the prices of produce. This is an absolutely mistaken idea. Of course one of their objects is to secure more money for the producer in cases where he is underpaid, but this is not done at the expense of the consumer, but at that of speculators who buy from the farmers for as little as possible and sell to the consumer for as much as they can get. By concerted buying of farm necessities and thus reducing the cost of producing, it is possible to lower prices.

"Marketing associations also encourage a higher grade of produce, because when farmers ship and sell their produce together, high prices are paid for quality rather than for appearance and size as has been the practice heretofore."

Mr. Beach has been working in Oakland county since Jan. 1. Before coming here he was manager of the Hart Co-operative Marketing association, an organization that does a $45,000 business in produce every month. He has also served as county farm agent for Oceana county.

"Last year our marketing association paid farmers a dollar a bushel more than dealers did for plums," said Mr. Beach, "and we put them on the market at the same price as the dealers. My purpose here will be to encourage better produce, see that the farmer gets more for it and that the price is not boosted for the consumer by speculators."

It is hoped to have marketing organizations under way in the principal communities of Oakland county before the close of 1920, although it will probably be three years before the project is fully developed. Several villages in the county have already begun work on a small scale.

Farmers Endorse Farm Agent Work

Just how much value former county agent J. Vernon Sheap, of Jackson county, has been to the individual farmer has never been exactly determined, but a visitor at the office of the county agent said that he estimated that he had made several hundred dollars last year by following Mr. Sheap's advice. He ended his conversation with the expression that should he ever be called upon to contribute for the support of a county agricultural agent he would willingly dig down in his pocket for any amount.

"I had some poor land which had been producing five bushels of beans to the acre," he said. "Through the efforts and advice of Mr. Sheap and a little work on my part I was able to raise the productivity so that last year I produced twenty bushels to the acre. The same is true of my oat ground. Last summer I was able to obtain ten more bushels to the acre than in previous years because I followed the advice of Mr. Sheap."

Other farmers said that they could cite instances where the productivity of the soil had been raised by information given by Mr. Sheap and said that the office of the county agent was worth a great deal more than they could estimate.

Grange Leads Fight Against Wayne County

The State Grange is asking the Muskegon supervisors to join in the fight to oppose the action of Wayne county in endeavoring to get the state board of equalization abolished. Kent, Ionia and some of the other counties have asked the Grange to lead in this fight, and the communication yesterday from John C. Ketcham, master of the State Grange was referred to a special committee composed of Supervisors Benjamin, Moore and Kline.

It is pointed out in the communication from Mr. Ketcham that Detroit escaped the paying of $20,000,000 in state taxes by having a low valuation in 1916, 1917 and 1918, because of its rapid growth. The state board equalized only every three years at that time. Last year the valuation was boosted and the taxes reduced in many counties.

Under the present law the state equilization board would have power to act yearly. Mr. Ketcham says it is understood Detroit has raised $54,000 to fight its case and he believes that should be a signal for the rest of the state to get busy.

Branch County Farmers Organize Elevator Company

The farmers of the county held a mass meeting at the town hall Monday in the interests of forming an elevator company.

After the meeting was called to order by Frank Knapp, of Coldwater, Milo D. Campbell, of Coldwater, gave a short address followed by a few minutes talk by County Agent Nash.

During the business meeting which followed a permanent organization was formed with the following officers in charge.

President, L. G. Taylor, vice-president, Ward Lindsey, secretary, Warren Dobson. Board of Directors: A. D. Robinson, Roy Strang, Harry Corless, Frank Demorest, Arthur Luse, Herman Strahly and Linus G. Taylor.

The elevator company will adopt the revolving plan of financing. This system is different from a stock company in that no stock is sold. The men who care to loan the organization from $50 up, secured by notes of 6 per cent interest given by the board of directors, these notes being paid off as fast as funds permit.

The elevator is conducted on a non-profit basis and will render a service rather than a profit. A membership in the organization costs $10 but if anyone cares to sell without taking out a membership, a plan has been arranged to take care of that. Eventually all patrons of the elevator become members.

Hillsdale Co-Ops. Held Annual

At the annual meeting of the Hillsdale County Co-operative Association, the reports showed that during the past year a $375,000 live stock business had been done and a $60,000 general business.

All of the directors were re-elected: B. S. Lamb, Wheatland; B. E. Kies, Bankers; Charles Boone, Hillsdale; Frank Carter, Hillsdale; Bert Slack, Cambria; Marley Brown, Hillsdale.

Cattle Graze in Snow

For the past few weeks Edward E. Thurston, residing at Camp Verdie, Arizona, but who after next summer will give his home as Manistique, Michigan, has been in Schoolcraft county looking over the ranch which was started this fall by H. R. Griscom, L. W. Martin and himself at Blaney.

Coming from a state which has yet had no snow and very little cold weather, Mr. Thurston expressed great surprise at finding the 500 cattle that are being wintered at the ranch in such fine condition compared with the cattle, that are being wintered in the southwest, those on the Blaney ranch were in much better condition he said.

Although the Blaney Cattle Company has received several carloads of hay for winter feed, the cattle have been able to find enough feed under the snow to satisfy them and the owners have not yet found it necessary to resort to the stock which they purchased. Under the foot or more of snow there are quantities of tender grass which the cattle devour with apparent relish. This grass contains splendid food values and the cattle are remaining as sleek and fat as they were during the growing months last summer and fall, according to U. P. breeders.

Terms Providing Packer Control Made Public

THE FARMERS' National Committee on Packing Plants and Allied Industries of the Farmers' National Council, with headquarters in the Bliss Building, Washington, D. C., has just issued a statement giving the terms of the Supreme Court perpetual injunction against the packers, and the report of the Federal Trade Commission on the practices of the "Big Five" which the Council says shows that the Kenyon-Anderson bill to control the packers should be promptly enacted. The statement says:

On May 26th, 1903, a preliminary injunction against Swift & Co., the Cudahy Packing Co., the Hammond Packing Co., Armour & Co., the Armour Packing Co., Edward Morris, Nelson Morris and Ira N. Morris, co-partners under the name of Nelson Morris & Co., and other packers, was made perpetual and with slight modifications was affirmed by the United States Supreme Court on April 11, 1905.

This perpetual injunction restrained the defendants, the packers, and their agents and attorneys "from entering into, taking part in, or performing contract, combination or conspiracy," the effect of which will be as to trade and commerce a restraint of trade, in violation of law either "by directing or requiring their respective agents to refrain from bidding against each other at the sales of live stock" or "by combination, conspiracy or contract, raising or lowering prices or fixing uniform prices at which said meats will be sold." It also enjoins these packers from violating the provisions of the anti-trust laws, "by combining or conspiring together, or with each other and others to monopolize or attempt to monopolize any part of the trade and commerce in fresh meats among the several states and territories and the District of Columbia, by demanding, obtaining, or with or without connivance of the officers of agents thereof, or any of them, receiving from railroad companies or other common carriers, transporting such fresh meats, in such trade and commerce, either directly or by means of rebates, or by any other device, transportation of or for such meats.

The Federal Trade Commission in its report on the meat packing industry states:

"The power of the Big Five in the United States has been and is being unfairly and illegally used to:

Manipulate livestock markets.

Restrict interstate and international supplies of foods.

Control the prices of dressed meats and other foods.

Defraud both the producers of food and consumers.

Secure special provileges from railroads, stock yard companies and municipalities, and profiteers.

It is clear that the Big Five Packes have been violating the essential terms of the perpetual injunction issued by the Supreme Court. It is clear that the proposed amendment between the Department of Justice and these defendant packers who have continuously violated their injunction as well as the anti-trust laws is not sufficient. In order to control the five big packers the Kenyon-Anderson bill must be promptly enacted by Congress.

TRACTOR MANAGEMENT COURSE ATTRACTS MANY

From applications received for admission to the truck and tractor course at the M. A. C., it has been estimated by A. M. Berridge, director of short courses, that the attendance during the first course will reach 150, and that for the second course, which begins March 1, the number to attend will be even greater.

The work this year will be much more comprehensive than in former years and will apply not only to the trucks and tractors, but also to stationary engines. Each day's work will call for one hour of technical lectures, one hour of general lecturs, and six hours of laboratory work.

The course has been divided into five groups: stationary engines, tractors, ignition, starting and lighting, carburetors and block tests, and forge shop. In each group the study will be all that well-equipped laboratories and shops can make it.

Swartz Creek Farmers Embrace Gleaner Plan

Following is a report of the meeting of the Swartz Creek Live Stock and Produce Shipping Association, held at the I. O. O. F. hall on Jan. 20, with two hundred or more men present. The manager's report of stock handled since last meeting until Dec. 31, was 285 cattle, 342 calves, 1,264 hogs and 442 sheep or a total of 2,333 head. Amount received for same $89,965.32. The meeting was closed rather hurriedly to take up the co-operative elevator proposition.

Mr. Cribbs, of the U. S. marketing division gave very interesting talk. The audience listened to Mr. Nathan F. Simpson of the Gleaner Clearing House Association, who talked along the line of co-operative marketing and explained the working of the terminal elevator at Grand Rapids, after which the following committee was appointed to go with Mr. Simpson to Grand Rapids, Lansing and Detroit to investigate and report at an adjourned meeting at the same place on Saturday, Jan. 24. Committee: E. C. Allen, Bert Bush and W. H. Short.

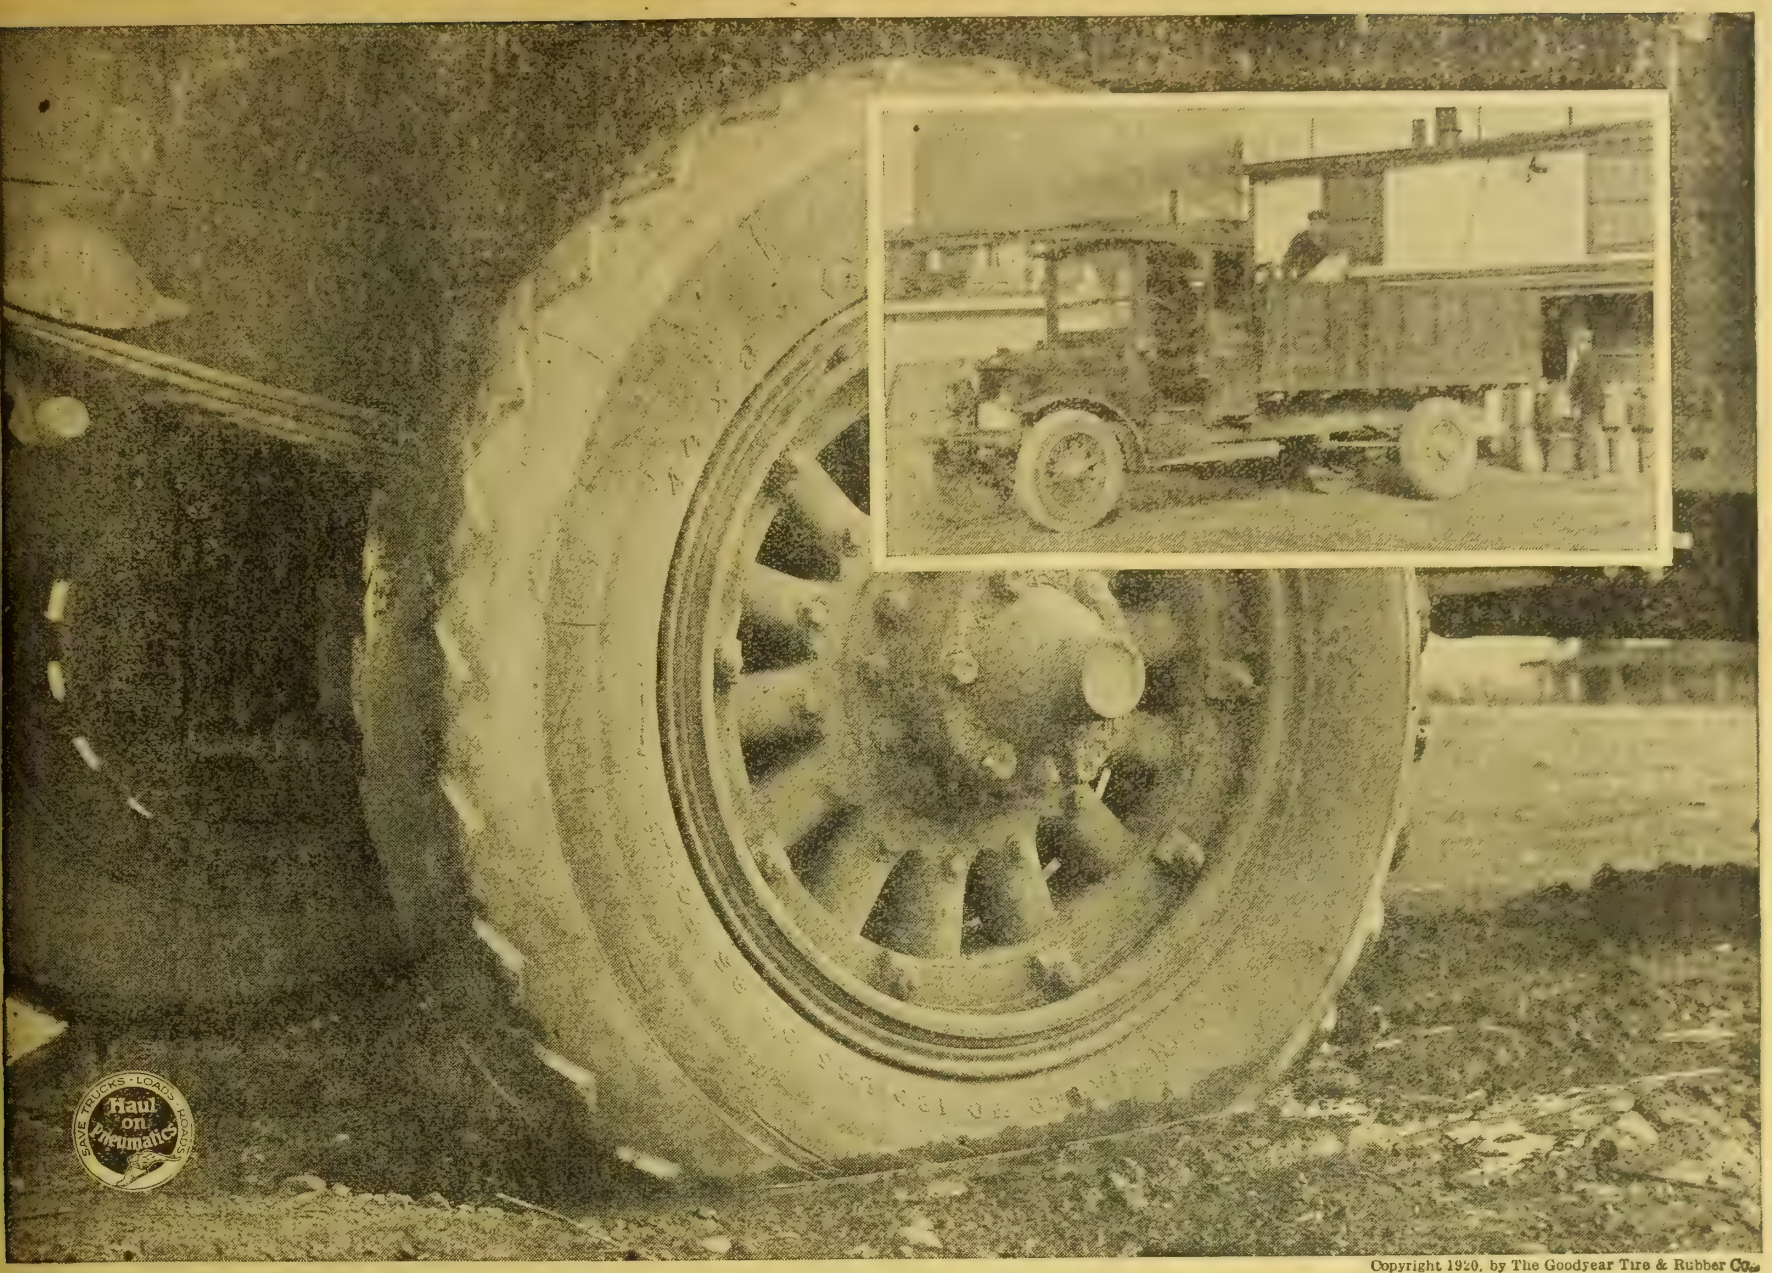
Committee reported as per schedule on the 24th, saying that they visited Grand Rapids and Lansing, but did not think it necessary to visit Detroit as they were convinced in their own minds that it was the way to organize. After the report the following motion was made, seconded and carried, that they organize under the terminal elevator plan. It was decided that no one be allowed to vote except those who had taken stock or avowed their intentions of doing so, and also that each man place his name on the back of ballot. Whole number votes cast 85, of which 75 were for and 10 against.

The following advisory committee was appointed: E. C. Allen, Bert Bush, W. H. Short, A. G. Edson, W. R. Harris, B. W. Cole and S. R. Burleson. The committee met immediately after the closing of the meeting and elected the following officers: President, W. H. Short, vice-president, Bert Bush, secretary, E. C. Allen. A. M. Lewis, secretary of meeting.

Sturgis Co-Op. Has Big Year

G. W. Taylor was elected president of the Sturgis Co-operative Association, at a meeting of stockholders. Other officers are: vice president, J. A. Wybourn, and secretary, M. B. Rice. Joseph D. Sturgis was again named manager, and Clare Bardner, secretary and treasurer. New directors were: Charles Cominator, Jr., E. E. Sheap, R. G. Hibbard and M. B. Rice. Directors remaining in office are: G. W. Taylor, J. A. Wybourn, R. F. Zelt, Jerome Fox, C. J. Lublow, F. M. Frohriep and E. C. Zable.

The annual report of the association showed it to have received the sum of $153,725.25 from the sale of stock. The association shipped 69 decks during the year.



Copyright 1920, by The Goodyear Tire & Rubber Co.

"IT would be impossible for us to handle our present milk route except with a pneumatic-tired truck. Our Goodyear Cord Tires have delivered mileages up to 13,500 to date over bad gravel, rocks and chuck holes. With them we serve more farmers than we could with the slow solid tires."—Harry E. Hughes, Dairy Farmer and Truckman, Hughes, Ohio

THIS statement describes hauling conditions such as many farmers find can be counteracted most effectively with the perfected pneumatic truck tire.

Not only does the pneumatic-shod truck, as compared with the solid-tired unit, average a better rate of travel over country routes, without necessarily reaching a high maximum speed, but it does so quite smoothly.

Rural users thus note that hauling on pneumatics adds to a saving of time and brawn important protection of equipment and loads, shrinkable, perishable and breakable.

They particularly note the effect of Goodyear Cord construction, developed during recent years, which makes possible pneumatic-tire mileages comparing very favorably with those of solid tires.

In addition to reporting that pneumatic-tired trucks pave the way for the general motorization of farm work, they list mileages of Goodyear Cord Tires, on trucks, as ranging from 15,000 to past 40,000 when given proper care.

Accurate information furnished by farmers and other rural haulers, showing how they improve their methods and incomes with pneumatic-tired trucks, can be obtained by writing to The Goodyear Tire & Rubber Company, at Akron, Ohio.

HEARTS OF THREE

By JACK LONDON
Author of the "Valley of the Moon."

Introductions Not Necessary

IT IS A HARD JOB to pick out the right kind of a serial story for Business Farming. The editors wanted to get the best on the market, and finally "Hearts of Three" has been selected, beginning in this issue. Needless to say, the story is a blinger and no introduction is needed for the author, the great spellbinder spinner of tales, Jack London. He died a few years ago but he is a living hero to the millions of readers. Likewise his story reproduced here is full of life. It is too good a story for any reader to miss.

Chapter I.

EVENTS happened rapidly with Francis Morgan that spring morning. If ever a man leaped across time into the raw, red drama and tragedy of the primitive and the medieval melodrama of sentiment and passion of the New World Latin, Francis Morgan was destined to be that man, and Destiny was very immediate upon him.

Yet he was lazily aware that aught in the world was stirring, and was scarcely astir himself. A late night at bridge had necessitated a late rising. A late breakfast of fruit and cereal had occurred along the route to the library—the austerely elegant room from which his father, toward the last, had directed vast and manifold affairs.

"Parker," he said to the valet who had been his father's before him, "did you ever notice any signs of fat on R. H. M. in his last days?"

"Oh, no, sir," was the answer, uttered with all the due humility of the trained servant, but accompanied by an involuntarily measuring glance that scanned the young man's splendid proportions. "Your father, sir, never lost his leanness. His figure was always the same, broad-shouldered, deep in the chest, big-boned, but lean, always lean, sir, in the middle. When he was laid out, sir, and bathed, his body would have shamed most of the young men about town. He always took good care of himself; it was those exercises in bed, sir. Half an hour every morning. Nothing prevented. He called it religion."

"Yes, he was a fine figure of a man," the young man responded idly, glancing to the stock-ticker and the several telephones his father had installed.

"He was that," Parker agreed eagerly. "He was lean and aristocratic in spite of his shoulders and bone and chest. And you've inherited it, sir, only on more generous lines."

Young Francis Morgan, inheritor of many millions as well as brawn, lolled back luxuriously in a huge leather chair, stretched his legs after the manner of a full-vigored menagerie lion that is over-spilling with vigor, and glanced at a headline of the morning paper which informed him of a fresh slide in the Culebra Cut at Panama.

"If I didn't know we Morgans didn't run that way," he yawned, "I'd be fat already from this existence. . . . Eh, Parker?"

The elderly valet, who had neglected prompt reply, startled at the abrupt interrogative interruption of the pause.

"Oh, yes, sir," he said hastily. "I mean, no sir. You are in the pink of condition."

"Not on your life," the young man assured him. "I may not be getting fat, but I certainly am ing soft . . . Eh, Parker?"

"Yes, sir. No, sir; no, I mean, no sir. You're just the same as when you came home from college, three years ago."

"And took up loafing as a vocation," Francis laughed. "Parker!"

Parker was alert attention. His master debated with himself ponderingously, as if the problem were of profound importance, rubbing the while the bristly thatch of the small toothbrush mustache he had recently begun to sport on his upper lip.

"Parker, I'm going fishing."

"Yes, sir!"

"I ordered some rods sent up. Please joint them and let me give them the once over. The idea drifts through my mind that two weeks in the woods is what I need. If I don't I'll surely be laying on flesh and disgrace the whole family tree. You remember Sir Henry?—the old original Sir Henry, the buccaneer old swashbuckler?"

"Yes, sir; I've read of him, sir."

Parker had paused in the doorway until such time as the ebbing of his young master's volubility would permit him to depart on the errand.

"Nothing to be proud of, the old pirate."

"Oh, no, sir," Parker protested. "He was Governor of Jamaica. He died respected."

"It was a mercy he didn't die hanged," Francis laughed. "As it was, he's the only disgrace in the family that he founded. But what I was going to say is that I've looked him up very carefully. He kept his figure and he died lean in the middle, thank God. It's a good inheritance he passed down. We Morgans never found his treasure; but beyond rubies in the lean-in-the-middle legacy he bequeathed us. It's what is called a taxed character in the breed—that's what the prof. taught me in the biology course."

Parker faded out of the room in the ensuing silence, during which Francis Morgan buried himself in the Panama column and learned that the canal was not expected to be open for traffic for three weeks to come.

A telephone buzzed, and, through the electric nerves of a consummate civilization, Destiny made the first out-reach of its tentacles and contacted with Francis Morgan in the library of the mansion his father had builded on Riverside Drive.

"But my dear Mrs. Carruthers," was his protest into the transmitter. "Whatever it is, it is a mere local flurry. Tampico Petroleum is all right. It is not a gambling proposition. It is legitimate investment. Stay with it. Tie to it . . Some Minnesota farmer comes to town and is trying to buy a block or two because it looks as solid as it really is . . . . What if it is up two points? Don't sell. Tampico Petroleum is not a lottery or a roulette proposition. It's bona fide industry. I wish it hadn't been so almighty big or I'd have financed it all myself. . . . Listen, it's not a flyer. Our present contract for tanks is over a million. Our railroad and our three pipe-lines are costing more than five millions. Why, we've a hundred millions in producing wells right now, and our problem is to get it down country to the oil-steamers. This is the sober investment time. A year from now, or two years, and your shares will make government bonds look like something the cat brought in . . .

"Yes, yes, please. Never mind how the market goes. Also, please, I didn't advise you to go in the first place. I never advised a friend to that. But now that they are in, stick. It's as solid as the Bank of England. . . . Yes, Dicky and I divided the spoils last night. Lovely party, though Dicky's got too much temperament for bridge. . . . Yes, bull luck. . . . Ha! ha! My temperament? Ha! ha! . . . Yes? . . . Tell Harry I'm off and away for a couple of weeks. . . . Fishing, troutlets, you know, the springtime and the streams, the rise of sap, the budding and the blossoming and all the rest. . . . Yes, good-bye, and hold on to Tampico Petroleum. If it goes down after that Minnesota farmer's bulled it, buy a little more. I'm going to. It's finding money. . . . Yes. . . . Yes, surely . . . It's too good to dare sell on a flyer now, because it mayn't ever again go down. . . . Of course I know what I'm talking about.. I've just had eight hours' sleep, and haven't had a drink. . . . Yes, yes. . . . Good-bye."

He pulled the ticker tape into the comfort of his chair and languidly ran over it, noting with mildly growing interest the message it conveyed.

Parker returned with several slender rods, each a glittering gem of artisanship and art. Francis was out of his chair, ticker flung aside and forgotten as with the exultant joy of a boy he examined the toys, and, one after another, began trying them, switching them through the air, till they made shrill whip-like noises, moving them gently with prudence and precision under the lofty ceiling as he made believe to cast across the floor into some unseen pool of trout-lurking mystery.

A telephone buzzed. Irritation was swift on his face.

"For heaven's sake answer it, Parker," he said. "If it is some silly stock-gambling female, tell her I'm dead, or drunk, or down with typhoid, or getting married, or anything calamitous."

After a moment's dialogue, conducted on Parker's part, in the discreet and modulated tones that befitted absolutely the cool, chaste, noble dignity of the room, with a "One moment, sir," into the transmitter, he muffled the transmitter with his hand and said:

"It's Mr. Bascom, sir. He wants you."

"Tell Mr. Bascom to go to hell," said Francis simulating so long a cast, that, had it been in verity a cast, and had it pursued the course his fascinated gaze indicated, it would have gone through the window and most likely startled the gardener outside kneeling over the rose bush he was planting.

JACK LONDON

There are few authors who are so much worshipped by readers as Jack London, writer of stories which grip you and carry you away with their power and charm. He is author of "The Valley of the Moon" and other great books.

"Mr. Bascom says it's about the market, sir, and that he'd like to talk with you only a moment," Parker urged, but so delicately and subduedly as to seem to be merely repeating an immaterial and unnecessary message.

"All right." Francis carefully leaned the rod against a table and went to the 'phone.

"Hello," he said into the telephone "Yes, this is I, Morgan. Shoot. What is it?"

He listened for a minute, then interrupted irritably: "Sell—hell. Nothing of the sort. . . . Of course, I'm glad to know. Even if it goes up ten points, which it won't, hold on to everything. It may be a legitimate rise, and it mayn't ever come down. It's solid. It's worth far more than it's listed. I know, if the public doesn't. A year from now it'll list at two hundred . . . that is, if Mexico can cut the revolution stuff. . . . Whenever it drops you'll have buying orders from me. . . . Nonsense. Who wants control? It's purely sporadic . . . eh? I beg your pardon. I mean it's merely temporary. Now I'm going off fishing for a fortnight. If it goes down five points, buy. Buy all that's offered. Say, when a fellow's got a real bona fide property, being bulled is almost as bad as having the bears after one . . . yes. . . . Sure. . . . yes. Good-bye."

And while Francis returned delightedly to his fishing rods, Destiny, in Thomas Regan's down town private office, was working overtime. Having arranged with his various brokers to buy, and, through his divers channels of secret publicity having let slip the cryptic tip that something was wrong with Tampico Petroleum's concessions from the Mexican government, Thomas Regan studied a report of his own oil expert emissary who had spent two months on the spot spying out what Tampico Petroleum really had in sight and prospect.

A clerk brought in a card with the information that the visitor was importunate and foreign. Regan listened, glanced at the card, and said:

"Tell this Mister Senor Alvarez Torres of Ciodad de Colon that I can't see him."

Five minutes later the clerk was back, this time with a message penciled on the card. Regan grinned as he read it:

"Dear Mr. Regan,

"Honoured Sir:

"I have the honour to inform you that I have a tip on the location of the treasure Sir Henry Morgan buried in old pirate days.

"Alvarez Torres."

Regan shook his head, and the clerk was nearly out of the room when his employer suddenly recalled him.

"Show him in—at once."

In the interval of being alone, Regan chuckled to himself as he rolled the new idea over in his mind. "The unlicked sub!" he muttered through the smoke of the cigar he was lighting. "Thinks he can play the lion part old R. H. M. played. A trimming is what he needs and old Grayhead Thomas R. will see that he gets it."

Senor Alvarez Torres' English was as correct as his modish spring suit, and though the bleached yellow of his skin advertised the Latin-American origin, and though his black eyes were eloquent of the mixed lustres of Spanish and Indian long compounded, nevertheless he was as thoroughly New Yorkish as Thomas Regan could have wished.

"By great effort, and years of research, I have finally won to the clue to the buccaneer gold of Sir Henry Morgan," he preambled. "Of course it's on the Mosquito Coast. I'll tell you now that it's not a thousand miles from the Chiriqui Lagoon and that Bocas del Toro, within reason, may be described as the nearest town. I was born there—educated in Paris, however—and I know the neighborhood like a book. A small schooner—the outlay is cheap, most very cheap—but the returns, the reward—the treasure!"

Senor Torres paused in eloquent inability to describe more definitely and Thomas Regan, hard man used to dealing with hard men, proceeded to bore into him and his data like a cross-examining criminal lawyer.

"Yes," Senor Torres quickly admitted. "I am somewhat embarrassed—how shall I say?—for immediate funds."

"You need the money," the stock operator assured him brutally, and he bowed pained acquiescence. . . .

Much more he admitted under the rapid-fire interrogation. It was true, he had but recently left Bocas del Toro, but he hoped never again to go back. And yet he would go back if possibly some arrangement . . .

But Regan shut him off with the abrupt way of the master-man dealing with lesser fellow creatures. He wrote a check, in the name of Alvarez Torres, and when that gentleman glanced at it he read the figures of a thousand dollars.

"Now here's the idea," said Regan. "I put no belief whatsoever in your story. But I have a young friend—my heart is bound up in the boy but he is too much about town, the white lights and the white-lighted ladies, and the rest—you understand?" And Senor Alvarez Torres bowed as one man of the world to another. "Now, for the good of his health, as well as his wealth and the saving of his soul, the best thing that could happen to him is a trip after treasure, adventure, exercise, and . . . you readily understand, I am sure."

Again Alvarez Torres bowed.

"You need the money," Regan continued. "Strive to interest him. That thousand is for your effort. Succeed in interesting him so that he departs after old Morgan's gold, and two thousand more is yours. So thoroughly succeed in interesting him that he remains away three months, two thousand more—six months, five thousand. Oh, believe me, I knew his father. We were comrades, partners, I—I might say, almost brothers. I would sacrifice any sum to win his son to manhood's wholesome path. What do you say? The thousand is yours to begin with. Well?"

"I . . . I accept," he stammered and faltered in his eagerness. "I . . . I . . . How shall I say? . . . I am yours to command."

Five minutes later, as he arose to go, fully instructed in the part he was to play and with his story of Morgan's treasure revised to convincingness by the brass-tack business acumen of the stock-gambler, he blurted out, almost facetiously, yet even more pathetically:

"And the funniest thing about it, Mr. Regan, is that it is true. Your advised changes in my narrative make it sound more true, but true it is under all. I need the money. You are most munificent, and I shall do my best. . . . I . . . I pride myself that I am an artist. But the real and solemn truth is that the clue to Morgan's buried loot is genuine. I have had access to records inaccessible to the public, which is ne[illegible] here nor there, for the men of my own family—they are family records—have had similar access, and have wasted their lives before me in the futile search. Yet were they on the right clue—except that their wits made them miss the spot by twenty miles. It was there in the records. They missed it, because it was. I think, a deliberate trick, a conundrum, a puzzle, a disguisement, a maze, which I, and I alone, have penetrated and solved. The early navigators all played such tricks on the charts they drew. My Spanish race so hid the Hawaiian Islands by five degrees of longitude."

(To be continued)

Essex Sets World's Long Distance Endurance Mark

3037 Miles in 50 Hours Proved Its Reliability

In its official test of 50 hours to prove endurance, Essex has established its claim as the dominant new type light car. Who ever before regarded a car of its type in the light of such proved performance and endurance? Only specially built racers and a few of the larger, costlier cars have been considered capable of such a test. Surely light weight cars have not been associated with such reliability as Essex has shown.

Proves Essex Economy

This test gives to Essex proof of the greatest factor in motor car economy. Light cars are notable principally for their economy in saving of gasoline, oil and tires. These qualities Essex has revealed from the first. But real economy must also include freedom from repairs and mechanical attention—all costly items.

So what greater proof of Essex economy could be asked than its new world endurance mark.

5869 Miles in 94 Hours 22 Minutes Driving Time

These tests were not made to establish speed records. Two trials were made before the 50-hour run was completed. So, in all, the Essex went 5,869 miles in 94 hours, 22 minutes driving time, averaging more than a mile a minute. Sleet stopped one, after 27 hours, 58 minutes, and 1790 miles. Snow halted a second, three days later, after 16 hours 25 minutes and 1042 miles. The third, begun the next day, went the full 50 hours. These tests were made under American Automobile Association observation on the Cincinnati Speedway.

Think what they mean. The average car is driven little more than 5,000 miles in a season. The average driving speed is probably 25 miles an hour. The Essex went more than a mile a minute for 5,869 miles.

You might expect that a car of its weight would require frequent mechanical attention. But there was no need for that in the Essex.

Doesn't It Settle the Light Car Question?

Essex now adds to its light car qualities the advantage of endurance and reliability. It brings costly car distinction, beauty and fineness to the light weight, moderate price class. Essex cars appeal to pride, and that is why owners speak of them as they do.

Individual owners would never ask as much of a car as did this 50-hour test.

It showed how much more could be expected of an Essex than any one would demand of it.

Every Essex delivered has resulted in an increased demand. Sales passed $35,000,000 in 11 months—a new record.

This latest proof will decide thousands who have only waited for just such evidence that Essex would stand up. All buyers cannot possibly be served. Now is the time to make your reservation.

Milo Campbell's Platform

ONCE IN awhile a candidate for office presents a platform that does not meet with the approval of all. Take Milo Campbell's platform, for instance. Surprising as it may seem the newspapers and the politicians who do not intend to support Mr. Campbell and the people who do not intend to vote for him are finding flaws in his platform.

The Detroit News which is probably the most progressive daily newspaper in the Middle West and the opinions of which are usually worth listening to, calls Mr. Campbell's platform a "platform of platitudes," which from No. 1 to No. 13 plank "is eternally safe and sane." The News observes that any voter wishing to take issue with the 13 planks in the platform will be literally declaring himself as follows:

1—I am opposed to Americanism.
2—I am a Republican but shall not adhere to the principles of the Republican party.
3—I am opposed to the right of collective bargaining in industry.
4—I am opposed to improved conditions and an adequate wage for labor.
5—I am opposed to limiting a working day to eight hours.
6—I approve the demands of the Red element in labor unions.
7—I am opposed to proper relief for disabled soldiers and sailors.
8—I am opposed to the reduction in the number of state boards by combining groups of relative activities along the lines successfully worked out in Illinois.
9—I oppose the proper recognition of women in the matters of government.
10—I oppose reforms in insurance laws which would benefit both insurance companies and insured.
11—I oppose better highways and such internal improvements as will make Michigan a better state.
12—I oppose official independence. I shall make all sorts of promises in advance of the election.
13—I oppose vigorous enforcement of the criminal laws, and particularly the liquor laws.

In a later editorial the News complains that Mr. Campbell has not been specific enough about his views on state affairs. It says:

"The people want to know if the candidate for governor is likely to effect any economies in the management of state institutions; if his attitude toward the state's educational institutions is constructive and enlightened; whether in questions concerning public utilities, the governor will be on the side of the people or the public utilities corporations; whether the governor has a broad, progressive conception of the changing relations between the rural districts and the rapidly increasing urban populations; whether he knows how to safeguard the interests of our great agricultural industry; whether he realizes that big cities are struggling with new and important problems and cannot be treated by the state government as if they were villages or country towns."

We concede the point the News makes. Mr. Campbell could have been more explicit concerning his attitude toward problems that will confront Michigan's next executive. But he has said that he will from time to time express himself in greater detail. We believe Mr. Campbell will keep his word and that his voluntary pronouncements will be quite in accord with the News' well-known views and the voters' most exacting requirements for their state executive. But we would like to ask the News if it would be possible for Mr. Campbell to so declare himself on public questions as to win the News' approval and support of his candidacy. Would the inclusion of the above propositions in Mr. Campbell's initial statement to the public have made Mr. Campbell's platform more acceptable to the News, or would not the News have offered the same criticism that it does of his original statement?

The News' propositions themselves are all "safe and sane." All candidates can subscribe to them. It would be political death for a candidate to say:

"I am opposed to economy in the management of state institutions. I am ignorant of the needs of the state's educational institutions. In controversies between the people and the public utilities I will be on the side of the public utilities corporations. I know nothing about the changing relations between the rural districts and the rapidly increasing urban populations. I cannot be trusted to safeguard the interests of our great agricultural industry. I am quite unfamiliar with the new problems with which the cities are struggling and it is not quite clear to me where state rights end and municipal rights begin."

We venture to say that Milo Campbell has as good a grasp of the problems of state as any other avowed or prospective candidate for governor, and that at the proper time he will make his position known beyond any question of doubt. But Milo Campbell will have something vastly more important than that in his favor. If he is elected, he will step into the governorship with no political obligations to pay and no "friends" to compensate, entirely free to run his job without fear or favor. Can the News say as much of any Wayne county candidate now in the field?

* * * *

Those That Have Not

DID YOU ever know of a farmer, a merchant or a laboring man who had money invested from which he was drawing dividends to condemn the "profit system." All are friends of the profit system who profit from the system. Its enemies are they who pay the profits.

Let us apply this theory of "no-profits" and see how it would work out in practical demonstration. For one thing, it would destroy the entire banking system. Banks could not run without taking a profit on their deposits and they would have no deposits if they could not pay their depositors something for the use of their money. People who needed money would have to depend upon the generosity of their friends or go without.

Farmers could not take a profit from their products. Indeed, they would not grow more than they could consume or exchange for other commodities. If they suffered losses, that is, if it cost them more to produce a crop than they could get out of it by exchanging for commodities of relative value, there would be no way in which to make up these losses.

"No profits" would put the slothful man on exactly the same footing with the industries, the thriftless with the thrifty, the fool with the wise man. Then some day the wise man, being thrifty and industrious, would discover that by working a little harder and saving a ltle more diligently he could lay by a surplus, and the hateful old profit wheel would again start rolling.

* * * *

Whose Money Was It?

THE ENTIRE WORLD was lifted up out of its sordid selfishness for a brief spell when just before Christmas it was announced that John D. Rockefeller had made various benefactions to humanity totaling a hundred million dollars to promote science, the arts, medicine, religion, etc. Ministers of the gospel prayed for him, newspapers praised him, and those few conscientious brethern who had formerly denounced the acceptance of the Rockefeller money by the church on the ground that it was tainted, hung their heads in shame. The very magnitude of the gift took their breath,—and conscience,—away. "Pretty good fellow, after all," was the concensus of opinion.

Thirty days later the newspapers published the sequel, "The Standard Oil Company has increased the price of gasoline one cent a gallon."

This reminds us of the story of the man who, himself in straightened circumstances, loaned some money to a friend who was in even worse straits. When he told his wife about it, she said, "John, dear, that wasn't your money to lend. It was noble of you to think of your friend's need, and you think it was unselfish of you to help him, but that's not true. We have struggled along here together to put our boy through college, and I have helped as much as you to save this bit for a rainy day. It was as much my money as yours. You loaned that money because you wanted to feel the thrill of pride and satisfaction that comes with performing a good deed. Your pleasure wouldn't have been so great had we both made the loan, and since part of the money was mine, you were selfish to loan it without consulting me."

Doesn't that bit of philosophy apply to John D. Rockefeller's case? How much of the hundred million really belonged to John D., and how much to the public? No one regrets the passing of this money from John D.'s nor the public's pockets either for that matter, to help so worthy a cause, but isn't it a bit selfish of John D. to take all the credit for the huge gift upon himself?

* * * *

The New Secretary of Agriculture

E. T. MEREDITH, publisher of Successful Farming, has been appointed secretary

While Mr. Meredith is not strictly speaking a farmer, he has spent a long and useful life in the farm paper publishing business which has kept him in more or less sympathetic contact with farmers and given him an insight into their problems. He is a self-made man. Once he was poor. The story is told that he used to wheel his farm paper to the postoffice in a wheel-barrow. Today he is financially able to relinquish his private business to become agriculture's representative in the president's cabinet.

Mr. Meredith has a golden opportunity before him. The failure of his predecessor to set any high standards or make any important innovations in the department leaves him free to build from the ground up and demonstrate what vision he may have of the future needs of agriculture.

* * * *

The Truth in Fabric Bill

A BILL is before Congress to compel manufacturers of cloth to sell their goods on the basis of the amount of virgin wool they contain. Perhaps the average reader does not understand the necessity for such a measure, but he will when he learns that the majority of "woolen" garments being sold and worn today are 80 per cent shoddy or "re-worked" wool.

Both the producer of wool and the purchaser of clothing are injured by this deception. The use of shoddy instead of virgin wool decreases the demand and market for the farmer's wool and naturally acts as a check upon the growth of the sheep industry. So far as the consumer is concerned he pays a higher price than ever before for a mixture of virgin wool and shoddy which soon pulls apart and wears out. Even though the manufacturer sold his goods on their intrinsic value, the deception would still prevail and the purchaser would continue to buy material which had already served its purpose and usefulness.

The only possible objectors to this bill will be the fabric manufacturers who are making large profits from the sale of shoddy. All others will be benefited,—farmer, wholesaler, retailer, purchaser. The manufacturers are fighting the bill and it behooves the other parties concerned to make their voices heard in Washington, and secure the early adoption of the measure.

* * * *

Nearly a year after the Detroit Free Press lauded the legislature for refusing to let the people vote on the warehouse amendment, it wakes up to the fact that the price of potatoes would not be so high if the farmers had storage facilities in the large cities. Live and learn.

WHAT THE NEIGHBORS SAY

FULL VALUE SHOULD GO TO PRODUCER

I agree with E. W., of Gladwin, that producers should receive the full social value of their products. If not, then who should receive the portion denied the producer? I realize, however, that under the present system producers, on the average, can have only enough of the value of their products to enable them to exist and reproduce.

The irrepressible conflict between the capitalist class and the producing class is not due to any evil desire on the part of either. The conflict is inherent in the profit system of today as it was in the profit systems of the past, known as chattel slavery, and feudalism.

Producers are continually struggling for a larger portion of the value of their product, while those who live by profit are ever and always striving for greater dividends.

Any system founded on profit has within itself the seeds of its own destruction. The difference between the smallest possible profit and the greatest possible profit is only a matter of time. One class or set of individuals continually getting more value than they give must eventually own all the sources of production. The nearer we come to the concentration of the wealth of the world in the hands of a few, the greater will become the unrest of the producers, and the more relentless the efforts of the ruling class to keep the producers in subjection by endeavoring to suppress what those who live by profit call red or radical.

By red or radical I do not mean the anarchists. Anarchists are so few in number that all of them could be deprived of their liberty within a few days' time. What is generally classed as red or radical are those who believe the profit system is to blame for existing economic wrongs, and believing that, organize to replace the presen system by establishing industrial democracy. Of course, there are different shades of red, but all who seek to replace the profit system by the establishment of a system of co-operation can properly be called red.

A reformer is never a red, because a reformer believes in patching the profit systm, while a red demands the abolishment of production for profit. The only sure way to know a reformer from a revolutionist is by discovering which method he believed in, using to bring about an equitable distribution of the wealth produced. Different shades of red can be determined in the same manner.

If we do not like the method suggested by the ultra red it remains with us, who are more numerous, to set things right. Whichever method succeeds in bringing about the establishment of industrial democracy will be finally accepted as the practical plan.

The reformer is having his opportunity today. With his failure will come the opportunity of the light shade of red, and with the failure of that will come the opportunity of the real "dyed in the wool" red. In the meantime a goodly number of both shades of red will be jailed or deported, which will have about the same effect on removing radicalism as jailing or deporting smallpox scabs would have on the smallpox disease.

When farmers in general discover that any increase they may secure in the price of what they produce will be more than taken up by the increase in the price of commodities they have to produce, and when wage workers in general discover that any increase in wages they may obtain will be more than offset by the depreciation in the purchasing power of the money received for their labor, then, and then only, will the farmers in general and the wage workers in general be brought to see that their economic interests are identical, and that only by their united efforts can those who live by profit be forced to join some branch of the army of production, thereby establishing a system in which all shall be useful workers.

The fact that a small percentage of those who are called farmers may also be classed as capitalists, must not be permitted to lead us to imagine that the economic interests of farmers as a class, and wage workers as a class are not one and the same. The farmer who hires help profits by doing so as a matter of necessity under the profit system, but the same profit system extracts from the farmer what the farmer extracts from his wage wage worker, and along with it the major portion of what the farmer and his family produce, hence the farmer extracts profit from his hired help as an agent for the benefit of someone higher up in the economic scale, therefore, it is not to the interest of farmers in general to prolong the life of the profit system.

As one who appreciates the efforts of the "MICHIGAN BUSINESS FARMING" to correctly inform its readers, I am anxious to bring my opinions on economic questions before my brother farmers for endorsement or correction.—*Andrew Johnston, Presque Isle County, Mich.*

Thanks for setting us right on the "reds." From the time Christ preached the parable of the talents, the profit-system has been in vogue. We have had wars and crusades against certain forms of government, religion and social inequality, but there has never yet been a successful revolt against the profit-system. The reason is not hard to find. The desire to profit and raise one's self above his fellow-man is a law of nature, and in the most Utopian existence possible to have here on earth there would always be a great many who would strive for profits. Experiments have been tried of "communities" wherein the profit-system was taboo, but without exception they came to grief after a brief existence.—Editor.

EYES THAT SEE NOT

Our good friend, John E. Taylor, of Belding, Mich., sends us the following clipping from the *Grand Rapids Press*:

"FARM EDITOR INDORSES BUREAU

Forrest A. Lord Announces Change of Views in Conklin Speech

Grand Haven Jan. 24—Forrest A. Lord, editor of Michigan Business Farming, in a speech Friday at a co-operative creamery meeting held at Conklin indorsed the farm bureau movement. Mr. Lord formerly had not stood for the movement. The Ottawa County Farm Bureau drive is progressing with about 80 per cent of the farmers joining."

In his letter accompanying the clipping, Mr. Taylor comments as follows:

"Not that it makes any material difference, but a man is often compromised before the public by a trivial misrepresentation of material fact. Following your course in BUSINESS FARMING I can understand you have consistently endorsed and stood for the Farm Bureau *Movement*, though you have not stood for every exponent of its development as a farm bureau. The statement that "you had not formerly stood for the *movement*" is evidently false. I have not noticed that the Michigan Farm Bureau has adopted any of your suggestions of severing connections with the Detroit Coalition Committee. Therefore, I assume you favor the Farm Bureau *Movement*, but not its *affiliations*, and have *not* changed in your attitude."

Exactly. Moreover, the few remarks that were made at the Conklin meeting were qualified by the statement that "there are some things about the Farm Bureau Movement in this state which we do not like," but it did not serve the purpose of the Press correspondent to tell the whole truth. We have NOT changed in our attitude toward the Bureau one whit. We want the farmers to join this organization and we want them to RUN it, NOT in the interests of Wall Street and its Michigan representatives, but in the interests of FARMERS.

PARTYISM

I am sorrowfully surprised upon the reading of the platform of our candidate for governor. He has spilled the beans in the first round. Do the farmers of this state want a candidate who makes one of the main planks in his platform partyism. One of the main ills of government of our state at the present time is an overdose of partyism. It has crept into the educational institutions of our state. It has attacked the integrity and honesty of some of the best citizens of our state. It has a characteristic attachment for the pockets of the taxpayer. If we are to correct these chaotic conditions let us demand a candidate who is independent of partyisms with superfluous judgment and determination to sever the heads of all these parasites that venture under the dome of the capitol. Yours for independence.—*Mason Goss, Van Buren County.*

What do you advocate, the formation of a new party? That was tried back in 1912, and nearly all of its candidates went down to defeat. It is one thing to declare one's self independent of party affiliations and quite another to elect a slate on a purely non-partisan ticket. So far as we are concerned a candidate for any office within the state of Michigan could run on any old ticket. But the point is, under our election law, he must run on SOME ticket, and since the Republican party is the dominant party in Michigan, it should be to the interest of all farmers, irrespective of their political ties, to run their candidate on the Republican ticket. Mr. Campbell is not a strict partisan. We have his assurance that in his appointments, qualifications will receive first consideration, and partisan leanings last.—Editor.

MEN VS. PARTIES

Your editorial, "The Real Danger," (Jan. 24), is the best anti-Bolshevist talk I have seen. In fact, you generally talk sense, except on the "Good Man" theory. Political parties developed because that theory failed to work. It failed for two reasons: Because it is impossible for the average citizen to know the average candidate personally, and because even if he could, good men are as apt to think wrong politically as rascals. Taft was a good man, and Roosevelt thought he knew him. If Roosevelt with all the advantage of personal intimacy, could get so badly fooled, what chance has the average citizen who doesn't even know his man by sight? Robert E. Lee was a good man who had as little use as Lincoln had for slavery and secession. The only difference was that Lincoln believed in fighting both slavery and disunion, and Lee didn't.

The Republican party of 1860 contained rascals and put some of them in office, but it gave us efficient government because all its members agreed in supporting a definite political policy and even its rascals feared to oppose that policy. The trouble with that party today is that no definite political policy can command the support of all Republicans. For that reason even Roosevelt actually accomplished very little as president. And because the Democratic party is in the same condition Woodrow Wilson has had to depend much on Republicans and Independents in Congress. The fact is, we have but two real political parties, Prohibition and Socialist. Most of us distrust the latter because of its attitude toward the war, and the Prohibiiton platform needs radical revision to bring it up to date.

That campaign booklet idea is good, but our great need is a new political union of all citizens who can agree in supporting a definite, progressive, industrial reform policy. Any citizen of fair ability and reputation who is willing to risk his or her political future by becoming the candidate of such a party is pretty safe to vote for. —*Stacey Brown, Ionia County.*

There is sound sense in much you say. But let me ask you, "Why is it that the Republican party cannot today command the support of all Republicans," and "why is it that there is need for a new political party?" Is the Democratic party to blame for the present condition that exists nationally of special privilege, monopoly, industrial unrest, official extravagance, high taxes, etc.? If so, is the Republican party to blame for the same conditions that exist in this state? Neither of the old political parties subscribe to planks that will lead us into such conditions as these. In fact, every four years they declare themselves for efficient government, economy, business administration, etc. The people vote for men the machine puts up and the elections are scarcely over before the game of politics is on and the bill for the fun charged up to the taxpayer. Roosevelt was bigger than the Republican party. Wilson is bigger than the Democratic party, but neither of them had the right kind of men in Congress to back them up. The Republican party did not make Roosevelt, nor the Democrats Wilson, and neither party is to be credited with their successes nor charged up with their mistakes. The success of any political party depends upon its ability to change its policies to meet changing conditions. That ability rests with its leaders. A new party formed today might easily outgrow its usefulness twenty-five years hence, and probably would do so if its supporters were as careless of the kind of men they elected to direct their affairs, as have been the Republicans and Democrats.—Editor.

BREVITY IS THE SOUL OF WIT

I like the paper all right. I like Uncle Rube, also the county reports and market reports. I don't think much of Foster's weather forecasts. I have always been a Republican but I voted for Ford. I am in favor of the League of Nations without compromise. I agree with the preacher that said he would not compromise with the devil. I am non-partisan, and for Hoover for president. Keep right on with the good work you are doing.—*R. B. Moore, St. Clair County.*

Shake! Your letter reminds us of Finnegan who, after a sharp reprimand from a superior for making his reports too long, reported the derailment of his train as follows: "Off agin, on agin, gone agin. Finnegan." Give us more Finnegans.—Editor.

The Week's Editorial

"Potatoes and the Problem of Distribution"

The once lowly "spud" is now the piece de resistance of the dinner table when it comes to claiming distinction through cost. One does not have to qualify as an antiquarian to recall the time when the best grade of potatoes sold in the fall, laid down at the door, for fifty cents a bushel. Now they have jumped to $3.50, which places them in the same proud class as the once despised carrot, that, because of its cost, is used chiefly as one of the minor ingredients of salad, and the turnip, long regarded as suitable only for cattle food, but now commanding as much a pound as it once brought per bushel.

Coincident with this advance came the familiar explanations—shortage of the Michigan crop, the long cold spell that has made the shipment of potatoes an expensive proposition, etc. All of which is plausible but ineffective when it comes to keeping prices within reason.

One of the causes for the present shortage of potatoes is the fact that a very large share of last year's crop is at the present many miles from a profitable market, instead of being within easy reach of the consumer. An attempt at this time to ship may easily involve serious loss because of weather conditions over which producer and consumer have no control. A carload of potatoes started from northern Michigan now might be worthless by the time it reached Detroit unless expensive precautions were taken in the way of lining and heating the car. This same element of risk applies to all vegetables on which shipment is essayed at this season. The statement was recently made by a Detroiter who is in a position to speak with authority that a large share of every shipment of vegetables to the city at this time must be considered waste, either through being frozen in transit or because of careless handling on the part of the railroads and others after its arrival. In the aggregate this means a tremendous shrinkage that must obviously be made up for by increasing the price of what is salvageable, and for which the consumer pays.

Some potato growers in the upstate districts have expressed a willingness to make shipments in the fall if there were adequate storage facilities contiguous to the cities where the crops could be kept and distributed at an advantageous price to all concerned. They cannot be expected to throw their harvest on the market at a sacrifice for the benefit of city speculators. The result is that the potatoes remain in distant warehouses until the demand draws them forth, with the householder paying for the shrinkage that takes place by the time they reach his table.

Some day the country may awaken to a realization of the fact that the question of distribution is just as important as that of increased production and take some practical steps to bridge the gap which now exists between the source of supply and the ultimate consumer. When that time arrives there may be some reason to hope for relief from the present excessive and largely unnecessary cost of products of the soil.—*Detroit Free Press.*

MARKET FLASHES

WHEAT MARKET WEAKENS

WHEAT PRICES PER BU., FEB. 2, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.62		2.65
No. 2 White	2.60	2.70	
No. 2 Mixed			
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.30	2.30	2.36
No. 2 White	2.26	2.28	2.34
No. 2 Mixed	2.26	2.27	2.33

After having spent the last few months in a merry upclimb, the wheat market struck a bunch of snags a few days ago and is clinging desperately to keep up its price level. Astounding news has come from Great Britain which is enough to make anyone in the wheat business think. The belief of a number of British grain authorities is distinctly bearish. They state that there is much more wheat on hand than the world can use, figuring the total world surplus at 720 millions of bushels of wheat at present, with a total demand in 1920 for not more than 560 millions of bushels. The United States has about half of this surplus of wheat, and foreigners, the English say, consider America the most expensive market. They say that if enough ships could be obtained, there would be little demand for the product in a short time. As tonnage increases there is bound to be a great deal of competition for American wheat.

Men who were predicting a peak of around $4 per bushel wheat at some time this winter are growing less insistent in their claims saying that about the only thing to make for $4 wheat will be reports showing great reduction in acreages.

A subscriber has sent the following interesting letter to the market editor, concerning the wheat quotations:

"I have noted in your market reports that wheat is quoted at around $2.50 per bushel in various big city markets. Now in North Dakota, I am informed there is wheat being sold for more than $3 by farmers. Please straighten this out for me."

This may all be true enough and BUSINESS FARMING is looking up this matter. But here is undoubtedly just what you would find if you traced the matter out. Certain especially high grades and kinds of dark red northern wheat have been bringing fancy prices. Chicago buyers paid $3.53 per bu. for such wheat a short while ago, and Minneapolis reports similar transactions. The farmers being in control of practically everything in North Dakota may no doubt have its influence on price, but it is not probable that prices for various grades of wheat would be generally much higher than for the rest of the country.

Another interesting wheat news item is from the *Modern Miller*:

"With the possible exception of Michigan, where conditions are good, the winter wheat promise is much below normal. This includes the condition as well as the acreage."

UNREST BOLSTERS CORN

CORN PRICES PER BU., FEB. 2, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.64		1.72
No. 3 Yellow	1.60	1.52	
No. 4 Yellow	1.56		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.52
No. 3 Yellow	1.35	1.32	1.48
No. 4 Yellow	1.35	1.30	1.45

A rather unusual factor stepped into the grain market arena last week-end in the shape of definite reports of agricultural unrest throughout the larger part of the nation. The reports showed clearly how farmers, not making the profit they deserve, have become dissatisfied with farming and are going out of business or reducing their acreages, especially in crops like corn and others in which the market gamblers forever ruin the farmers' chances for a square deal.

The postoffice department of the United States has been a large factor in determining the unrest as reported in the last few days. About 200,000 questionaires were sent out to as many farm homes, considered representative of agricultural homes in general, and 40,000 have already been returned, showing great interest in the questions. Only a small percentage of satisfied farmers was to be found, and the vast majority make severe complains along the following lines:

1. Shortage of labor.
2. High profits taken by middlemen.
3. Lack of proper agencies of contact between farmer and consumer.

Fifty percent of those answering the questions either threaten to leave the farm or curtail production. Likewise there is talk of a general farmers' strike.

All this is having a big effect for the time being at least upon the corn and some of the other markets. The long predicted big run of corn holdings has not yet occurred and car shortage has been acute. Many farmers have shown a determination to hold their corn until at least $1.50 per bushel can be obtained at country stations. From Chicago come predictions that corn is likely to go up considerably for a while at least. In Detroit there is practically no corn on hand, and it is badly needed for the trade.

OATS CONTINE CLIMB

OAT PRICES PER BU., FEB. 2, 1920

No. 3 White	.59	.58	.66
No. 4 White	.58	.55	.63

Oats have kept right on going up during the past week and are nearly a dollar a bushel in Detroit and Chicago. Even on the days when corn remained unchanged, oats moved upward slightly. There has been a very great shortage in the oats sector accompanied by good demand. Export of oats has picked up slightly, but even now the figure is only a tenth of what it was a year ago. For the past six months the export of oats from this country has been only a third of what it was for the corresponding six months a year before.

LAST MINUTE WIRES

DETROIT—Corn and oats firm; rye and barley stronger. Produce firm. Hay firm. Beans quiet.

CHICAGO—Corn firm and higher due to reduced acreages forecast. Wheat inactive. Spuds steady.

Weekly Trade and Market Review

PESSIMISM has been the tone voiced by numerous financial experts during the last several days. The fear of a recession of prices, perhaps abrupt and disastrous to business, seems to be the topic of the hour. The immediate outlook, however, seems fine. Business is good. Orders are greater than the factories can fill, and there is not enough being produced on the farms to fill the demands of the trade. The foreign exchange has continued to cut wild capers, and in the past week has fluctuated harder and farther down than it has done for a long time. The British and French money reached a new record low level, in comparison to the American dollar, but the German mark is rising gradually. The United States is one-sixteenth of the world in size, but it possesses several sixteenths of the wealth. Yet the world's wealth tends to distribute itself evenly, we are told. Europe is pretty badly ruined for the time being financially and industrially, and the recovery is slow. Italy, for example, is now paying on her debts an interest which is as large as her entire income before the war. France does not dare to raise taxes to meet debts because, Millerand the premier says, the French have been taxed to the limit already. Eastern Europe is a political chaos, swept with typhus plagues and anarchy. The world, outside of America, is suffering acutely. Can it be that we will go on indefinitely without some of the world suffering being spread about until America bears more of an equal share?

Prices of hogs have risen $3 in Chicego since December, although sharp drops still occur. Cattle, topping at $20.75 several weeks ago are down to $16 for the best. Corn and other grains have been bulled by news of generally reduced acreages by generally dissatisfied farmers.

Buyers are very eager to get oats, not only for foreign trade but for home business as well. But dealers refuse to sell in most cases, having already contracted for most of their holdings. Although there is no very great activity, due to the small amount to be moved, prices have been ascending smartly and are now at about the peak of the season.

RYE AND BARLEY FIRM

After suffering considerable depression for some time, rye and barley have picked up in price. The export demand has once more become active and the market is firm. Rye had been feeling for some time the lack of export demand and ranged lower, bringing barley down with it to some extent. There seems to be quite a surplus of rye in this country and the market depends almost entirely on the demands from the European nations. Winter rye acreage is heavily short this year and that affords some additional strength for the present rye markets.

Detroit quotes rye, cash No. 2 at $1.72 and barley, cash No. 3 at $3@$3.20 per cwt.

GOOD BEAN PROSPECTS

BEAN PRICES PER CWT., FEB. 2, 1920			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.25	7.75	8.00
Red Kidneys		15.00	14.75

Prime	7.00	7.75	9.00
Red Kidneys	11.50	12.00	13.00

Beans are steady in Detroit and in quiet demand, with the price around $7.25 per cwt. Michigan growers are keeping back some holdings and with strong hands, confident of a great increase in price, which is quite generally predicted in the bean trade. The following interesting news item regarding beans is repeated from *The Chicago Packer*:

"It is the belief of a number of prominent bean handlers of Los Angeles that the bean grower is due to receive more money for his product during the coming months. The recent sudden advance in the Lima bean market, is said to be due to the fact that the Lima Bean Association which guaranteed prices until Feb. 1, has now extended the price guarantee until April 1, and may further extend it.

"The weather has not been favorable to bean growing, with only about four inches of rain. The early rains were followed by a North wind which dried the soil rapidly and proved valueless. Unless heavy rains come before the middle of February, followed by cooler weather, the 1920 crop may not be more than 20 per cent normal. The last two years have been dry and it will take a good deal of moisture this year to get the ground into proper condition. The light rain had last week was beneficial, but there was not enough of it.

"Prices on Blackeyes have advanced 1 1-2c during the last six weeks, due to a heavy demand from the Southern states. Practically the available supply is exhausted and a further advance of 1 1-2c per pound is rather expected before the new crop comes in. Pinks and large and small white beans have also gone up 1c per pound during the last few weeks and are now very firm.

"Beans are practically the only staple food product which has not advanced from 75 to 300 per cent since the beginning of the war in 1914. A large portion of the 1918 crop of beans has been shipped to Europe. Speculators have been holding from 25,000 to 30,000 sacks of Tepary beans in San Francisco. Large shipments have been and are still being made to Germany by way of Hamburg and Sweden. As a whole, conditions in the bean market look brighter to the grower now than at any time in the past two years."

SPUDS SOMEWHAT EASIER

SPUDS PER CWT., FEB. 2, 1920		
	Sacked	Bulk
Detroit	4.90	4 80
Chicago	4.75	4.85
Pittsburg	4.85	4.70
New York	4.80	4.60
PRICES ONE YEAR AGO		
Detroit	1.85	1.75
Chicago	1.70	1.75
Pittsburg	1.75	2.00
New York	2.40	2.35

There has been a great deal of trouble in the potato business because of bad country roads and because of car shortage. Growers and dealers could not get as much of the stock as they wished to the cities at the close of last week, although earlier in the week an easier tone had been caused because of big runs from many shippers.

In Chicago the carlot potato market weakened early last week because of heavy shipments. But these were reduced later in the week and prices became stronger. Shippers had apparently thought the market at a very favorable point and still think so, and the falling off of shipments seems to be more the fault of the weather and car shortage.

From the West comes the news that potatoes are scarce and sharply higher. This is especially true at Kansas City. From Arkansas comes the report that most of the potatoes are moved out of the state. Pittsburg reports unusually heavy shipments of potatoes and a generally good market although many cars have to wait for some time before being sold. In Boston and other eastern centers, there is not much doing in regard to spuds just now, because of the hard cold spell. Much frozen stock has been received.

DETROIT PRODUCE STRONG

An easy market is quoted for eggs and fresh receipts are large, but butter is firm and in good demand. Consumers are refusing to take storage eggs. They all want the fresh goods. Poultry is scarce and has been all week, with no sign of improvement. Demand has been speciall active for hens and chickens, and offerings Saturday were not enough to fill the needs of consumers. Demand for dressed calves and hogs was active, and the supply liberal.

Apples—Spy. $3.25@$3.50; Baldwin, $3.25@$3.50; Greenings. $3.50@$3.75; western, $2.75@$3.50 per box.

Butter—Fresh creamery, 60c; fresh

creamery in 1-lb bricks, 60@61 1-2c.
Cabbage—Home grown, $8 per 100 lbs
Celery—Michigan, 50@80c per doz.
Cheese—New York flat, June, 34c; Michigan flats, new make, 31@31 1-2; Michigan daisies, 32 1-2c; Wisconsin twins, 31c; Wisconsin double daisies 32 1-2c; limburger, 34 1-2@35 12c; domestic wheel Swiss, 52@65c per lb.
Dressed hogs—Choice country dressed, under 150 lbs., 19@21c; over 150lbs., 17@18c per lb.
Dressed calves—Fanchy country dressed, 29@31c; choice, 27@28c per lb.
Dressed poultry—Turkeys, 42@50c; chickens, 34@36c; choice, 27@28c per lb.
Dressed poultry—Turkeys, 42@50c; chickens, 34@36c; geese, 28@30c; ducks, 40@42c per lb.
Eggs—Fresh eggs: 58c per doz.; storage, 50 12c.
Fresh vegetables—Parsnips, $3 per bu.; cucumbers, $5@$5.50 per doz.; California spinach, $4@$4.50 per crate; shallots, 75c@$1 per doz. green peppers, $4@$4.50 per case; radishes, 35@40c per doz.; parsley, 50@60c per dozz.
Onions—Indiana, $6@$6.50 per-100-lb sack.
Popcorn—Shelled, 10@12c per lb.
Live poultry—Spring chickens large 34@35c; small, 31@32c; hens, 36@38 small hens, 33@35c; roosters, 23@24; geese, 28@33c; ducks, 40@45c; turkeys, 44@45c per lb.

From Detroit comes the interesting news to farmers that hay has gone up $2 per ton. The market has been very firm in that city, and the supply has kept on falling short. Although this same condition prevails in other Middle West cities, New York reports an easier tone, partly due to a much larger quantity of receipts. In some parts of Michigan there is not enough hay for local demands.

LIVE STOCK HIGHER

Live stock has shown streaks of strength at various times this winter and the breaks which are just as abrupt. In general, of course, prices are more nearly fair to the farmer than some time ago, but many farmers have been suffering heavy losses. Lambs reached the record for the season at Chicago last Thursday, with the top at $21.60. Receipts of cattle fell off during January at most markets, but the market prices have not responded by becoming higher. Last week hogs reached their record for the season, topping at around $16, but some declines have been suffered since. Quotations follow:

CHICAGO—Hogs: Market irregular bulk, $15.10@$15.40; top, $15.50; heavy, $14.75@$15.30 medium, $15.10@$15.45; light, $15.15@$15.50; light lights, $15@$15.35 heavy packing sows, smooth, $14@$14.50; packing cows, rough, $13.75@14. Cattle—Steers and butchers mostly steady to 25c lower; in-between heifers 50c lower; canners steady, calves mostly 25c higher; feeders steady to 25c lower. Sheep: Compared with a week ago, market 75@1,15 higher.

EAST BUFFALO—Cattle: Slow. Calves: Slow; 50c lower; $6@$23.50. Hogs: Slow; heavy, 25c lower; heavy, $15.75@$16.25; mixed, $16.25@$16.50; Yorkers, $16.50@$16.65; light Yorkers and pigs, $16.50; roughs, $14@$14.25; stags, $10@$11.50. Sheep and lambs; 75c lower; lambs, $12@20.50 yearlings, $11@$19.50; wethers, $14@$14.50; culls, $5@$13; mixed sheep, $13@$13.75.

BOSTO NWOOL MARKET FIRM

While there has been less activity in the market during the past week than for some time, the market has remained as firm as ever. Finer grades of wool, especially, are very firm. Supplies of desirable fine wools are likewise exceedingly scarce and strongly held, with manufacturers ready buyers of anything that is really desirable in the market and at good prices.

In medium wools, the action has turned more to quarter-blood than three-eighths wools during the past week or two, although the higher grade has been by no means neglected. Fine wools still have the center of the stage, however, and that in spite of the attractiveness in price for the coarser grades of wool.

Fine unwashed, 67@68; Delaine unwashed, 87@90; 1-2 blood unwashed, 80@82; 3-8 blood unwashed, 68@69; 1-2, 3-8, 1-3 clothing, 55@57; common

CROP IMPROVEMENT ASS'N BUYS ALFALFA SEED

(*Continued from page 7*)

vidual growers are selling their Grimm and Cossack seed at 65c to 75c per pound, and while it may be good there is a chance that it may not be pure. And in many cases there is a big chance that it is very badly mixed.

If we are going to have success with these pure seeds of highly recommended varieties, we have learned from experience with Rosen Rye, that it is very essential to get genuine pure seed.

Again, there are many hard seed in alfalfa and most of the seed on the market has not been sacrificed. This process often improves germination 2 0to 40 per cent.

Mr. Lyman of Minnesota, and the North Dakota Seed Growers' Association are the only ones that I know of who are sacrificing their seed, and Mr. Lyman is not removing the hulls after sacrification,-while the North Dakota people clean the seed thoroughly, then scarify and then reclean. This seed is also of excellent quality, a statement which can not be said of a great deal of the seed produced in the Northwest this year, for the rains in some sections discolored the seed and the drouth in others caused the production of a lot of small shrunken seed, which many of the growers are not removing.

Taking all these things into consideration, I think this seed even at the price of 86 cents per pounds, which it is likely to cost us net, when we consider the percentage of viable seed, is the cheapest Grimm alfalfa seed on the market. For, with a good yield of other seed you may pay less per pound but the pound will not in most cases have as much good, clean, strong germinating seed.

The freight on this seed from Fargo to East Lansing is 99c per 100 lb. and the express is $2.77 per 100 lbs.

They can make shipment of 2,000 pounds at once and the rest inside of about two weeks. First I thought it might be safe to ship this by freight but I am really afraid to do it now. For, on seed as expensive as this, by the time it is shipped by freight to East Lansing and then re-shipped by express with the chance that it will get indefinitely delayed, compared to shipping it direct to the purchaser by express, I think the vote would be in favor of direct shipment. For those ordering over 100 pounds, as all have so far, I believe will get it only about 1c per pound cheaper, if they have it come by freight to East Lansing and reship it by express.

The Michigan Crop Improvement Association is charging nothing for handling this seed and by going out to North Dakota I got them to give us a price of 85c per pound laid down here by freight, instead of 85c f. o. b. Fargo. I am now going to try and see if I can not get it sent by express for 85c net, and I believe I at least, can get it for 86c delivered by express to your depot.

I am writing thus in detail because you will undoubtedly have some questions to answer regarding this seed, and while it is impossible to tell you all the points in a letter of this kind, these are the main ones of interest.

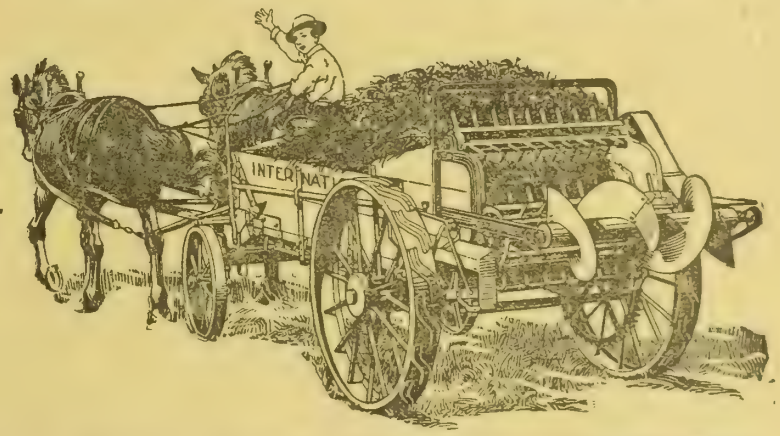
Four thousand pounds of this seed has already been ordered. We still have an option on 2,000 pounds more. I do not believe there will be any Grimm seed on the market after about 8 weeks. If we can be of any further service to you on this question feel free to call upon us.

The New Roller-Bearing Tight-Bottom

International

Spreader is Now Ready and Invites Your Critical Inspection

New
Different
Better



Run Your Eyes Over These Bang-Up Features:

Roller Bearings

1. Roller bearings at seven points—the only spreader so equipped. Easy, smooth, quiet running.

Double Ratchet Drive

2. Walking beam transmission from main axle eccentric and extra large ratchet wheel give easy, strong steady feed. Box tapered to eliminate friction on box sides. Six feed speeds.

Center-Pivot Axle

3. Oscillating front axle, auto-type, permitting short turn. No pole whipping.

Power—Both Wheels

4. Power is transmitted from both ends of the rear axle—beaters and wide-spread driven from one wheel and the manure feed from the other.

Wheels Track

5. Rear wheels track with the front wheels, lightening draft.

Tight Bottom

6. There is no clogging, jamming apron, because the spreader has a tight bottom. Spreads anything.

Two Beaters

7. Handles good substantial loads easily, because two all-steel beaters with chisel-pointed square teeth work from both top and bottom of the load.

Wide-Spread

8. The spiral wide-spread behind the beaters gives the manure a third beating, and spreads it finely and uniformly beyond the wheels.

Steel Frame

9. An all-steel main frame—wood box sides hold only the load.

THE NEW INTERNATIONAL—made in two sizes—is unquestionably the best spreader value on the market today, and when you consider it in connection with its price, it is so far ahead of all others that it is bound to prove the sensation of 1920. Place your order early. For further information send you name and address to

GENERAL PRINCIPLES
1. Government

TODAY civilized society expresses its ideal under some form of government. Without generally accepted regulations as to conduct, chaotic conditions would be the rule, imperiling life and property, reducing the rewards to labor, and in every way interfering with the pursuit of happiness. It is a long story, this gradual evolution of society from the simple to the complex, and it would serve no good purpose to narrate it at this time. Each step has had its lessons, many of them written in blood; for often the change from one condition to another has brought in its wake war, famine and suffering. It may be disputed in some quarters, yet it is capable of demonstration, that drastic social upheavals have not, in the long run, been as productive of real good to the people as methods depending on the gradual adoption of just lines of conduct—social, political, industrial.

Autocracy vs. Democracy

Broadly stated, the world is ruled today by two kinds of government. One is autocratic, the other is democratic. Autocratic government has been the almost universal rule from time immemorial. Democratic government is so comparatively recent that even many who practice it do so with doubt as to its efficacy; and in times of stress they abandon their democracy and turn for protection to the system they have every reason to look upon with suspicion as under normal conditions being oppressive and evil.

Government can be stated as a wise and economical method of safeguarding the home, protecting life and property, and making labor more effective. Autocratic government is the rule of the many by the few; democratic form of government is the rule of the people by themselves. The rule of the czar, before the bolsheviki revolt hurled him from the throne, was an extreme example of autocratic government. Yet one must go to Russia to find an extreme example of democracy running side by side with the autocracy of the czar. The soviet—the Russian town meeting—is purely democratic. Both men and women take part, and its decisions are final.

Democracy

In Michigan the best example to be found of a democratic form of government is in the township or school district meeting. Citizens of both sexes assemble, and by vote decide the nature and kind of the community's political and educational activities. The delegation of authority to officials might be called democracy once removed. This has been found necessary because of the impossibility of all the people assembling at one time. Not all political problems can be decided offhand; they often demand analysis and investigation; so legislative and executive officials are elected or appointed to perform duties that a democratic meeting cannot handle.

Democracy is the rule of the majority. Society is not a unit as to the dividing line between the rights and duties of society and the right and duties of the individual. And the woman voter can well hesitate to express an opinion as to just where the dividing line is. Nor do the autocrats agree as to how strong autocratic government should be. There are political autocrats, and industrial autocrats, and religious autocrats. Czar, kaiser, king, emperor—each represents an autocratic form of government; and in industry the steel mill autocrat, the cotton factory autocrat, the meat

(*Continued on page* 23)

HOME IN THE HEARTS OF MEN
By JAMES O'CONNELL

I builded a home in my fancy,
Aloof from all toil and all care,
With nothing of want to enhance me,
Surrounded by wealthy and fair.
I would dwell with the rich and the merry,
With never a thought of the poor,
And all should be gladsome and cheery,
Who welcome should find at my door.

But time passed along, and my vision
Began less alluring to seem,
'Til my soul seemed to sneer with derision,
At the self-loving strain of my dream,
Then a new home I sought and I found it,
Down deep mid the hovels of woe,
With hunger and want all around it,
And the stripes of a cruel world's blow.

Then a whisper I heard in my dreaming,
Which awoke my long slumbering soul,
"If you'll build you a home, of home seeming,
Let your poor brother's heart be its goal,
Seek out all the wretched and weary,
To comfort their trouble and woe,
Casting sunshine where all now is dreary,
'Til men bless you wherever you go.

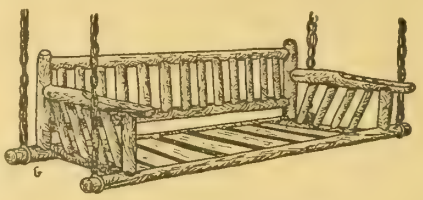
"For the home which will bring you most pleasure,
That will oft be repeated again,
Is not one of rich, idle leisure,
But a home in the hearts of men,
Better than riches or beauty,
Is a home in your brother's heart,
With charity first in the duty
That falls to your humble part."

BEAUTIFYING THE HOME

Stint yourself as you think good, in other things; but don't scruple freedom in brightening home. Gay furniture and a brilliant garden are a sight day by day, and make life brighter.—BUXTON.

QUITE OFTEN it is possible that within our reach we have that within our reach we have home and by our home we mean not only the house but the grounds; yet we do not know how to go about it.

The purpose of this article is to call to your attention the possibilities that lie in that little strip of woods on the back of your farm. If your son or husband is at all handy with the saw and hammer and you have some young trees on your farm, there can be constructed from these during the cold winter days when regular work upon the farm is impossible, a quantity of very useful and at the same time artistic pieces of furniture for the porch and yard.



Rustic Porch Swing

This is a cross between a couch and a hammock, and can be swung from the ceiling of the porch, from a stout branch in the garden, or in the summer house, also made of this same wood.

Cedar is the best wood for rustic furniture, though other soft woods may be used if cedar is not available. If you have white birch and can leave the bark on you will find your furniture very picturesque, especially if this is combined with dull green cushions which are tied in and can thus be easily removed and taken into the house nights.

In making this furniture it is advisable to smooth off the seats where the flat surface would add to the comfort and yet this will not detract from the looks of your furniture as cushions will always be used.

The furniture is put together with stout tenons, and as it must stand rain and shine, glue cannot of course be used in its construction. They will, if rightly fitted together be so made that they will last a lifetime. The pieces required for making the swing seat are as follows:

	No.	Lgth.	Diam.
Front posts ...	2	14 in.	2½ in.
Back posts ...	2	24 in.	2½ in.
Seat rails	2	90 in.	2½ in.
Seat rails	2	26 in.	2½ in.
Back rails ...	2	82 in.	2¼ in.
Back uprights	21	15 in.	2 in.
Arms	2	27 in.	2½ in.
End uprights	.10	15 in.	2 in.
Seat slabs ...	19	24 in	2in.x1in.

Rustic Arm Chair

The rustic arm chair is even more easily made as there as not so many pieces.

	No.	Lgth.	Diam.
Legs	4	30 in.	2½ in.
Arms	3	28 in.	2½ in.
Seat rails	4	28 in.	2¼ in.
Stretchers	4	28 in.	2 in.
Back uprights ..	7	15 in.	1½ in.
Seat slabs	7	24 in.	2x1 in.

A Good Porch Table

The table shown has a hewn board to finish the top so that there will be a smooth surface for lamp, basket, books, or the refreshment service. The mill bill of stock for this table is:

	No.	Lgth.	Diam.
Top boards	4	46 in.	8½x1
Top rails	2	38 in.	3 in.
Top rails	2	50 in.	3 in.
Legs	4	32 in.	3 in.
Stretchers	4	20 in.	2¾ in.
Stretchers	1	48 in.	2½ in.

In order to encourage beautifying the house and grounds, we will offer a special prize which we believe is a different prize than has been offered by any other paper or magazine and which we believe you will appreciate. Here is the offer:

If you have received an idea which has helped you to make your home or grounds more beautiful from some suggestion or write up on this page, or if you have adopted this idea and made rustic furniture, when the leaves are on the trees and the lawns are green, secure a good, clear cut kodak picture or have a photographer take a picture of your home and sent it in to the Editor of the Woman's Page, and we will print it on this page. Others will profit by your ideas and will be encouraged to try your plan perhaps. And the prize offered will be the cut from which the picture is printed in the paper. This will be sent to you and you can then use it to have on your Christmas greeting cards. It is quite the fad you know to have a personal greeting card at Christmas time, and what could be nicer than a message on a card which contained the picture of your home.

HELPFUL HEALTH HINTS

Severe pains in the stomach can often be relieved by drinking a glass of hot water in which has been stirred a teaspoonful of salt.

To stop hiccoughs, give the patient a teaspoonful of granulated sugar and vinegar. If necessary, repeat the dose.

If a vein is cut, the blood is dark red, flows freely and will not spurt. Lay the patient down, loosen all tight clothing, elevate wounded part, press the severed skin together, using clean gauze or cotton applied cold by means of cold water or better still, ice water. If bleeding does not stop, apply tight bandages near wounds, but on side farthest from the heart. If an artery is cut, the blood is bright red and spurts and the wound should be bound on side nearest the heart.

Salt as a gargle will cure soreness of the throat if the remedy is administered early, and if persisted in will cure a stubborn case.

WHEN A MAN MARRIES

"A man who gives his fiancee an engagement ring and does not give his wife an insurance policy on his life needs a guardian—not a wife."

We don't know the author if this bit of wisdom, but he spoke the truth which should be driven home to every man whose name appears in your local paper under the heading "Engagements" or "To be Married" as well as to the underinsured or uninsured married men.

One insurance man sends a letter containing some such wording as the following to "the man in the case" every time he learns of an approaching wedding in his territory according to Service.

When a man asks a woman to marry him she should ask him the question:

"Do you carry sufficient insurance to protect me from want in case of your death?"

Most men think they would do anything for the girl they expect to marry. But after the sound of the wedding march has ceased and the honeymoon is over, too many men neglected the matter of insurance. They take long chances and they would make the girl take still longer chances with added handicaps.

They forget that if the girl who has become his wife found it difficult to make a living before marriage without dependents, her difficulties will be tremendously increased as a widow with one or more children.

BAKER'S COCOA

IS GOOD for Breakfast Luncheon Dinner Supper

Any time that *any one* wants a delicious drink with a real, satisfying, sustaining food value.

We guarantee its purity and high quality. We have been making chocolate and cocoa for nearly 140 years.

WALTER BAKER & CO. Ltd.
Established 1780. DORCHESTER, MASS.

As good as winter clothing

Because, like winter clothing, Piso's protects young and old from the effects of winter weather. It relieves coughs and soothes inflamed throats and hoarseness.

Always keep it in the house—its use often prevents little ills from developing into real sickness.

30c at your druggist's. Contains no opiate. Good for young and old.

PISO'S
for Coughs & Colds

ROBUSTNESS

The *"Fisherman"* has quaintly, yet truly been called the modern advocate of robustness. Upon every bottle of

Scott's Emulsion

the *"Fisherman"* is a guarantee of purity and goodness unsurpassed. Those who use *Scott's* regularly, more often than not realize pure blood, a sound body—robustness.

Scott & Bowne, Bloomfield, N. J. 19-45

Reading, Mich.

SEEN IN CITY SHOPS

MATCHING one's suit with a purse has been in vogue for some time. Now that the velvet bags and beaded purses have had an extended run, we see displayed as the latest novelty the Kokak purse. They are neat in shape and a handy size to carry, having a stationery mirror inside the flat top. Then there are compartments for cards, and handkerchief as well as money. And the price is about whatever you want to pay as they can be bought as low at 1.50, while I saw a very fine grained leather one at $6.

Something which will add to the convenience of the home is always welcomed by the housewife, and we saw the best contrivance the other day in the shape of a wire basket with a handle into which you dropped your fried cakes. The wire basket fits right down into the hot fat., and when the cakes are done they can all be lifted out at once, so that some are not browner than others. The basket is equally good for French-fried potatoes croquettes, etc., so that at its cost price of 50c it is really not expensive.

This coming spring with the suit blouse will be worn, instead of the beads, a grosgrain ribbon, on the end of which is attached a jade ornament. These black ribbons are a nice finishing touch to any waist and what is best of all, they can be worn with all colors while we had to be careful when we donned our colored strings of beads, that we had the right color to harmonize with the blouse or dress we were wearing. Although jade ornaments come rather high, from $6 to $8 each, still almost every woman has some sort of a good-looking ornament she can substitute for this fad.

We wish more of our readers would make use of the Personal Service Shopping Bureau. We are here to serve you. During the past week we have bought crochet-hooks, cut-out maps and linen crash for our readers, but we know that we can be of inestimable value to you if you will but tell us your needs. Address the editor of this page.

Dan McGann Declares Himself

Said Dan McGann to a foreign man
who worked at the self-same bench.
"Let me tell you this," and for emphasis, he flourished a Stilson wrench,
Don't talk to me of the bourjoisee, don't open your mouth to speak
Of your socialists or your anarchists, don't mention the bolsheveek,
For I've had enough of this foreign stuff, I'm sick as a man can be
Of the speech of hate, and I'm tellin' you straight that this is the land for me!

"If you want to brag, just take that flag, an' boast of its field o' blue,
An' praise the dead an' the blood they shed for the peace o' the likes o' you.
I'll hear no more," and he waved once more, his wrench in a forceful way,
"O' the cunning creed o' some Russian breed. I stand for the U. S. A.!
I'm done with your fads, and your wild-eyed lads, don't flourish your rag o' red
Where I can see or at night there'll be, tall candles around your bed.

"So tip your hat to a flag like that! Thank God for its stripes an' stars!
Thank God you're here where the roads are clear, away from your kings and czars.
I can't just say what I feel today, for I'm not a talkin' man,
But first an' last, I am standin' fast for all that's American.
So don't you speak of the bolsheveek, it's sick of the stuff I am,
One God, one flag is the creed I brag! I'm boostin' for Uncle Sam."

(*Copyright*, 1919 *by* EDGAR A. GUEST.)

CALUMET

—gives better bakings that go further. It strikes straight at the root of extravagance—waste—and reduces living cost in a sane, sensible, way.

Calumet Baking Powder never fails to properly raise all bakings—produce the best results.

Makes Most Palatable and Sweetest of Foods

Calumet bakings *do* go further, because they are deliciously good, are never thrown away. *And* because they have greatest of keeping quality—stay moist, tender and oven-fresh for days.

You save when you buy it—moderate in cost. You save when you use it—has more than the ordinary leavening strength—therefore you use less. You save materials it is used with—no failures.

Generations of good cooks have used Calumet—because it positively proves its superiority and economy. It comes to you from the largest, most sanitary Baking Powder Factory in the world—absolutely pure and as perfect in leavening power as the day it left the big Calumet Plant.

Contains only such ingredients as have been officially approved by United States Food Authorities. Sold by your grocer under a definite money-back guarantee, if it doesn't prove "best by test"—in your own kitchen, in *any* baking.

BALDWIN'S
Big Berry Plant Book
Is Now Ready For You—

One of 100,000—and it's chockful of information about berry plants—when to plant them, how to grow them, how to care for them, how to make a success of the berry business—all plainly told by one who knows, backed by more than thirty years' experience. This instructive Fruit Growers' Guide tells you how to get big crops from standard varieties and everbearing Strawberries and other small Fruits. All Baldwin plants are produced from new rich soil, free from insects or diseases, well rooted, hardy and vigorous, making sure that you can start right. It shows the most complete line of small fruit plants to be found anywhere. You make money when you do as Baldwin tells you. Start right. Get the best.

Plant Baldwin's Berry Plants
and Help Produce Healthgiving Food.

All true to name. They are large, heavily rooted, sure growers, because grown on new fertile ground. The kind that produces profits—big profits—quickly. We grow them by the million. The same attention, the same cultivation, that you would give to a garden of but a few plants. We want you to get our Big Berry Book now and place your order early while we are well stocked and before our varieties are depicted. Have had a most excellent growing season. Well supplied with plants of all standard varieties—Now. The demand is going to be heavy. If you act quickly you will run no danger and there will be no delay on our part. We can save you money. We want you as one of our satisfied customers. You need the profit—the world needs the fruit. Do your duty in producing wholesome healthgiving food. Send for Baldwin's Big Berry Book. Save a day—write tonight.

The Children's Hour

DEAR CHILDREN: In order that we may learn something every day from the common things about us and that we may train our powers of observation, we are going to have another contest, and this time it is to be a Bird contest. Many of the birds go south before winter comes, as you know, but there are some that stay in the cold north and it is of this last that we will study.

For the best letter of not more than one hundred words, telling me what birds stay north, how they live and how you are able to tell them, I will award a little book of birds. This is a prize well worth working for. The second and third letters on the same subject which are next best will also receive a prize of a trip around the world in postal cards.

You know a good way to study the winter birds is to crumb the table for mother after each meal, then throw the crumbs out on the snow and watch the birds come and pick them up. This gives you the best chance to become acquainted with them. Some one has written such a pretty little verse about the snow birds, I am going to pass it on and hope you will memorize it.

Affectionately yours—LADDIE.

"Without the snow no snowbirds;
And without their throats to sing,
How could we waste the winter
Or hope to have a spring."

THE WONDERFUL ADVENTURES OF A RAINDROP

By Ethel Allen Murphy

Part III

"'THE green things and flower things growing along our way were swayed to and fro as we brushed against them, and they seemed to be reaching out to stop us. Some flowers were so pretty and had such sweet looks that I wanted to stay with them, but there was a song that all my companions kept singing over and over that made me feel I must go on. This is the song they sang—

Oh, come with me
To the deep, deep sea,
Where the wandering waters go!
Where the wandering streams
Fulfill their dreams
In the great tide's ebb and flow!

"'So down the slopes we ran, sometimes stopped for an instant or turned aside by stones, around which we parted and joined again with a great rush and splutter, sometimes leaping over big spaces, down steep rocks, and making the green and white flying veils that you call the waterfalls.

"'Then we ran on through deep woods and came out into meadows soft and smoothly sloping, where the red clover was growing. The red clover, you know, Garden Lady, such as the children plant in their gardens in the fall, because the plants hold the moisture—raindrops like me, you know, and keep the soil in place during the winter and spring months. Then in the spring when it is plowed under, the clover adds humus to the earth. You see, Garden Lady, I've sometimes been sorry that I did not spend the winter, tucked away safe in the kind brown earth. Some of my friends did, and they had the most amazing adventures, and they met the old man of the garden, the mole, and they heard all about the little field mouse and her little underground home.

"'We almost went to sleep while we were passing through the meadowlands. But still we heard the song which had led us on calling to us again—

Oh, come to the sea! The deep green sea,
Where the waving seaweeds grow.
Where the wild sea creatures wander free
And the proud ships proudly go!

"'So we went on, through broad, flat lands, past farms and towns and cities. And here in the open country, we knew that great blue space that you call the sky. We felt something speaking to us from it, as if we were kin to it.

"'The stars dropped their images down to us, and we laughed, and rocked them to and fro, and tossed them from one to another. The lights from boats shone and gleamed upon us and flung long red or green or white streamers of light down on us. We caught them like the boys catch baseballs, and carried them on, rippling and waving, and dropped them as we went laughing on. We were to have the biggest adventure of all!'"—By Ethel Allen Murphy.

OUR PUZZLE CORNER

Answer to last week's puzzle: No, he did not. They travel on parallel lines, and do not change their relative position.

THE FOX, GOOSE AND CORN

A farmer who is about to move has a fox, a goose and a bag of corn. He comes to a river, and the boat will only carry the farmer and one of his charges. Now, if he leaves

the fox and the goose alone, the fox will eat the goose, and if he leaves the goose and the corn alone, the goose will eat the corn. How can he safely take them all over the river?

A FINE TOY TO MAKE

LOTS of fun may be had with two round clothes pins, which mother will give you from her wash day supplies, or which you can buy at any store. Pierce each of the clothes pins with holes, making four holes in each pin; the first about three quarters of an inch below the top, the second through the center of the pin directly above the legs and the third and fourth through each leg near the bottom. An awl or screwdriver can be used to make these small holes. Then cut off the legs close to the place where they join the pin and have left a piece. The next thing to do is to get two thin pieces of wood, three inches in length and drill three holes into each; one at each end and one in the middle. Then take some very fine wire and join the slips of wood that you have just pierced to the top of the clothes pin, putting one piece on each side for arms. Bend the wire at each end in the form of a loop so the arms will not slip, but give the arms enough freedom to move easily. Cut off the left over wire.

Attach the legs in the same way to the lower holes in the body of the

Lily White

"The Flour the Best Cooks Use"

is probably the best family flour.

Bread, biscuits, dumplings, rolls, cakes, cookies, pies—in fact everything baked in the home from LILY WHITE FLOUR will taste so good, look so good and actually be so good that they will be a delight to every member of the family, and a real treat to visitors.

It is almost a universal expression among women who use LILY WHITE FLOUR that "everything tastes so good and looks so good."

The reason is LILY WHITE FLOUR is so good.

Your money will be returned if you do not like it better than any flour you ever used for every requirement of home baking.

VALLEY CITY MILLING CO.,

Grand Rapids, Michigan.

pin. Take a long piece of black thread and tie one end of it to a pin, pass the string through the holes in the center of the arms and tie it about two feet from the pin. Then pin the little performers to the carpet or the lower rung of a chair. Take hold of the free end of the thread and hold it so the dolls just touch the floor. Pull the thread and the little men will wrestle with each other.

If you work this novel toy in a semi-darkened room and hold the end of the thread behind you as you jerk it ,any on-looker will be much mystified and wonder what is making the queer little clothes pin wrestlers perform so strangely.

JUNIOR COOK

Many times tasty and inexpensive vegetables are not used as much as they should be because the cook doesn't know the best way of preparing them. Rudabago is the very cheapest of all winter vegetables and when cooked this way is one of the most delicious. Peel and cut into inch size pieces about 2 pounds of rudabago. Wash, cover with water and put on to cook, in a tightly covered vessel. After it has boiled hard for ten minutes, put over a low fire and cook for one and one-half hours. Take off cover, mash the vegetable with a wire masher and add 1 teaspoonful of salt—more if desired. Stir well. Increase heat slightly and cook for one-half hour more. By this time the vegetable should be thick and a rich yellow and should be cooked dry enough to serve on a plate with meat without seeming "watery." At the end of the half hour add one tablespoonful meat drippings (bacon is best) and cook five minutes more. Serve hot. If any is left over, save for "warm-over."

WOMEN IN POLITICS

(*Continued from page* 20)

packing autocrat, has each his little kingdom. In America this is autocracy in a democracy.

Radical democracy takes various forms: socialism and bolshevism are the two just now most in the public eye.

Socialism

A socialist would prohibit by force all kinds of autocracy—in production in transportation, in every line of human activity. He advocates the collective ownership of all the means of production. His motto is: "To every one according to his deeds."

Bolshevism

Russia is the home of bolshevism. The bolshevik is simply a radical socialist, just as the menshevik is a conservative socialist. Both are followers of Karl Marx, and both find in his "Kapital" the socialist's full authority for his beliefs.

Between the low degree socialist and the high degree socialist are many varieties to be found in all countries under all degrees of civilization. Michigan has its Socialist party, its Socialist Labor party and its "I. W. W." the initials standing for International Workers of the World. Probably these latter come the nearest to advocating the methods of the Russian bolsheviki.

The different forms of socialism is the expression of those who believe they are exploited under present economic conditions. They are particularly incensed against the employing class, whom they regard as their personal enemy, and they insist that because employers own "the machinery of production," those who work for wages are "slaves."

How to Deal With Socialism

So long as industrial conditions are prosperous, with employment, to be obtained by those who desire to work, agitation for radical socialism will be negligible. But when there is business depression, with little work and a diminishing wage, outbreaks are not impossible. Society's safety can best be defended by education rather than by suppression.

So much of society's activities are already socialistic, that general condemnation of socialism is ineffective in alarming the people against it. The fact is, social life is gradually absorbing all of socialism that is available as a rule of conduct; the rest will go into the discard by the simple process of intelligent elimination.

Regarding these tendencies, the voting woman must do her own investigating and draw her own conclusions. And if she reads of "swollen fortunes," "unearned increment" "monopoly" and "war profit," it is not showing wisdom to jump to the conclusion that socialism is the only method of eliminating these excrescences on the body politic.

FARMING A REAL BUSINESS

In the last few years farm methods have been revolutionized. Better roads, more railroads, the automobile, the tractor, the cream separator, the telephone, the farm lighting plant and other labor saving and time saving improvements have done away with the old, tedious methods. The farmer is no longer isolated from the outside world. He can have on his farm almost all the conveniences and advantages that his city brother can have and a lot more that his city brother cannot have.

Farmers are applying scientific farming in the field. They understand crop rotation, stock breeding, deeper plowing, soil exhaustion. They are getting greater and greater returns from their acreage by intensive cultivation. They keep pace with the latest discoveries and inventions of agriculture and stock raising. They are in close touch with market conditions. They are keenly interested in the cost of transportation.

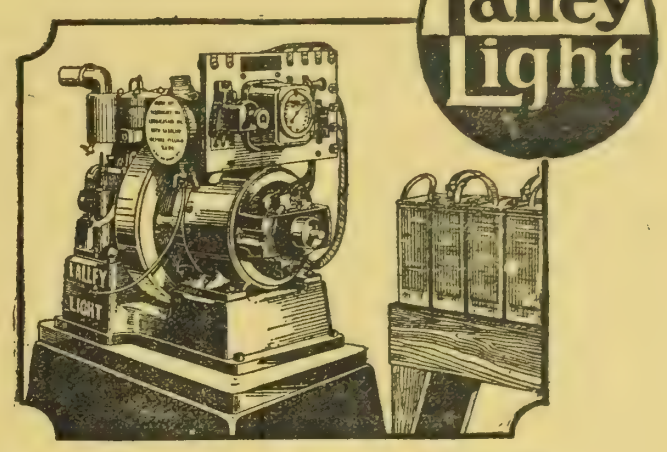
Yet many of them do not put that same efficiency into their office work. For every modern farmer is compelled to do a certain amount of office work. He has to do a lot of things that his father did not have to do. The government insists that he keep sufficient records so as to make a correct return on his income tax. He is transacting more and more of his business by mail. No merchant, no lawyer, no manufacturer—no man needs a typewriter more than a farmer.

The core of a business office is a typewriter. The typewriter is becoming the business partner of the farmer of today. Every letter a farmer writes should be a silent compliment to the business efficiency which he is employing as a business man. It should be clearly written and easily read. It should be written on a letterhead.

Carbon copies should be kept by the farmer of all letters, agreements, orders, memoranda, cost entries, instruction sheets—all paper which must be read by another without mistake at a time when correct, easy reading is important. These are recognized requirements in a business office which the typewriter furnishes.

You may think it difficult to operate a typewriter—that it requires long months of practice before presentable work can be produced. Such an impression is erroneous. Hundreds of farmers are handling their own correspondence and office work with a typewriter. Most of them learned as beginners with the instructions furnished with all typewriters. It is really a simple matter.

Get a typewriter and learn to operate it. Let your children learn to operate it. The result will be that your letters, instead of being written slowly and painfully, by hand, will be writen in a few moments, and will create respect and command attention wherever they may go.



Lalley Light is a complete unit—engine and generator—with 16 cell storage battery. It supplies ample electricity for lights, water pump, washing machine, sweeper, cream separator, fanning mill, iron, etc.

Ten Years' Owner-Experience Has Proved Lalley Light

Naturally, there are fundamental reasons why progressive farmers everywhere are installing Lalley Light Plants now.

They recognize that Lalley Light is the most highly perfected electric light and power plant.

They know this because Lalley Light has stood the test of owner experience for ten years.

They know that only through such an experience can an electrical unit like Lalley Light be developed, refined and perfected as Lalley Light has been.

Install Lalley Light *Now*

Right now is the best time to begin enjoying Lalley electricity. You have the time now to make this installation.

You can begin enjoying Lalley benefits and comforts immediately and be ready for the savings in time and labor that Lalley Light will give you when the rush of farm work comes.

Furthermore, delay may mean that you will have to pay an increased price for this essential money-making farm equipment.

Do not delay. See your Lalley Light dealer today, or ask him to call upon you.

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent

A Free Trial Package is Mailed to Everyone Who Writes

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powdrpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof, sanitary and durable for outside or inside painting. It is the cement principle applied to paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manufacturer, 13 North Street, Adams, N. Y., and he will send you a free trial package, also color card and full information showing you how you can save a good many dollars. Write today.—(Adv.)

WAS $100—NOW $57

Here is the famous Oliver Typewriter offering you a saving of $43. The $57 Oliver is our identical $100 model, brand new, never used. Our finest and latest model. The same as used by many of the biggest concerns. Over 800,000 sold. We send an Oliver for Free Trial. Not one cent down. If you want to keep it, pay us at the rate of $3 per month until the $57 is paid. This is the greatest typewriter bargain in the world.

Write today for our new book, "The Typewriter on the Farm."

FARMERS SERVICE BUREAU

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you.)

WIFE'S PROPERTY

If a man marries a woman with money and property and no heirs whatever at her death, can the husband hold anything of hers? Can a will stand law or can it be broken?—L. C., Montcalm County.

If a married woman dies leaving a husband but no father, mother, brother, sister, nor children or other lineal descendants of a deceased brother or sister be living, the entire estate will be assigned to the husband.

In a strict sense a will can not be broken. The wording of the verdict or finding in what is known as a will contest is that the document purporting to be the last will and testament of the deceased is not his last will and testament. Meaning that while it has the form it was not his will because it lacked some requirement, either in its execution or that the maker was incompetent or that undue influence was exercised so that the document was not really the expression of his own mind. A will executed in the manner required by law by a competent person and without undue influence being exercised by anyone is a will and can not be broken. If possible, wills should be executed when one is in good health and in possession of all his mental faculties and at a time when he is sure to know what is right. If he wants to change it afterward by reason of changed conditions he has a right to do so. As a will is not operative until after death of the maker he may dispose of, encumber, or handle the property just the same as if a will had not been made—*W. E. Brown legal editor.*

EXPRESS CO. REFUND

Some time ago I ordered a set of Ford Shock-Absorbers from Indianapolis to be sent to Jasper, Mich., by American Express. They were correctly addressed by the consigner, but by all outward appearances the expressmen could not read a type-written address and they were carried to Jackson in place of Jasper and held there until I received their letter asking for further instructions, the same which I answered promptly, requesting the Express Company to forward the shock-absorbers to their destination which was done after a three weeks' delay. When they finally did arrive at Jasper, I had two separate charges to pay on account of the shipment being mis-sent. Is it possible for me to obtain a refund from the Express Company when it was no fault of the shipper but nothing more than carelessness on their part? I have the express receipts showing each separate amount. No. 2. When A rents a farm of B and they have a written contract, can A raise sugar beets or any other farm crop even against B's will if they had no understanding stating the kind of crops, either oral or written, covering same? What I have reference to is cash rent.—F. W., Metamore, Ohio.

The express company is liable to you for any damage caused you by reason of the mis-shipment o the goods. They are also liable to you for any overcharge by reason of their mis-shipment. Send them a bill for the damage and sue them if they don't pay. The tenant for cash rent without limitations upon the use of the land can raise sugar beets if he wants to. He can raise any crop not prohibited by the lease.—*W. E. Brown, legal editor.*

TO COLOR FURS

Will you please give in your paper a way to color rabbit skins to brown color? I have a formula to tan them, now, how to color is the question.—T. C., Webberville, Mich.

Dyeing furs is a skilled trade. We have not, therefore, prepared any bulletin covering the subject. However, if you can procure a copy (or refer to it in your local library) of "Home Manufacture of Furs and Skins," published by A. R. Harding, 106 Walnut Street, St. Louis, Mo., and sold for $1.50, postpaid, you will find directions for coloring skins brown given on page 180. Briefly, the instructions are as follows: "One lb. catechu in one gallon of water and to fix, 1-2 pound sulphate of copper in one gallon water. If the color is not deep enough repeat the entire process."—*H. B. Bell, acting Assist. Chief of Bureau of Biological Survey, U. S. Department of Agriculture, Washington, D. C.*

A LEGAL FENCE

Please give me some information about a line fence. A neighbor and myself had some dispute about the fence which separates my 40 from an 80 of his. A wants to keep sheep and he wants B to put a woven wire fence for a line fence. Is a barbed wire fence of four strands a legal line fence? Please let me know.—T. S., Midland County.

I would be of the opinion that a barbed wire fence of 4 strands was not a legal fence. Sec. 2206, of C. L. 1915, describes what would be required to make a legal fence. The opinion of the fence viewers as to the sufficiency would largely control.—*W. E. Brown, legal editor.*

CAN I TRADE BONDS?

Would like to ask in the legal department if I can change a part of a Liberty bond to war savings stamps. They put us down for a certain assessment and as circumstances changed with me, after I had paid a certain sum, I found it impossible to pay the remainder. Would like to change it to war savings stamps.—G. D. S.

Consult your banker or the postmaster about changing your bond for stamps. As I recollect the government makes no provision for allowing such a change.—*W. E. Brown, legal editor.*

IS THIS USURY?

I was greatly interested in your article in a recent issue of M. B. F. on the supreme court's decision in the usury case of a farmer near Sears. I own a farm of 200 acres in ..... county and am clearing part of it and developing a fruit orchard. I began six years ago and the expense has exceeded my plans, and I was obliged to borrow money. The first loan was for $200 for 90 days and they charged me 7 per cent interest and 5 per cent discount taking it out in advance. This loan has been renewed and other loans made until the total is now $850. The renewals have been for 30, 60 and 80 days and the 12 per cent has been exacted each time. I have paid in interest and discount about $400 and still owe all I borrowed. I cannot take up the loan at present and do not know when I can. I am quite sure this bank charges farmers the 12 per cent and the village people only 7 per cent. Could I sue the bank under this supreme court decision and get judgment for all interest paid or only for interest on the last note?—C. N. F., Washington, D. C.

Why, bless you, your experience is no different than that of thousands of others owning cut-over lands in Michigan. The banks get by with their usury because mighty few farmers are in a position to take their case into court and thereby take the chance of forever destroying their credit. Answering your questions, there is no doubt whatever but that you are the victim of usury and as such entitled to receive back or to have applied upon your iriginal loan every penny you have paid the bank both as legal and illegal interest.—*Editor.*

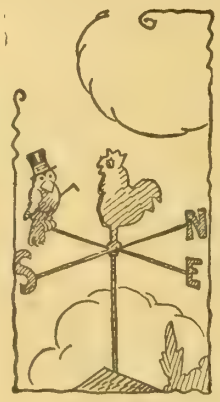
WILD LAND HOMESTEAD EXEMPTION ACT

Some weeks ago I noticed in your legal column, "Farmers' Service Bureau," an inquiry signed "P. O'M." (or "O. L."), giving Otsego County, I think, or Iosco County, and stating that the inquirer purchased a forty of wild cut-over land; built a cabin and did some farming, and finds that the supervisor put him down for taxes.

I would like to suggest to this inquirer that next spring, say about June 1st, he should go after his supervisor, or better, the board of review, and apply for the Wild Land Homestead Exception. According to our statutes, the board of review may grant exemption from taxes for five years to a settler buying up to eighty acres, and making a bona fide showing on his place.

If the request is proper, I would like the address of Inquirer in Jan. 10th M. B. F., in the Farmers' Service Bureau, who signs "W. J. M.," Otsego County. In this case there is involved a change in school district boundaries without owner's knowledge or consent. There was a controversy some years ago over such a matter here. I would like to have W. J. M. give me the details of his case, and to this end would need to ask a number of questions.—*J. E. G., Rapid City, Mich.*

SENSE AND NONSENSE



SLIGHTLY MIXED

Sporty Bird (After a night at the club): S'all right me dear, been to a club meeting.

Honest Butcher

A butcher one day put up a sign reading: "Purveyor to His Majesty." Wishing to improve upon this, he added, "God Save the King."

A Martyr

Wife—"Do you expect to get to heaven by hanging onto my skirts?"

Hub—"No; but I might by showing St. Peter the bills for them."

Nigh Unto Death

The doctor narrowly escaped death. He said to the new mama, "It's a normal child."

And Then He Awoke

"Did you try the simple plan of counting sheep for your insomnia?"

"Yes, doctor, but I made a mess of it. I counted 10,000 sheep, put 'em on the cars and shipped 'em to market. And when I'd got thru counting the sum of money I got for them at present prices it was time to get up."

HARD ON THE FISH

You look worried.

I am, don't you know this is the Lenten period?

Where Knowledge Ended

Biggs—"What do you usually eat in this restaurant?"

Higgs—"Don't ask me; ask the cook. I simply order from the menu."

Good for Crops

"Do you think early rising is good for your health?" asked the languid city visitor.

"I don't know about my health," replied Father Cobbles, "but next to sun, rain and fertilizer, it's the best thing there is for crops."—Birmingham Age-Herald.

A Final Argument

She (to dentist lover)—"Mother will not believe that I come here about my teeth so often."

He—"I will send her a bill tomorrow."

SILLY THINGS

Miss Candle: There comes some more of those silly old moths to flirt with me.

Uncle Rube Spinach Says

'MAGINATION AN' SYMPTOMS

WHAT a wonderful thing is 'magination! Why it jest 'bout gits our goat. What the dum thing'll do to a feller when he least expects it too! Now, I've always cac'lated that I wuz jest about as healthy a feller as could be found any place—all things considered—so healthy, in fact that I jest kinda envied folks that could find somethin' wrong with their inside workin's, so to speak.

But some little time ago, havin' a sort o' tired feelin'—jest a bit dull you know—I commenced lookin' in the papers for a remedy, readin' the patent medicine advertisements you know, an' say! I wuz surprised. Why, accordin' to them there ads an' the symptoms specified, I ain't been well for years—some of the time at least, I've been right next door to death itself, b'gosh! Why, at one time or 'nother I've had purty darn night every symptom mentioned, not forgittin' Lydia E. Pinkham's nor any of the Peruna ones either—I've had 'em all an' some not even mentioned by any of 'em, b'ginger! I ain't had quite so many of the latter for the last year or two though—not since things got so dry y' see I'm different now an' I guess it's a good thing too, 'cause with all the other things that's been ailin' me, accordin' to the medicine ads, I couldn't stand much more—not an' live any way. Why I hardly knew I had a liver, or stomach, or kidneys, or lungs—course I thought I had a heart all right—used to have any way but I guess mebbe I lost it when I wuz young an' so I never worried none about that, but the rest of the works didn't disurb me an' so I jest let 'em run along 'til I found by readin' them pesky ads that they wuz all wrong, diseased almost beyond repair 'less I commenced right away a takin' gouge'em's liver pills or mebbe it wuz killem's stomach tablets or somebody's kidney remedy Oh, it's been a tryin' time let me tell you, with so many horrid symptoms I couldn't hardly tell which I better doctor first—I wuz jest about to give up in dispair an wuz tellin' the boys where I work, how awful bad I wuz, when Tom Tingay (he's that marshall guy I mentioned once or twice before) he says "Well, why'n 'ell don'tcha go'n see a doctor?"

Now, I hadn't thought of a doctor—with all them advertised remedies, why should I? but Tom is a purty level-headed cuss an' so I took his advice an' went. Well the ol' doc, he sized me up an' down, thumped me all over, looked at my tongue an' down my throat an' in my ears an' asked me how much money I was earnin' an' a lot more questions an' then asked if I wuz sure I wasn't earnin' more'n I to'd 'im an' when I said I wasn't he give me a ugly kind of look an' said they wasn't a darn thing the matter with me, that it wuz all 'magination an' that I better look fer a job payin' more money 'fore I come to him again, 'cause he sed, "If a man as healthy as you be, wants to play sick, he'd ort to be able to pay his doctor anyway."

Well when I told Tom an' the rest of the boys what the ol' doc said, Tom jest fairly snorted; he slapped my back, kicked my shins, twisted my head purty nigh off'n my neck 'an hollers "Course they ain't nothin' the matter with ya'; it's jest 'magination, nothin' else," an' sez he, "that's jest the trouble with most of the world, too dam much 'magination." "Why," he sez, "ninety-five per cent of all our troubles in life are imaginary; we imagine we're sick an' we'll git sick in time, 'less we quit lettin' our minds dwell on it. We think our neighbor is tryin' to do us an' we look on him with suspicion. We 'magine we're goin' to lose our crops or git beat out of our money, that our wives are gittin' old, that our girls are extravagant; oh, imagination is wonderful an' past all understandin'." Tom sez, "Better cut out 'bout eighty-five per cent of such foolishness an' quit worryin' 'til we've got somethin' to worry about," he sez.

"Say, fellers,' sez he, "do you know that worry kills more folks than disease? Worry is one of the surest killers there is an' so I say, 'Cut It Out.'" Tom sez, "Well I guess that's purty good logic all right an' mebbe it would be a good thing if some folks didn't 'magine so many things to worry about, but jest the same an' not withstandin, when you have symptoms so darned pronounced that there's no deny'in' of 'em, I guess it's somethin' to worry about, don't you think?"

Jest a day or two ago I wuz readin' one of them medicine ads an' I almost know, by the symptoms described in that ad, that I've either got softenin' of the brain or flat feet. By gosh! I've got plenty symptoms of both complaints only I can't tell yet jest which is strongest. Tom sez it's the feet, but you never c'n tell 'til you've tried the remedies, so I'm either goin' to try some of that medicine or else go an' see the ol' doc agin an' I hate to see him 'til I git a little money ahead, 'cause he'd probably try to discourage me an' tell me they wa-ant nothin' the matter—just simple 'magination—an' he might be right about it too.—Cordially, *Uncle Rube.*

Thanks, Same to You

Your paper is fine and we want every copy.—*Rush Eastman, Kalamazoo County.*

I will help support any of these candidates which are chosen, if they will work equally for the interest of all men. You give the farmer a square deal.—*Wm. H. Wilson, Ionia County.*

We are very much interested in your paper for its co-operation with the farmers' business. And am only sorry that it doesn't get into every farm home in Michigan. Yours for Greater Success.—*J. D., Burt, Mich.*

I very heartily endorse your policies and your very firm stand on all questions of vital interest to the farmers. I am aware that all who dare stand for right and a square deal for all classes today are termed "cranks," etc., but I am glad we are blessed with a few, far too few, such cranks today. Wishing success and prosperity to you the only real farmers' paper in Michigan, I am—*F. D., Leonard, Mich.*

Enclosed nd ballot for choice of candidate for governor. There are two votes at our house for him or any other good man named by the farmers of Michigan. We were sorely disappointed upon reading Mr. Slocum's decision not to become a candidate and realizing that men often change their minds, we reserve the right to change our votes if Mr. Slocum changes his mind on this matter. We are staunch friends of M. B. F. and enjoy the effect of the hot shot you are contiinually pouring into the ranks of the shysters. Let your motto ever be. "Soc et tu um."—*W. C. Stitt, Gratiot County.*

In reading your article, "Fair Price," of Dec. 27 I note one J. C. Cusick's ire was riled when you presented chart that told the whole truth to committee. I can best express my views of this man by using the words of one of America's great men: "Man has always sought the mastery of his fellow-man to enslave his fellow in some form and to live from his labor has been the main spring of human action; to escape submission, not in freedom, but in mastery over others, has been the controlling desire, and this has filled the world with slavery and crime." M. B. F. ought to be in every farm home in Michigan. It tells the facts as they are at present. Hoping it will be able to do same in the future, I remain yours for a square deal—*E. E. Baughman, Vicksburg, Mich.*

WAITING

"This setting down and folding our arms and waiting for sumthing tew turn up, iz just about az rich a spekulashun ez going out into four hundred acre lot, setting down on a sharp stone with a pail between our knees, and waiting for a cow tew back up and be milked."—*Josh Billings.*

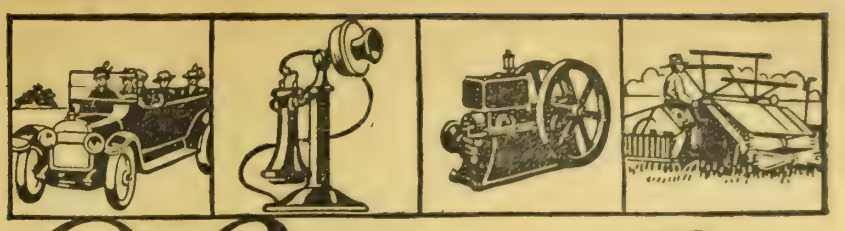
It Makes a Difference

The man who tries to reform Others is an Inspired Missionary. The man who tries to reform You is a Hypocritical Humbug.

"It doesn't seem right," said the man with worn-out shoes.

"What doesn't seem right?"

"That a mere cow can afford to wear all that leather."—Washington Star.



Perfected Utilities

TWENTY years of unceasing application has at last produced in the Huber a farm tractor that takes its place with the automobile, telephone, gasoline engine and self-binder, as a perfected utility that is dependable and does its work *reliably*—on which it is safe to depend.

12 H. P. on Draw-Bar
25 H. P. on Belt Pulley

THE HUBER Light Four
"THE TRACTOR DEPENDABLE"

Draws Three Bottoms
Turns an Acre an Hour

In every detail of its construction, The Tractor Dependable shows that power-saving simplicity which is the mark of long studied and reliable mechanical design. It has fewer moving parts and less complications, lighter weight in proportion to power, and not a single untried or experimental feature.

The Huber Light Four is known everywhere in power farming neighborhoods as the tractor "That always keeps running".

All spur gear from motor to draw-bar reduces loss of power from friction. High test steel decreases tractor weight. Thus, the Huber is designed to produce the greatest traction pull possible in a tractor light enough to work on plowed ground without packing. High wheels roll easily and afford a better traction grip. More power is transmitted to the draw-bar because less power is required to move the tractor.

The 1920 Model is now regularly equipped with oversize motor, at no increase in price.

Weight 5,000 lbs; Waukesha, four-cylinder motor, oversize; Perfex Radiator; Hyatt Roller Bearings; burns gasoline, kerosene or distillate; center draft; two speeds, 2½ and 4 miles per hour.

Write for booklet "The Foundation of Tractor Dependability".

County Crop Reports

MECOSTA, (N. E.)—Plenty of snow here at present; good sleighing, although the roads are drifted some. Potatoes are pretty well cleaned up in this locality, not many having been raised this season. —F. M. E. The following prices were paid at Remus:—Wheat, $2.38@$2.75; corn, $1.25; oats, 72; rye, $1.63; straw-rye, 10; beans, $7.25; potatoes, $4: butter, 55; butterfat, 65; eggs, 50; hogs, 14; beef cows, 6.

CALHOUN, (N.)—Farmers are cutting wood and doing chores. A great many are cutting logs for the saw mill, drawing wood and hay. Some potatoes are going to town.—C. E. B. The following prices were paid at Battle Creek—Wheat $2.50@$2.48; corn, $1.20; oats, 35; rye, $1.60; hay: No. 1 timothy, $30; No. 1 light mixed, $28; wheat-oat, $12; potatoes, $3; ;hens, 25; springers, 26; butter, 50; eggs, 65; lambs, 10@15; hogs, $14.50; beef steers, 8@10; beef cows, 5@7; veal calves, 10@16.

MASON, (W.)—Cold and snappy and snow somewhat deeper. Quite a number of bright days now. No especial work on hand at present. The Farm Bureau and farmers' organizations are the chief topics of conversation in this county. At present there are two successful farm organizations here and we are enthusiastic concerning the future.—B. M. The following prices were paid at Scottville Custer:—Wheat, $2.45; rye, $1.60; hay, $25; wheat-oat, $10;; beans: Pea, $6.25@$6.50; red kidney, $12@$12.50; potatoes, $2.10@$2.25; butter, 55; butterfat, 62;; eggs, 55.

INGHAM, (C.)—A big storm here recently again caused the roads to be drifted. A large lot of stock was sold at Mason recently and some shipped through the co-operative association. Most of the winter-fed hogs are now sold. It continues cold. Only two days since the fore part of December that it has thawed any. Wheat and clover are covered with snow and so far are not hurt.—C. J. M. The following prices were paid—Wheat, $2.25@$2.30; oats, 80; rye, $1.70 beans, $6.50; potatoes, $2.25; hens, 23@26; ducks, 20; butterfat, 61; eggs, 66; sheep, 3@7; lambs, 17; hogs, 15; beef steers, 8@12; veal calves, 15@19.

WEXFORD, (W.)—We had a few nice days this week but dare not predict for the future, the weather being so uncertain. It has been a bad winter. I have put in every winter in this county since 1869 and this is a stunner. I think it is the worst I have seen, not so much snow but cold and disagreeable.—S. H. S. The following prices were paid at Cadillac:—Wheat, $2.24@$2.30; corn, shelled, $1.4 oats, 85; rye, $1.50; hay, $30; beans, pea, $6.50; red kidney, $9; potatoes $3.60 hens, 21@23; springers, 21@23; ducks, 23@24; geese, 20; turkeys, 30@32; butterfat, 63; eggs, 54; hogs, 16@18; veal calves, dressed, 16@22.

JACKSON, (N. E.)—The past week has been more stormy than pleasant and at this writing we are having a very severe northeast storm, wind and snow drifting badly and closing the roads for all traffic. Farmers doing chores, some drawing hay for feed and shipping. How about the bean tariff? What has been done? Beans are still too low and farmers are holding for better prices. Very little being sold except wheat and rye. Winter grains under several inches of snow and if winter continues as at present will, no doubt, be a good proposition. Stock looking good. No sales at present but some are expected later.—A. F. W.

LIVINGSTON, (N. W.)—Farmers are wading in the snow up to their knees trying to keep their stock comfortable and it is snowing again today from the northeast. No one selling anything just at present but milk that brings $3.70 a cwt, at Borden Condensery in Howell.—G. A. W. The following prices were paid at Howell:—Wheat, $2.50; corn, $1.40; oats, 80; rye, $1.62; hay: No. 1 timothy, $22; No. 1 light mixed, $20; straw-rye, $6; wheat-oat, $5; beans, $6.50; potatoes, $1.55; hens, 20; springers, 24; turkeys, 30; butter, 60; butterfat, 72 to 75; eggs, 62; hoge: live, 14; dressed, 18; beef steers, 12; beef cows, 10; veal calves, 17@20; wool, 50@60.

BAY, (S. E.)—Cold weather but not much snow. Wheat well covered; hay mostly baled and sold at about $27. The stock are doing well. Roads are not very good; too many drifts for good wheeling and too many bare places for sleighing. Farmers cannot do much now but chores and repairing. A good many are getting in their fuel supply; mostly coal, not much wood here. Not much building is being planned.—J. C. The following prices were paid at Bay City:—Wheat, $2.50@$2.52; corn, $1.45; oats, 86$; rye, $1.56; hay, baled, $26; beans, $6.50; potatoes, $3; hens, 20; springers, 22; butter, 65; butterfat, 66; eggs, 65; hogs, 18@19; beef steers, 14@15; beef cows, 12@14; veal calves, 22@23.

ALLEGAN, (S. E.)—Very little being done by farmers, mostly chores. Very cold and roads are drifted in some places. A few logs are being hauled. The writer attended a meeting in Allegan held under the auspices of the Farm Bureau in the interest of the members and milk producers of Allegan county. Mr. James Waldron, of the M. A. C., was there and in the forenoon gave a very interesting and instructive lecture on the cost of milk production and the value of skim milk on the farm. The afternoon session was opened by a discussion of some of the difficulties encountered by the milk producers in the test, weight, and delivery of their milk to the buyer, which in this case is a condensery. This discussion resulted in the appointment of seven dairymen representing seven townships nearest the point of delivery. This committee representing practically all of the patrons of this condensery is to meet with Mr. Overton of the condensery to bring about a better understanding and a better and more efficient method, if possible, in the handling and delivery of milk. This committee will report at a general meeting to be called at a later date. Mr. Waldron also gave a very instructive lecture on feeds and rations in the afternoon.—W. F. F.

WHEN REUBEN COMES TO TOWN

(*Continued from page 9*)

and a Plimsoll mark of two gallons of hard stuff—and not a drop more—in the cellar. Mr. Raney—what a name for the drouth-compeller— is against all our little wickednesses. I don't think they will stand for him in North Victoria.

* * *

Artless though it is, the U. F. O. government has attempted two grand stand plays within the last six weeks. One was Premier Drury's voluntary curtailment of his salary by $3,000. Premier Hearst gave himself $13,000 a year for about $2,000 worth of ability—which was one reason why the people kicked him out. Premier Drury may be worth more than Premier Hearst, but he is taking no chances with his farmer colleagues, who will naturally say, their mouths watering the while, that $10,000 a year is quite enough to keep the wolf away from the door. At any rate, wolves have been kept away on considerably less and when Premier Drury, taking time by the forelock, did what his colleagues would have done for him a few weeks later, he was a wise man.

The other grand stand play Premier Drury could not put over. He and his U. F. O. friends have been making a great hit by promising to abolish Government House, a $1,000,000 chateau set down in a hole called Chorley Park, which has a beautiful outlook on railway yards and brick works. It is a strange place for a place which represents the pride of our eye and our social ambitions, and what's more, it costs $10,000 a year to keep it in coal. One of the first and firmest planks in the U. F. O. platform was abolishing Government House as a social institution and turning it into a soldiers' home. The idea caught on with the farmers, who hate these fal-lals, but when the time came for abolishing it, the U. F. O. ran up against the deed of sale which headed off the bolshevik movement against Government House by providing that the site shall be used for its present purpose and that purpose only for 100 years to come. So Government House is safe for a while yet. It will probably be opening its hospitable doors when the farmers' movement is one with Ninevah and Tyre.

MEANWHILE the U. F. O. government is not losing sight of the main chance. Already it has announced that it will divert the millions we intended to spend on trunk roads to the improvements of side roads which will do the farmers more good. Another bright idea broached is the co-operative store, which is to freeze all the other stores out and leave the cost of living in the U. F. O. hands entirely—a happy thought which leads straight to such high ideals as dollar butter, dollar-and-a-half eggs and five dollar potatoes. The U. F. O.—so it says—does not go in for selfish class legislation. (Business here of hoarse laughter.)

Yes, Birnam Wood has come to Dunsinane. In other words, the country has come to the town—and how does the town like it? The answer is—not a bit. The government prates of its purity. The government's wife looks askance at the town wives' next-to-nothing costumes and speaks frostily of a more Puritan outfit. The government's child being interviewed—yes, the newspapers went that far—is revealed saying that he or she finds it "so much freer in the country." Of course the little brats are taught to say it, and the town naturally resents such wisdom from the mouths of babes and sucklings.

Fighting the Enemies of Mr. Onion

MAYBE IT IS because of its strong smell. Anyway there is some magnetic attraction which apparently draws disease of various kinds and conditions to the onion crop. Take, for instance, onion smut. It works overtime in trying to snuff out the young seedlings by forming brownish black, elongated blisters which finally split the leaves and expose the powdery black mass of spores within the interior of the blister. A specific fungus causes this onion ailment, the spores wintering in the ground and again attacking the young seedlings in the spring.

The onion is susceptible to the fungus only while in the young seedling stage. After the plants reach a height of 3 to 4 inches they become immune to further infection. Smut spreads slowly in the soil, but an infested area in a field will gradually become larger and more severely diseased each year onions are grown on such an area. The spores are spread on farm implements, the feet of men and animals, by surface water, and in dust carried by the air. Purchasers of onion sets should use caution that they do not contaminate the soil by planting smutted sets.

Control is accomplished in home gardens by changing the location of the onion bed to clean soil, or by planting sets instead of seed. In large commercial onion districts of northern states formaldehyde solution is applied in the furrow with the seed, as this disinfectant holds the fungus in check. One fluid ounce of 37 or 40 per cent formaldehyde solution is used with each gallon of water, this diluted solution being applied at the rate of 200 gallons per acre or 1 gallon to about 185 feet of row. Farmers' Bulletin 1060, recently issued by the United States Department of Agriculture, describes in detail the apparatus used in applying this fungus destructive seed protects. As a rule it costs about $5 an acre to insure the onion crop against smut losses in this manner. It is advised that the tops of diseased onions be burned after harvest in order to prevent the return of infected onion refuse to the soil. The spreading of waste from onion warehouses is a bad practice.

Onion mildew or blight is sometimes serious in the cooler and more humid onion districts. The disease commonly starts in the field in spots and spreads to the surrounding areas, its development being greatly aided by moist weather. It centralizes its attack on the leaves which turn yellow, become covered with furry growth, and eventually collapse. The disease occurs wherever onions are grown extensively, although the control varies in different sections. A fungus causes the disease, the furry masses on the affected leaves being branches of the fungus, which bear abundant spores. Warm weather promotes spore germination and hence is favorable to the spread of the disease.

As the spores winter in the onion field, an efficient crop rotation is one commendable method of control, the supplementary growing of cabbages, potatoes, and sugar beets with onions being valuable. Good soil drainage also helps to reduce the blight, since it decreases the moisture in the air near the surface of the soil. Good air drainage of the field is also essential so that excessive dew and fog may be avoided. Rosin fish-oil soap as a sticker, makes the use of Bordeaux mixture effective in controlling onion mildew. The Bordeaux mixture consists of 4 pounds of copper sulphate, 4 pounds of quicklime, 3 pounds of rosin fish-oil soap, mixed with water to make a 50-gallon solution. Complete directions for making this spray material are furnished in the Department of Agriculture bulletin.

Onion leaf is a disease of minor importance except in Louisiana and California, where it occasionally causes large losses. It occurs in mid-season and causes the tips of the leaves to die back. No satisfactory control has been perfected.

Strict attention to sanitary measures and careful sorting of diseased bulbs at harvest time are the chief mans of controlling Fusarium rot, which reduces the roots to a mass of white moldy growth

Pink root is the most serious disease confronting the grower in the Bermuda onion growing region of southern Texas. It causes the roots to shrivel up, turn pink, and die, while the new roots sent forth are disabled in a short time. This disease is being investigated by the Texas agricultural experiment station.

Resolutions Adopted by Live Stock Exchange

AT A board meeting of the directors of the Mich. Live Stock Exchange held in Lansing recently, the following resolution were adopted:

Resolved, We, the undersigned directors of the Michigan Live Stock Exchange, do hereby condemn the practice at the stock yards of tearing out decks in stock cars now in vogue by the different systems.

We do hereby recommend the instigating a plan of returning stock cars to the loading points regularly, under a continuous order, for those kinds of cars required each week by that particular station. This to apply on cars for state and interstate shipments, where cars are regularly equipped with gates or partitions, and lining at the expense of this station.

The manager of the Michigan Live Stock Exchange takes the opportunity to call attention to the local units of the exchange, to take up all their claims through the following channels:

1. Those originating through shipments to Detroit, covering losses in transit, delays, etc., through J. R. Richards, Traffic Manager at that point.

2. Those originating through Interstate shipments to Buffalo through J. W. Buckpitt, Traffic Manager at Buffalo, N. Y.

3. Those originating through the Interstate shipment to Chicago, thru H. R. Parks, Traffic Manager, Union Stock Yards, Chicago, Ill.

Our exchange trusts each local will start all their claims properly through these respective channels.

After failing to collect through these channels, report your claims with all correspondence pertaining thereto to E. E. Compson, Remus, Mich. The exchange is working out a plan of further collection service.

We recommend that the Manager of the Exchange take up the matter of pro-rating of Co-operative returns with those exchanges which do not now do this work for Co-operative shippers.

Resolved, that, as directors of the Michigan Live Stock Exchange, we favor the affiliation of the Michigan Exchange with the National Federation, and will recommend the submission of the same to our members at the annual meeting to be held Feb. 12, 1920, and instruct the secretary to write a letter to the Manager advising him of the same.

Fred Smith, E. A. Beamer, C. L. Harrison, E. E. Compson, L. E. Willett.

The first annual meeting of the Michigan Live Stock Exchange will be held at East Lansing on Thursday and Friday, Feb. 12-13, 1920, for the purpose of electing a board of directors and transacting any other business that may come before the meeting. All Co-operative Shipping Associations are urged to elect delegates to attend this meeting and all members of the exchange are requested to pay their 50 cents per car up to Jan. 1st, 1920.

All local Co-operative Shipping Associations having any suggestions or formulated resolutions to come before the annual meeting should be mailed to L. E. Willett, Secretary, Laingsburg, Mich., early in February. --*L. E. Willetts, Secretary.*

I Didn't Lose an Ear of Corn Last Year

Why? No wonder some of my neighbors have long faces when they think of their last year's corn crop. Jim Burns had a bumper crop, but fire wiped out his old wooden crib and all its precious contents in one night. Bob Wilson had a good crop too, but he stored it in rail cribs and the mould spoiled about half of it. Bill Rice over south of me lost a big part of his corn the same way. And old Pete Carlson claims the rats and mice stole his corn and on top of that he blames those dirty rodents for bringing hog cholera that killed off about 25 head of his best hogs.

I didn't lose a single ear last year. That's why I've got a smile on my face that won't come off. I made up my mind last year that it didn't pay to spend 5 or 6 months of hard labor and horse flesh to produce a good crop of corn and then dump it into a wooden crib or rail pens where it could be wasted and destroyed by rats, mice, fire mould and thieves.

I invested in a MARTIN STEEL "CORN SAVER" CRIB and believe me it has paid me big dividends. It cured my corn perfectly and brought me the top notch market price.

Rat-proof Fireproof Mould-proof

MARTIN "CORN SAVER" CRIBS are just what their name implies—the biggest corn savers ever invented. They are built of galvanized steel and are rat-proof; fireproof, birdproof and thief-proof. With their patented ventilating system they will cure corn perfectly. Cheaper than wood in the long run; easy to erect; never needs repairs—lasts a life-time.

FREE Big New Corn Crib Book

Better take this farmer's advice if you want to stop your corn losses, and write for your copy of our FREE Corn Crib Book—the biggest and finest book of its kind ever published.

It tells all about MARTIN CRIBS from A to Z and gives facts and figures on how much they will save you. It gives special low prices on any size crib. A postal card brings this book FREE and postpaid. Write for it today.

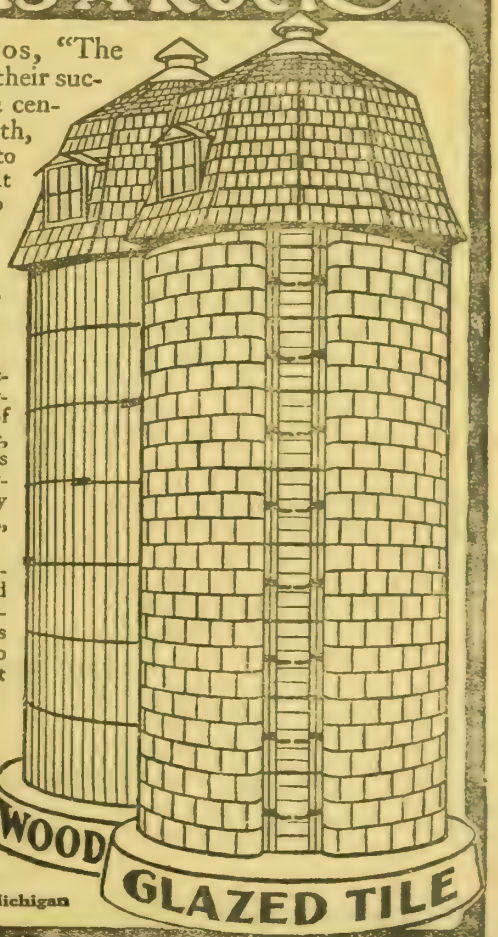
Kalamazoo
Firm As A Rock

KALAMAZOO Silos, "The World's Standard," owe their success of over a quarter of a century to their great strength, firmness and durability, and to their substantial, air-tight walls. Built by the best Silo engineers and backed by the largest Silo manufacturers in America. You run no risk in buying a KALAMAZOO whether it be of Glazed Tile or Wood Stave.



Glazed Tile, the indestructible Silo, "permanent as the pyramids," built of KALAMAZOO special glazed tile, positively moisture proof. Walls with three dead air spaces and keyed joints making them absolutely air tight and proof against wind, frost and decay.

Wood Stave, the first patent ever issued on Silos was awarded the KALAMAZOO wood stave over 29 years ago. Such Silos have stood to this day, because they are built the KALAMAZOO way.

Send Us Your Name and receive our big Silo Catalog by return mail. It explains KALAMAZOO superiority in a way easy to understand. You will be more competent to judge what to buy after you have read the KALAMAZOO book. Ask about KALAMAZOO Ensilage Cutters. Write TODAY. 2010

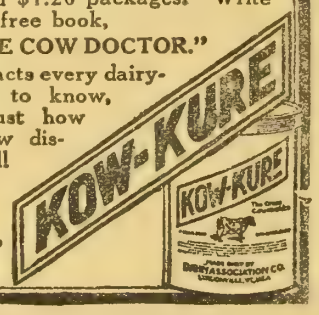
So Easy to Put Your Dairy On a Good-Health Basis

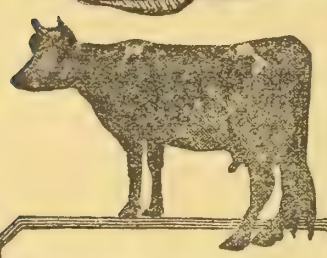
To be satisfied with anything less than top-notch health in your cows is a foolish waste of milk-income. Most cow sickness is preventable—or curable. With the aid of KOW-KURE, the great cow medicine, such troubles as Abortion, Retained Afterbirth, Barrenness, Scouring, Bunches and Milk Fever can be eliminated from your herd. KOW-KURE acts on the digestive and genital organs—where nearly all cow diseases originate, and aids nature in inducing normal, healthy action. No dairyman who has used KOW-KURE will be without it. Sold by nearly all druggists and feed dealers; 60c and $1.20 packages. Write for our big free book,

"THE HOME COW DOCTOR."

It is full of facts every dairyman ought to know, and tells just how to treat cow diseases of all kinds.

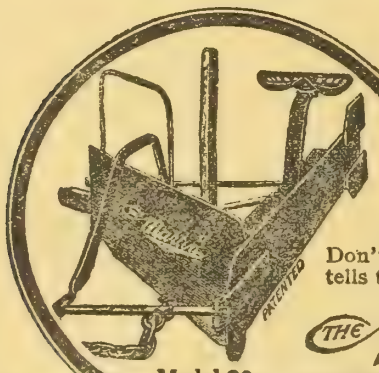
Dairy Association Co., Lyndonville, Vt.





18,458 Pounds Milk

in a year is the record of this fine Guernsey. Records are worth trying for; but health is an absolute essential. Raise the health standard of your cows, and the milk yield will surprise you.



DRAINAGE PROBLEM SOLVED

FOR the first time American farmers can solve the drainage problem at low cost. Find out about this tool. Don't put it off. Write for the new book that tells the story.

Model 20

THE Martin Ditcher & Grader

All-Steel—Reversible—Lasts a Lifetime

Cuts V-shaped farm ditch down to 4 ft. deep; cleans old ditches; grades roads; builds farm terraces, dykes and levees; works in any soil, wet or dry. 2, 4 and 6 horse sizes; large size fine for tractor. Does work of 100 men. Write and find out how to make big crops sure. New free book on drainage, irrigation and terracing. Address

Michigan Business Farming,
.....Mt. Clemens, Mich.
Gentlemen:

I have been receiving your paper at my office as above and copies have been piled away unnoticed until today I took a little time to look them over.

It never occurred to me just what I had been missing. Your paper is just what I have been looking for, a Michigan agricultural paper telling us something of local conditions.

Please change my address to my house, 95 Atkinson Ave., where I do all my farm business. Am enclosing inquiry for advertising rates.

Yours truly,
JOHN P. HEHL.

The Proper Quartering of Ewes Pays Well

By R. B. RUSHING

I HAVE found from years of experience in the sheep raising business that it pays, and pays big, to provide good, safe quarters for the ewes when they are dropping their lambs and cannot take care of themselves.

I want to call the readers' attention to an incident that came under my observation when I was with a farmer a few miles from me and was looking at his flock of sheep. I saw that he had some sheep of good blood, and they looked to be in very good condition, and I was talking with him and asked him if he made good money out of them if he could keep them from dying while lambing as they did. He said that half or more of his lamb crop died every year.

I thought there surely must be some cause of his sheep dying that could be remedied, so I asked the cause and he said that he could not tell why, but his lambs were very hard to raise, that he did not have very many old sheep to die, but his lambs were always giving him trouble. So I thought I would see if I could find the reason for his lambs dying.

I asked the brother farmer where he kept his ewes when the lambs were small, and he took me to an old house that had one time been a dwelling, and he is now using it for a house to keep his sheep in when they are bringing their lambs.

On entering the house I surely was surprised to find things as they were. I found loose planks of all kinds lying all over the floor, and boxes of all kinds and sizes and pieces of boxes, and loose wire, barrels, jugs, and I am not just sure what else, as I could hardly tell what was not there, for it was not real easy to get inside.

However, I got in enough to see that it was a shame to try to keep them in such a place.

This man (I am sorry to say) just put his ewes and young lambs in that old house and thought they ought to just live anyway. This house was a large four square house, and had it been cleaned out and divided into small stalls so the lambs could have been with their mother long enough to learn her they might have done well, as the roof was very good.

Shame on such a farmer; he could not tell which lambs belonged to certain ewes, and you know that some ewes don't like for other than their own lambs to bother them, especially when they are crowded. He just put them in there anyway, and of course young lambs are very tender, and they would become entangled and get hurt, or perhaps something turn over on them and hurt them and of course, enough of such abuse would put them out of business.

Some of them (surprisingly as it may seem) would make it through and not get hurt, and as he had good blood they would make very good sheep, but he was not making anything as he could have and should have been. I thought that right there was a good time to drop a few hints; thought they might stimulate him a bit to better things, so I advised him to clean out that old shack and build some rather small stalls for the ewes with lambs till they became well acquainted with their own mother when turned out with the whole flock ,and he would not lose so many lambs, and that next time when I was there he would have a new song to sing about the sheep raising business. He said that he had always been accustomed to using this house and had never thought much about what I had said, but he would clean it out and see if he could do any better, as he was certainly making slow progress in the sheep business as it was.

Of course all men do not do this way, nor do I mean to say that they do, but there may be others that could profit by this, and what I want to impress is the importance of having things in good shape, so that they can come and do well. I have learned that the lambs cannot be too well cared for if you are in the business for profit, and if I was not in the business for profit I certainly would quit the business before night, but when those early lambs go to market they leave a check behind that makes the good wife smile, and when the "wolf" comes howling around our way it is no trouble for the wife to give him a scare and we are rid of him, at least while the sheep money lasts.

I have learned to look to the lamb crop as one of my best sources of income, and I know that where they are rightly handled they will prove thus to you. No, I don't think you can get rich out a small bunch in a short time, or at least I have not, but I have reference to making a few good, honest dollars to get grub for the kids and wife. You know how it is when the new styles are all coming around.

No, we don't try to keep up with all of them for goodness sake, no, it would take a running stream to keep up with all the styles, but my, how the lambs do help out on securing the real necessities.

MICHIGAN BULL SIRE OF BRITISH GRAND CHAMPION

THE NOTED Smithfield Fat Stock show of London, England found its grand champion single animal in a 3-4 cross bred Aberdeen-Angus heifer that was sired by James E. Scripps' "Edgar of Dalmeny." This is the greatest old country show and the fact that the animal was only a yearling was especially significant as this was the first yearling champion ever named at Smithfield. This victory would seem to entitle Mr. Scripps' bull to the claim of the greatest sire now living. as the two greatest old country honors of 1919 fell upon the Michigan-owned bull.

Erodemas, the champion bull at the annual spring show and sale at Perth, was sired by "Edgar of Dalmeny" and sold at 2,100 guineas, or $11,000 as exchange was then figured, which was a new record for the breed at the time. Another of his bull calves stood 2nd to Erodemas at Perth; still a third one was 1st at Aberdeen the following week.

A championship at Perth is generally conceded by Aberdeen-Angus breeders the world over to be the hardest championship in the world to win, over 500 bull calves from all over the leading herds of Scotland competing

Thus it will be seen that four calves of his 1st crop achieved high distinction last year, and two of them won the two highest honors of the old world. "Blue Bell," the Smithfield champion will be carried on for another year, so that there is still a chance for Great Britain to continue heaping honors on Michigan. Major Cumming, who let "Edgar of Dalmeny" get away before he had seen his 1st calf crop now refuses to price any of his daughters at all.

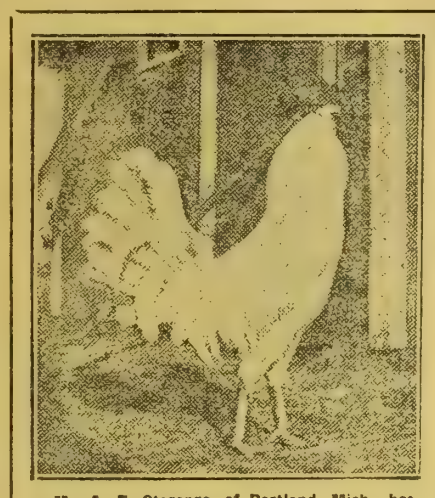
Poultry Shows Results of Breeding

MORE THAN 72,000 eggs were produced on the poultry farm of the University of Missouri ollege of Agriculture in the last ear. Reckoning the entire flock, he average per hen is about 150 ggs. This doesn't sound so prolific ens and better yet, 150 eggs a year en sand better, yet 150 eggs a year s nearly twice the production in the verage farm flock and ninety eggs ore than the average for the United tates according to the last census. f it were not for the fact that a cer- ain proportion of the flock is kept or experimental work and that some f the uncommon varieties are kept or student judging work the flock verage would probably run close to 60 eggs.

The strain of Single Comb White eghorns on the University farm is ne of the best in the United States. he production f these birds s excelled at ne experiment tation only. his is at Ore- on where rof. James ryden has de- eloped an ex- eptionally high r o d u c i n g train. During his past year ver ten per ent of the Uni- ersity Leg- orns have pro- uced 200 eggs r more. One ndividual reg- stered 226 ggs. Another as laid 225 to ate and has a ew more days o complete er pullet year. One pen of eighty White Leghorns has averaged more ore than 170 eggs apiece.



Mr. A. F. Stegenga, of Portland, Mich., has sent the above picture of one of his prize Leghorns.

Perhaps the most remarkable production record ever recorded on the University farm is that of this present season's Leghorn pullets. From August 1 until November 15 a flock f eighty March and April hatched ullets has averaged 48 eggs apiece. ne individual, has produced 79 ggs in this period. One pullet began laying on July 4 at the age of months and seven day, which is a ecord for early maturity.

The high producing strain of Leghorns on the University farm is the esult of nine years' constant selection and breeding by Prof. H. L. Kempster, chairman of the poultry department. Prof. Kempster believes that his birds have reached a point in high egg production where a number of different family lines can be established and that production next year will be higher than ever before.

KEEP HENS INSIDE DURING COLD WEATHER

For maximum egg production during the winter months the hens must not be allowed outside range, but must be confined to quarters, says T. S. Townsley, of the University of Missouri College of Agriculture. The poultry keepers, who get the best egg production during the winter months, shut their hens in their houses as soon as the weather gets bad in the fall and keeps them in until spring comes. If the birds are allowed to run at large during the winter months. they will spend most of the time standing around behind buildings and other windbreaks trying to keep warm when they had much better be in the poultry house scratching for feed.

Turing the birds out even on pleasant days during the winter months will cause a slump in the egg production. This is probably due to the fact that when the birds get outside the ground is cold and wet and this produces enough shock to affect the production of the birds. If the hens are to be kept inside for several months the poultry house must not be overcrowded. Each hen should have at least two and a half or three square feet of floor space. Some attention is necessary with birds that are confined, to insure plenty of exercise.

One method of providing exercise is by feeding all grain in a straw litter covering the entire floor to a depth of not less than twelve inches. Another good means of keeping the birds busy is to hang cabbage, turnips, beets, or other green stuff just above the birds' heads in the house so that they are kept busy jumping to get this material.

CONSERVATION OF WATER IN SOILS

(*Continued from page 8*)

material until seeded. Large gullies may be stopped by means of brush, logs or stump dams provided they are available. These may be held in position by stones and straw used with them. These methods are familiar to most of us.

In some sections of the country, although seldom used in Michigan, concrete dams are in vogue. These when properly installed are very effective. The Dickey system or the earth dam have recently come into prominence. This consists of a dam at the bottom of which is placed a large sewer tile with the upper end turned upward by means of an elbow joint. The water rises behind the dam to the height of the upturned tile before it passes out, this permits much of the sediment to settle out of the water and is thus held by the dam.

In the next article I shall discuss moisture conservation.

FIRST SHEEP ADVERTISER

As you will remember I was the first and for some time the only sheep advertiser in your paper. Will say it has proved one of the best and perhaps THE best of the numerous papers I have used. We have had a good trade this season. In August we shipped to Texas two cars (154) head, one of registered yearling ewes and one of rams, and since have shipped out over 60 head of small lots to customers in Michigan and other states. Have a car of yearling rams sold for delivery next June and a car of ewes for August delivery. We have also sold three cars of western ewes (690 head) to the farmers locally. So we take it for granted that the sheep business looks good. We are now offering our usual reservation of high class bred ewes that from the outlook will make some one plenty of money. Thanking you for past favors and wishing to assure you I am in perfect accord with your policy of a farmer-governor and farmer-legislature for farmers. I remain, respectfully, C. Lemen, Dexter, Mich.

Yes, indeed, we well remember Mr. Lemen's initial advertisement in M. B. F. and how pleased we were when he told us that it was bringing him in a great many inquiries. In this manner we performed a service for Mr. Lemen in assisting him to sell his surplus stock, and we performed a service for our readers who took advantage of his offer and bought some good sheep. We'll wager that none of the three parties concerned in the transaction ever regretted that Mr. Lemen placed his advertisement in M. B. F.—Editor.

Blights the Soul

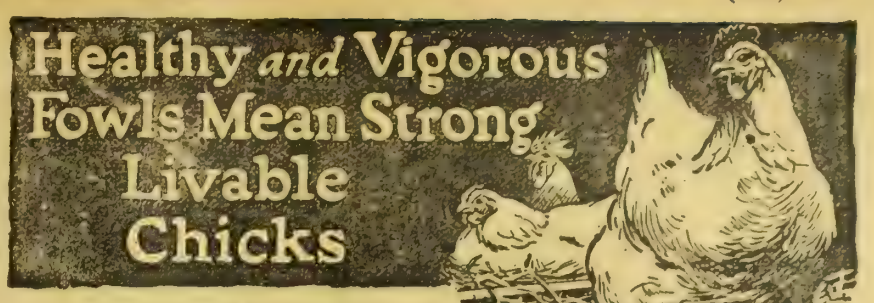
"Here is a preacher who announces that the automobile is a menace to religion."

"Maybe the poor fellow bought a second-hand car."—*Charlotte Observer.*

If He Prest Them Properly

"Oh, well!" said the Old Fogy. "Clothes do not make the man!"

"Don't you believe it," responded the Crank. "Suits have made many a lawyer."



Mating Time

One of the most important seasons of the poultry year is at hand. At mating time your hens and roosters should be in the pink of condition so you'll get chicks that will live. Start in now to condition your breeding stock for the spring hatch.

Dr. Hess Poultry Pan-a-ce-a

increases the vitality of the parent stock, gives you fertile eggs, insures a hatch of good, strong, vigorous chicks.

Speed up egg production during winter with Dr. Hess Poultry Pan-a-ce-a. It contains tonics that promote a hen's digestion, tonics that tone up the dormant egg organs—so that the proper amount of food goes to egg production—and not all to flesh and fat and laziness—when it's action and eggs you want.

Pan-a-ce-a supplies the additional iron for the blood—which is essential to the speeding-up process. It contains certain forms of lime that supply needed material for making egg shells.

Feed Pan-a-ce-a to all your poultry to make and keep them healthy. The dealer refunds your money if it does not do as claimed. Tell the dealer how many fowls you have and he will tell you what sized package to buy. Always buy Pan-a-ce-a according to the size of your flock. 30c, 75c and $1.50 packages. 25-lb. pail, $3.00; 100-lb. drum, $10.00. Except in the far West and Canada.

Farmers' Week Speakers Urge Better Returns

Agree That Agriculture Does Not Receive Rewards Commensurate With Investment and Labor Involved

WHY IS the farmer discontented? Speakers at Farmers' Week, M. A. C., answered the question as follows: (1) Inadequate returns; (2) lack of social and educational advantages; (3) lack of voice in affairs of government. All agreed that rural unrest was something more than talk; that it actually existed and according to Dean Ernest W. Groves, of the New Hampshire State College, would lead to civil war and revolution in twenty-five years' time unless the causes were removed.

The "flu" kept hundreds from attending Farmers' Week, but those who braved the dangers of the disease were amply rewarded by smiling skies, moderate weather and a program of vents that gave them a new and broader outlook upon life, and many valuable suggestions to take home with them. Few branches of agriculture were over-looked in the carefully prepared program of speeches, demonstrations and exhibits. The speakers were for the most part the best in their line, and the exhibits were among the finest ever seen at the college. Several of the speakers, notably Dr. H. C. Taylor of Washington, D. C., and Pres. G. C. Creelman, of the Ontario Agricultural College, were prevented by sickness from keeping their appointments while Congressman A. F. Lever missed train connections and was obliged to cancel, although a crowd of several thousand awaited his appearance the entire afternoon of Friday.

The speaking talent included the following prominent men: Kenyon Butterfield, president of the Massachusetts Agricultural College; J. L. Howard, president of the American Federation of Farm Bureaus; Dr. C. V. McCollum, nutrition expert Johns Hopkins University; Gov. Frank O. Lowden, of Illinois, presidential aspirant; W. G. Eckhardt, county agent DeKalb county, Illinois, the highest paid agricultural agent in the United States; Harvey J. Sconce, former president of the Illinois Agricultural Ass'n, but now rural campaign manager for Frank C. Lowden; Dean Ernest W. Groves, of the New Hampshire Agricultural College; Milo D. Campbell, candidate for governor of Michigan.

Dr. Butterfield, who graduated from M. A. C., in '91, and is now president of the Massachusetts Agricultural College, gave a very scholarly and impressive talk at the general session Tuesday evening on "Vital Problems of Country Life." One of the greatest problems he named was the difficulty in securing a fair return on the agricultural investment. He compared farming with other lines of business. "A merchant may easily turn over his entire stock in two or three years' time," he said, "whereas a farmer requires four to five years to turn over the value represented in his stock in trade. As long as a condition of this kind continues, we may expect nothing better than that farm boys and hired hands will migrate to the city."

A general feeling of disappointment because they were virturally ignored in matters of national and world affairs existed among the farmers, the speaker thought. He stated his belief that farmers could not be satisfied with a vocation so vitally necessary to the human race as agriculture, and yet he left entirely out of his reckoning when great affairs were being settled.

Dean Groves reiterated and amplified many of the statements made by Dr. Butterfield. He gave the difficulty of securing and keeping good help as one of the most fruitful causes of the discontent of farmers. He pointed out that the future was none too bright to the average farmer who at best must work longer hours than his city cousin, but, who in the face of the growing shortage of farm help, found even harder work and longer hours in prospect. Dr. Groves also stated his belief that farmers as a class were skeptical of the working out of popular government. The appalling inefficiency, climbing taxes, corruption, etc., aroused the farmer's native instincts of thrift and honesty, and yet he felt powerless to act to curb these evils. One of the reasons for the farmer's skepticism, according to Dr. Groves, was his lack of voice in affairs of government.

Governor Lowden Speaks

The vast gymnasium was thronged on Thursday evening when Gov. Lowden presented his address, 'The Economic Relationship Between Food Producers and the Government." The governor showed a somewhat deeper insight in the problems of agriculture than most of the nation's big men who express themselves upon the subject.

"The hope of agriculture in America lies in co-operation," Gov. Lowden said. He advocated co-operative buying but insisted that the co-operative movement should be carried on through voluntary association, not through Governmental agencies.

"The curse of farming in America has been the awful isolation on the farms," he said. "It is this that has driven our boys and girls from the farms. Co-operation will make the farm the best place in the world to live."

"Co-operative selling and buying will reduce the cost of living in the cities and increase the income of the farmer," he declared. "Groups of workers in the cities should organize to buy foodstuffs in quantities directly from associations of farmers," he said, "encouraged by the laws."

"The Farm Bureau is developing co-operation in all farm enterprises," he said. "It is the greatest practical farm organization in the history of agriculture in this country. The only way in the world that the farmer can get a fair show is by co-operative selling. The Illinois legislature has legalized co-operative bargaining. I did not want to go to the penitentiary for co-operating with my neighbors, and neither do the rest of the farmers."

Milo D. Campbell, the farmers' candidate for governor, occupied the platform Friday forenoon and made a deep impression upon his hearers. The sentiment at the college, and among the extension men for Mr. Campbell, is very marked, and many were the pledges of support that were made. The Farm Bureau will not as an organization get into politics, but the majority of its members and officers will individually do what they can to further Mr. Campbell's campaign. Roland Morrill, president of the Farm Bureau, attended the informal meeting which was held Friday night at the Kerns hotel to lay plans for Mr. Campbell's campaign, and he spoke very heartily of his preference for Mr. Campbell and his willingness to assist personally in the campaign. Other Farm Bureau members who attended were equally open in their endorsement of Mr. Campbell.

Highest Paid County Agent

One of the most interesting and valuable of all the addresses was that given by Mr. W. C. Eckhardt, county agent of DeKalb county, Illinois, who has performed miracles of co-operation in the marketing of farm products. Mr. Eckhardt spoke for nearly an hour and a half, and not once did his talk grow tiresome. Farmers received a vision of some of the things that can be done through organization as exemplified by the accomplishments of Mr. Eckhardt's county. We hope in a later issue to publish Mr. Eckhardt's addresses complete.

Associations Hold Annual Conventions

It would be impos'sible to dwell in detail upon the programs of the various associations: which held their annual meetings during the week. The Muck Farmers' Ass'n had an attendance of about 300 at most of their sessions and successful growers of muck land crops, as well as muck land specialists from other states, gave interesting and valuable talks on their experiences. Ezra Levin is the extension expert in muck land and has been largely instrumental for the growth of the association and the interest manifested. The following officers were elected: C. E. Downing, Vermontville, Pres.; Lewis Merriman, Deckerville, vice-pres.; Ezra Levin, East Lansing, secretary.

Veterinarians Elect

The Michigan Veterinary Ass'n held business sessions, annual election of officers and a banquet on Wednesday. They elected the following officers: Dr. R. H. Wilson, Rochester, pres.; Dr. B. A. Perry, Hastings, first vice-pres.; Dr. A. Z. Nichols, Hillsdale, 2nd vice-pres.; Dr. B. J. Killham, Adrian, 3rd vice-pres.; Dr. H. F. Palmer, Brooklyn, sec'y.-treas.; directors, E. T. Hallman, East Lansing, six years; H. M. Armour, Chelsea, five years; E. B. Cavell, Northville, four years; A. McKercher, Lansing, three years; H. M. Gohn, St. Johns, two years; G. D. Gibson, Adrian, one year.

Would Unite Potato Organizations

The principal item of business taken up at the annual meeting of the Michigan Potato Producers' Ass'n was the question of uniting with the Michigan Potato Exchange. Opinions were expressed that the Potato Producers' Ass'n had accomplished its work and that the interests of potato growers could be best served by having the Potato Exchange carry on the functions of the other organization along educational lines. Suggestion was made by Prof. C. W. Waid that the Producers' Ass'n be continued and that a campaign for members be conducted, his idea being that an organization could be perfected with at least ten thousand members which should affiliate with the National Association. The matter was finally left to a committee appointed by Pres. Smith. The old officers were all re-elected as follows: Arthur N. Smith, Lake City, pres.; M. B. McPherson, Lowell, vice-pres.; H. C. Moore, East Lansing, secretary; Dorr D. Buell, Cadillac, treas.

Maple Syrup Producers

The Maple Syrup Producers' Ass'n in annual session appointed a special committee to consider the feasibility of a central blending and canning plant. It will also take up the question of central marketing department to handle sales and develop standard brands. The plans call for the co-operation of 2,000 syrup producers, turning out 300,000 gallons a year, into a protective association.

Michigan Crop Improvement Ass'n elected the following officers: L. Whitney Watkins, Manchester, president; A. B. Cook, Owosso, vice-president; J. W. Nicolson, East Lansing, sec'y-treas.; additional directors, Garfield Farley, Albion; Fred Cornair, Chesaning; ex-officio directors, Prof. J. F. Cox, East Lansing; Prof. F. A. Sprague East Lansing.

A more detailed account of the annual meeting and plans adopted for the ensuing year will be published later.

Looking Through the Eyes of Lincoln

Abraham Lincoln, the Great American

LET US not imagine for a moment that the great problems confronting us today are new. Lincoln had them to contend with and the biographer has left the printed record of his views on such questions as freedom of speech, labor, capital, woman suffrage, prohibition, Mexican intervention, etc. Let us consult them and learn what Lincoln would say and do were he on earth today:

FREEDOM OF SPEECH

The freedom of speech and freedom of the press, were topics upon which Lincoln said little directly, but all his actions showed him in accord with the greatest liberality. He recognized the necessity of curbing attacks that would react against the morale of the Army, but beyond that he showed himself in sympathy with complete freedom of speech, even in war time. He greatly regretted the arrest of Clement L. Vallandigham, the leader of the Copperheads and finally changed his sentence from life imprisonment to banishment behind the confederate lines among his "friends."

RIGHTS OF LABOR

The rights of labor had come into discussion in Civil War times, and in his views concerning labor Lincoln was far in advance of the period in which he lived. Contained in his annual message to Congress, Dec. 3, '61, is this statement, "Labor is prior to, and independent of capital. Capital is only the fruit of labor, and could never have existed if labor had not first existed. Labor is the superior of capital, and deserves much the higher consideration." Capital has its rights, which are as worthy of protection as any other rights. Nor is it denied that there is, and probably will always be, a relation between capital and labor producing mutual benefits. The error is in assuming that the whole labor of the community exists within that relation. A few men own capital and that few avoid labor themselves, and with their capital hire or buy another few to labor for them. A large majority belong to neither class—neither work for others nor have others working for them. . . . . It is not forgotten that a considerable number of persons mingle their own labor with capital—that is, they labor with their own hands and also buy or hire others to labor for them; but this is a mixed and not a distinct class. . . .

MEXICAN INTERVENTION

Very little aid and comfort would those who are crying for intervention in Mexico today get from Abraham Lincoln. He was entirely out of sympathy with the first Mexican War, and it may be presumed that he would still maintain that attitude today. In a speech to Congress in January, 1848, he said, "If he (President Polk) can show that the soil was ours where the first blood was shed, then I am with him. . . . . But if he can not or will not do this —if by any pretense or non-pretense he shall refuse or omit it—then I shall be fully convinced of what I more than suspect already—that he is deeply conscious of being in the wrong; that he feels the blood of this war, like the blood of Abel, is crying to heaven against him; that originally having some strong motive—what I will not stop now to give my opinion concerning—to involve the two countries in a war, and trusting to escape scrutiny by fixing the public gaze on the exceeding brightness of military glory—that attractive rainbow that rises in showers of blood—that serpent's eye that charms to destroy—he plunged into it, and has swept on and on till disappointed in his calculation of the ease with which Mexico might be subdued, he now finds himself he knows not where."

TEMPERANCE AND PROHIBITION

And yet another question of the day—a controversy concerning which raged through the Nineteenth and into the Twentieth Century, and culminating recently in another Federal amendment—Lincoln was called to pronounce upon. This, the temperance question. Regarding it he declared, "Turn now to the temperance revolution. In it we shall find a stronger bondage broken, a viler slavery manumitted, a greater tyrant deposed; in it more of want supplied, more disease healed, more sorrow assauged. By it no orphans starving, no widows weeping. By it none wounded in feeling, none injured in interest; even the dram-maker and the dram-seller will have glided into other occupations so gradually as never to have felt the change, and will stand ready to join all others in the universal song of gladness.

Methods Used for Conservation of Soil Moisture

Explanations of Mulching, Tillage and Removal of Weeds for Retaining Water for Crops

By M. M. McCOOL

(A continuation of his series of articles on the subject of soils.)

A DISCUSSION of the conservation of soil moisture is now in order. I promised in the introductory article to present some of the modern views and recent findings concerning the conservation of soil-water. I have delayed this phase of the general subject of soil moisture until the last or until the fundamentals or the relationship of soil texture to water retaining capacity, movement and others were discussed. It is my purpose to present facts that bear on this question rather than to write an entertaining or pleasing article. This means that the contributions by soil investigators located under different soil and climatic conditions must be considered.

It was shown in a former article that about as much water is required to produce one pound of dry matter in weeds as is required to grow the same amount of dry matter in some crops. In those regions where rainfall may be somewhat deficient, the prevention of weed growth is essential. A heavy growth of weeds may remove much of the water in the first foot of soil within a few days of warm weather. In addition to robbing the crop of water, they remove plant-food that the crop should utilize. It should be distinctly understood that weeds and grass take nitrates, phosphates, potash and others from the soil as do our crops that we grow. Thus the destruction of weeds serves a dual purpose, that is, saves both moisture and elements of plant-food; yet, we should not lose sight of the fact that weeds produced after a regular crop may increase the vegetable matter of the soil and also prevent some plant-food from being washed out of the soil. The importance of early spring plowing, of not permitting clover crops to grow too late in the spring, and the destruction of weeds after the harvest of wheat or oats, if seeding is to follow, where the rainfall is somewhat deficient cannot be overestimated.

Soil Mulches

Mulching the soil to conserve the moisture has long been advocated and practiced. Some have taught that the soil should be thoroughly mulched at all times inasmuch as a loose surface layer of soil effectively breaks the capillary connection and prevents film movement of water to the surface thus cutting down the loss by evaporation; considering that these mulches should be about two or three inches in depth. It is a common belief that a firm or compact layer of soil is undesirable inasmuch as great losses of water may take place through this layer.

Somewhat recently the tremendous value placed on soil mulches in preventing the loss of water by evaporation has been questioned. It is now considered by many that soils that are hard and dry on the surface do not lose water by evaporation, that as soon as a dry layer is formed it is effective because the dry layer of soil is warmer than that below and as stated in an earlier article, moisture does not move from a cool, moist layer of soil to a dry and warmer one. Moreover to till a soil immediately after a medium sized rain is useless because it does not penetrate much below the depth to which cultural operations take place. Furthermore nature forms her own soil mulches by causing a more rapid loss of water from the surface than can be supplied by the relatively slow film movement from below, and once the dry layer is formed, it is sufficient and that under ordinary field conditions a soil that is unmulched loses little if any more water by evaporation than one that is mulched provided there are no cracks in the ground.

An examination of the results that are on record shows them to be somewhat contradictory. In eastern Montana under semi-arid conditions on loam soil the soil mulch was reported to be quite effective, the mulched field soils containing about twice as much available water as those unmulched. It must be admitted however that this difference may have been due in part to the increased amount of rainfall that penetrated the soil on account of favorable structure or tilth.

The Nebraska Agricultural Experiment Station has done more work on this problem than any other. Their workers report as a result of several years investigations under different conditions, that tillage has little effect on the moisture content of the soil other than to destroy the weeds and increase the amount of water that enters the soil. In these tests the soils were sampled to depths of six feet or more and the water content of each foot accurately determined.

The above is a well plowed field according to Dr. McCool. Note that the furrow slice should stand on edge as in the above.

Much careful field work has been done at the Kansas Agricultural Experiment Station. The soil investigated was a silt loam. The five year average yield for corn is shown in table one.

Table 1.

Cultivation treatment	Bus.
1. Ordinary	40.4
2. Soil kept mulched all times	39.5
3. Not cultivated. No weeds allowed to grow	38.6

Mosier and Sustafson at the Illinois Experiment Station conducted experiments to determine the effect of various cultural methods upon the yield of corn grown on a silt loam soil. They conclude, as a result of eight year field investigations, that killing weeds is the most important consideration in the cultivation of corn on this soil, inasmuch as they rob the crop of plant food, light and moisture; where the ground is plowed to a depth of six or seven inches in the spring and a good seed bed produced there is very little necessity for cultivation of corn on sandy loams and silt loams to conserve the moisture. Some of their results are given in table II.

Table II.

Treatment	Eight-year average Bu. corn per acre
Plowed, seed bed prepared, no cultivation, weeds kept down	45.9
Plowed, seed bed prepared, weeds allowed to grow	7.4
Plowed, seed bed prepared, cultivated shallow. 3 times	39.2

The United States Department of Agriculture, Bureau of Plant Industry, conducted experiments over a period of six years on many different kinds of soils in 28 statts. The average yield of corn from uncultivated plots for a period of six years was 99.8 when expressed as percentage of similar cultivated plots.

In the sub-humid or semi-humid sections the average yield from the uncultivated land was 85.9 per cent of that from the cultivated, which of course shows a greater necessity for cultivation in those regions. A summary of six years' results is shown in table 3.

Table 3—Corn Yields of Uncultivated Plots Expressed in Percentage of the Yields of Cultivated Plots for Different Groups of Soil Types.

Soil types	Average percent
Clays	92.6
Clay loams	94.5
Silt loams	102.4
Sandy loams	105.7
Average of groups	98.9

One of the men who conducted these tests, in discussing this said in a recent number of *The Country Gentleman*:

"Keeping the fields clean of weeds and grass is now generally recognized throughout the Corn Belt as being the main thing necessary in cultivating corn. The Illinois Experiment Station, after conducting a long series of experiments, has concluded that there is practically no other value in cultivating corn except in keeping down the weeds so that the corn itself can have free sweep of the field.

"A number of years ago, while connected with the National Department of Agriculture, I carried out a lengthy series of tests covering 28 corn growing states, in an effort to determine if stirring the land after corn was planted served to increase the yield over and above what it would have been had weeds and grass at all times been kept down without any manipulation of the soil whatever. There were nine of these experiments in Indiana, and the average for the nine was five per cent increase in ear corn by merely keeping the land weed-free without even breaking the crust, as compared with the check plots where supposedly ideal shallow cultivation was given. In ten tests in Ohio the merely weeded plats fell about four per cent behind. In Missouri the weeded plats were three per cent ahead, in Iowa a little less than three per cent ahead, and in Nebraska two per cent ahead. Eight experiments in Illinois did not show quite so favorably for weeding as compared to cultivating, there being a difference of nearly nine per cent in favor of cultivating. More recent experiments carried on by the Illinois station, however, show a far less variation."

The majority of our information concerns the fine-textured soils. I shall report the results of three years' investigations carried on by the writer and associates, on deep sandy soil at East Lansing. This soil contains about one and one-half per cent of organic matter and varies but little to a depth of about eight feet, and is of such a nature that no water runs off, the rain that falls, "soaking in." Moreover, the surface of this soil is dry within a few hours after a rain, as it probably mulches itself or is a "self-mulcher."

Potatoes, corn and radishes have been grown with and without the formation of a soil mulch. The portions of the field that were not mulched were scraped with a hoe to eradicate the weeds, care being taken to leave the surface of the soil unmulched. The mulched portions were cultivated three inches deep, as usual. The yearly and average yield of corn and potatoes are presented in Table 1, the amount produced on the tilled portions of the field being taken as 100. The yields of radishes are not given, but the differences were not greater than could be attributed to variation in the land upon which they were grown.

Table 1—Yield of Crops on Moisture Plots Given in Per Cent of Yields of Cultivated Crops.

Corn

Plot, 5; treatments, weeds clipped; 1917, Stover grain. 123.73, 111.35; 1818, Stover grain, 84.42, 91.09; 1919, Stover grain, 113.04, 101.22; Average, Stover grain, 107.06; plot 6, cultivated; 1917, Stover grain, 100.00, 100.00; 1918, Stover grain, 100.00. 100.00; 1919, Stover grain, 100.00, 100.00; Average, Stover grain, 100.00.

Potatoes

Plot 7; treatment, weeds clipped; 1917, 106.17; 1918, 89.32; 1919, 86.90. Average, 94.13. Plot 8, cultivated, 1917, 100.00; 1918, 100.00; 1919, 100.00. Average, 100.00.

The moisture content of the differently treated soil was determined during the growing season.

A small area of the same soil type was covered by means of a glass roof The sides and ends of the outfit were so arranged that free circulation of air took place; yet no rain entered One area under cover was mulched with a one-inch layer of fine black muck, another with three inches of soil and still another unmulched. The water lost from each plot from May 30th until June 27th was determined by carefully sampling and weighing and drying the samples collected. According to the results that were obtained, which are presented in Table 3, the differences in

(*Continued on page* 17)

The disc is shown here at work on a heavy soil. The thorough preparation of the seed bed is essential to good yields.

State Farm Bureau is Now Ready for Business

East Lansing Convention Puts Stamp of Approval on Projects of Farmers' New Business Organization

DECLARING itself to be an honest-to-God farmers' business organization, the Michigan State Farm Bureau, in annual session at East Lansing last week adopted a puncture-proof constitution, passed censure-proof resolutions and otherwise removed all suspicion that it was under obligations to anyone but farmers.

Outstanding among the recommendations and resolutions were those appropriating $2,000 to aid the sugar beet growers in their campaign for fair beet prices, advocating a marketing committee to be composed of one representative from the Bureau and one from each of the other farm organizations and associations in the state, restricting voting privileges to men "actually engaged" in farming, opposing compulsory military training and demanding the right of collective bargaining.

Thirty-five counties were represented by the following delegates:

Muskegon, O. S. Marvin; Oakland, Geo. Gunn; Berrien, A. R. Hall; Manistee, Hugh Kenny; Genesee, M. M. Billings; Kent, M. R. Shisler; Gladwin, M. G. Reynolds; Lenawee, J. B. Daniels; Lapeer, M. B. Millson; Bay, C. R. Oviatt; Wexford, Neil Martin; Saginaw, Thos. Price; Missaukee, Lloyd Ardis; Washtenaw, L. A. Seamons; Marquette, F. S. Vandenboom; Oceana, Alfred Hendrickson; Ottawa, Melvin Smith; Macomb, Rob't Knight; VanBuren, M. E. Phillips; Barry, M. A. Smith; Montcalm, Clair Taylor; Allegan, Robert Monteith; St. Clair, North Wesbrook; Tuscola, V. F. Wilcox; Shiawassee, George Winegar; Presque Isle, John Hoeft; Wayne, Sam Spicer; St. Joseph, Aaron Hagenbuck; Eaton, M. L. Huber; Monroe, L. H. Kirkland; Benzie, Byron Wolcott; Clinton, Jas. R. Campbell; Grand Traverse, Jas. Harris; Mason, Ben S. Wilson; Livingston, H. M. Morton; Calhoun, Elmer Ball.

The business session of the Bureau opened in the Agricultural Building Thursday morning. Through an error on the part of the Bureau clerical force this meeting was advertised as open to "delegates only," but all who cared to attend were admitted, rules being adopted, however, restricting the privilege of the floor to delegates and officers. This prevented endless discussion which is the bane of so many farm meetings and confined the business of the meeting to those who were sent there by the farmers to transact the business.

Pres. Roland Morrill spoke briefly of the work, plans and future prospects of the Bureau which he called the "consummation of a dream." He emphasized very strongly, as did every speaker and delegate the fact that the organization was composed strictly of farmers, and managed by farmers for the purpose of carrying out the business end of farming. He asserted that the Bureau as an organization must keep clear of political and religious issues.

Secretary C. R. Bingham presented a very complete and interesting report, the most important portions of which are as follows:

"The activities of the Secretary of the Michigan State Farm Bureau in the last year, subsequent to the Organization Meeting on February 5th, 1919, at East Lansing, which was attended by delegates from fifty-seven county farm bureaus, have been directed mainly toward the perfecting of the organization, inasmuch as this must be accomplished before the Michigan State Farm Bureau can operate extensively for the benefit of the farmers of the state, commercially, legislatively and educationally.

WHERE THE STATE FARM BUREAU STANDS

1. Approves of efforts of beet growers to secure fair contract for 1920 and appropriates $2,000 to aid fight.
2. Favors marketing committee composed of representatives from all state farm organizations.
3. Urges legislation to protect both to buy and sell collectively.
4. Promises assistance to milk producing and distributing conditions in Michigan.
5. Demands early action to bring about restoration of efficiency in railroad transportation whether under federal or private control.
6. Urges improvement in rural telephone service and establishment of more uniform rates.
7. Declares itself independent of alliance with any commercial, labor or industrial organization.
8. Advocates co-operation in agricultural affairs with all other farm organizations and with the state and federal departments of agriculture.
9. Condemns speculation in food products and other commodities.
10. Opposes the national compulsory military training bill.
11. Restricts voting privileges to men "actually engaged in farming."

"In a resume of the development of the Michigan State Farm Bureau in 1919 I would like to stress the following outstanding facts: The organization took place February 5, 1919, with fifty-seven counties participating, at which time I was requested to act as temporary secretary. On March 5th the Eexecutive Committee tendered me the office for the remainder of the year.

"It soon became apparent that the means and methods for financing this organization, fixed at the February 5th meeting, were entirely inadequate. In March, therefore, after explaining the Farm Bureau movement to the Farmers' Club of the Senate and the House at Lansing, a bill was drafted and later introduced and passed, which appropriated three thousand dollars a year for two years for the benefit of the Michigan State Farm Bureau.

"Still the problem of financing was retarding development of the organization. An appeal was made to individual farmers of the state asking them to lend their financial support on collateral notes. In this way funds were raised which permitted continuance of the work on a small scale. The methods of the Illinois Agricultural Association in regard to finances were then investigated, and a meeting of the Executive Committee of this organization was called in Grand Rapids, August 5th, 1919, at which time Mr. J. C. Sailor, of the Illinois Agricultural Association fully explained the work in his state. Authorization then was given the secretary, Mr. R. G. Potts, Macomb County, and Mr. A. E. Illenden, Lenawee county, to proceed immediately with the execution of plans for a state-wide membership campaign to secure individual memberships of farmers for this organization for three years at five dollars a year. The actual results of this campaign will be shown elsewhere in this report.

Organization

"The State Membership Campaign was begun in Oakland county on October 15th. Since then fifteen counties have been campaigned and preparations are now being made for the extension of the drive into 22 others as rapidly as possible.

"Membership figures in the counties covered so far are approximately as follows:

"Oakland, 1,850; Barry, 1,391; Allegan, 1,850; Gladwin, 672; Montcalm, 1,474; Van Buren, 1,650; Lapeer, 1,844; Genesee, 1,382; St. Clair, 2,192; Kent, 1,375; Tuscola, 1,819; Macomb, 1,450; Ottawa, 1,000; Washtenaw, 1,300; Shiawassee, 1,500. Total, 22,749.

"These figures must necessarily be approximate at this time, as follow-up work in these counties is constantly adding to the original campaign totals. These figures would indicate that, providing the progress of the campaign continues at the present rate, by the end of the year there will be close to 100,000 Farm Bureau members in Michigan. The twenty-one additional counties which have applied for the membership campaign and which will be reached as rapidly as can be done with efficiency, are:

"Eaton, St. Joseph, Monroe, Wayne, Saginaw, Benzie, Loelanau, Emmet, Mason, Wexford, Cheboygan, Calhoun, Berrien, Livingston, Huron, Clinton, Presque Isle, Grand Traverse, Mecosta, Oceana, Jackson.

"It is difficult to work out any definite percentage of the farmers who are being signed, inasmuch as no solicitation can be perfect. However, of the farmers being reached by solicitors, approximately 95 per cent are becoming members of the Farm Bureau.

Members in Good Standing

"The records of the Secretary show that the following counties are members of the Michigan State Farm Bureau in good standing:

"Muskegon, Oakland, Berrien, Manistee, Genesee, Kent, Gladwin, Lenawee, Lapeer, Bay, Wexford, Saginaw, Missaukee, Washtenaw, Marquette, Oceana, Ottawa, Macomb, Van Buren, Barry, Montcalm, Allegan, St. Clair, Tuscola, Shiawassee, Presque Isle, Wayne, St. Joseph, Eaton, Monroe, Benzie, Clinton, Grand Traverse.

Finances

"The financial condition of the organization, according to the records of the Secretary, is as follows:

Finances

"Total receipts, $76,225.00; forwarded to treasurer, $66,225.00; borrowed by secretary's office from F. S. S. B. (notes unpaid) $4,000.00; borrowed by Secretary's office from F. S. S. B. (notes unpaid) $6,000.00. Disbursements. Printed matter, supplies, $4,395.92; advertising and publicity expense, $6,894.37; secretary's traveling expense, $880.84; secretary's salary, $2,500; office expense, $2,171.26; postage, $304.98; executive board, $650.62; special committees, $400.57; indebtedness paid by treasurer thru secretary, $10,400; indebtedness paid by secretary's office, $6,000; solicitors' expense, $37,630.49. Total disbursements, $72,229.05. Assets—Due from county membership checks (1920) $51,095.05; due from county membership checks, (1921-22) $227,490; cash on hand, $1,850; cash in treasury, $2,145.95; state appropriation, $3,000; inventory, $1,047. Total assets, $286,628; liabilities (note F. S. S. B.) $4,000. Actual valuation, $282,628.00.

Commercial Activities

"Preparatory to possible establishment of a Purchasing Department of this organization, to work on an extensive scale in supplying Farm Bureau members with many, if not most, of the materials necessary in their business, the Secretary's office in the last few weeks has collected much relevant data, on which is based the recommendation that such a department be established with expert help and proper office facilities and that appropriations of $15,000 from the general organization funds be made for the initiation of such activities without delay. It is possible, through such a department, to effect a tremendous gross saving for the Farm Bureau Members in Michigan.

"Illinois already is working extensively in this direction and other State Farm Bureau federations are preparing to follow suit. Co-operation with these farmers' business institutions will be financially advantageous to our membership and can be easily effected. Already overtures toward this end have been made to us.

"The items given particular attention in our preliminary investigation were fertilizers and seeds, especially clover seed. A dozen of the largest fertilizer manufacturers in the middle West were communicated with and several of the large seed wholesalers interviewed.

"Findings were that this organization can purchase in practically any quantity; that a large central agency purchasing for the county farm bureaus will obtain a considerably reduced price, based on cuts in manufacturers' overhead costs; and that a straight seven per cent discount can be obtained on fertilizer purchased for delivery in the next few weeks. Acid phosphate may be purchased in carload lots, sulphate of ammonia and potash in less than carload quantities.

"Clover seed can be bought by the state organization, is ordered in the next few weeks, at a considerable saving financially to members. It is possible to purchase in carload lots, for many individuals in a county, with their small individual purchases being packed separately in the cars.

"As the spring planting season is not far distant, any purchasing activities of this organization this spring necessarily must be limited, recommendation is made that the department be created and properly financed in preparation for extensive operations for the fall season.

"While many individual members of this organization have sought specific assistance, which has been given them and enabled them to make a considerable saving, estimated in gross at approximately $1,000, on orders for fertilizer, coal, fence posts, corn, alfalfa and other seed and salvage grain, this method of purchasing is impractical if attempted on an extensive scale. Recommendation for operation, there

"This convention declares the Michigan State Farm Bureau independent affiliation with any commercial, labor or industrial organization."

—Resolution adopted by Michigan State Farm Bureau at East Lansing Fe

fore, would be that a Purchasing Department of this organization deal directly only with the County Farm Bureaus on orders of individuals assembled in the various counties. If due authorization is given for establishment of this department, it is believed that fertilizer orders for several thousands of tons can be placed this month at a large saving to members.

Would Aid Sugar Beet Growers

"In the last few weeks, also, the Secretary's office has interested itself in the problem of the sugar beet growers of the State, which hinges on the refusal of manufacturers to consider negotiations for any new basis for a contract with the growers in 1920. Mr. John L. Shepard, of Allenton, Michigan, was requested to act with the Committee of Sugar Beet Growers as representatives of the Michigan State Farm Bureau. His report, backed up with figures that graphically illustrate conditions, show that the manufacturer's profit is approximately seven times the farmer's profit; that this was true on the 1919 crop and that the growers cannot be expected to continue to do business extensively under the present contract scale in the coming year.

"It is, therefore, urged that the Michigan State Farm Bureau assist the growers in efforts to obtain a fairer contract, one that will bring about a more equitable division of profits between the factories and the farmers than is now true, but not one that will mean an increase in the gross figure and a corresponding increase in the cost of sugar to the consumer.

"It is recommended that this assistance to the sugar beet growers be in the form of a publicity campaign, and that this convention appropriate $2,000 for such a campaign to set the facts of the case of the growers squarely before the public and acquaint the sugar consumers of Michigan with the fact that the price they are now paying for sugar is exorbitant; that it is not the fault of the beet grower that such excessive prices are charged, but the fault of the manufacturer, not content with a reasonable return on their investment. There also is an opportunity to lend the beet growers a helping hand in their organization activities. It is urged that such co-operation be extended to whatever reasonable, co-operative extent is determined by the executive committee of this organization elected today."

C. A. BINGHAM, Secretary.

The newly drafted constitution was then submitted to the delegates, and reading and ratification went forward rapidly. Only three changes were made in the entire draft and those of little importance, showing that considerable thought had been given to the preparation of the instrument. It must be admitted that the Constitution of the Bureau comes as close to being puncture-proof as one could reasonably expect a constitution for a new organization to be. Trial may show the wisdom of some changes, but as the draft stands it offers little loophole for criticism or mis-direction of the Bureau's affairs.

The constitution and by-laws will probably be printed in some subsequent issue.

Objects of Farm Bureau

THE PURPOSES of this association shall be to encourage, correlate and promote the efforts of the county farm bureaus of Michigan, affiliated with it, and their individual members and to co-operate with other agricultural organizations in advancement and improvement of agricultural interests in Michigan and the nation, educationally, legislatively and economically, by doing primarily and principally for members and not for pecuniary profit the following, namely:

Buying and selling merchandise, farm machinery, fertilizer, stock feeds, live stock, or any other farm products whatsoever; operating storage warehouses, elevators, creameries or mills; canning, preserving, pickling, evaporating, dehydrating or otherwise converting or manufacturing farm fruits, grains, vegetables or any other kind of farm products whatsoever; securing better results in grading, packing, marketing and advertising the products of members; renting, buying, building, owning, selling, and controlling such buildings, equipment and other real and personal property as may be deemed necessary in the conduct of the affairs of this association.

Any and all of the above mentioned purposes executed by this association for members shall be at actual cost to this association and not primarily nor principally for pecuniary profit as specified in the law under which this association is incorporated.

Election of Officers

The election of officers brought some surprises. It was freely rumored for several days prior to the business session of the Bureau that Roland Morrill, the president, did not desire to become a candidate for re-election, and as a result there was some speculation as to whom his successor might be. The names of Jas. Nicol, of Allegan county; Dorr D. Buell, of Wexford county, and Jas. N. McBride, of Lansing, were mentioned as good men for the job, and the friends of each did a little "electioneering" on the side, but when the time came for nominations, Roland Morrill and R. G. Potts were unanimously re-elected president and vice-president respectively, without opposition. In accepting the honor for a second year, Mr. Morrill said: "Gentlemen, I thank you from the bottom of my heart for the honor you have bestowed upon me. I feel though that you should choose younger men than I for these important positions. We old fellows tire out and there is much to be done. Feeling that I will have your united support during the ensuing year as I have had the past, I will accept the presidency for another year."

Under the provisions of the new constitution the executive committee membership was changed to six persons, three elected for two years and three for one year. The following members were elected for two years: A. J. Rogers, Jr., Beulah; A. E. Illenden, Adrian; James Nicol, Allegan. For one year: Mrs. Cora E. Ketcham, Hasings; Robert Blemhuber, Marquette; Ashley M. Berridge, Greenville.

Following the adoption of the resolutions the business session of the Bureau adjourned and the crowd repaired to the gymnasium to listen to addresses by Milo D. Campbell, candidate for governor; John C. Ketcham, master of the State Grange; Jas. N. McBridge; J. R. Howard, president of the American Federation of Farm Bureaus and W. G. Eckhardt, "the highest paid agricultural agent in the United States."

The resolutions committee of this convention presented is report as follows:

From among the maze of matters that has been brought to our attention the attempt has been made to select those of the most vital importance to the farmers of this state, assembling in some cases several similar resolutions into one, as we have realized the utter impracticability of attempting, in the short space of time alloted, to run the gamut of problems and their ramifications that are today confronting the farmers of this state and this nation. With these ideas in mind, for your consideration, the following declarations are recommended.

That this convention declares the Michigan State Farm Bureau independent of affiliation with any commercial labor or industrial organization, but asserts that it shall maintain a co-operative attitude to all movements promoting and pertaining to the welfare of American institutions.

That this organization declares it to be its earnest desire and purpose to co-operate with other state federations of farm bureaus and other agricultural organizations in efforts for improvement of agricultural conditions not only in this state, but over the country.

That this organization demands adequate protection, through the medium of appropriate federal legislation, of the rights and privileges of farmers of Michigan and the United States to buy and sell collectively.

That this convention urges early action in the establishment of the purchasing department of this organization, as already approved, because of the vital need of the farmers of the state for adequate mediums of doing business, and furthermore advocates earnest consideration by the executives of this organization of ways and means of providing better mediums for the marketing of farm products that will not only be of financial benefit to the farmers, but also the consumers.

That this organization assist in an attempt to remedy the milk-producing and distributing conditions in Michigan with the intention of determining more definitely the cost of production, and that milk and its products be paid for an a quality basis as well as butterfat content, and that due publicity be given to milk and its products as a necessity in the diet of children; and that we further insist that the producers have as much right to a voice in determining weight and test of their products as the manufacturer and distributor.

That this organization is not interested primarily in federal or private ownership of the railroads, but in efficiency of them and demands early action to bring about restoration of efficiency of live stock and other perishable commodity transportation, both in car equipment and train schedules, with the belief that such adequate service at just and equitable rates can be arrived at the sooner under private ownership; furthermore that the executive committee of this organization seriously consider advisability of creation of a traffic department that may efficiently serve the members of this organization in many ways they vitally need such service.

That the interests of the rural telephone subscribers of Michigan are not adequately taken care of to the detriment of large rural business interests, their financial loss is resulting through discriminatory rates and service, and that it, therefore, is urged the attention of the Michigan Public Utilities Commission be called to these conditions and remedy for them devised.

That this organization urges the enactmentment of national legislation that will restrict the opportunities for speculation in food stuffs and other commodities that exist today and are largely responsible for the high cost of living problem of the nation.

That this organization declares its opposition to the national compulsory military training bill, such opposition being in accord with the American Farm Bureau Federation. Legislation that will take the boys of the farm away from home at an age when they are of the most help to their parents, and which will persuade many of them to forsake rural life, is underirable in our belief. No lack of patriotism prompts this opposition;; the American farmers' loyalty to the government being apparent in the response of thousands from the country to the call to arms in 1917.

That this convention expresses its earnest appreciation of the efforts of the Executive Committee of this organization and especially the secretary, Mr. C. A. Bingham, in the building in the last year of this organization into a valuable insrument for the farmers of this state to use in betterment of agricultural conditions.

That this organization recognizes that its strength and origin have largely been achieved through co-operation with the state and federal departments of agriculture. We declare it to be our desire to continue such co-operation in the future.

That this convention sincerely regrets the illness of our treasurer, Mr. Fred VanNorsdall, and member of our Executive Committee, Miss Flora C. Buell, which unfortunately has kept them from our annual meeting, and extends to them our earnest hope of speedy recovered health.

Mr. Sugar Beet Grower, Get in Line With Other Growers and Win a Fair Price for 1920

HAVE you figured cost of raising beets in 1920? Continue to grow on old contract, your government presumes you do so at a profit. It will cost 25 per cent more to farm this year than two years ago. Did you ever figure the fertility a crop of beets takes out of an acre of land? It will take out $37.50 at present prices. Your government will allow you to charge that up. You never figured your manageri a l e x-pense. You can charge at least 10 per cent or $15 per acre. You never figured the $6 extra for contract labor. You will have to add at least $3 more if you keep them this year. Figure it up now. Don't wait and then kick on how you lost money and damn the sugar beet industry next year. Can you produce an acre of beets next year less than $160? Many of the best farmers say "No; where will you land next fall if you accept the old 1917-18 contract and the government reduces the beet sugar price to 9 cents per pound? (The government would be justified in doing so as the Lever Law enforced will not allow the factories to make the excessive profits they made last year on 12c sugar) and you should raise an average crop of 8 tons per acre and receive $80 for what will cost $160.

Get in line. Join with your brother farmer. Join the Michigan Sugar-Beet Growers' Ass'n. They got you the price raised from $8 to $10 two years ago. They will get you the $12 this year if you join and stick. They only want a fair price to produce at a profit. The government and the consuming public want producers to have a fair price to increase domestic sugar. The Lever Act will allow the factories to charge enough to make a profit. Don't worry about them. They want you to drudge and produce them the beets at the old price and they also want to wipe the Lever Law away and charge what foreign sugar will cost. They are Gougers, Profiteers.

In the last two weeks over 2,000 growers have joined and paid in a dollar each. Don't stand back and think you can honorably take the extra money your brother farmers get you for your beets this year and not join and stand with them. "Bill Wallis" said that when we ask you for a dollar you would take the door jams right out of the halls trying to get away, will you? No. Join now; don't wait. Send your name with a dollar on your check to *C. E. Ackerman Mgr. Michigan Sugar Beet Growers' Association, Durand, Mich.*

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL

MORE MICHIGAN CATTLE BUT DOBBINS DECREASE

Increased prices of milk in the cities of the state, especially in Detroit, added $13 to the value of every cow in Michigan during the last year. The cow population, previously on the decline, increased 25,000 in 1919.

According to annual live stock summary, issued by the State and Federal Joint Crop Reporting Bureau, Michigan had 873,000 cows Jan. 1, 1920. Cows sold during 1919 on the average at $96 each. This is $10 higher than the average price throughout the United States.

Automobiles and motor trucks, however, were continuing to humiliate the horse. A year ago the average horse was worth $105. The price is now $95. For the first time in the history of the state horses are worth less than cows. Michigan's horse population decreased 20,000 during 1919. It is now 640,000. Cattle are the only species of live stock that have not deceased in value. The average value of sheep has decreased from $12.50 a head to $11.80. The average hog is worth $22 against $23 a year ago. The value of mules has fallen from $106 to $99.

The value of all stock on Michigan farms is $236,231,000. Although there are 130,000 head of live stock more in the state than a year ago, the value is $8,482,000 less.

FARM HELP WANTED

Calls are coming to the Michigan Free Employment Bureau for farm hands, those married seeming to have the preference, though occasionally single men are asked for, says a dispatch from Battle Creek. Married men, the best who can qualify, receive $50 a month, house rent a garden patch and other concessions. One opportunity is forthcoming for a man who has his own team and agricultural implements. A good start will be given him. And there is a home and small salary awaiting a middle-aged man in the country. Single men on farms who can prove their worth, are commanding from $40 a month up, but the supply is limited, even though board and room and washing go along with the handsome wages. Said one man: "I can remember the time when I started work on a farm for the monthly wage of $4 and I was quite glad to get that amount. Later I got $17 a month. That was a big wage then. Look at the difference and then they are not tempted." There is lots of work for mechanics who can qualify, and places plentiful for housemaids.

RECORD BUSINESS AT FREMONT

More than a half million dollar business was done by the Fremont Co-operative Produce Co. during the year 1919, according to the report of the manager, A. L. Burt, given at the annual meeting of the corporation held in its warehouse. This was one of the most prosperous years in the history of the business. All the directors, namely, D. H. Brake, Dirk Kolk, Geo. R. Warren, John Dobben, John Rotier, Joe Rozema and A. L. Markey were re-elected. Mr. Brake is again the company's president; Mr. Warren, vice president and Dirk Kolk, secretary-treasurer. A regular dividend of 7 per cent was declared and $2,500 will be paid to the purchasing stockholders in dividends which are computed upon the amount the stockholder has bought of the company during the year. Nearly $5,000 of the stock was subscribed for which leaves about 1,300 shares still unsold.

FOXES FOR N. E. MICHIGAN

A Washington correspondent of Michigan daily papers recently wrote a lengthy article on fox farming, in which he said "there are millions in it" and quoted from a government publication on the subject in which directions for the care of foxes are given, including their housing, the sort of a place in which to keep them and their feeding. Among other things it says that "a light, sandy soil, with rather hard winters, and summers with considerable rainfall provide the best surroundings for the fox." Possibly this will yet solve the question of what to do with the jack pine lands. Now its up to some Northeastern Michigan man to make the experiment. "With the hides of silver gray foxes bringing as high as $1,500 each and a prime black fox fur worth $5,000, it ought to be worth trying," said Secretary Marston, of the Development bureau.

SPLIT IN KENT BUREAU

Although agreed on the purpose of the Kent County Farm Bureau, that the organization should primarily be of benefit to actual farmers, delegates from the townships to the reorganization meeting of the bureau divided on how the membership should be constituted.

One party favored confining the membership to those owning farms or occupying farms as tenants and deriving the major portion of their income from the farm. The other party advocated making the actual farmers voting members and the absentee farmers non-voting members.

Confining the membership to those living on the farm and deriving the major portion of their income therefrom would bar city farmers and many managers of co-operative buying and selling organizations.

Work Urged as Remedy for Soaring Costs

SHERMAN J. LOWELL, master of the National Grange, declares it is the belief of farmers of the country that the only way to reduce the cost of living is for every one to be willing to do "a reasonable day's work" and that the 44-hour week would never support even America. Mr. Lowell's statement, in part follows:

"Those who are best informed on agricultural conditions in America can not offer the slightest hope of lower food prices so far as the farmer is concerned.

"In the reconstruction everyone must get ready actually to work again, to save again and to a considerable degree to get back to thrift sanity and common sense, or else accept as permanent the present scale of living costs, in which event we might just as well stop ranting about the high cost of living and realize that a new basis of economic procedure is here to stay.

Slave Long Hours

"This is the declaration of the National Grange, which sees no reason why its members should slave long hours, seven days a week, to supply cheap food to the other workers of the country who enjoy short hours and unlimited opportunity for rest and pleasure. Speaking as the largest and best established farmers' organization in America, the grange hereby notifies the world that the farmers do not intend to keep responding to the call, "produce, produce and produce," so long as other lines adopt as their slogan, "reduce, reduce, reduce.'

"There are five very definite things that may be expected to have an effect on the production of a world's food:

"A more direct and less expensive system of distribution.

Lengthen Work Day

"The removal of all artificial restrictions upon the sale of farm products.

"A lengthening of the workday with honest service for the wages paid.

"Increase of back-to-the-farm movement which will enable farmers to meet the wage scale of competing occupations.

"Increasing social and educational privileges in the rural communities."

Iosco Farmer Rises to Defense of County

I AM a reader of the M. B. F. and admire very much the presentation of fact which its every issue contains, but deplore publication of matter that tends to cash reflection on any community or its citizens, or any matter that may be construed as a reflection on any particular place or its inhabitants.

Referring to Mr. Grenell's production in the January 17th issue of M. B. F., "Changing Michigan Sand Lands to Fertile Acres," I note with regret that he leaves the impression with his readers that Iosco county is the worst land in Michigan that will raise crops, and that parts of it are "uncivilized" which undoubtedly is a reflection on the county and its inhabitants.

In our endeavor to enlighten would-be settlers as to the many good features of Northeastern Michigan cut-over lands, such statements as referred to cannot harmonize with such endeavor. The "knocker" is ever present and undoubtedly takes advantage of all such deductions, and constructions as may be deduced from such statements and make harm where none was intended. In my opinion it occurs to me that the reason given why Walhalla came to be located in Iosco county does not add any weight to the proposition discussed, but on the other hand may be easily construed as a reflection, as also the reference to the "civilized section" of Iosco county. One would assume that a portion of the county is uncivilized, when the facts would not bear out such conclusions. Iosco county has many fertile acres and a large portion of good farm lands only waiting for development into productive farms. It also contains many natural resources awaiting development and its citizens are among the best of the state, highly civilized, industrious and an asset the state may well be proud of. Where did you get your prize-winning farm products and your prize winning Short Horn cattle, and many other things too numerous to mention? Why, from Iosco county, of course! Iosco county as well as any other undeveloped portion of the state, has its natural conditions to be subdued, and while we find some things not conducive to the best farming it is not the worst by any means.—*Amos Freeman, Glennie, Mich.*

THE CRITICISM of our correspondent is well taken. Not enough distinction made between the good land and the poor land in Northern Michigan. So much has been written about Michigan's "jack pine plains" that the average person is wont to think of that great section of the state as an unbroken expanse of sand, jack pines and scrub oaks, incapable of producing anything but the hardiest of shrubs and legumes. There is not a single county in all the state of Michigan that does not have its variety of soils. Some of these are just average, but in most of the counties of the upper part of the state the soils range in quality from the very richest capable of growing profitably all crops that are indigenous to this latitude, to the "white sand" that Mr. Grenell described in his articles. There are millions of acres of fertile cut-over land that have grown great forests of hardwood timbers now lying dormant and unused in Northern Michigan. They are to be found in Iosco county, in Roscommon, in Alpena, in Otsego, in Emmet, Grand Traverse, in fact, in every county of Northern Michigan. These lands, when cleared, produce large crops for several years without the application of fertilizer, and are as fertile in every sense of the word as the majority of soils in the lower part of the state. But, it is true, as Mr. Grenell has stated, that there are also many more million acres of the "light" soils which need "coaxing" to produce anything. Some day the majority of these will undoubtedly be under cultivation, but it will require large quantities of money and perserverance to bring them to the producing stage. Until that time arrives, it is only fair that careful distinction be made between them and the extremely fertile heavier soils.—Editor.

LIVE STOCK SHIPPERS' PROGRAM

Following is the program for the short course in marketing for live stock shipping association managers and county agents billed for Tuesday and Wednesday, Feb. 10 and 11, at Detroit:

Tuesday, Feb. 10, 9:30 a. m.—Grading cattle on the market under the direction of representatives of the U. S. Bureau of Markets, a cattle salesman and packer buyer. Observation of methods of handling co-operative shipments at the market. 1:30 p. m.—Market Report Service of the U. S. Bureau of Markets, by representative of the U. S. Bureau of Markets, Chicago. Conference on accounting, prorating and other matters pertaining to the operation of live stock shipping associations.

Wednesday, Feb. 11, 9:30 a. m.—Grading hogs, sheep and calves on the market under the direction of the U. S. Bureau of Markets representatives and a packer buyer. 1:30 p. m.—Some Problems of the Stock Yard Companies in Connection with Co-operative Live Stock Shipments, F. S. Welsh, New York City, General Manager Detroit and Buffalo Stock Yards. Railroad Pointers for Co-operative Live Stock Shippers and the Prevention of Claims, C. B. Heinemann, Chicago, secretary, National Live Stock Exchange. The Co-operative Live Stock Shipper and the Commission Man, H. M. Bishop, president, Detroit Live Stock Association, M. C. Stock Yards, Detroit, Mich. Advantages of State and National Associations of Live Stock Shippers, E. J. Trosper, Chicago, Ill., organizing secretary, National Federation of Co-operative Live Stock Shippers.

Inasmuch as arrangements were not made in time for headquarters for the meeting, those attending the short course were requested to assemble at Hotel Garvey, M. C. Stock Yards, Detroit.

WHEAT BELOW NORMAL

In the December Crop Reporter a tremendous decrease is shown in the acreage of winter wheat sown last fall. In 1918 more than 50,000,000 acres were put to this crop whereas in 1919 only some 38,000,000 acres were planted, this representing a decrease of nearly 24 per cent. As it happens, this figure is the same as the average for the five years, 1913-1917. Seemingly no plans are made to supply the abnormal demands now made on our wheat crops, nor even those occasioned by increase in population.

To make matters worse the condition on December 1 was reported as being 85.2 per cent, as compared to 89.5 per cent, the normal for the past ten years.

Farming Engineering at M. A. C.

Agricultural men of the state will study special features of farm engineering work in a new short course which is to open at the Michigan Agricultural College on March 1 and run for four weeks. Drainage, Farm Biuldings, Home Conveniences, and a choice of carpentry, blacksmith or gas engine work will make up the divisions of the course.

"We expect this course to attract city men as well as those who are working on farms at present," says O. E. Robey, acting head of the farm mechanics department at M. A. C. "There is a tendency for city workers to get back to the farm, any many are anxious to fit themselves for some special agricultural work.

"Under the Home Conveniences division of our work we will take up farm lighting and heating plants, water systems, and sewerage disposal systems. All the work will be given a practical angle. Actual surveying will be done when we study drainage, buildings will be designed under the Farm Buildings sections, and the laboratories and shops of the college will be used for the work in forge, carpentry and gas engines."

Make Producers of "Useless Members," Says Secretary Meredith

New National Agricultural Chief Insists on Remedies for Marketing and Other Troubles

IN ANSWERING questions of newspaper men regarding means for reducing the high cost of living, Edwin T. Meredith, the newly installed Secretary of Agriculture, said that useless employees, no matter in what line they may be engaged, must be released from non-productive work and given an opportunity to become producers upon the farm or in the factory. If this is done and if jobbers and retailers recognize the harm that must ultimately come from profiteering on the farmer and content themselves with a reasonable profit, he said, the question of the high cost of living will largely solve itself to the permanent good of all. But unless the whole country—all business and all labor—does recognize this as a common problem and do the things necessary to solve it, he continued, "less and less will there be of farm produce to divide among the whole people and higher and higher will go the price of that which is produced."

"I am surprised," said Mr. Meredith, "that I should have received the number of messages I have, particularly from daily papers, asking what plans I, as Secretary of Agriculture, have to reduce the high cost of living, indicating that the general feeling is that this is essentially an agricultural problem. It is, of course, related to agriculture, but no more than to many other lines of activity, and I am tempted to believe that the solution of the problem lies more in the hands of those interested in distribution and non-productive enterprises than in the hands of the farmers of the country.

Give Farmer Satisfactory Conditions

"The farmers must certainly produce. They have produced and will produce—that is their business. They are on a piece measure basis, so given satisfactory conditions they will do their part, as the farmers of America have in every situation or crisis that has faced the country. But this question of satisfactory conditions is a big one. It is not a satisfactory condition for the farmer to receive reduced prices for his pork, wheat, hides, while the prices of his machinery, lumber and shoes are raised. It does not conduce to a pleasant frame of mind on the part of the farmer or spur him to greater production to be obliged to sell his products for half or less than he later sees them sold for at retail. The dairy farmers of the country wonder if they are treated fairly when they receive thirty-five to forty cents for butter and see it retail at eighty-five cents. The poultry men wonder why, when they receive from forty cents to fifty cents for eggs, they retail as high as a dollar per dozen. The hog growers wonder if they are not in a hazardous business when they buy fencing and all other supplies at greatly increased prices, and then see their produce fall fifty per cent and sold by them at an actual loss, in answer to a demand on the part of the rest of the population for a reduced cost of living.

"The farmers of America," the new Secretary went on, "are willing to assume their part of the responsibilities as American citizens in meeting any problem threatening the welfare and stability of our country, but this high cost of living problem is a mutual one, and they ask that it be approached by all the people as a common problem. They ask that those engaged in distribution eliminate the lost motion and not put so great a burden upon production as there is upon it today. In other words, they ask that there be an adequate number of producers of wealth, and this includes property and food of all kinds, and only such number of distributors as is necessary to perform the services required. They ask that the banks, railroads, wholesale houses, retail establishments, factories, all of which are vitally necessary to the farmer and recognized by him as such, be speeded up along with him, that the work now done by three men may be done, if possible, by two, and the burden of transportation and distribution be thereby lightened. If the factory executive will speed up his plant that there may be two days' labor in the supplies, machinery, or what not, that the farmer buys, rather than three days' labor the article will cost the farmer that much less his profits be increased and his production stimulated, more men stay on the farm, more men go to the farm.

Put Useless Employees at Productive Work

"Business men must look to the operation of their establishments, no matter in what line they may be engaged ,and see that no useless employee is retained to add to the cost of distributing what the farmer now produces. Useless employees must be released from non-productive work that they may go into productive work and add to the sum total that may be distributed among all.

"Let us enjoy in America as highly developed a system of distribution and in this I include all the professions. doctors, lawyers, teachers, as well as retailers, transportation, etc., as we now have, but let us cut out the useless member, the surplus one here and there, and give him an opportunity to become a producer upon the farm, or in the factory. Let us have six tenths of our people in production and four-tenths in distribution ,that there may be six-tenths of what a man can produce each day for each of us, rather than have four-tenths in production and six-tenths in distribution, which gives us only four-tenths of what a man can produce each day for each of us. To do this conditions in production must be attractive, farming must be remunerative and offer to a young man who engages in it an opportunity equal to that offered him should he go into a bank, railroad, wholesale or retail establishment.

Labor Must Meet Farmer Half Way

"The farmer asks that the laborers in the mines, the factory and the mills, who are also real producers along with the farmers, make an effort comparable to his and see there is just as little labor expense as possible in each article turned out by their hands, thereby helping the farmers of America, who in turn will help the laborer. This is not inconsistent with the views and desires of the loyal, intelligent laboring men, who recognize the mutual advantage to all in an honest day's work for an honest day's pay. Given this and the manufacturers, jobbers and retailers taking a reasonable profit and recognizing the harm that must ultimately come from profiteering upon the farmer ,the question of the high cost of living will largely solve itself to the permanent good of all concerned.

"On the other hand if the whole country, all business and all labor, does not recognize this as a common problem," the Secretary continued, "and do those things which give the farmer a fair compensation for his efforts, do those things which make farming remunerative, pleasant and as attractive as other lines of endeavor, the conditions will not improve. On the contrary, more and more will the young man leave the farms, more and more will the older men become discouraged, and less and less will there be of farm produce to divide among the whole people for their sustenance, and higher and higher will go the price of that which is produced.

All Must Strive for Cheaper Distribution

"Attention must be given by public-spirited citizens to the methods which tend to quicken and cheapen distribution of farm products, such as better terminal facilities, easier transfers, inland water transportation, back hauling and round-about routes eliminated. We must all interest ourselves in helping solve the problems of the farmer and furnish

Help Mother Nature

NATURE does her share in seed bed building by providing fertile soil, moisture, and healthy seed. There Nature's obligation ends. The rest is up to you.

And the preparation of a mellow, thoroughly pulverized seed bed is almost as important as fertile soil and moisture. Upon it depends the healthy germination of the seed and a sturdy growth of the plant.

A seed bed prepared with **International Tillage Tools — disk harrows, spring and peg-tooth harrows, combination harrows and culti-packers** — will form a solid foundation for a bumper crop because these implements are thorough in their work. And they are not only efficient but also very durable, being made of high-grade material throughout. The name "International" is a guarantee of unquestioned worth.

Let us mail you descriptive folders of these tillage implements so that you will know just a bit more about the preparing of Spring seed beds. With every implement goes an alert, responsive and intelligent service. The International dealer will serve you direct.

No. 2 White	2.26	2.28	2.34
No. 2 Mixed	2.26	2.27	2.33

Wheat has suffered along with all other grains during the past week. There are many factors entering into the price fluctuations, the biggest being the foreign exchange. When the value of British sterling shot way down last week, it had the effect of greatly raising the price of American wheat to the British dealers—consequently the trading dropped off and prices suffered in this country, a condition hailed with delight by the public, which is still generally unaware that farmers are getting less than their cost of production. A decline of more than one million bushels occured in the American exports for a week ago compared with the same week a year ago. At the same time, it is interesting to note that Argentine exports of wheat were twice as great as those from the United States, whereas a year ago the American exports were ten times as great as the Argentine's.

Another important bit of news in the wheat world was the fact that Canada has been shipping large quantities of wheat into this country. The government has been releasing big lots to millers, and they are not buying much on the open market.

Along with the above bearish factors, we find that supplies are very light at the terminals. Farmers are shipping little. More than $3 per bushel is still being paid for good quality dark northern, and Detroit reports almost no price change, on the same day that Minneapolis announces a decline of 10 cents a bushel. The supply of spring grades is especially short, and prospects for the future crops are not great. Michigan in most sections has been pretty fortunate because of snow remaining over the fields of winter wheat, but this does not hold true for most other wheat growing districts. Englist experts continue to produce strong statements showing that there will be much less demand for American grains as soon as the agricultural nations get back onto their feet this year and the worlds supply of ships increases.

CORN FALLS HARD

Corn has suffered quite severely of late, especially due to the foreign exchange declines. When the value of British sterling struck its lowest level in American money values last week, corn turned bearish in the American markets and has not yet recovered. Moreover, there has not been heavy trading on the declining market as might have been expected. There are many who predict still further drops in the comparative value of European money. It seems that the world has been figuring all the time in money rather than in material which is really the basis of all values, while money is merely the medium of exchange representing the material. The balance of trade, or the amount of America's exports in excess of her imports has gone on for years always heavily in America's favor, and along with this process the value of the dollar has climbed. The world is awakening to this fact in hard jolts, and the latest jolt has knocked down grain prices substantially.

Market bears are publishing reports that selling is likely to be greater from now on, with the breaking up of winter about to begin in earnest. They say that the market has gone over the top and there will be no more room for extensive bullish operations. Farmers who have been holding back considerable amounts of corn usually show a disposition to shut off the supply when the market goes lower. If they do that in case easier prices continue, bullishness may be expected again. But if many farmers rush to market with their holdings to realize on them at once, the chances for the bears are fine. In fact, with heavy shipments on an easy market, the bears would just about have things all their own way.

Millions of bushels of corn are being held back at the country elevators awaiting cars for shipment, but stocks at terminals are the lowest in years. Probably a great many millions of bushels are still with the farmers. Their action is expected to determine largely the future of the corn deal.

LAST MINUTE WIRES

DETROIT—Corn, rye and barley considerably lower; oats and wheat stay high. Beans dull and easy and hay firm.

CHICAGO—Grains dull and lower from exchange slump and bigger receipts. Hogs higher. Potatoes lower.

Weekly Trade and Market Review

BUSINESS has been good lately in the Middle West in spite of serious drawbacks, including bad times for the farmers who are sending anything to market. In the East the drawbacks on business have been more marked than in the West. Severe winter has helped effect a huge traffic tie-up, hurting business in this country. At the same time, international trade is severely hampered by the foreign exchange which has raced far down, reaching its lowest level the past week. With German marks, formerly worth more than twenty cents, now worth only about one cent apiece, the Germans would not be able to buy from America without bankrupting their future. The same applies to most other foreign countries, and large shipments to foreign ports have dropped off day by day. This same influence has hit the grain markets. Rye and barley have suffered sharply, largely on account of the foreign trade being forced out of the running by the bad exchange conditions.

The hazardous outlook has caused some eastern concerns, industrial and mercantile, to be sharply conservative. On the other hand, many big buyers of raw material are confirmed optimists as to the future. Throughout most of the West good business is reported in the cities, there being no let-up in the retail trade. The sale of farm implements has been so great, we are told, that orders are stacked up way ahead of deliveries. Mail order houses are doing a land office business. Nearly all big auto and tractor concerns are far oversold. One of the greatest auto concerns reports that it has so many orders in the South alone that it would take up practically the entire output of the plant. Steel plants are again running and building has picked up.

Meanwhile, the past week, all grains excepting oats, suffered sharp reverses. Farmers are not getting much to market both because of bad weather and because many are holding for higher prices.

OATS STAY HIGH

Oats have suffered less than any of the more important grains during the downward rush on the markets the past several days. After rising to a point about equal to the highest on record for the crop, the oat market encountered a number of weakening factors. Of course, the fall of corn and other grain before the onslaughts of an upset foreign exchange had a weakening effect. Along with this, Canada has been shipping into this country considerable quantities of oats. Dealers can hardly understand this, since Canada had as bad luck with the oat crop as the United States did.

Limited receipts of American oats accompanied by good foreign and local demand have concentrated to supply intrinsic strength to the oat market generally.

RYE AND BARLEY DOWN

Rye and barley, depending upon the good graces of international support have been sort of "deserted at the church" during the past week. Just when it looked as though foreign trade was going to furnish rye and barley with very favorable conditions it scampered and the rye and barley markets got the severest setbacks sustained for a long while. Detroit quotes rye quiet and easy at $1.52 for cash No. 2, and barley, cash No. 3 at $2.90@3 per cwt.

Red Kidneys	11.25	12.00	12.75

Beans in the Detroit market have declined to $7 per cwt. for immediate and prompt shipment, according to the quotations received at the beginning of this week. It is thought that this action was caused partly by the general slump on the markets by the fall of the exchange rates, because in the bean factor there are numerous strong bullish factors in the offing. For instance, the shortage of the bean holdings has become painfully evident, and the jobbers themselves seem to have turned bullish in their predictions.

Regarding the quantities left with farmers, we gather the following reports from Lowell, Mich.: Beans are sold closer than any time in five years, only 10 per cent being the estimated quantity left; unless prices go up soon, the smallest acreage in ten years will be planted. F. B. Drees, secretary of the Michigan Bean Jobbers' Association, reports the following stock of beans on hand in this state: 334 cars C. H. picked, 16 P. H. picked, 23 fancy screened, 222 cars picking stock, a total of 595 cars. It is difficult to estimate the average amount in farmers' hands, the reports running as high as 50 per cent of last year's crop and in some cases as low as ten. The majority of the estimates however, run from 20 to 25 per cent of the crop.

California has cleaned up left-over stocks of beans and the wholesale grocers are reported to have begun their purchases, thus adding more fuel to the already ardent hopes of the bulls.

POTATOES RULE EASIER

SPUDS PER CWT., FEB. 9, 1920		
	Sacked	Bulk
Detroit	4.50	4.25
Chicago	4.75	4.60
Pittsburg	4.50	4.25

Detroit	1.85	1.75
Chicago	1.70	1.75
Pittsburg	1.90	1.85
New York	2.20	2.10

A note of caution has ruled throughout the market reports of MICHIGAN BUSINESS FARMING regarding the potato situation. Readers were advised to sell gradually through the winter while prices were still high, twice as high as last year for part of the season at least, and not to wait for still higher prices which were never sure of coming. This advice seems justified by the turn taken in the market the last week or so. In almost all parts of the country the price of potatoes has slumped badly.

Chicago, which gets a great amount of Michigan's potatoes, particularly shows an upset condition. In Chicago, under larger receipts and lighter demand, the carlot spud market dropped off each day for several days during last week. Growers who had been holding out for a long time began to

dump their holdings into the market last week and the result was bad. Chicago and other markets show a disposition to buy only from day to day, in hope of lower prices. There are some bulls who look for temporary revivals in price, but they are keeping quiet this week.

Pittsburg, New York, Minneapolis and other big markets report conditions similar to Chicago. One of the factors for lower prices, in addition to larger receipts and poorer demand, is the government early potato crop. Last year, it will be remembered, the early spuds came around early enough to raise havoc with the holdings of the old crop. The federal report follows:

"There will be an approximate increase in the early Irish potato crop of 12 per cent in the states of Alabama, Florida, Louisiana, Georgia, Mississippi, the Carolinas and Texas this season over last year. All of the states mentioned except Louisiana and Georgia, according to present prospects, will have an increased acreage. The acreage estimate by states this year and last are as follows:

	1920.	1919.
Alabama	4,750	3,100
Florida	19,620	18,300
Louisiana	11,950	16,600
Georgia	1,350	1,350
Mississippi	1,680	1,500
North Carolina	28,750	21,300
South Carolina	9,450	8,000
Texas	10,000	8,550
Total	87,550	78,400

Planting in the Hastings section of Florida is being completed this week. Beaufort, N. C., will have an increase of about 35 per cent in acreage. Planting will begin next week in the Eagle Lake section in Texas if weather permits but so far there has been a great deal of rain in the district.

Unprecedented snows in the northern and eastern portions of the United States practically stopped the movement of freight during the latter half of last week and supplies of hay are greatly reduced in consequence. City deliveries are interfered with but the deep snow has tied up motor trucks to such an extent that the horse has won another inning. Values are strong and higher under the small supplies and if country loading and railroad deliveries are not resumed promptly further advances will result. Much difficulty is reported in getting balers this season and this with car shortages is keeping the shipments below normal.

Various parts of Michigan have been reported to have the following conditions:

Macomb County—Farmers are holding in this section as the crop was about half of last year and the farmers think they will need most of this for their stock. The car situation is very bad, and shipments move slowly. Perhaps half of the hay has been moved and possibly a few cars more will be loaded when the farmer is sure he has enough to get through the winter.

Sanilac County—The crop this year was mostly of No. 2 and clover mixed in this section and was about 10 per cent more than last year's crop. None of the old crop will be carried over and the general outlook is not very good.

Eaton County—This section produced at least 50 per cent more than in 1918, and about 60 per cent has been moved. Farmers are selling, but can get no cars. Prices seem too high to last.

LIVE STOCK MARKETS

Fewer cattle were shipped during January than for many months, yet the prices of cattle have declined. In explanation of this, we find that the international situation is responsible. There are more head of cattle and stock in this country than at any other time in history, but the enormous foreign demand is gradually growing less. That leaves the country with what amounts to a surplus. Moreover, foreign countries which might buy of us are unable to pay the exorbitant rates caused by the foreign money exchange scale. Much the same can be said for other kinds of live stock. Lambs are being kept high partly because of great national demand. The hog market has been gaining considerably the last few days and so has the lamb market. But cattle has been generally pretty dull.

PRODUCE MARKET UNSETTLED

In reviewing the produce markets of the past week, one finds a variety of conditions. Potatoes, as noted above, have slumped. On the other hand, apples have firmed up after an easy season, and better prices are being given in many cities. The onion market has been ruined for the time being at numerous points, while the demand for numerous kinds of vegetables has kept up well, and well ahead of supplies. Detroit quotes the following:

Apples—Spy, $3.25@3.50; Baldwin, $3.25@3.50; Greenings, $3.50@3.75; western, $2.75@3.50 per box.

Butter—Fresh creamery, 59 1-2c; fresh creamery in 1 lb. bricks, 60@61c.

Eggs—Fresh, 55c per doz; storage 43c.

Dressed hogs—Choice country dressed under 150 lbs. 17@19c; over 150 lbs., 15@16c per lb.

NEW SECRETARY'S PROGRAM

(*Continued from page 7*)

him facilities that will help him in his business. While such facilities must be furnished we find on the contrary there is now being made an assault on the Farm Loan Bank, which gives the farmer money on favorable terms, without commissions, without renewal charges, finances him to carry on the fundamental activity of our country, gives him long time that he may plan ahead where necessary. The assault is made by selfish interests, and their success would, in my judgment, be a blow to agriculture in America and result in ultimate harm to all interests. But how many business men in America have recognized this as their problem, or interested themselves in the farmer's behalf? Very few, and yet they could well afford, in fact must, interest themselves in this and other problems affecting the farmer, or they will feel the reaction.

"The farmers of America are willing and anxious to meet the problem of reducing the cost of living as a mutual one. They seek the co-operation support and sympathy of the business world, and receiving it they will do their part and more. All of us working to this end are strengthening and making permanent agriculture, the very foundation of our whole structure, and therefore doing well for our country as a whole. Every person, no matter in what walk of life he may be engaged, should have a sympathetic, helpful interest in agriculture, be helpful to the farmer, and see he gets a fair, square deal in all matters. Surely, such an attitude is an expression of the highest type of patriotism in peace."

A CORRECTION

In the beautiful advertisement of the Citizens' Mutual Auto Insurance Company, which adorned the back cover of the January 31st issue of M. B. F., an error appeared in the signature, where the word "Fire" was inserted instead of "Auto" as it appeared in the copy.

We are sure that very few of our readers noticed this error, but in justice to the company it should be stated that the insurance policy which they write on automobiles in this state, cover not only fire but theft and liability, also for a small additional charge a rider covering collision, in which the car itself is injured is added.

Inquiries regarding rates should be addressed to Wm. E. Robb, Secretary, Citizens' Mutual Auto Insurance Company, Howell, Michigan.

TEXACO MOTOR OIL ★ THUBAN COMPOUND ★ HARVESTER OIL ★ AXLE GREASE

Every farmer can get the *best* oil. It's marked with the red Star and green T

TEXACO
TRACTOR OIL

There is not a single book of instructions on tractor maintenance, issued by the various tractor makers, which does not lay great emphasis on lubrication. For uninterrupted and longtime service in the hands of the farmer, all say practically this: "The first and most important thing in caring for the tractor is to see at all times that all parts are properly lubricated with the very best grease and oil that can be obtained." Now, every farmer can obtain Texaco Tractor Oil. He need only look for the red Star and green T. It marks the quality tractor oil that economically lubricates longer, that keeps the motor working, and lengthens the tractor's life. Texaco Tractor Oil comes in 33 and 55 gallon well-built steel drums, wooden barrels and half-barrels, and five gallon cans.

Organized Ohio Farmers Market Their Wool Crop Successfully

By J. F. WALKER
(Secretary, Ohio Sheep & Wool Growers' Association.)

FIFTEEN Ohio wool growers met to discuss ways and means of protecting the great wool industry of the state on the 25th of May, 1918. It was felt that the one thing needful was the establishing in some way a plan for marketing that would eliminate the speculation of wool dealers, also the numerous hands through which the wool passed on its road to market. The average buyer of wool was almost as ignorant as to its grades and quality as was the average grower, which broadly speaking meant that neither knew nothing about the business. It was felt that the year 1918 would be an ideal year to put such a plan in operation, as the price had been absolutely determined and it would afford a fine opportunity to see what could be saved, merely by eliminating the usual marketing expenses. Some 200,000 pounds of wool were handled in this way and a comparison with grades of the same quality sold locally revealed the savings of 7c a pound to those who consigned their wools. This so encouraged the growers that an active campaign was at once put on to see what might be done with the wool clip of 1920.

We were informed early in the year that 35c or 40c a pound would be the top of the market. It was very evident that dealers anticipated paying no more than 50c for the top wools of the 1919 clip. When growers refused to accept this valuation and began arranging shipments, the market immediately began to advance, in some cases as much as 15c a pound over night in the desperate effort of certain dealers to stop the work of the organization, and for six weeks a merry fight was on. Every known argument whether legitimate or illegitimate, every bit of influence that could be brought to bear against the organization or its officials or sales agents was used. Men were told on one hand that the wools would be held to speculate with and as the market was bound to go down they would lose. On the other hand they were told that these wools were sold in advance and as the market was rapidly going up they would lose. They were told that the sales agents were not responsible or give them a square deal in spite of the fact that the concern handling wool of the association had an honorable career for over forty years and had built up a reputation for handling high grade wool in a thoroughly honorable manner.

They were also told that the sales agents sold these wools to themselves for speculative purposes. They were told they would not receive their money for a year and that if it had not been pernicious activities of the Wool Growers' Association, dealers would have paid them $1 a pound for good wool. That the officials of the Association were getting a rake-off and would sell them out when the time came. Charges of graft that would aggregate over $1,000,000 were talked of but only so vaguely there was no means of bringing these men into court and make them substantiate the statements they were so eagerly making or suffer the penalty for their falsifications.

In spite of all this, however, over 2,000,000 pounds of wool were consigned and handled thru the Association. Over 5,400 men were represented in the consignments. A brief summary of the year's business is appended which will show somewhat of the actual results accomplished. It is not only in the marketing of the wools that the growers have benefitted, they have been informed as to grades of wool and its uses, etc., as never before. They have been instructed on preparing and caring for their wools. They are realizing that the difference between good and poor wools is decidedly more when it comes to the manufacturers than they ever received at the hands of the local buyers and are not satisfied to any longer permit their good wools to help carry the poor wools to market. They are getting in a position where they can make themselves felt in no small way on matters that affect the industry.

At the present time they are actively behind the pure fabric law, realizing that its passage will mean much not only to them as producers of wool, but also as consumers and that it is a step in the right direction for the protection of the public. They are interested in increased consumption of mutton as this will afford a better outlet for their surplus stock, and they are encouraging the development of other State Associations because the stronger the organization of the different states the stronger the business generally. When the purpose of the organization is fully carried out it will mean that America will produce sufficient wool to take care of its own requirements, that the wool growers of America will have been so educated that they will produce a uniform of high quality wool and will understand somewhat of its value to the manufacturer. That the sheep industry will be stabilized so as to furnish a guaranteed reasonable profit to those engaged in it.

The question has been raised repeatedly as to the comparative advantages of the consignment plan or the county pool. The only advantage of the county pool is to the grower of inferior wool because these wools are sold generally on the old flat rate basis. Wool pooled when consisting of wools that are in keen demand are generally sought for but when these wools are not scarce or the trade is being well supplied then the pools suffer in consequence. Another decided disadvantage is the fact that they are made up of various grades and that no manufacturer would use all these grades in his plant so they are generally sold to the dealer who grades them up and sells them after taking his profit on them. Another disadvantage is that those in charge of the pool generally are men who are not wool experts, knowing but very little of grades or market requirements except that they get it through current market reports which are more or less biased to favor the dealer.

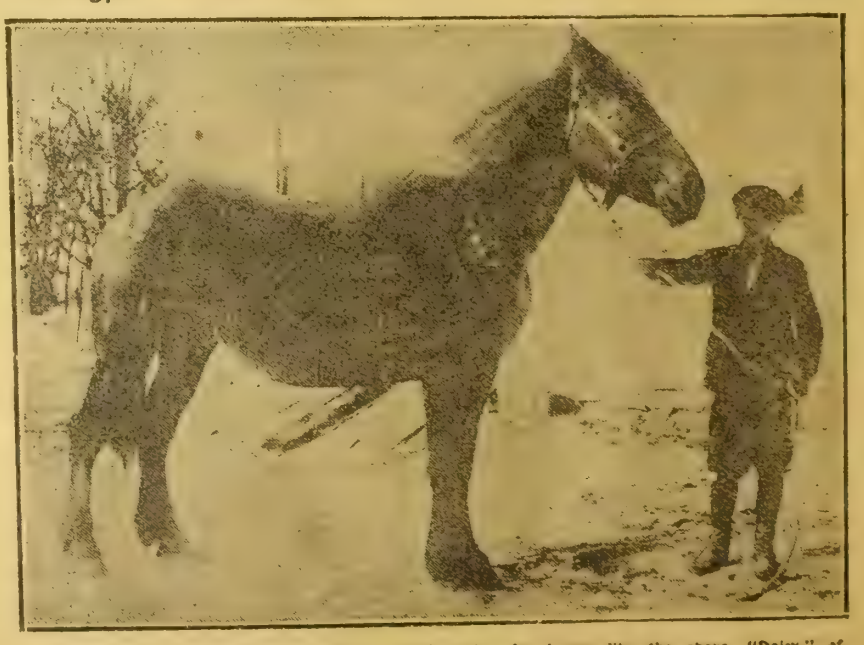
Should there be any question on this point it is only necessary to ask the grower to go back over the files of his papers carrying market reports and observe the extreme steadiness and low prices and draggy market of wool generally while it is in the hands of the producers. Then note its activities when it gets out of their hands. Ohio has long had a reputation for producing high class wools, yet Ohio would not produce one third of the Ohio delaine that was sold on the Boston market when the wool was in the government control. This means that other states have sold wool that went to market as Ohio wool. It means that an advance price was received by the dealer and the men in that state who were producing good wool were not receiving credit for it.

As a proof of what unscrupulous dealers will do, a friend of mine went to a large concern operating in the middle west about the middle of January this year and asked him what they would pay for very choice delaine wool. He was offered 58c a pound for it and finally told him that they would give him 60c. This at a time when good delaine was approaching the $1 mark to the manufacturer is certainly significant and only means that the old order must change.

The question is sometimes raised as to why it would not be advisable for growers to hire their own graders, prepare their wools and sell direct to the manufacturer without the sales agent. The methods that organized businesses have found successful in disposing of their products surely ought to be a safe guide for those undertaking adventure along this line. No business today even those having practically a monopoly on every product but has its sales agent. These agents are men who are thoroughly familiar with the requirements of all those customers who handled their products. Some of these sales agents work on a commission basis and their salaries viewed from the standpoint of a farmer often seem enormous, yet it is very evident that if they could be dispensed with and men of less ability could be employed it would be done. In the wool business no two manufacturers work the same grade of wool even though it may be the same market term, as for instance delaine. There are possibly a dozen different grades of delaine wool on the market, depending on shrinkage, character, etc. One will require a certain grade for the making of its yarn, another mill another grade, and the experienced sales agent who is conversant with the grades of the various mills will more than secure his commission in advance prices by grading wools that will be satisfactory to these different mills. More than that he is devoting his entire time to the selling end of the game and knowing the trend of the market will secure top prices for his patrons.

The Ohio Association this year expects to market six million pounds of wool. Indications point to a greatly increased membership. The organization end of the association has been carried out to a great extent thru farm bureaus and occasionally wool growers associations have been instrumental in organization of farm bureaus. The future of the wool industry at this time depends on the thought and hands of those engaged in its production. The old methods of flat rate prices and speculation are doomed. The new plan of co-operative selling at fair market prices direct to the manufacturer thru a competent sales agent seems the best plan that has been devised.

The Type of Horse Which Needn't Fear the Tractor Invasion



There is and probably always will be a good market for horses like the above. "Daisy," of "Little Gay" by a purebred Percheron stallion, is 11 years old and weighs 1,400 pounds.

One Farmer Who Made Profit on Hogs

Most farmers have become so disgusted over the losses in the hog business that they are incredulous when a brother farmer makes profit on hogs. But here is his side of it:

THERE is much said today about raising hogs at a loss. I will give the readers of our farm paper, MICHIGAN BUSINESS FARMING, my methods of making a little profit in the hog business. I endeavor to raise two litters of pigs from one sow every year. I have tried several breeds of hogs, and find the Red hog at the same age will outweigh the others, so I raise them. However I have had good success with the Poland-China and Chester White.

In selecting a brood sow, I look for a long, rangy, straight-back animal; well up on large bony legs, having not less than twelve teats, short nose and ears large that fall well over the eyes. If such an animal is bred to a boar of fine qualities about Dec. 1st you have a good start for an April litter. Should a person be so fortunate as to have very warm quarters and plenty of room for exercise, earlier pigs would be desirable no doubt, but they are liable to get too fat and by not exercising have the "thumps" and other troubles, such as indigestion, etc. When I experience such conditions, I take an old broom and brush them out of their quarters every day until they get terribly afraid of me, and will scamper when I come around. They need to get on the ground as early as possible. If the weather is not suitable, I carry dry dirt to them which they like very much. The feeding of the dam is very essential both before and after farrowing time. Some unsuccessful farmers think that a hog is something that can shift for himself and not much thought is given to its wants or needs.

It is time well spent to make the sow feel that you are her friend, by talking to her and scratching her back with a stick when you are where she is. After the first two months of the gestation period, a change of feed should be given of non-heating elements. If corn has been fed change and substitute with wheat, oats, bran and middlings. Be careful that she does not get too fat and so have weak pigs, without hair and other troubles, too numerous to mention. Milk and fine middlings, with oats and bran and an ear of corn twice a day and a few potatoes once a week are fine for her, keeping her from being nervous and cross at time of farrowing, and so keeping her from devouring her young. Should she take to that, a piece of salt pork (2 lbs.) cut in small pieces will usually suffice. It is well to keep watch of the dam, if a young sow, and take the pigs away while she is farrowing, by putting them in a warm box with a light cloth cover or carpet over them, if the air is chilly. It is well to let the little fellows have nourishment before putting them away if you can and not disturb the mother. Do not feed the sow very much for a day or so, but give her plenty of water. Do not feed her sour feed as it will reflect back to the pigs and cause trouble, not at least until the pigs are two weks old. Should bowel trouble set in, give teaspoonful of some tonic in the sow's swill, once a day, for three days. I use "Raleigh's Mountain Herb" medicine. I suppose other make of dope would answer the same purpose. After the pigs are three or four weeks old I make a "creep" for them so that they can get extra feed, such as wheat, oats and middlings dry. At noon some skimmed milk in their trough also. When they are six to eight weeks old, the sign being right—out of the stomach—I put them in an enclosure where the dam will not hear them, if possible, and give them, with a little increase of feed four or five times a day. Keep them hungry for their feed, by dealing it out in small quantities at a time and so making them "stretch" out instead of getting short and fat. A little shelled corn now would not injure the rations.

I plant a lot of sweet corn and when it is fit to use, throw the stalks and corn to them, not too much, as it will sour them. When the stalks get tough I jerk it and feed it plentiful, watching their tails to see if they "curl" all right. If they don't curt I change feed immediately.

At the end of six months, under this treatment, you should have a hog weighing around 250 lbs., at a small cost besides your time and trouble.

In three to five days after weaning the pigs, the sow will come in heat, and so get ready for another litter in the fall.

Pigs need more care in cold weather. Feed them warm swill especially in the morning as they come from their warm quarters. Their bedding must be kept dry and plentiful, and if everything works according to schedule, you will be pleased with results. I believe that the hog business and prices are going to be in the farmer's favor again, soon. The man who sticks will be the gainer in nearly all lines of farming.

I know of large farmers going out of the sheep business when Wilson was elected because the tariff loomed up before them so greatly that it worked a detriment to them. Just a word more about feeding. In cold weather feed some corn, wheat and rye ground three to one, oats, charcoal, wood ashes and middlings. Change around on this as they may require, and you will come out with profit, but not so large as before. I consider that expenses run about one-third in warm weather and one-half in cold weather feeding. Would like to hear from some of the practical men who have had these economic conditions to solve.—*F. H. Carpenter, Otsego, Mich.*

PLEA FOR SOY BEANS

N STUDYING over the clover seed situation tonight I have come to the following conclusion: With clover seed from $30 to $32 per bu. can a farmer afford to sow it, when soy beans (one of the greatest legumes if not the greatest) are selling at from $5 to $6.50 per bushel of same number of pounds. Now the soy bean situation is very acute also. The supply is very much below normal and beans every month are taking a raise as is clover seed. To relieve the bean shortage why not every farmer that has from 1-2 to 10 acres that he can put in soy beans to advantage, do so and then next year the soy bean proposition will not be handicapped. Soy beans and corn, as you know, are one of the finest combination crops for hogs that can be raised and one reason is that if you inoculate the soy beans that you are storing up in the ground a good lot of nitrogen that the corn is taking away by its growth. It is surprising to know the value of inoculation in the growing of soy beans. Experience only will show how much nitrogen can and will be produced if handled in the right manner. The amount produced by soy beans may be far in excess to that of clover on same number of acres. The writer has had stocks of soy beans that the roots would be full of nodules as large as the end of a man's thumb, or 1-4 to 1-2 inches in diameter.

The hog proposition looks good to me as there have been hundreds of farmers that have gone out of hogs entirely owing to the loss they sustained on them this fall by the market dropping below 50 per cent in 90 days, and I cannot blame them, only it makes it better for those who stay in the game (as we may rightly call it, I guess.) The rule of supply and demand will invariably rule if given a fair show.

In summary, will say, sow some soy beans for seed. Get your seed early and avoid the rush and then handle the crop to best advantage by inoculating and well tending, then get beans in the dry as soon as possible in the fall and sow to wheat getting and additional few bushels to the acre and I believe you will be more than pleased in dollars and cents and also that you have as much or more nitrogen in the soil as if you had sown the same number of acres of clover seed at a very much higher initial cost. Then if you care to sow clover seed in the wheat do so and the next year cut a good crop of hay and seed then turn under for corn with about 9 or 10 loads of manure spread on along in fall or early winter and I believe you will be more than pleased again with the results.—*G. P. Phillips, Eaton County, Mich.*

Northern Grown Seed Corn Samples FREE

85 to 90 Day Varieties

Adapted to the Climatic Conditions and Short Seasons of Michigan and Other Northern States

Your corn crop is important. Make it profitable by planting Isbell's improved, high-yielding varieties and harvest 10 to 15 bushels more per acre. Write for Isbell's 1920 Catalog.

Isbell's Seeds
As They Grow Their Fame Grows
TRADE MARK

We specialize in the following leading sorts and others:
Isbell's First Choice—the best early yellow dent
Silver King—the prize winner white dent.
Northwestern Dent—the earliest dent corn.
Isbell's Sure Thing Dent—a sure cropper.
White Cap Yellow Dent—for the lighter soils.
Flint Corn and Ensilage Corn.

BALDWIN OF BRIDGMAN.

Any one who knows will tell you that Michigan is a great Fruit Growing state. All varieties grown in any of our Northern States do remarkably well in Michigan. Climatic and soil conditions are ideal—Berry Plants grown in Michigan are best — better still when grown on New Ground — Baldwin grows them that way.

Nothing better than berries and small fruits to preserve health and maintain happiness during these reconstruction days. Our plants are true to name. All free from diseases. All northern grown on new rich ground, producing strong, healthy, large, heavily rooted plants. Millions of them, as good as ever were grown, offered our customers this year. We have had a wonderfully successful growing season.

Baldwin's Berry Plants

produced by Baldwin himself, are sure growers. Every grower or prospective customer, large or small, may have our big handsomely illustrated and thoroughly descriptive Berry Book. It contains valuable information, showing how to plant and produce successfully, delicious fruit from Baldwin's Berry Plants. It explains how to have the earliest berries in the Spring and the latest berries in the Fall. For home garden or market purposes, for pleasure or for profit. Baldwin will show you the way. Start right. Write tonight.

Entered as second-class matter, at Mount Clemens, Michigan

Society and the Farmer.

WE HAVE talked much of the farmer as a "business man." Let us for a few brief moments think of him as a social being, entitled to education, to understanding of government, to participation in the social functions of life, in fact to all that culture, refinement, civic and religious consciousness, which are the heritage of every well-rounded citizen of a free country.

The rural comunity has been deficient in the educational and social side of life. At first, necessity was a grim obstacle that stood in the way of their development. The matter of prime importance and immediate and continuous action was the making of a living. Sufficient rewards could not be earned in one half of the year to tide the farmer and his family over the second half of the year. Necessity was a master that exacted every ounce of effort during every moment of the waking day. Therefore, education and the development of the farmer's social natures were sadly neglected.

But these conditions are prevalent no longer. True, they exist in some portions of the country, but as a general thing the farmer has by hard work, thrift and perserverance managed to put his farm on a business basis, create a working capital to tide him over brief spells of hard luck or recreation. To many farmers the problem of making a living and laying by a sustenance no longer worries them. They are free to give more attention to the educational and social requirements of themselves, wives and particularly their children. To those farmers who are not so fortunately situated we would say that the first essential is to put their business in such a position, and the second essential as good citizens is to develop their social natures, become intimately acquainted with the processes of government, the requirements of citizenship, and to spend such time as they can spare in their intelligent consideration. But no farmer can afford to neglect the one essential for the other. A thorough education is not only the right of every child born on a farm but the future demands of all occupations, including farming and home-making, will be for abilities that can only be acquired through the teachings of the grades, high school and the college. Your children will in future years thank you far more for a good education and the ability to meet and talk without restraint with other people than they will for the few paltry dollars that you have saved for them.

If the hope of democracy rests upon the farmers, the farmer must equip himself to justify that hope. He must not only have the heart to interest himself in politics, in art, in religion, etc., but he must know how to use that knowledge in the welfare of the individual, the home, the state and nation. A man can be a good farmer without a knowledge of these things, but he cannot be a good citizen.

Foiled!

SOMEWHERE in Michigan are several gentlemen who are grating their teeth and muttering under their breath, "the ungrateful wretches." These gentlemen spread a fine net to ensnare the Michigan State Farm Bureau. They loaned the Bureau money. They took two of the Bureau heads to sit among them. They put one of their number in the Bureau organization. Then they sat back to await results. The Bureau, in the role of the unsuspecting fly walked straight into the spider's web. Friends warned it, and tried to keep it away from the snare, but to no avail. Then the farmers of the state took a hand, tore away the web and rescued the Bureau before Mr. Spider was aware of what was being done. The separation is not entirely complete, but the financial obligation has been repaid, and the Farm Bureau officers and delegates took action at East Lansing last week which virtually renounces all affiliation with the Bureau's "city friends." Foiled again, gentlemen! The farmers are too much for you.

"We have discovered that the Coalition Committee loaned us their money for their benefit instead of ours as we supposed," was the admission of a member of the executive committee at East Lansing last week. A perfectly natural discovery! What this member did not know was that the Coalition Committee was using the name of the Michigan State Farm Bureau in the propaganda with which it is flooding the state at the present time. "One of the functions of the Farm Bureau and the Coalition Committee, etc.," reads one of their circulars, which was prepared and mailed out to several hundred newspapers in the state without the knowledge or sanction of the Bureau. There is danger in this word-wedding of the Committee and the Bureau, even though the Bureau is entirely ignorant of the ceremony and does not agree thereto. We sincerely hope for the sake of the Bureau's good name and influence that it will take early action to sever the last link with the Coalition Committee ere that propagandist organization drags the Bureau into a mire of politics, legislative entanglements and industrial controversy.

As for the officers and leaders of the Farm Bureau, we think they have entirely vindicated themselves of any intentional betrayal of the farmers' interests. Nothing that transpired at the annual session could longer substantiate such a suspicion if it ever existed. The new Constitution should stand the test of time and criticism. The recommendations of Sec. Bingham are all excellent, and should meet with the approval of all farmers. We want to particularly commend Mr. Bingham for his attitude toward the beet growers and his recommendation that they be given financial assistance.

Michigan Business Farming welcomes the opportunity that has thus presented itself to clear the good name of the Michigan State Farm Bureau, and to urge again that the farmers interest themselves in the movement.

Abolish the State Constabulary.

ONE OF the first acts of the next legislature should be to put the Michigan State Constabulary out of business. If there was any reason at all for its creation which is disputed by well-informed men that reason no longer exists. The nation has banished booze. The enforcement of the liquor laws is now a national function rather than a state function, and judging from the character of the enforcement officials and the amount of money that congress has voted for their use the national prohibition law will be enforced as well in Michigan by the national authorities as we ourselves could enforce it through the state constabulary or any other police force we might create.

Word comes out of Lansing that the Constabulary is "broke," having spent $180,000 of the people's money since the first of last July. Prior to that time it had spent $831,000 of the five million dollar "war fund". But that's ancient history. We are more concerned with the present and prospective cost of maintaining this military institution. It has not and it cannot return full value for the money it costs the taxpayers. The sensible the economical, the obvious thing to do is to abolish it altogether and spend the money in behalf of our suffering educational and charitable institutions.

Farmers Get the Boomerang

THE LAST official report of Michigan's live stock population shows a large increase in numbers over last year, but a value eight millions dollars less, pretty good evidence that the investigation into the high cost of living has had its effect. Now, we suppose the attorney general will be prepared to tell us exactly how much of the farmer's loss is the consumer's gain.

Experience and common sense tell us that investigations into conditions that are world-wide are fruitless so far as providing a remedy is concerned. At the best only a very few individuals and cases of profiteering can be investigated, and while these are under fire and temporarily forced to abide by the dictums of the government, thousands of others continue their usual practices. The government has virtually told the consumer to expect a reduction in living costs without a similar reduction in income. It can't be done, and the club that the government uses acts as a boomerang that starts on the trail of the profiteers but always comes back to the producer and raps him on the shins. The farmers ought all to remember the professional high cost of living Nemeses, who deprive the farmer of his legitimate price, put it in the pockets of the profiteers and boost the cost of living another notch or two.

Coasting Vs. Climbing

ONE of our readers protested the other day that he had heard about using better sires and better cows, ever since he could remember. But now the shouting is louder than ever, and more dairymen are getting into the business of purebreds and grades, while the scrub is passing out. It is well that this is true and too much harping upon the subject is almost impossible. Here is an extract from a letter from Richard Strabbing, tester for the St. Joseph County Cow Testing Association, who reports big success for the cow testing work in his county:

> How about it, brother testers and dairymen, in our line doesn't it seem as though it pays cash to co-operate? Sleeping dairymen, and there still are plenty of them, must wake up to the fact that the scrub bull and the boarder cow are like an auto without gasoline. Without bettering your stock you are staying on the same spot or coasting backwards down hill.

There is nothing especially new in Mr. Strabbing's statement, but it puts the situation in just a little bit different light. The increase by many thousands in the purebred and grade cattle in Michigan the past year shows the trend of action of business dairymen in this state. No, Michigan is not coasting down hill backward—it is climbing up and up, and may she never cease climbing.—V. E. B.

Our "Shocked" Legislators.

NEWSPAPER advices state that the Michigan delegation received a "shock" from the resolutions adopted at the farmer-labor conference in Detroit several weeks ago "instructing" Michigan's representatives in congress to vote for an extension of rail control. Fine! That shows progress. A good many men who go to the legislature and to congress show that they are quite impervious to apeals, petitions, requests and supplications. Such hackneyed approaches go into one ear and out the other, but if "instructions" will register a sensation of "shock",—a jarring into consciousness, if you please, of the fact that the folks back home are on the alert,—well, three cheers for the instructions. Let's have more of 'em.

A. Mitchell Palmer ought to turn his searchlight of investigation upon the State Farm Bureau. They adjourned their annual session last week withiut passing resolutions declaring their Americanism or their opposition to Bolshevism.

WHAT THE NEIGHBORS SAY

PUBLIC UTILITIES

To all who have studied the question of public ownership of public ultilities in this and other countries, very few, if any, favor private ownership instead, except those financially interested in such business or some other big business. It is well known that all, or nearly all men interested in some monopoly or so-called "Big Business" stand together.

Many, when government or public ownership of railways, water, light, etc., etc., is mentioned, think of the government or public as some monster far off, instead of we, the people. Of course, very few would favor turning our wagon roads or streets back to private or toll roads, our schools to private schools, our courthouses, postoffices, parks, fair grounds, or even the sun and air. But hold on, the wise Creator so fixed sunlight and air so as yet the cunning few cannot control them and they remain common property.

One of the great monopolies in our country not run for the benefit of a few, even the few who manage it, is our postoffice department. Yet the monopoly is so strict that no one is even permitted to make a postage stamp, card, stamped envelope, issue a money order, etc. Prices on the same have not been advanced. They are not held up for all that the traffic will bear. No one has ever gotten rich out of it; no one even depressed by it; no strikes. It goes to the uttermost corners of the earth for the poor for the same meager price as for the rich. It is no respecter of persons, has no favorites, no exorbitant salaries like private corporations.

The difference between a publicly owned and a privately owned utility, the former is run for service without profit while the latter is run for private profit, which has given us most of our millions and millionaires. The ten million dollar fund recently raised by the railroad securities and security holders, and used to advertise in the press, hire speakers, create public sentiment against public ownership or even public control, will chloroform many unthinking who will at once place themselves on the side of the monopolists to their great rejoicing and profit—*B. E. Kies, Hillsdale County, Mich.*

The opponent of government ownership of public utilities will admit that it is a most beautiful theory, but that it will not stand the test of practice. If a private corporation can and will conduct a public utility giving maximum service for the minimum of cost and be satisfied with normal profits, there is really no special advantage to be gained by substituting public ownership. But, when a private corporation is given a monopoly of a public utility and abuses the confidence that the public has placed in it by exacting the highest rates possible, giving the least service that it is safe to give, and paying exorbitant salaries and dividends, the patrons of that public utility are fully justified in taking over its control providing that it protects the legitimate investment of the private owners. The war brought the transportation systems of the country into the limelight where all might observe and easily ascertain that the roads had practically wrecked themselves upon their own rocks of manipulation and watered stock. It would appear that the railroads have abused the confidence that the public has placed in them, and it is therefore a proper question for discussion as to whether or not, in view of our recent experience with the railroads, it would not be better for the public to assume the control and operate them for service instead of profits.—Editor.

MICHIGAN AS A SWINE STATE

Ever since I can remember the farm papers have been crying for the farmer to get a better bull or cow, but so far not one of them has raised his voice above a whisper to tell the Michigan farmer to get a better boar or sow. Now the breeder has his share of that blame too, as he has been asleep.

When we see the wonderful progress made in Minnesota and the Dakotas in the past five years, one wonders why Michigan has not been keeping up. We have the greatest pastures, raise all kinds of the best of small grains and corn in a large part of the state, and we are at the threshold of the greatest markets of the country. Nearly every farm carries some hogs, and yet you can find less than 1 per cent of pure breds.

The farmer is not the one at fault, because he will buy good ones if he can be made to see where they are enough better to warrant the investment, and it is up to the breeders and farm press to show him.

The Mich. Duroc Ass'n is going to try to do its part in the next year to show him where he is at, and we will need your help. Of course we understand you cannot champion one breed but you can do a lot along general lines. I trust you will give this some of your attention, as it is to your interest as well as ours.

With best wishes, I am yours very truly—*W. O. Taylor, Breeder pure-bred Duroc-Jersey Swine, Milan, Mich.*

We extend wide-open arms to the Michigan Duroc-Jersey Swine Breeders' Ass'n and all other swine associations in the state to use the columns of M. B. F., to tell the farm folks of Michigan about their respective breeds. We know of no reason why Michigan should not be a great hog state. Surely if we can raise such corn as we did last year the feeding problem will be largely solved. We've boosted Michigan as a cattle and dairying state, a sheep state, and we've made good on our boast. From now on the swine shall have their inning.—Editor.

WHAT DOES IT COST?

To say that the M. B. F. is one of the best papers published for the farmers would be speaking very lightly of the matter. It is the best and no getting around it. Hits the nail on the head and every dinged time and "begorry," as Pat says, "is doing things all the time," Now to get down to brass tacks. A farmer these days has a right to know what is causing his increased prices in everything, where his tax money goes, and the like, along with the right to know how much it costs him to produce and to have a say in who should be his representatives to our legislature. It is the right time for farmers to organize the same as other corporations and state what their prices should be.

Take, for instance, in the cost of beans. How many farmers know how much it costs to raise a bushel. The answer is that few know. The farmers have been playing a losing game and the time has come for them to come on and say, "Organize our county." Arenac is a banner bean county but the present price of beans, $6.50 per cwt. is not enough and at the high cost of labor, beans cannot be raised at a profit short of around $8 per hundred. Sugar beets are another crop that our county is a banner for and the fight for better prices is on and here's hoping that it will still go on until right is produced. We need not look for any decrease in prices of farm tools, taxes or anything that the farmer has to buy for some time to come.—*M. B. R., Arenac County.*

The first to feel the drive on the high cost of living is food. Why? Because the farmer, of all producers, is in the poorest position to defend himself. It is hardly to be expected that prices of other commodities, which are based on cost of production, will come down. It behooves the farmer, as you say, to organize and protect his own industry.—Editor.

The Week's Editorial

"Should a Farm Paper Follow Principle or Experience?"

BECAUSE I think, as a rule, I can make better use of the limited space in these columns, I do not often print any of the great mass of letters which I receive commending the work I am striving to do for the advancement of the interests of the agricultural and industrial producers of the grain belt. Such letters are always encouraging and helpful to me in various ways, and I want my correspondents to know I appreciate them greatly, even though I do not print many of them. I am here reproducing excerpts from two such letters, only to serve as texts for a few observations which I believe to be timely, and which I trust will not be regarded by my readers as inappropriate. Mr. S. M. Gearhart, of Bolan, Iowa, writes:

"I have been taking your paper for the last four years. I have read your editorials with much interest, and have found you to be right in almost every case. I am glad there is one man in this country, printing a paper that reaches as many people as yours reaches, who is not afraid to pass his judgment and to uphold the farmer and the laboring man."

It is a comparatively easy matter for an editor of a farm paper to "pussyfoot" on questions of great importance to the farming interests; to give partial support to this side of of vital contention, and, again to give partial support to the opposing side of the same contention; to give countenance and encouragement, for instance, to the dishonest propaganda of corrupt interests against particular farmer movements and, in the next breath to emit fulsome and slobbering editorials on "the importance of farmer organizations;" to oppose to the limit economic co-operation by and among the farmers (until co-operation has become a demonstrated success) and then to favor co-operation, after the farmers have compelled recognition of the principle. In short, it is easy to play the game of the special interests in every way, and then to jump on the band wagon of popular favor, when, after years of struggling and political battling, the farmers have succeeded in forcing popular recognition of the righteousness of their principles and policies. My readers may have come in contact with so-called farm papers which pursue this two-faced policy which is sometimes described as "playing both ends against the middle."

But the policies of farm papers other than my own are matters of no concern to me, and in truth I give but little thought at any time to papers of the class I have mentioned. What I am particularly interested in is in making my own farm papers in every way truly worthy of the large circulation which they enjoy; truly worthy of the confidence and good will, which they are receiving in full measure from several hundred thousand agricultural producers in this great section of the Middle West. It, of course, pleases me to have a thoughtful reader say that he has found me to be "right in almost every case," but it is much more gratifying to me to glean from his letter the assurance that he believes that I mean to be right in all cases, though, humanlike, I may err in some. Another reader, Mr. J. B. Dole, of Mendota, Missouri, is kind enough to say:

"The miners in our camp told me of your article in defense of the miners, and I borrowed a copy of your paper, and after reading it I breathed a prayer of thank to God that we had a man big enough to stand up for the rights of his fellow man, regardless of what others might say or do. May you live long to point out the errors of those "higher up," as they are sometimes described, but some of whom are disgraces to our nation."

Mr. Dole's words, far from arousing in me any feeling of personal pride, give me a spirit of humility. I only hope that I may be given the mental and moral sturdiness that will enable me to measure up in some degree to his generous estimate of me.

But as I said at the beginning of this article, and as I have said before it all comes down to the question of what a publisher's aims and ambitions are. If he wants to be all things to all men; to dwell in peace and harmony with his fellow men, because he stands for nothing that could offend anyone; to say what he thinks others are thinking; and to follow instead of lead—if these are his ideals, he will choose the path of least resistance by making his motto "Whatever is, is right." I have no quarrel with those who hold this ideal, for they have a right to think as they please. But it does not happen to be my ideal, and I could not follow it without losing my own self-espect, which I value more than anything else in the world.—*Iowa Homestead.*

A TALE OF WOE

Enclosed find my subscription for three years. You may need the money if you are anything like the fellow that is mentioned in a little piece entitled "Clings to life to learn what is coming next."

The following letter was recently received from a customer to whom a letter had been addressed calling his attention to a payment past due on a purchase:

"For the following reason I am unable to send you check asked for. I have been held up, held down, sandbagged, walked on, sat on, flattened out and squeezed first for federal war tax, the excess profit tax, the Liberty loan bonds, thrift stamps, for state, county and city taxes, the capital stock tax, the auto tax, the merchant's license and the broker's license, and by every society and organization that inventive minds can conceive, to extract what I may or may not possess, from the Society of John the Baptist, the G. A. R., the Women's Relief, the Women's Suffragette, the Navy League, the Red Cross, the White Cross, the Black Cross, the Double Cross, the Children's Home, the Daughters of the American Revolution, the Jewish Relief, the Armenian sufferers, the Belgian Relief, and every hospital in town. And I am inspected, suspected, examined and re-examined, cussed, discussed, knocked, boycotted, talked to, talked about, lied to, lied about, held up, robbed and nearly ruined, and the only reason why I am clinging to life is to see what in h—l is coming next." You certainly are doing a great work. Keep it up.—*Subscriber in Van Buren County.*

Well, you know what Sherman said about it.—Editor.

PROHIBITION VS. WHAT?

The editor of M. B. F. and the writer do not agree on prohibition at all. The writer lived and worked in big cities for 37 years and saw considerable drinking. He found a big majority of the drinkers were decent drinkers. The quicker the small minority drank themselves to death the better. But it never came under the writer's personal observation that anybody did drink themselves to death. In other words he never saw anybody whose death could be directly traced to the immoderate use of liquor.

Can you say as much for prohibition? To judge by the papers prohibition has been the death of more people in the last few weeks than J. Barleycorn was in the last 50 years.

Wet orators told us if prohibition succeeded our taxes would be higher. "Well," were they right? "Are yours any higher?" Mine are more than four times higher than they were 15 years ago. If the government income is cut $500,000,000 a year, will the government spend that much less or will they raise it on something else? Just one guess. You guessed right, they'll raise it on something else. Our children's ice cream cones, on Peptogenic Milk Powder or Mellen's Baby Food.—*Edw. J. Schubert, Ingham county, R. F. D. 4*

In the early days of the prohibition agitation the temperance people presented indisputable facts showing that a large percentage of the cases of crime, insanity, poverty, disease, etc., was caused by the chronic use of alcohol Crime means prisons. Insanity means insane asylums. Poverty means almshouses. Disease means hospitals. The maitenance of these institutions cost the nation many hundreds of millions of dollars a year. Today the almost unanimous verdict, —based no longer upon opinion, but on evidence,—is that the temperance people were absolutely right. Instances are legion of jailers closing their jails altogether,—no occupants; of sheriffs and other officers of the peace resigning their jobs,—no business; of hospitals abandoning enlargement plans,—no call for the extra accommodations.

Some day when the entire nation shall have given prohibition a fair trial the figures will be compiled to show what effect it has had upon the business of these various institutions, and how much it has increased or decreased taxes. So far as your state taxes are concerned they could not be affected by prohibition. The state received no share of the liquor tax. The license fee was divided between township, village or city and the county in which they were located. The total liquor receipts in Michigan in '15 were $1,-709,709.63. Of this amount Wayne county received $787.675.00, leaving a balance of $922,034.63. Apportion this over the other then wet counties of the state, and you can readily see what a small fraction of the entire township and county expenditures the liquor tax took care of. If you want the real secret of high taxes compare the annual cost of government for ten years back and you'll have it.—Editor.

The Farm Home
A Department for the Women

Edited by MABEL CLARE LADD

FOR WEEKS the roads had been piled high with drifts and well night impassable. Only necessary travel was indulged in and then on the cross roads the men had to dig regular tunnels through which the faithful horses or puffing "Henry's" pulled their loads. All the reading matter had been given a more carefnl perusal than usual, even the ads coming in for more than their usual share of attention. Everyone was longing for something to do out of the ordinary when, on Sunday morning, February the 8th, came a telephone message from Martha Graham who lived out on the main line.

"Hello, Sarah, do you know I am so tired of my own company that I have decided that if something does not happen pretty soon, I'll simply die. Yesterday's paper said that we could look for milder weather this coming week and so, as I sat by the fire darning Joe's socks, I just thought I would start something. You know this is Valentine's week—also Lincoln's birthday. All the papers are full of suggestions for decorations, menus, etc., and I just thought to myself, I don't care if it does sound funny for me to be having a Valentine party. I'm going to do it! Won't you and John come over Thursday evening early, dressed like children and be sure and bring a home-made Valentine. Come early—as early as seven anyhow."

We had longed for something different but this was so unusual that we hesitated, but finally reluctantly consented to come dressed up, for Martha has insisted that no one would be admitted who wasn't dressed up. Well, I was certainly busy the first three days of that week rigging up clothes for John and me. I found a blue serge summer suit of John's which we used by pulling the pants up around the knee until they puffed up like a boy's short trousers, then we pulled a pair of the boy's long black stockings on over them, rolling them back like socks. He had no oxfords so we took a pair of dressing slippers which he put on for slippers after we arrived. Then a soft shirt of white which John had last summer with a black ribbon bow tie made him look quite boyish. I did my hair up in kid curlers the night before and in spite of the family kept it up so that I could wear it in short tight curls, with a big butterfly bow of bright red ribbon right on top. Then a white dress of last summer's wardrobe, was easily shortened. John insisted that we would feel foolish, but really when we arrived it just seemed as if everyone had entered into the spirit of the thing and some of them had actually borrowed their children's clothes so that we weren't at all conspicuous, and oh, what a good time we did have!

The entertainment which our hostess provided began when the daughter of the house played "Auld Lang Syne" while her mother read the lines of that old familiar poem:

Backward, turn backward, O time, in your flight;
Make me a child again, just for tonight;
Let me forget the long, weary years,
The trials and troubles, the heartaches and tears.
Let me be young again, happy and gay;
Let me forget the cares of the day;
Let me forget the hair that is white,
Make me a child again, just for tonight.
Turn back the years in life's busy whirl;
Just let me be a dear little girl,
To share in the joys of childish delight;
Make me a child again, just for tonight.

Everyone had to suggest some game they had played as a child, and an hour was spent playing these games, then while some of the "boys" popped corn, the "girls" made taffy of corn syrup and just before we left for home, each one was invited to pull a valentine from the heart shaped box which our hostess had provided. Of course the valentines were the ones which we had made and which our hostess took from us as we came in, attaching them to ribbons which extended from the heart shaped box.

Quite a little ingenuity was displayed in the making of those valentines. Some there were which

Here is how a Serbian woman dresses when she goes out to help with the harvests.

showed real talent on the part of neighbors whose ability to draw we had never suspected while the one which won the most favorable comment was an original poem which a strapping young fellow had written and dedicated to his mother:

To His Mother

Today an old sweetheart of mine
Is my precious Valentine;
My best and oldest sweetheart you
Are, mother, dear. So loyal, true
And tender always. And your love
I cherish over and above
Earth's fairest gifts. You've made of me
All that I am and hope to be,
Mother mine,
My Valentine."

And as we drove home that evening, and discussed how much fun we had had and how little expense there had really been in connection with the whole evening's entertainment, we resolved to open our home more to the neighbors, and ourselves take life a little less seriously.

HOME, HOME, SWEET HOME!

With the desire to make this page more attractive, we have decided to "dress it up" with pictures of homes and home scenes of our readers. It is not always the largest home that is most attractive, but the homey home—you know the kind—the one which makes you want to stop and visit when you pass. Perhaps it is because of the well-kept grounds, or the lovely flowers—or perhaps it is the children at play with their pets in the yard which suggests that here is a real home. There are thousands of these homes in Michigan and almost everyone has a picture taken on a bright Sunday afternoon of the baby, or perhaps the little boy taking his first horseback ride or it may be just a picture of the house. We want to share these home scenes with all our readers. So for one month we will offer a prize for every picture which is sent in which is clear enough so that we can use it in our paper. We will return all pictures that we cannot use—immediately, and those which are available will be used and then returned.

Send all pictures direct to the editor of this page and beginning with the March paper, watch for the pictures, one of which will appear each week.

HELPFUL HOUSEHOLD HINTS

To clean feathers soak them in benzine and then rinse on the clean benzine and dry out of doors. Be sure and keep away from the fire.

For grease spots on silk, lay a blotter under the spot and then rub some warmed flour on the stain. Brush off and then renew until the stain disappears.

When washing your windows, add a small quantity of blueing to the water.

If the leather in your shoes becomes hard, rub the shoes with a little caster oil and they will become soft and pliable.

The best way to keep black leather shoes from looking worn and also from breaking is to dip a flannel in olive oil and rub into the leather.

Four eggs to a quart of milk is the proportion for boiled custard. Five eggs for frozen desserts.

If porcelain baking dishes become discolored on the inside fill them with buttermilk and let them stand for a day or so. The acid in the milk will remove the stains.

A little sugar added to oatmeal while it is cooking adds to the flavor.

A thick slice of onion laid on top roast of beef and cooked with it, gives a fine flavor to meat and gravy.

When setting bread sponge, omit putting in salt until light and ready to knead. The salt partly kills the yeast germs and this retards fermentation.

An apple in the cake box will keep the cake moist.

A tincup of vinegar set on the back of the stove and kept boiling while cabbage and onions are cooking will prevent the smell from going through the house.

After doing kitchen work, rub the hands with salt for a few minutes and then rinse with tepid water. This will smooth them so that you may embroider or sew without difficulty.

Crumpled tissue paper is one of the best things for polishing mirrors and glass of all sorts after washing.

Marks on woodwork made by scratching matches will disappear when rubbed with a lemon.

Half an ounce of gum arabic and half a teaspoonful of boiled milk mixed with enough plaster of paris to make a creamy paste is an excellent thing with which to mend broken bric-a-brac or china.

AN OVAL DOILY

A very charming oval doily 13 in. by 6 1-2 in. can be made from this simple motif in eyelet embroidery. The leaves and floral petals are eyelets, the edge in the well padded buttonhole stitch and the lines in outline.

LATEST STYLES and New York Patterns

No. 3044.—Misses' Dress. Cut in 3 sizes: 16, 18 and 20 years. Size 16 will require 3 1-2 yards of 44-inche material. The skirt measures 1 2-3 yard at the foot.

No. 3059.—Girl's Dress. Cut in 4 sizes: 4, 6, 8 and 10 years. Size 10 requires 3 1-2 yards of 44-inch material

No. 2709.—Ladies' Dress. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 6 1-2 yards of 36-inch material. The skirt measures about 2 1-4 yards at the foot.

No. 2657.—Child's Short Clothes Set. Cut in 5 sizes: 1, 2, 3, 4 and 5 years. Size 4 requires 3 1-4 yards of 27-inch material for the dress, 1 3-4 yards for the petticoat and 2 7-8 yards for the combination.

Nos. 3046-3048.—Business Costume. Waist 3046 cut in 6 sizes: 34, 36, 38, 40, 42, and 44 inches bust metasure. Size 38 will require 2 5-8 yards of 36-inch material. Skirt 3048 cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. Size 24 requires for a one-piece skirt, 2 5-8 yards of 48-inch material if cut crosswise, and 2 1-8 yards of 54-inch material if cut lengthwise. With front and back seams—2 1-4 yards of 54-inch material will be required if cut with front edges straight, and 2 3-4 yards if front and back edges are cut bias. The skirt measures about 2 1-2 yards at the foot. Two separate patterns.

No. 3045.—Ladies' Envelope Chemise. Cut in 4 sizes: Small, 32-34; medium, 36-38; large, 40-42; and extra large, 44-46 inches bust measure. Size medium requires 2 5-8 yards of 36-inch material.

NEIGHBORLINESS REVIVED IN AMERICA

AMERICAN rural and village life is experiencing a new era of neighborliness. It began a score of years ago, but received its greatest impetus during and since the war. Well-housed rural clubs—something almost unheard of a few years ago—are springing up all over the country. Because they mean so much to their neighborhoods, and because this neighborhood movement contains so much of promise for the 50 million Americans who live in the country or in village of less than 2,500 ,the United States Department of Agriculture has sent representatives to learn first hand the history of nearly 300 of these club houses. The results of this investigation have been recently published in a bulletin "Rural Comunity Buildings in the United States," which can be had by addressing a request to the United States Department of Agriculture, Washington, D. C.

This publication tells the extent of the rual club movement, the character of the club houses, the uses to which they are put, how their erection was financed, and how they are managed. In addition details are given regarding eight different clubs representative of as many different kinds of communities. How each solved its particular building problems is explained.

The majority of the structures visited were erected by popular subscription or by the sale of stock in a community organization. In some cases the projects were financed by local manufacturing concerns. Other buildings were the gifts of public-spirited individuals. A few were erected by public funds raised thru taxation or the sale of bonds. In all cases the structures are the centers of a great variety of wholesome activities such as communities without central meeting places can not enjoy. One evening a building may be used for a basket ball game, the next night for a neighborhood dance, later in the week for a political gathering ,and on Sunday for union church services or union Sunday school. Any rural or semi-rural district interested in erecting a club house—whether it is to cost $2,000 or $50,000—is expected to find helpful suggestions in this publication.

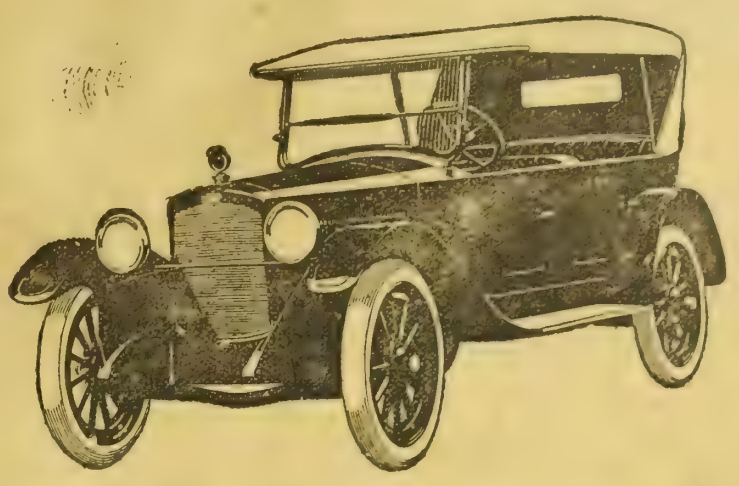
Many Amusements Provided

Many of the simpler structures, located in the open country, contain an auditorium with movable seats which permit it to be transformed into a dining room, an athletic room or a dance hall. Usually, also, there is a stage and a well-equipped kitchen. These features make possible banquets and entertainments which mean much in the life of rural communities. In the club houses in smaller towns, in addition to the rooms mentioned, there are often a library, a reading room, a women's rest room, and a meeting place for various organizations.

The club houses in the county seats and larger towns are more pretentious, some having special banquet rooms, gymnasiums, swimming pools, billiard rooms and offices for the county agent and for local commercial club secretaries. The following is a partial list of the varied uses to which these buildings are put: Lectures, night school classes, home talent entertainments, dances, banquets, socials, political meetings, election, indoor athletic games, welfare work, boys' and girls' club work domestic science classes and demonstrations, agricultural society meetings, farmers' institutes, and co-operative purchasing and marketing activities.

The stockholders, and in some instances the associate or social members, elect a board of trustees of from three to nine members who manage the building. This same body, or the board, elects the usual officers, such as president, vice president, secretary and treasurer. Various committees are either appointed or elected. The details of management are often delegated to a house secretary, a physical director or a caretaker. In a few instances, where buildings have been presented by an individual or an industrial concern, control is placed in a select board nominated by the donor and possessing power to appoint its successors. Township and city buildings are managed by the usual officials.

IT SURPASSES COMPETITION



GRANT SIX

This new Grant Six surpasses everything anywhere near its price in beauty, quality and richness of finish; it surpasses them all in power and performance and surpasses them in roominess and comfort just as it surpasses them in practical economy.

If we told you about its fine upholstery, its excellent body finish, its completeness of equipment, including even a Boyce Motometer, you would undoubtedly sense the fact that the car is unusually complete and surprisingly good value in every way.

But you don't buy a car that way. You see it. You ride in it. You size it up in every detail and it is the car itself, not the beauty of its description, that sells you.

Experience gained in building over fifty thousand light sixes is embodied in this car. Careful buying, and quantity production, makes its price possible. And you will be surprised and pleased by its reasonable price just as you will by its high quality.

Four body styles to choose from — Five passenger Touring Car; Three passenger Touring Roadster; Five passenger Sedan; Four passenger Coupe.

Write for new illustrated catalogue and name of Grant Six dealer in your community.

The Children's Hour

DEAR CHILDREN: My, what a gay, glad week is this. With Valentine's day promising many a pretty visit from Dan Cupid who takes charge of our valentines, and Lincoln's birthday, we will most all be very busy in school, so I won't write a long letter this week but will save the space for the prize winning letters. But I must tell you that perhaps there will be some disappointed ones. However the prizes were awarded to those whom I thought told me all they knew about Lincoln and Washington without copying it from a book. We all have to learn from our books but in order to have it ours we must tell it just as we would to each other, with the book safely away on the shelf and so I have endeavored to award the prizes of a Trip Around the World in Postal Cards to those whose stories seemed to show that they told it in their own words.

The prize winners were Elinor Briggs, of Vermontville, Ellis Bazzett, of Bradley, Bernice Konwinski, of Posen and Beatrice Dickerson, of Moreley and then there were two more who had especially good ones about Washington which I have saved for next week when we celebrate the birthday of the Father of Our Country. Affectionately yours—LADDIE.

PRIZE STORY

Dear Laddie:—I am a farmer girl, 12 years old. I live on a farm of 160 acres. I like Lincoln and Washington both because they were great men and did a lot for their country. I like Lincoln best because he made his own way. When he was little he was very poor. He did everything he could to get himself to a higher position. I will now close.—Elinor V. Briggs, Vermontville, Mich.

Abraham Lincoln

Lincoln was born on February 12, 1809 in Kentucky. As soon as he was old enough to understand, his mother read him stories from the Bible. All his schooling together was not quite a year. When he was eight his parents moved to Indiana. When he was 21 he wanted to become a lawyer and studied all he could. In 1830 they moved to Illinois. Lincoln became a lawyer in 1837. He was elected president in 1860, and was inaugurated March 4th. In April the war started. It closed in 1865. Lincoln was shot in Ford's theatre by John Booth.

Washington and Lincoln were both great men but I like Lincoln best. He was noted for his kind heart. He never forgot that he had been a poor boy and was always kind to the poor people. He was born in a log cabin and worked hard for what little education he got. He wrote the Emancipation Proclamation which freed the slaves and caused the Civil War.

Washington was born in Virginia. His parents were rich people but he was a very pleasant man. He always spoke the truth and people could depend on him so he was chosen for many important duties. He was elected first president of the United States.—Ellis Bazzett, Bradley, Mich.

Dear Laddie:—This is my third or fourth time that I have written to you but I didn't see my last letter in print. Now I must tell you something about George Washington and Abraham Lincoln. George Washington was born Feb. 22, 1732. He was our first president, from 1789 to 1797. Abraham Lincoln was our sixteenth president, from 1861 to '65. He was born Feb. 12, 1809. Now I will try to get a prize for a story.—Bernice Konwinska, Rosen, Mich.

Lincoln and the Pig

One day Lincoln and a friend were on their way to a party. As they passed a swamp they heard a pig squealing. When nearly to the house Lincoln said, "My friend, I am going back and get that poor pig out of the swamp." "But you will spoil your clothes," said his friend. "I know this is my best suit and I shall be sorry to spoil it, but I'd rather spoil a dozen suits than think of that poor pig all night." And he went back and pulled the pig out. Then he went home for he couldn't go to the party with his soiled clothes.

Dear Laddie—I thought I would write to you. I am a girl, 10 years, 9 months and 25 days old. I thought I would write a story about Abraham Lincoln. Well I will close.—Beatrice E. Dickerson, Morley, Mich.

Abraham Lincoln

When Abraham Lincoln was a boy he had few of the opportunities which most boys now have. In the poor log cabin which was his home there were no lamps to give light at night, and the few candles which Mrs. Lincoln sometimes made were too precious to be used on common occasions, but there was a big fireplace in one end of the house in the winter time and they had plenty of wood by cutting it. He studied his lessons at night by lying with his back to the fire so the light would shine on his books. For paper he used smooth boards or a large wooden shovel and charcoal for his pencil. In his home there were but three books. He went three miles to borrow one on Washington. After supper he read it till it was past midnight and went to bed leaving his book in a crack upstairs where he slept so he could read it. In the morning he awoke and heard it raining. He got the book but it was soaked with water. He went down stairs, tried the book but it was not as good as before. He went to give the book back and the owner said, 'If you will work for me for three days you may have the book. So Lincoln worked for him and received the book.

Dear Laddie:—This is the second time I have written to you. I did not see my letter in print. I thought I would write a story.—Gladys Burt, West Branch.

Abraham Lincoln-George Washington

I think I like George Washington the better of the two. Everybody liked Mr. Washington because he did such brave and daring things. He was born on a plantation in Virginia on February 22, 1732. When he was not very old he wanted to be a sailor but his mother did not want him to leave, so he stayed at home. Once when he was not very old, he was with some other boys. He climbed up higher than any other boy would go, to the top of the Natural Bridge in Virginia and printed his name on a rock. Washington fought in the Revolutionary war. He was the first president of the United States, being elected president in 1789. George Washington died at his home in Mt. Vernon in 1799. When he died the whole world mourned him. The United States celebrates his birthday every year on February 22.

A Story of George Washington

George Washington was born in Virginia February 22, 1732. He was not a poor boy. Some people think a rich boy is sure to be proud and lazy, but George was neither. So are some people mistaken. He was the first president of the United States. When the first four years ewre over the people made him president again. Whn the second four years were ovr the people again wanted to make him president, but he would not allow it, saying, "No one should be president more than two terms. He wentback to his home in Virginia and lived a quiet, happy life. He died in 1799.—Alice Reavey, Akron, Mich.

Dear Laddie:—This is the first time I have written to you. I am a girl 13 years old and in the 6th grade. My teacher is Mrs. Edna Hetherington. We all like her. My letter is getting long so I will close hoping to see my letter in print and I would like to hear from some of the girls. I am sending a poem.—Crystal Stevens, Traverse City, Mich.

Easy Knowledge

How nice 'twould be if knowledge grew
On bushes as the berries do!
Then we could plant our spelling seed,
And gather all the words we need;
And sums from off our slates we'd wipe,
And wait for figures to be ripe;
And go into the fields and pick
Whole bushels of arithmetic.
And if we wished to learn Chinest
We'd just go out and shake the trees;
And grammar, then, in all the towns
Would grow with proper verbs and nouns
And in the gardens there would me
Great bunches of geography;
And all the passers-by would stop
And marvel at the knowledge crop;
And I my pen would cease to push
And pluck my verses from a bush.

Dear Laddie:—This is the second time I have written to you. My parents take the M. B. F. and I like to read the Doo Dads and the boys' and girls' letters. I am 12 years old and in the 6th grade at school. My teacher is Mrs. Jesse Snow. She lives a little way from my home. I have two sisters and a half brother; he lives in Pontiac and my sisters are at home. For pets I have three cats and I used to own a pet lamb which I fed on a bottle.—Beatrice E. Bulman, Wheeler.

Dear Laddie:—This is the first time I have written to you, so I thought I would try it. We live on an 160-acre farm. We don't live on it, but we work it just the same. For a pet we have a dear little baby. I have two little sisters; one is six years, the other is one year old and she is the pet of the family. I am 10 years of age and am in the 7th grade at school. My teacher is Sister Mary Christine and we all love her very much. There are 100 pupils in our school. There are five teachers, one music teacher. I take lessons on the piano. As my letter is getting long I will close.—Josephine Potvia, Merrill, Mich.

Dear Laddie:—This is the first time I have written to you. My father takes the M. B. F. I like the children's page. We have six cows, 30 chickens and one pig. I have three pets, two rabbits and a cat. I will close hoping to see my letter in print.—Ernin Burt, West Branch.

Dear Laddie:—I have written you before but never saw my letter in print. I am a little girl 10 years old and in the 6th grade at school. I like to go skating, go down hill on my sled. There is a creek down a little ways from our school, and we often go there at noon. The name of our school is Hillside, because it is on a large hill. There are 17 pupils in our school, three in my class. I will close hoping to see my letter in print.—June Ganley, Harbor Beach, Mich.

Dear Laddie:—This is my second letter as I didn't see my first letter. I am a girl 12 years old and am in the 7th grade at school. My teacher is Mrs. Dowling and I like her very much. I like to read th "Children's Hour" stories and the Doo Dads. My father takes the M. B. F. and likes it very much. I have no brothers or sisters. I would like to hear from any of the boys and girls.—Doris Rykert, Bailey, Mich.

THE WONDERFUL ADVENTURES OF A RAINDROP

By Ethel Allen Murphy

PART IV.

"THE Moon Maiden spread wonderful white dreams on us, and always when the moon was brightest our longing for the known, yet unknown sea, was the deepest. Could any Garden Soldier tell us why the moon made the streams long for the sea? Deep down in us we could feel the moon pulling us on to it!

" 'Oh, come to the sea, the deep, deep sea,
Whose waters still obey,
And ebb and flow forever free,
Yet bound to the month's bright ray!' '

" 'Great cities grew up along our way. And at night these cities seemed to bloom with flowers of fire. A million, million times brighter than the firefly's torch or the glowworm.

" 'But we went on in a deeper, broader, more powerful stream, and by our force we gave power and light to the great cities where thousands of soldiers in the United States School Garden Army were raising their wonderful gardens. We were proud of our million, million strength. And because we were united, and all worked and pulled together, we were strong enough to bear on the great, moving shoulders of the muddy streams the boats that carried the golden grain from the ters from one great city to another.

" 'And something else we carried, too, because we carried the gifts of the plains to the mountains. We carried the golden grain Tfrom the fields to the people who mined the coal from the earth. The people of the plains and the meadows, and those who raised gardens and had orchards sent grains and vegetables and fruits to those who lived in the mountains and forests. And the mountain folk and the forest folk sent great logs to build houses, and coal to warm the children's homes, and minerals from the treasuries of the mountains.

" 'No one of us, alone, Garden Lady, would have been of any use, but when we joined we made the rivers and the streams, and so because we were all together we carried the great boats. We were united in one great army, just like the boys and girls of the United States School Garden Army. Why, there isn't anything, Garden Lady, that the boy and girls can not do if they all are united and work together like the drops of water.

" 'As we carried the gifts from the mountains to the plains, our stream that has been clear and sparkling grew yellow with mud, tawny colored, but grand in its bigness, and beautiful too, when the sunlight and sunset colors, and moonlight and clouds sent their messages and their dreams of beauty to us.

" 'Other streams joined us. Then there was great news of their adventures. These streams, too, brought millions and millions of earth grains or mud with them and this dark-colored mud was a rich gift from highlands to lowlands; for sometimes in the Spring, when there were great rains and the white cold cover of the earth grew warm and turned to sparkling water, the big and little streams came hurrying down from all directions. Then our stream grew so big and deep and broad that it spread out over the banks, carrying great loads of mud with it. And when the water went back, the land was made rich with a new layer of earth, full of food for growing things.' "

OUR PUZZLE CORNER

Answer to last week's puzzle, the Fox, Goose and Corn. Take the goose over, return and take fox over, bring goose back, take corn over, return for goose.

THREE WORD PUZZLE

I am candy, change my head I am to consider, change again I am a gentle push.

FOUR LETTER SQUARE

A precious stone.
A square of glass.
A girl's name.
Slender.

BEHEADINGS

Behead to bring low and find what ball players run for.

Behead to raise or lift up and find approval.

Behead acid and find skill.

Behead custom or treatment and find wisdom.

Behead staff and find a playing card.

Behead no one and find some one.

The letters taken off form a certain season.

Answers Three Word Puzzle

Fudge. Judge. Nudge.

M—ace
N—one

JUNIOR COOK

Fish Balls

Measure one cupful of fish flakes. These may be the fish flakes that come canned ready for use of left over bits of fish may be flaked into small bits and used. Add to the fish three cupfuls of mashed potatoes.

With a large fork, or better still, clean finger tips, mix the fish and potato till it is a smooth paste. If left over fish is used it will likely need no seasoning. If canned fish is used add one-half teaspoonful of salt. Mold into neatly shaped balls and put in a cool place for at least one hour.

Put two tablespoonsful of meat drippings into a frying pan over a fire. When the grease is smoking hot lay the balls in the pan. Cook moderately fast till the lower edges of the balls are brown. With a small pan cake turner or large spatula turn the balls and brown on the other side. Take up onto a hot platter. Garnish with a bit of parsley and serve at once. These are delicious for either breakfast, luncheon or dinner. A relish of home made chilli sauce goes nicely with these balls.

The Remedy

First Office Boy—"I told the boss to look at the dark circles under my eyes eyes and see if I didn't need a half-day off."

Second Office Boy—"What did he say?"

First Office Boy—"He said I needed a bar of soap."

County Crop Reports

ST. CLAIR—Farmers all busy with various kinds of farm work that is, what few farmers there are left as this part of the county is stripped of all its available surplus help. The new city of Marysville, which is being built at the present time, is demanding all the spare help. Weather is very cold with lots of snow and good sleighing at the present time. Some farmers are holding their hay, thinking the price will be higher but the largest part of it has gone to market.—I. J. The following prices were paid at Smiths Creek—Wheat, $2.40; corn, $1.50 oats, 86; rye, $1.61; hay: No. 1 timothy, 25; No. 1 light mixed, 25; straw-rye, 13@14; wheat-oat, 13@14; beans, $6.75; potatoes, $2.25; hens, 24; springers, 25 @28; butter, 56; eggs, 65@70; lambs, 14 @15; hogs, 14@15; beef steers, 6@9; beef cows, 6@8; veal calves, 16@20; apples, $4.

BAY—Big slump in sugar beet contracts; farmers not in a hurry to contract until manufacturers come across. We have two and one-half months before seeding time and in most cases later so we are not getting excited over the situation. So let us all hold back while the fight is on. A few beans are going on the market. Most farmers having any hay for sale are selling at present at around $25 per ton. Hay is real light and dry. Roads are snow bound part of the time and so it is difficult to get around. The ground is frozen to a good depth. Are buying a little coal, only about as it is needed, price ranging from $8 to $10 per ton. Some clover being threshed, mostly June clover.—A. G. The following prices were paid at Bay City:—Wheat, $2.52; corn, $1.45; oats, 86; rye, $1.56; hay:, $25; barley, $3; straw-rye, $8; wheat-oat, $7; beans, $6.75; potatoes $2; hens, 20; springers, 20; butter, 50; butterfat, 58; eggs, 55; sheep, dressed, 12; lambs, 17; hogs, 18; beef steers, 10; beef cows, 9; veal calves, 19.

MIDLAND—The following prices offered at Midland, as quoted by Orr Bean & Grain Co.; Wheat, S., $3; W., $2.50; corn, shelled, $1.45; oats, 84; rye, $1.58; buckwheat, $2.85; beans, $6.60; barley, $3; peas, $4.

GRATIOT, (E.)—We have had quite cold weather; was 14 below some of the time. Some of the roads were so badly drifted they had to be scraped. I look for a cold summer because everyone is putting up ice. Not much grain moving at present.—J. W. The following prices were paid at Ithaca:—Wheat, $2.50@ $2.80; corn, 65; oats, 82;; rye, $1.60; hay, $25; beans, $6.75; potatoes, $2; springers, 22; geese, 20; butter, 55; eggs, 60; hogs, 15.

PRESQUE ISLE—Most of the farmers are trying to do a little lumbering this winter, some are getting out some logs for their own use as building material, while others are getting out all kinds of forest products for market including mine props and fence posts. But it keeps a lot of them busy doing chores and keeping the home fires burning. We are having an extra severe winter here this winter, there is about two and one-half feet of snow in the woods now. But as usual clover and all kinds of winter grain are covered with a heavy blanket of snow. This county is fast becoming a live stock and milk producing center. Several carloads of pure bred stock has been shipped in here the past year. Chas. Atkins, Sam Schnepp and Chas. Heron are some of our farmers that are building up fine herds of Holsteins. The Rainy Lake Branch Co. have a fine herd of Herefords, they also have over two hundred ewes, their last car load of sheep came in the last part of last month. The farm bureau movement is progressing very nicely in this county. The Millersburg Co-operative Marketing Ass'n isn't doing much these days, only laying plans for the future. Preparations are going forward and material is being placed for their root cellar that is to go up before the potato season opens next fall. Some prices offered are as follows: Wheat, $3.50@$4; oats, $2.70; rye, $2.55; hay, No. 1 timothy, $26; beans, $6.25; potatoes, $2; butter, 50; eggs, 60.—J. M., Millersburg, Mich.

SANILAC (N.E.)—Farmers are cutting wood in a few cases, also pressing and hauling hay to market, and marketing some wheat, oats and barley at good prices. January has not let up for a thaw this year. We have fair sleighing, but does not pack. Our mail man has only missed one trip so far this winter on account of storms. Our farmers are Milo D. Campbell men for Governor. 150 stockholders in our co-operative store at Deckerville receive satisfactory dividends and good treatment. A semi-monthly auction sale of horses held here for farmers' benefit is being well patronized. 150 in today. Prices offered at Deckerville—Wheat up to $3.10; corn, $1.50; oats, 85; rye, $1.60; hay, No. 1 timothy, $22; No. light mixed, $20; beans, $6.75; butter, 65; eggs, 60.—J. C. F., Deckerville, Mich.

CLINTON (N)—Not much doing on the farms now but cutting wood and doing chores. A good time to "warm up" for the spring election. The agitation for better beet prices started a little late, as usual, about four-fifths of the growers have signed their contracts for 1920. Why wasn't the campaign started at least a month sooner? Prices offered at St. Johns: Wheat, $2.45; oats, 80; rye,$1.65 beans, $6.50; potatoes, $2.25; hens, 25; ducks, 22; springers, 25; butter, 55; buttetrfat, 64; eggs, 60; sheep, 6@8; lambs, 13@18; hogs, 15; veal calves, 12@20.—A. E. J., Bannister, Mich.

MECOSTA—Farmers are busy doing chores, cutting wood and some are selling wood, others are selling beans and grain and potatoes. The weather is very cold. Prices offered are as follows: Wheat, $2.30; corn, $1.25; oats, 90; rye, $1.65; hay, No. 1 timothy, $30; No. 1 ight mixed, $25; beans, $6.25; red kidney, $7; potatoes, $$3.85; hens, 27; butterfat, 58; eggs, 60.—L. M., Hersey,Mich.

MONTCALM—Farmers are putting up ice and hauling potatoes. Prices offered at Lakeview—Wheat, $2.50; corn, 80; oats, 80; rye, $1.70; hay, No. 1 timothy, $25; No. 1 light mixed, $25; rye straw, $10; wheat-oat, $18; beans, $7; red kidney, $14; potatoes, $3.85; onions, $2.25; hens, 22; springers, 20; ducks, 24; geese, 22; turkeys, 40; butter, 65; butterfat, 65; eggs, 60; sheep, 8; lambs, 10; hogs, 15; beef steers, 12; beef cows, 4; veal calves, 18.—G. B. W., Lakeview, Mich.

MANISTEE—The farmers are cutting wood, some hauling gravel and going to town, a few selling some potatoes, beans and feeds and some have contracted their number of acreage of cucumbers and also acres of peas and beans for a canning factory to run next year at Bear Lake, owned by a Manistee company, with a factory at that place. Looks like great business here next year. Fruits will also be canned. Enough said I guess. Weather is still cold, not so much snow, but lots of drifting of roads. Some warm, thawy days. Snow on ground frozen. Quite a few farmers have beans and potatoes to sell at a future date. Not much buying or building going on here these days. Following are the prices offered at Bear Lake: Butter, 55; eggs, 55; butterfat, 63; potatoes, $3.25 cwt; navy beans, $6.25; red kidneys, $1—per cwt; rye, $1.40; wheat, $2.10; beef, 6@8; pork 16@17 1-2 dressed; veal, 10@13 alive; 16@20 dressed; live chickens, 18@22; hides, 20@25.—H. A., Bear Lake, Mich.

SAGINAW (S.W.)—Good, snug winter weather, 20 below zero a few mornings ago. Plenty of snow. The roads are badly drifted, has nearly stopped the automobiles. The farmers are hauling some grain to market, oats are bringing a fair price, 85c per bushel; beans are down 25c to $6.50 cwt. There are quite a number of farmers planning on going up to Lansing next week to Farmers' Week. Prices at St. Charles are: Wheat, $2.35; corn, in ear, 60; oats, 85; hay, No. 1 timothy, $24; No. 1 light mixed, $$22; beans, $6.50 cwt; potatoes, $2.25 bu; hens, 20c; springers, 20; butter, 55; butterfat, 60; eggs, 65; hogs, $15; beef steers, 8@12; beef cows, 6@10; veal calves, 12@20.—G. L., St. Charles, Mich.

CONSERVING THE WATER SUPPLY IN THE SOIL

(*Continued from page* 5)

the amount of water lost from the unmulched plot and the one mulched with 3 inches of soil are negligible, whereas the changes in the water content of the soil beneath the layer of muck are appreciably less than in the others.

The Loss of Water From Soils Under Cover Loss of Water Percent

Depth treatment	No. mulch	3-in. mulch	Muck 1-in.
0-6	3.00	2.25	1.87
6-12	1.21	1.48	.30
12-24	1.52	1.27	.71
24-36	1.15	1.39	.19
Total	6.88	6.40	3.07

In general these results are in accord with those obtained by several investigators.

The attitude toward the formation of the dust mulch has radically changed in some sections. I recall conditions on my father's farm in northwestern Missouri about twenty years ago when we considered that we had done a day's work when eight acres of corn had been cultivated. As I well remember the day lasted from a little after sun up until nearly sunset! Moreover, one season after the corn was too tall to cultivate without breaking it down with the disk of the walking cultivator. I rode a horse that dragged a mower wheel between the rows of corn to form the dust mulch.

Last summer I had the privilege of touring across the famous corn belt to the home farm in Missouri. In talking with several men I noted that they had changed somewhat in regard to this proposition. Many of them lay much more emphasis on fall plowing and deep and thorough preparation of the seed bed and the prevention of weed seed formation after the small grains are harvested.

I was recently informed that what was probably the largest yield of potatoes in Michigan last year was obtained from land that was cultivated twice. This particular field did not produce many weeds, however.

With few exceptions the reports of carefully conducted field tests show that mulching the soil is of secondary importance in cultural operations. I discussed rather fully the modern views on the movement of moisture in soils showing that in the absence of a water table or water level film as capillary movement water in the soil is very feeble, moreover temperature has great bearing.

(*To be continued*)

DE LAVAL
CREAM SEPARATORS
are the cheapest as well as the best

This is the unanswerable argument in favor of the purchase of a DE LAVAL Cream Separator.

Everyone wants the best, provided its cost is within his means. Fortunately a DE LAVAL costs but little more than an inferior cream separator and saves that difference every few weeks.

Moreover, an inferior separator wastes in time and labor, and in quantity and quality of product what a DE LAVAL saves, and goes on doing so every time it is used, twice a day every day in the year.

If you doubt this is so, try a new DE LAVAL alongside any old machine you may be using or other make of separator you may have thought of buying. Every DE LAVAL agent will be glad to afford you the opportunity to do so.

If you don't know the nearest De Laval agent, simply address the nearest De Laval main office, as below

The De Laval Separator Co.

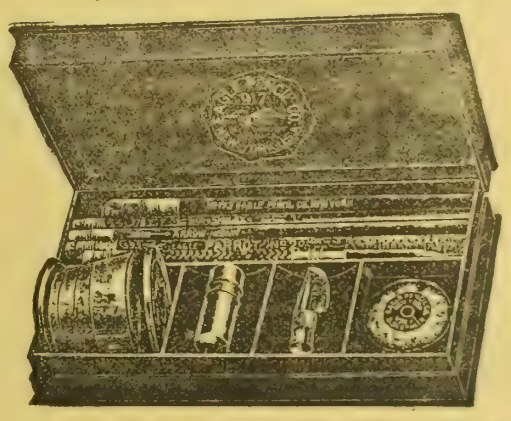
We want 1,000 or more of our subscribers to act as special representatives in taking new and renewal subscriptions to Michigan Business Farming. Write us today for our special offer.

62 BREEDS PROFITABLE Pure-Bred Chickens, Geese, Ducks, Turkeys. Hardy Fowls, Eggs and Incubators at lowest prices. *Pioneer Poultry Farm.* Valuable poultry book and catalog FREE. **F. A. NEUBERT, Box 436, Mankato, Minn.**

Strawberry Raspberry, grape, currant, blackberry plants, trees and flowers. Everything to plant. Will pay you to answer this little ad. Valuable list FREE. Write THE ALLEGAN NURSERY, Box 39 Allegan, Michigan

Boys! Girls! This School Outfit YOURS for a LITTLE Extra Work



During the past 30 days more than 50 "LIVE WIRE" boys and girls have secured this dandy outfit which consists of 3 pencils, 1 pen holder, 1 combination pen and pencil, 12 pen points and holder, 1 pencil sharpener, 1 ink and pencil eraser and 1 aluminum collapsible drinking cup, all packed in a beautiful box, without it costing a penny.

HOW THEY DID IT

They simply called on two of their friends who were not taking Michigan Business Farming, had them look over one or two recent copies and explained just what this weekly has done and is doing for the farmers of Michigan and convinced them that they ought to be taking M. B. F. if they expected to keep abreast of the times and derive the same benefit over 70,000 farmers are now enjoying. Then they explained that they were working for a school outfit. That settled it, their friends subscribed and now the School Outfit is theirs.

HERE'S YOUR CHANCE

All you have to do to win this outfit is to call on two of your friends who are not now taking M. B. F. and ask them to help you win the outfit by giving you their subscription to M. B. F. for one year at $1.00 each. Send us the $2.00 with their names and address plainly written and the outfit will be yours.

Get your Father, Mother, Big Brother or Sister to help you.

Is Your Farm for Sale?

Write out a plain description and figure 5c for each word, initial or group of figures. Send it in for one, two or three times. There's no cheaper or better way of selling a farm in Michigan and you deal direct with the buyer. No agents or your farm, send in your ad today. Don't commissions. If you want to sell or trade just talk about it. Our Business Farming Farmers' Exchange gets results. Address Michigan Business Farming, Adv. Dept., Mt. Clemens.

HEARTS OF THREE

By JACK LONDON
Author of the "Valley of the Moon."

The Story's Just Started; Read This

LAST WEEK this great story by Jack London started by telling how Francis Morgan, son of a millionaire who had just died, grew bored by luxury in New York and was just starting off for a fishing trip. But at the same time, Regan, an old Wall Street partner of the elder Morgan was plotting with a dusky-skinned visitor named Torres, to get Francis off to the Carribean haunts of the ancient pirate Morgan, who was an ancestor of Francis, in search of buried treasure, thus leaving Regan free to manipulate the stock market, especially the Tampico stock in which young Morgan was heavily invested and very confident. Don't fail to read this installment.

ALL OF this was in turn Greek to Thomas Regan, who smiled his acceptance of listening and with the same smile conveyed any businessman's tolerant unbelief.

Scarcely was Senor Torres gone when Francis Morgan was shown in.

"Just thought I'd drop around for a bit of counsel," he said, greetings over. "And to whom but you should I apply, who so closely played the game with my father? You and he were partners, I understand, on some of the biggest deals. He always told me to trust your judgment. And well, here I am, and I want to go fishing. What's up with Tampico Petroleum?"

"What is up?" Regan countered, with fine stimulation of ignorance of the very thing of moment he was responsible for precipitating. "Tampico Petroleum?"

Francis nodded, dropped into a chair, and lighted a cigarette, while Regan consulted the ticker.

"Tampico Petroleum is up—two points, you should worry," he opined.

"That's what I say," Francis concurred. "I should worry. But just the same, do you think some bunch, onto the inside value of it—and it's big—I speak under the rose, you know, I mean in absolute confidence?" Regan nodded. "It is big. It is right. It is the real thing. It is legitimate. Now this activity—would you think that somebody, or some bunch, is trying to get control?"

His father's associate, with the reverend gray of hair thatching his roof of crooked brain, shook the thatch.

"Why," he amplified, "it may be just a flurry, or it may be a hunch on the stock public that it's really good. What do you say?"

"Of course it's good," was Francis' warm response. "I've got reports, Regan, so good they'd make your hair stand up. As I tell all my friends, this is the real legitimate. It's a damned shame I had to let the public in on it. It was so big, I just had to. Even all the money my father left me, couldn't swing it—I mean, free money, not the stuff tied up—money to work with."

"Are you short?" the older man queried.

"Oh, I've got a tidy bit to operate with," was the airy reply of the youth.

"You mean . . . ?"

"Sure. Just that. If she drops, I'll buy. It's finding money."

"Just about how far would you buy?" as the next searching interrogation, masked by an expression of mingled good humor and approbation.

"All I've got," came Francis Morgan's prompt answer. "I tell you, Regan, it's immense."

"I haven't looked into it to amount to anything, Francis; but I will say from the little I know that it listens good."

"Listens! I tell you, Regan, it's the Simon-pure, straight legitimate, and it's a shame to have it listed at all. I don't have to wreck anybody or anything to pull it across. The world will be better for my shooting it I am afraid to say how many hundreds of millions of barrels of real oil—say, I've got one well alone, in the Huasteca field, that gushed 27,000 barrels a day for seven months. And it's still doing it. That's the drop in the bucket, we've got piped to market now. And it's twenty-two gravity, and carries less than two-tenths of one per cent of sediment. And there's one gusher—sixty miles of pipe to build to it, and pinched down to the limit of safety, that's pouring out all over the landscape just about seventy thousand barrels a day.—Of course, all in confidence, you know. We're doing nicely, and I don't want Tampico to skyrocket."

"Don't you worry about that, my lad. You've got to get your oil piped, and the Mexican revolution straightened out before ever Tampico Petroleum soars. You go fishing and forget it." Regan paused with finely simulated sudden recollection, and picked up Alvarez Torres' card with the pencilled note. "Look, who's just been to see me." Apparently struck with an idea, Regan retained the card a moment. "Why go fishing for mere truot? After all, it's only recreation. Here's a thing to go fishing after that there's real recreation in, full-size man's recreation, and not the Persian palace recreation of an Adirondack camp, with ice and servants and electric push buttons. Your father always was more than a mite proud of that old family pirate. He claimed to look like him ,and you certainly look like your dad."

"Sir Henry," Francis smiled, reaching for the card. "So am I a mite proud of the old scoundrel."

He looked up questioningly from the reading of the card.

"He's a plausible cuss," Regan explained. "Claims to have been born right down there on the Mosquitoa Coast, and to have got the tip from private papers in his family. Not that I believe a word of it. I haven't time or interest to get to believing stuff outside my field."

"Just the same, Sir Henry died practically a poor man," Francis asserted ,the lines of the Morgan stubborness knitting themselves for a flash on his brows. "And they never did find any of his buried treasure."

"Good fishing," Regan girded good-humoredly.

"I'd like to meet this Alvarez Torres just the same," the young man responded.

"Fool's gold," Regan continued. "Though I must admit that the cuss is most exasperatingly plausible. Why, if I were younger—but oh, the devil, my work's cut out for me here."

"Do you know where I can find him?" Francis was asking the next moment (all unwittingly putting his neck into the net of tentacles that Destiny, in the visible incarnation of Thomas Regan, was casting out to snare him.)

The next moring the meeting took place in Regan's office. Senor Alvarez Torres startled and controlled himself at first sight of Francis' face. This was not missed by Regan, who grinningly demanded.

"Looks like the old pirate himself, eh?"

"Yes, the resemblance is most striking," Torres lied, or half-lied, for he did recognize the resemblance to the portraits he had seen of Sir

Be sure to get in on the opening chapters of this great story of adven-ture.

Henry Morgan; although at the same time under his eyelids he saw the vision of another and living man no less than Francis and Sir Henry, looked as much like both of them as either looked like the other.

Francis was youth that was not to be denied. Modern maps and ancient charts were pored over, as well as old documents, handwritten in faded ink on time-yellowed paper, and at the end of half an hour he announced that the next fish he caught would be on either the Bull or the Calf—the two islets off the Lagoon of Chiriqui, on one or the other of which Torres averred the treasure lay.

"I'll catch tonight's train for New Orleans," Francis announced. "That will just make connection with one of the United Fruit Company's boats for Colon—oh, I had it all looked up before I slept last night."

"But don't charter a schooner at Colon," Torres advised. "Take the overland trip by horseback to Belen. There's the place to charter with unsophisticated native sailors and everything else unsophisticated.

"Listens good!" Francis agreed. "I always wanted to see that country down there. You'll be ready to catch tonight's train, Senor Torres? . . . Of couse, you understand, under the circumstances, I'll be the treasurer and foot the expenses."

But at a privy glance from Regan, Alvarez Torres lied with swift efficientness.

"I must join you later, I regret, Mr. Morgan. Some little business that presses—how shall I say?—an insignificant little lawsuit that must be settled first. Not that the sum at issue is important. But it is a family matter, and therefore gravely important. We Torres' have our pride, which is a silly thing, I acknowledge, in this country, but which with us is very serious."

"He can join afterward, and straighten you out if you've missed the scent," Regan assured Francis. "And, before it slips your mind, it might be just as well to arrange with Senor Torres some division of the loot . . . If you ever find it."

"What would you say?" Francis asked.

"Equal division, fifty-fifty," Regan answered, magnificenty arranging the apportionment between the two men of something he was certain did not exist.

"And you will follow after as soon as you can?" Francis asked the Latin American. "Regan, take hold of his little law affair yourself and expedite it, won't you?"

"Sure, boy," was the answer. "And if it's needed, shall I advance cash to Senor Alvarez?"

"Fine!" Francis shook their hands in both of his. "It will save me bother. And I've got to rush to pack and break engagements and catch that train. So long, Regan. Good-bye Senor Torres, until we meet somewhere around Bocas del Toro, or in a little hole in the ground on the Bull or the Calf—you say you think it's the Calf? Well, until then—adois!"

And Senor Alvarez Torres remained with Regan some time longer, receiving explicit instructions for the part he was to play, beginning with retardation and delay of Francis' expedition, culminating in similar retardation and delay always to be continued.

"In short," Regan concluded, "I don't almost care if he never comes back—if you can keep him down there for the good of his health that long and longer."

Chapter II.

MONEY, like youth, will not be denied, and Francis Morgan, who was the man-legal and nature-certain representative of both youth and money, found himself one afternoon, three weeks after he had said good-bye to Regan, becalmed close under the land on board his schooner the Angelique. The water was glassy, the smooth rool scarcely perceptible, and, in sheer ennui and overplus of energy that likewise declined to be denied, he asked the captain, a breed, half Jamaica negro, or a monkey or something," he skiff over the side.

"Looks like I might shoot a parrot or a monqek or something," he explained, searching the jungle-clad shore, half a mile away, through a twelve-power Zeiss glass.

"Most problematic, sir, that you are bitten by a labarri, which is deadly viper in these parts," grinned the breed skipper and owner of the Angelique, who, from his Jamaica father had inherited the gift of tongues.

But Francis was not to be deterred; for at the moment, through his glass, he had picked out, first, in the middle ground, a white hacienda, and second, on the beach, a white-clad woman's form, and further, had seen that she was scrutinizing him and the schooner through a pair of binoculars.

"Put the skiff over, skipper," he ordered. "Who lives around here? —white folks?"

"The Enrico Solano family, sir," was the answer. "My word, they are important gentlefolk old Spanish, and they own the entire general landscape from the sea to the Cordilleras and half of the Chiriqui Lagoon as well. They are very poor, most powerful rich . . . in landscape—and they are prideful and fiery as cayenne pepper."

As Francis, in the tiny skiff rowed shoreward, the skipper's alert eye noted that he had neglected to take along either rifle or shotgun for the contemplated parrot or monkey. And, next, the skipper's eye picked up the white clad woman's figure against the dark edge of the jungle.

Straight to the white beach of coral sand Francis rowed not trusting himself to look over his shoulder to see if the woman remained or had vanished. In his mind was merely a young man's healthy idea of encountering a bucolic young lady, or a half wild white woman for that matter, or at the best a very provincial one, with whom he could fool and fun away a few minutes of the calm that fettered the Angelique to immobility. When the skiff grounded, he stepped out, and with one sturdy arm lifted its nose high enough up the sand to fasten it by its own weight. Then he turned around. The beach to the jungle was bare. He strode forward confidently. Any traveller, on so strange a shore, had a right to seek inhabitants for information on his way—was the idea he was acting out.

And he, who had anticipated a few moments of diversion merely, was diverted beyond his fondest expectations. Like a jack-in-the-box the woman, who, in the flash of vision vouchsafed him demonstrated that she was a girl-woman, ripely mature and yet mostly girl, sprang out of the green wall of jungle and with both hands seized his arm. The hearty grip in the seizure surprised him. He fumbled his hat off with his free hand and bowed to the strange woman with the impertubableness of a Morgan, New York trained and disciplined to be surprised at nothing, and received another surprise, or several surprises compounded. Not alone was it her semi-brunette beauty that impacted upon him with the weight of a blow, but it was her gaze, driven into him, that was all of sternness. Almost it seemed to him that he must know her. Strangers, in his experience, never so looked at one another.

The double grip on his arm became a draw, as she muttered tensely:

"Quick! Follow me!"

A moment he resisted. She shook him in the fervor of her desire, and strove to pull him toward her and after her. With the feeling that it was some unusual game such as one might meet with on the coast of Central America, he yielded, smilingly, scarcely knowing whether he followed voluntarily or was being dragged into the jungle by her impetuosity.

"Do as I do," she shot back at him over her shoulder, by this time leading him with one hand of hers in his.

He smiled and obeyed crouching when she crouched, doubling over when she doubled, while memories of John Smith and Pocahontas glimmered up in his fancy.

Abruptly she checked him and sat down, her hand directing him to sit beside her ere she released him, and pressed it to her [illegible] while she panted:

"Thank God! Oh, merciful Virgin!"

Uncle Rube Says

THE OPEN SEASON

THIS BEIN' the open season for huntin' candidates for the next legislatur', mebbe a word or two in regard to the proper way of huntin' 'em an' of the kind of game to look for, would not be amiss.

For quite a number of years now we've been doin' most of our huntin' for this sort of game in the cities—kinda pickin' 'em out of lawyers' offices an' places similar—doctors, bankers, professional politicians—any thing would do if the gittin' was easy an' if the quary had a little of the coin of the realm to help the hunters to catch him.

You know lawyers like to git into the legislature—they like to make our laws, 'cause they know how to make 'em so they can, for a good fat fee, keep the feller out of jail that breaks them. You see, the more laws, the more business for lawyers an' so, as I jest mentioned, lawyers kinda like to git into the legislature an' they are easy game for the candidate hunter—why they won't even skulk nor try to hide when they know darn well the hunter is right onto them—rather, they'll jump right out in plain sight an' say, "take me if you want me; I'm entirely in the hands of my friends, an' if I'm needed I'll sacrifice myself, although I'd ruther live a private life with my little family." "In the hands of his friends!" "Sacrifice!" "If he is needed! ! ! " Gosh! all fish hooks! Who ever knew a lawyer that would not jump at the chance to land a job when he had a chance to frame or help make the law? Jest think how many of 'em we've had in the last few years, an' of some of the things they've done too, b'gosh!

Now, I ain't got anything agin lawyers—not as lawyers I ain't—no more'n I have agin doctors or preachers or pedlars or anything—they're all all right in their place—but why do we need so many of 'em in our law makin' body? Why not get some other kind of timber to put into the weak places? You know we've been told that when we could get a good business administration in our state capitol, things would be different. Well, accordin' to reports, we've had the business administration an' things are different ain't they? By gosh! I'd say they wuz different. What have the farmers had handed to them durin' the last few years? Most everything has been considerably different don't you think?

An' now that we've tried business administrations an' found 'em jest as we wuz told they would be, different—why wouldn't it be a good idea to try a good commonsense administration once or twice? Get Milo D. Campbell for governor, an' then get some good, level-headed men in the legislature to support him; get men that will think of somethin' besides creatin' jobs for some of their political wire pullers—that will give the farmers an' the laborin' class a fair deal,—men who will look well into matters callin' for the outlay of large sums of money, that will not be so ready to vote more taxes onto an already overburdened people.

There are plenty of good men for our state offices, men who will fill them with credit to the state an' to the people, men who are honest an' earnest, who will not be always hollerin' "business administration, which seems to mean an expensive one, but rather a sensible administration, fair to all.

An' take it from me, you don't have to go inside a lawyer's office you don't have to consult any professional politician or political wire puller to find the right kind of men. Great Scott! You don't think fer a minute, do you that all the smart men in Michigan have become lawyers or doctors or preachers? Why I know many farmers in this state who are jest as bright, jest as honest an' jest as capable of fillin' the highest office as any professional men that ever walked. An' so now, while the open season is on, it's a mighty good time to hunt your candidate; look around you an' you'll find him; then get together in your district an' elect him.

Remember that every big interest, every graft, every political ring, has a candidate picked out, someone who will work solely for its interests an' for no other. They don't care a whoop for you nor for me; they work for the masters that elected them an' b'gosh they do their master's biddin' every time. So it's up to the farmers an' the laborin' class to get together in this matter.

Now while the huntin' is good an' candidates are at large, pick out the right one an' don't lose sight of 'im for a minute—not till he's landed into the place where you want him—or her. Need I say more or is enough a plenty?— Cordially—*Uncle Rube.*

ARE YOU DISCOURAGED?

Remember this:

When Abraham Lincoln was a young man he ran for the Legislature in Illinois and was badly swamped.

He next entered business, failed, and spent seventeen years of his life paying up the debts of a worthless partner.

He was in love with a beautiful young woman to whom he became engaged—then she died.

Later he married a woman who was a constant burden to him.

Entering politics again he ran for Congress again and was badly defeated.

He then tried to get an appointment to the U. S. Land Office, but failed.

He became a candidate for the U. S. Senate and was badly defeated.

In 1856 he became a candidate for the vice-presidency and was again defeated.

In 1858 he was defeated by Douglas.

One failure after another—bad failures—great setbacks. In the face of all this he eventually became one of the country's greatest men, if not the greatest.

When you think of a series of setbacks like this, doesn't it make you feel kind of small to become discouraged, just because you think you are having a hard time in life?—[*Prætorian Guard.*

Profits or Prophets

"America," says Mr. Frederick William Wile, "wants a business president." Some have always felt that a fatal flaw in the League of Nations was that it gave the U. S. A. no opportunity of making anything out of it.

FARMERS SERVICE BUREAU

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you.)

POPCORN FOR SALE

Yours is the paper for the farmers in all the trials and hardships and prosperity that he passes through. Now I have 80 bushels of popcorn and wish to get in touch with some responsible buyers. Can you give me the address of two or three? —Your farmer friend, A. P., Elwell, Mich

E. M. Raynals & Co., of Detroit, are brokers and would likely be able to sell this corn at about 7c per pound. There seems to have been a great deal of pop-corn grown last season, therefore the market is pretty well supplied.—*Fred G. Merriman, Assistant Manager.*

CHATTELS AND MORTGAGES

I purchased a farm on a land contract. Since then I borrowed money from the same party and gave a chattel mortgage on my cattle. Can I pay the principal on the land contract first, or am I entitled to pay off the chattel first?—A Reader, Charlevoix County.

You have the right to pay either indebtedness first. You can not sell the chattels to pay the contract. If the chattel mortgage is due, the mortgagee can oblige you to pay that claim or foreclose thereon.—*W. E. Brown, legal editor.*

NAPOLEON MOTORS

I am thinking of invsting some money in Napoleon Motor Company stock Would you advise me to do so?—Subscriber, Ingham County.

I have half a dozen inquiries regarding investment in the Napoleon Motors Company, located at Traverse City, Michigan and with these letters has come a large amount of advertising matter calling attention to investors of the wonderful fortunes made in motor stocks.

As I have before stated, I will not advise our readers to buy or not to buy any kind of stock. You are welcome to my opinion and must use your own judgment.

Motor Truck Companies are springing up in all sections of this and other states. Ninety per cent of these institutions or concerns are assembling plants, nothing more or less. There has been a great demand for trucks and no doubt this demand will increase rather than diminish. However if you will pick up any of the large magazines you will notice that all of the larger automobile concerns are building trucks and as they are able to manufacture at least certain parts of the trucks, they are going to have a great advantage over the concerns that are merely assembling plants, located several hundreds of miles from the factories where they buy their parts. I make this prediction ,you can see how nearly I hit the bulls eye. In three years from today there will be fewer automobile manufacturing plants than there are at the present time.

It is absolutely foolish to expect to make from any truck or automobile company the fortunes that were piled up in the early history of the automobile business.

In justice to the Napoleon Motors Company will say that I have made no investigation as to the merits of their truck or the business management of the company.

THE FARM BUREAU

I would like to ask a question that is causing much discussion in our neighborhood. When the solicitors for the Michigan State Farm Bureau came through I joined for three years at ten dollars per year, five dollars to go to the Tuscola County Farm Bureau, with W. C. Sanson secretary, and five dollars to the Michigan State Farm Bureau with C. A. Bingham, secretary. Now my neighbors tell me it's just a money scheme, that there were thousands of dollars raised through our taxes this fall to support these farm bureaus. Is it so? Please explain this in the best farm paper printed, the M. B. F. My taxes jumped from $48 to $109.22 since 1914.—C. S., Caro, Mich.

The last legislature appropriated, I believe, the sum of $5,000 for the use of the Michigan State Farm Bureau, and I think this was the only state money that has ever been given to the Bureau. The legislature also appropriated funds for the horticultural society and one or two other farmer organizations. There is no reason why the small amount contributed by the state to the Bureau should influence you against supporting the Bureau as you can see for yourself that your share of the $5,000 was a very small fraction of a cent. The various counties which have county agents have appropriated small sums for the salary and expenses of their agents, but the services of the agents to the farmers have in the majority of cases more than justified this expense. As to what the local and state bureaus plan to do with their membership funds is a matter that has not been explained but that they will put them to good and honorable uses we do not question.

S-sh, don't say anything about your taxes. If they only jumped from $48 to $109 in five years, you're lucky. You're about due for a re-assessment. —*Editor.*

SENSE AND NONSENSE

HARD LUCK

Young Tree—Here's hard luck, just as we are starting to grow nicely, these infernal seven-year locust have to come!

Street Car Casualty

A man was found dead beside one of the street-car tracks in St. Paul the other day. Probably starved to death waiting for his car.

No Fair Telling

Customer—"How can one tell the imitation pearls from the real ones?"

Salesman—"Ah, madam, you do not tell—you just keep it to yourself."

Had No Limousine

"Pa, how much money did Crœsus have?"

"Oh, I don't know. About enough to live in what is at present middle-class style, I guess."

Signs of the Times

In Greenwich, Conn.: "Kids cleaned, any size, ten cents. Bring 'em in." Between Minneapolis and St. Paul: "Midway Harness Co., Manufacturers of Second-hand Harness." In Milwaukee: "Always at your service. Wm. P. Hug." In Chicago: "C. Schor, Sand and Gravel."

On a Returnable Basis

Mr. Sophtie—"Well, Willie, your sister has given herself to me for a Christmas present. What do you think of that?"

Willie—"That's what she did for Mr. Bunker last year, and he gave her back before Easter. I expect you'll do the same."

AN UNDERSEA MOTTO

You say it's very valuable?

Yes, worth its weight in goldfish!

A Railroad Situation You Should Know About-----and Prepare For

Undoubtedly you have experienced delays in freight shipments. Perhaps you have experienced a delay in the shipment of Solvay Pulverized Limestone.

While we are doing everything possible to prevent delays for our customers, we believe that a frank statement of railroad conditions in the United States today will show you the difficulties under which we are working and the wisdom of ordering far in advance.

* * * *

In 1918 the United States moved more freight than they had ever moved in history before. Prior to that year, under private management, a great many of the roads had been unsuccessful in securing sufficient revenue to build equipment, and to expand as a normal business expansion required. Therefore the large tonnage moved in 1918 was a result of improvements and economies in re-routing, and was in no way due to expansion of the mechanism of transportation. For more than two years now, few box cars and locomotives have been built in America. The increasing rate of depreciation of box cars and locomotives without proper care and proper money appropriations has sent an enormously large percentage of them to the junk heap. Yet, in the face of this condition—fewer box cars, fewer locomotives, fewer operatives—the world is demanding of Americans more produce from their farms and factories—more transportation.

The natural consequence is congestion—a congestion that is frightful and beyond comprehension. Scarcity of labor is further adding to the difficulties.

You can readily see that ordering far in advance is absolutely essential at this time. In order to make it convenient and economical for you to do this

—we will postpone all payments on shipments of Solvay Pulverized Limestone, Arcadian Sulphate of Ammonia and "U-S" Potash made during February. Shipments made during February will be billed April 1st. A cash discount will be allowed until April 10th, and a net cash payment on or before July 1st.

THE SOLVAY PROCESS COMPANY

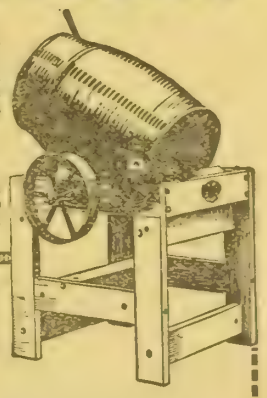
Every Farm Needs a Concrete Mixer

Concrete improvements have saved money for so many farmers that their Sheldon Farm Concrete Mixer has become as important a piece of farm equipment as their corn sheller or cultivator. Do away with the old-fashioned, expensive, back-breaking, unsatisfactory hand and shovel method. Mix your concrete the Sheldon way and get a uniform mix every time; save labor, save time and save the cost of the Sheldon on the first job.



SHELDON CONCRETE MIXER

does the same high grade work as a $300 mixer, yet costs only a fraction as much. Solidly built to stand strain and vibration for years. Easy to operate—easy to move—mixes two wheelbarrowsful at a batch—a 1½ H. P. engine will run it.

MAIL COUPON TODAY

and get our 1920 Book on Concrete. It will tell you how you can save money on your concrete work. Shows all types of Sheldon Mixers and gives our direct-to-you low prices. It's FREE. Get your copy today.

CATTLE

HOLSTEIN-FRIESIAN

Large Profits from Purebred Holstein Cattle

In the production of milk and butter the larger the cow the larger the profit, other things being equal. This principle has been established thru the investigations of government experts and is generally recognized.

When a cow's milking days are over ,size is still an important factor. The big Holstein-Friesian, weighing anywhere from 1,000 to 1,800 lbs. with her clean white fat well distributed through her muscular system, proves a most profitable dairy beef animal.

Send for Free Illustrated Booklets.

THE HOLSTEIN-FRIESIAN ASSOCIATION

This cow is right and a sure 30 pounder or better. Price $1,000.
ORCHARD CREST FARM
C. G. Hime, Prop. Rochester, Mich.

MR MILK PRODUCER

Your problem is more MILK, more BUTTER, more PROFIT, per cow.

A son of Maplecrest Application Pontiac—132652—from our heavy-yearly-milking-good-butter-record dam will solve it.

Maplecrest Application Pontiac's dam made 35,103 lbs. butter in 7 days; 1344.3 lbs. butter and 23421.2 lbs. milk in 365 days.

He is one of the greatest bred long distance sires.

His daughters and sons will prove it.

Write us for pedigree and prices on his sons.

Prices right and not too high for the average dairy farmer.

Pedigrees and prices on application.

R. Bruce McPherson, Howell, Mich.

For Sale: Registered Holstein bull calf from 24 lb. dam and 31 lb. sire, price $100. Born, Oct. 18, 1919. Wm. Griffin, R5, Howell, Mich.

"—for *all* the Farmers of Michigan!"

FEB 24 1920

MICHIGAN BUSINESS FARMING

An Independent Farmer's Weekly owned and Edited in Michigan

Vol. VII, No. 24 | MT. CLEMENS, MICHIGAN, SATURDAY, FEBRUARY 21, 1920 | $1 PER YEAR

"No shoddy for me," says this new Spring Arrival.

IN THIS ISSUE: The Farmer and His Hired Man—Lupin, the Wonder Soil Builder—The Gas-Driven Interurban Car—Foreign Exchange and the Farmer—Passing of Country Church—

Authorities Agree That Potato Prices Have Passed Season's High Mark

Opinions General That Future Tendency Will be Downward, Though Radical Price Changes Not Expected

Farmers Should Use Caution in Marketing

AT THIS particular season of the year there is always a good deal of speculation as to what course the potato market will follow for the balance of the season. The farmer who is holding stock at this time looks forward with some anxiety to the future of the market. Bermuda potatoes come onto the market in small quantities which gradually increase with the coming of March and by the middle of May the first arrivals from the southern states are in evidence, naturally having an effect upon the demand for old potatoes, which become more marked as the spring advances. The latter part of February also sees a breaking up of the severe weather that normally prevails during January hampering shipments and causing a scarcity at consuming points which sends the price up temporarily. The warm spell of weather during the first ten days of February loosened up the market to such an extent that prices declined from 60c to $1.00 per cwt. at some consuming points.

For sixty days back we have been urging our readers to keep their potatoes moving. Those who have had warehouse storage facilities have been able to do this, and they undoubtedly appreciate the wisdom of our advice by this time. Farmers who stored their potatoes in pits and cellars and found it unsafe to open them during the cold weather have, of course, been unable to put their holdings on the market, and will probably suffer some loss by reason thereof. It has been our judgment from the opening of the marketing season last fall that farmers should not chance the market by holding their entire crop this spring, and we apprehend that the steady movement of potatoes during the early fall and winter has been at least partly the result of our suggestions along this line. We now learn that the majority of the Michigan crop was moved during the upward trend of the market, which means that the majority of potato growers have profited by following our advice. In our issue of Dec. 27th, we stated plainly, "It is not wise to place too much dependance upon a continuation of the present demand and prices. We may be greatly mistaken but we feel that potatoes are nearing their highest point."

Potato prices reached their crest about three weeks ago, after which they declined steadily until about the 16th, when the market stiffened again, ruled firm for a time and now appears to be slowly coming back. We do not anticipate that this upward tendency will continue to the end. We do not anticipate prices will reach former high level. In order to lend weight to our opinion, however, we sent out a questionnaire a few days ago to some leading potato authorities. Of the replies that have come back thus far the most valuable were from the editor of the *Chicago Produce News*, Prof. C. W. Waid of the M. A. C. and Hale Tennant, field agent in marketing. M. A. C., who assisted in the organization of the Michigan Potato Exchange. In reading these two letters, the reader should bear in mind that the one represents the opinion of a potato dealers' produce journal and the other two those of extension specialists at the farm college, and it is perfectly natural that there should be some divergence of views between the two. Each of the letters contain worth-while information and we urge our readers to give them their careful attention.

Produce Journal Expects Temporary Reaction

"—Answering yours of the 10th regarding the future of the potato market, in our opinion the market will probably firm up and do somewhat better for a while, in fact it looks almost certain that there will be somewhat of a reaction from the steady decline of the last few weeks, but to us it seems that this will not last. There is entirely too much stock back in the farmers' hands to betoken a bright future for the table stock deal. In your own state the farmers have 30 to 40 per cent of their crop still back and the same is true in New York and Maine. Wisconsin and Minnesota have been freer sellers but the latest reports we have indicate there is fully 25 to 30 per cent of the crop still in the farmer's hands. It is therefore our opinion that the future of the table stock deal is none too bright, especially for the late spring. All indications are that the Eastern shore has planted rather heavily and from purchases made on Triumphs in Texas there should be a good volume of this stock moving as we have learned from experience that in these times the consumer is much more lavish in buying than he used to be, that he will not take old potatoes freely when new potatoes are available and this should be a factor in the late spring deal on old potatoes, especially if Texas stock moves early as the present indications would show.

"On seed stock, however, conditions look good. Seed has been held back greatly by the scarcity of cars. On early Ohios the situation is especially good as the holdings are extremely light and there has been no buying from Indiana, Ohio and Missouri and other central western states as yet. It looks as if the Ohios will clean up closely at present prices. Rose are also none too plentiful and there seems to be enough of a trade to clean these up at present prices. Triumphs are the only seed stock that have been more or less plentiful. Texas bought freely and is through. Arkansas and Oklahoma are at present sending in rush orders for Triumphs but the bulk of the buying for Triumphs will soon be over and there may be a decline in the market for this variety as the northern states do not take many Triumphs. This is a frank statement as to the way we view the situation which you may use either for publication or for your personal wants.—*Chicago Produce News.*"

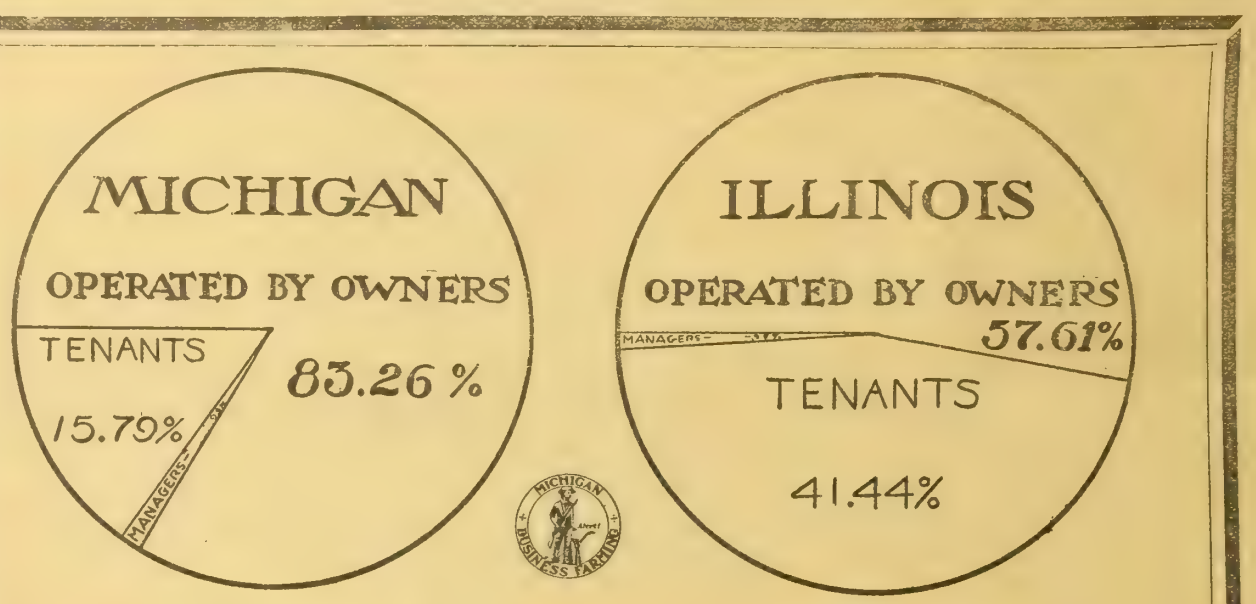
A Comparison of Holdings by Prof. C. W. Waid

"—Replying to your letter of February 10, will say that I endeavored to get some figures from Mr. Church yesterday but his office was closed because of the holiday. I was unable to get anything very near up-to-date and suppose you have all of the figures which I will be able to give you. However I will send them along and you can make use of them if you care to do so.

"According to the crop estimate the total production in the group of twenty-one northern states for 1920 was, in round numbers, 250,000,000 bushels, in 1919, 281,000,000; in 1918, 304,000,000. The holdings in these same states January 1 were: 1920, 91,000,000 bushels; 1919, 122,000,000 bushels; 1918, 151,000,000 bushels; 1919, 14,500,000; ing January first 1920 was 10.000,000 bushels, 1919, 14.5000,000 1918, 21,000,000. We were able to get figures from only one state since January 1. According to a report from Wisconsin there were 7,200 cars available for shipment December 1, 1919. February 1, 1920, there were only 2,970 cars left for shipment.

"Judging from these figures it would seem that if the movement of the remaining portion of the crop is made in a general way that prices should hold at a high level throughout the season. If, however, a heavy movement is made at any one particular period it may force prices downward considerably. It would be unfortunate if growers anticipate that by holding to the end of the season they can get much higher prices than at present because if a large number of those holding potatoes should follow this plan it would

(Continued on page 26)



"MICH-I-GAN, MY MICHIGAN!"

THREE WEEKS AGO I took this same space to tell the live stock breeders of Michigan that they had, up to now, practiced a profound modesty which, while commendable in the sweet-school-girl-bud-of-sixteen, was hardly heard above a whisper in the brass band of publicity which far less worthy states were tooting and blowing out of the west.

Michigan, the birth-place of the Holstein in America, for instance, was stepping modestly back to let other states pose as the real Holstein centers. This week, I want to direct the attention of every loyal citizen of Michigan to a graphic comparison of a fact vital to every state, i. e., the percentage of farms operated by tenants or owners.

ILLINOIS is a great state agriculturally, famous principally for her corn and its by-product, hogs. She is spoken of regularly as the "first farm state of America." Yet this simple chart, made from the last official figures, the United States census of 1910, shows how far **Michigan outranks Illinois in point of farm owners !**

No one questions but what the 1920 census now in process of taking, will show even a greater percentage of tenant farmers in Illinois—indications say that there will be more tenants in Illinois, than farm owners on her fertile acres !

We respect the farm tenant—the man who leases from another who owns the land, but his interest in the improvement of his farm, the drainage, buildings and home comforts surely are not to be compared with those of the man who actually owns his farm, fertilizes his fields and looks forward every waking hour to the improvement of his buildings and his families' living conditions.

Here, then, is something more we Michiganders can talk about, can toot our horns about—farmers from other states where land values have already become a speculative menace are looking towards Michigan, they want to come here, buy farms and settle among those, who like themselves own and till then **OWN** soil !

Wake up, Superintendent of the Public Domain !

Wake up, Agricultural College and you newspapers, Wake Up !

"Michigan, My Michigan," is more than a song to be taught in the little red school house, it is a vital fact that millions of folks all over this great America ought to be told about—that the MY in the song means just what it does in brother Webster's definition of this simple word !

Federal Farm Loan System Attacked by Enemie

Proposed Changes Intended to Cripple Act and Are Contrary to the Farmers' Interests

By W. G. McADOO
Formerly Secretary of the U. S. Treasury

THE ATTACKS now being made in the courts, and in the Congress of the United States, on the Farm Loan Act, and the great system of agricultural credit banks thereby created, indicate a purpose on the part of the majority leaders to yield to the pressure and influence of the Farm Mortgage Brokers and to destroy or so cripple the Federal Land Banks and the joint stock Land Banks that the farmers of the country will again be put at the mercy of usurers and mortgage sharks.

A suit was recently brought at Kansas City, Missouri, attacking the constitutionality of the Farm Loan Act. Judge Van Valkenburg, at Kansas City, decided in favor of the constitutionality of the Farm Loan Law. An appeal was taken to the Supreme Court of the United States where the case was recently argued. If the Supreme Court should sustain the constitutionality of the Farm Loan Act, then the only danger to the Farm Loan System is from Congress.

W. G. McADOO

Prior to 1913, there was a severe money stringency at crop-moving seasons. * * * Credit was largely controlled by a powerful group in New York—commonly referred to as "Wall Street." Doubtless every farmer remembers that in the fall of 1913, the Treasury Department, for the first time in its history, disregarded "Wall Street" and made direct deposit of government money in banks in the crop-moving centers thruout the country on condition that the same be lent to farmers for crop-moving purposes at reasonable rates. This broke up the annual crop-moving squeeze and since 1913, nothing has been heard about tight money and the difficulty of moving the crops.

But this was not enough. The administration realized that, unless remedial credit legislation was promptly enacted, what the Treasury had gained in breaking the selfish control of credit would be lost. Therefore, the Federal Reserve Act was passed, and while it created a great system of commercial credit, it made provision only for the essential short-time credit needed by the farmer. It put the farmer's six months' notes given for agricultural purposes, such as growing crops or carrying his matured crops when in the form of staple products, upon the same favorable basis as the notes of merchants and other business men when given for commercial purposes.

The farmer's notes of this character were made eligible for rediscount in Federal Reserve Banks just as were the business man's notes. What does this mean? It means that every National Bank can now lend money to the farmer for agricultural purposes or upon the security of staple agricultural products, with full knowledge that it can rediscount such notes in Federal Reserve Banks upon the same favorable terms that it can rediscount the merchant's paper.

Provision for Long Time Loans

But this was not enough. The farmer also needed a system of agricultural credit under which he could borrow on a mortgage on his farm for a long term of years and at low interest rates and be relieved of high charges for commissions, attorney's fees and other exactions which, in times past, have made the cost of money borrowed on mortgage, where he was able to get it at all, so high that he could ill afford to bear it. The farmer could rarely borrow on mortgage for a longer period than five years. Frequently he could borrow for a much shorter time only. He had to submit to arbitrary valuations of his property which were not infrequently lower than was justified and he had to take the money upon any terms the lender imposed upon him. The small farmer who wanted to borrow on mortgage, $1,000 or less, found it very difficult to get it on any terms. There was little or no credit on farm mortgage for the small borrower.

It became necessary, therefore, to create a farm mortgage system which would give the farmer: first, the long time mortgage loan covering a period of as much as forty years and repayable on the amortization plan, namely, in annual installments of say one per cent; second, a low rate of interest, which would be uniform thruout the United States, so that farmers everywhere would share equally in the benefits of the system. This could be accomplished only by the creation of Land Banks with power to sell a standard form of bonds based upon the security of the farm mortgages they purchased from the farmer.

It was essential that the mortgages given by the farmer and the bonds issued by the banks upon the security thereof should be exempt from all United States, state and local taxation. Without this exemption, it would be impossible to sell the bonds of the banks at such reasonable rates of interest that the banks in turn could lend money to the farmers on mortgages at a reasonable rate of interest. Consequently, the Congress of the United States, upon the recommendation of the President, passed the Federal Farm Loan Act in July, 1916. Under this law the country has been divided into twelve districts and a Federal Land Bank has been established in each. These Federal Land Banks are not permitted to lend more than $10,000 to a single borrower and they cannot lend except upon the co-operative plan through a Farm Loan Association which the farmers have to organize. It was necessary, therefore, to provide another class of banks, which could make loans to farmers desiring to borrow in excess of $10,000. Therefore, the Act provides for the organization of what is called Joint Stock Land Banks. These banks are permitted to lend direct to a single borrower in any amount up to $50,000. The Joint Stock Land Banks, like the Federal Land Banks, issue their bonds against the security of the farm mortgages they take. The Joint Stock Land Banks are required to lend on the long time amortization plan at rates of interest regulated by the Federal Farm Loan Board at Washington, just as in the case of the Federal Land Banks. Thus a great system of agricultural credit is created, the short time loans being supplied by the Federal Reserve system and the long time amortization mortgage loans by the Federal Farm Loan system.

Their Need is Apparent

Although the Federal Land Banks have been in operation but little more than two years, they have made loans to farmers throughout the United States aggregating $285,000,000 at five and five and one-fourth per cent interest, plus one per cent per annum for amortization, so that at maturity the principal will have been paid in full if the interest and amortization charges shall have been regularly paid as they became due.

The provision that the bonds issued by the Federal and Joint Stock Land Banks and secured by farm mortgages, shall be exempt from taxation, and that the rates of interest shall be regulated by the Farm Loan Board and be uniform in all the states makes it possible for the farmer having good security, even though he lives in a sparsely settled state, to secure credit on just as reasonable terms as the farmer who lives in the most populous and settled state. But those private money lenders and brokers who for years have fattened at the expense of the American farmer, have fought bitterly this tax exemption feature because they are now forced into competition with the Land Bank system and compelled to lend money on reasonable terms. Threats that the tax exemption on farm mortgages and Land Bank bonds would be knocked out by the present Congress have been confidently made by the Farm Mortgage Brokers of America.

Representative J. W. Fordney, Chairman of the Ways and Means Committee of the House and Representative McFadden, a member of the Banking and Currency Committee of the House have made speeches recently **in opposition to the tax exemption clause and these speeches are being widely circulated by the Farm Mortgage Brokers of America.**

Senator Smott has introduced a bill in the Senate to force the liquidation of the Joint Stock Land Banks and Mr. McFadden has introduced a similar bill in the House of Representatives. If the Joint Stock Land Banks are thus destroyed and the tax exemption on farm mortgages and Land Bank Bonds is repealed, the Farm Mortgage Brokers and private money lenders will again have a monoply of the field of long time agricultural credit and the farmers of the country know what that will mean in high interest rates, commissions, attorney's fees, and other charges on the original loan and large commissions on each renewal if the farmer succeeds in getting a renewal. The cost of money to the farmer will be increased and all the old abuses will be restored; the Mortgage Bankers will not grant the long time amortization loans which the farmer gradually pays off so that the principal of the debt will be liquidated at maturity. Farmers will have to take short time loans on such terms as the Farm Mortgage brokers and lenders choose to make.

Fair Play for Farmers

Why should farmers not have the benefit of exemption from taxation on farm mortgages and the bonds issued by the Land Banks against these mortgages? What is a mortgage anyway? It is merely an evidence of indebtedness. Why should the government of the United States tax the evidence of the farmers' indebtedness? What is the bond of the Land Bank but an evidence of indebtedness issued on the security of the mortgage of the farmer and by means of which the bank is enabled to get the necessary money from investors to lend to the farmer on his mortgage? If a tax is imposed on the Federal and Joint Stock Land Bank Bonds, who will pay it? The borrowing farmers, of course. They will pay the higher interest rates which the bonds will have to carry, if the tax exemption is removed, because the banks will have to charge the farmers a higher rate of interest on their mortgages. If the farmer has paid taxes on his mortgaged farm and on his income as well, why should he be asked to pay taxes on his debt?

The National Banks of the United States own all the stock in the twelve Federal Reserve Banks which have an aggregate capital of more than $86,000,000. These National Banks are permitted to receive six per cent preferred dividends on their Federal Reserve Bank Stock and in addition, every dollar of that stock and the income therefrom is exempt from all Federal, State and Municipal taxation. All State and Municipal bonds issued thruout the nation are given full exemption from federal, state and local taxation. There are millions of these securities in the hands of the wealthy classes. Why should they have the benefit of exemptions which withdraw hundreds of thousands of dollars of their income from all federal, state and local taxes? Certainly, a tax exemption which will permit the farmer to get credit on (*Continued on page 23*)

Farmers, Be On Your Guard

EVER since the farm loan system came into existence the farm mortgage brokers have sought to destroy it. First, its constitutionality was attacked. Then an effort was made to secure the repeal of the section of the law making the bonds tax free. Neither of these efforts has spent its force, and lobbyists are busy in Washington to cripple the measure. Read the accompanying article, and if the federal farm loan system means anything to you, advise your congressman, and particularly the Hon. J. W. Fordney, who is reported to have made speeches in the house against tax exemption, how you feel about it. —Editor.

Effects of Temperature on Productivity of Soils

Temperature in Soils is Largely Determined by the Water Content as a Result of Peculiar Properties of Water

(A continuation of Prof. McCool's Exclusive Articles for M. B. F. Readers.)

By M. M. McCOOL
Professor of Soils, Michigan Agricultural College.

THE PRODUCTIVITY of the soil depends much upon temperature. It is obvious that all life depends for its existence upon soil temperature and we should know as much as possible about the things that may induce changes in it. Doubtless there are many misconceptions regarding the temperature of soils of widely different texture, topography, surface conditions and others.

The biological, chemical and physical processes of the soil are markedly affected by its temperature. Biologically, the germination of seed, the best growth of plants, the multiplication of the lower soil organisms, the removal of plant-food elements from the soil by the plants and others depend upon it. The winter killing of new seedings of alfalfa and others in some cases is due to the low temperature of the soil. The special crop adaption of soils is due in part to the temperature relationships.

Many chemical changes that take place in the soil are accelerated by an increase in temperature; the solvent action of water is increased, the rate of formation of nitrates in the soil is more rapid in warm than in cool soils and other important changes that could be mentioned. Several important physical processes that are influenced by the soil temperature should be mentioned, namely, the movement of soil moisture, salts and air in the soil.

Several conditions influence the temperature of the soil. In brief there are two groups, one the intrinsic or those contained in the soil mass, chief of which are radiation, absorption and water content, the other the external consisting of the meterological elements. Certain of these tend to impart heat to the soil while others take it away. Therefore, a temperature record of a field soil is the resultant summation of the effects of these opposing forces.

Changes of Temperature

The fluctuations in the temperature of the soil are greater at the surface than they are lower down. We have obtained much valuable information pertaining to this subject by means of electric resistance thermometers and others. Records have been kept for about four years. In fact, Banyoncas, of the Soil Department has done more work on this on this subject that any other institution in the world. It is now known that the surface of dry mineral soils during the daytime is higher than the air above on account of the absorption heat, the difference amounting to more than thirty degrees. At night, however, the surface of the soil and the air above reach about the same temperature. Six inches from the surface of the soil the fluctuations are much less. On February 13 the maximum temperature of a soil six inches from the surface was about twenty-three degrees, and the minimum about six degrees less whereas in August the maximum temperature was eleven degrees greater than the lowest temperature. At 12 and 18 inch depths respectively there is usually less than two degrees of difference in the highest and lowest temperatures attained.

The temperature of the soil is usually reversed between day and night, that is when not frozen. This is because the air temperature reverses itself during these periods and the soil receives or loses its heat at the surface more rapidly at a given time than it does lower down. At sunrise, as is usually the case, the temperature of the surface soil is lowest and somewhat warmer below, the temperature of the air rises, of course, the surface soil begins to rise. The warmth passes downward as a wave, but as above stated the lower layers changes less rapidly than those above and again the temperature of the soil mass is reversed.

The daily reversion of the temperature of soils aids in their aeration or ventilation. Air expands greatly in volume when warmed and likewise contracts when cooled. Thus when the temperature of the soil varies the air contained therein contracts and expands forcing air out when warmed and taking it in when cooled. It is maintained by some that soil aeration takes care of itself, that is where the soils are drained and that the value of tillage in assisting in this process has been overestimated.

Although soils may freeze several inches below the surface their temperature does not go much below the freezing point. One cold day in February when the temperature of the six inch depth of soil decorded 22 degrees twelve inches from the surface it was about two degrees below freezing and eighteen inches from the surface it was at freezing point. Winter injury of crops must be due to the low temperature of the upper layers.

The water content of the soil markedly affects its temperature. This is brought about chiefly by three properties of water. One of these is it requires much heat to melt a given quantity of ice. Thus soils that contain different amounts of water in the frozen state require different amounts of heat to melt this ice and to warm them. It follows that those lows that those containing the smallest quantities of water thaw first in the spring.

Another property of water is its high specific heat. By this is meant the amount of heat that is required to raise the temperature of one pound of soil one degree as compared with the amount of heat required to raise the temperature of one pound of water one degree. The specific heat of water is about five times greater than that of soils. Therefore, water will warm up and cool much more slowly than will dry soils.

The third property of water is its tendency to evaporate. Much heat is required to bring this change about or in other words when water evaporates it uses up heat. The evaporation of one pound of water at 62 degrees, that is its conversion into water vapor at the same temperature requires as much heat as would raise the temperature of about 1,050 pounds of water by one degree. Now when a wet soil receives a large amount of heat from the sun the temperature rises only slightly, because the heat received is utilized in the evaporation of the water instead of going to warm up the soil. Inasmuch as different kinds of soil contain different amounts of water and especially is this true after a rainfall, different quantities of water will evaporate from the surface, and, therefore, these soils will have a different temperature, especially during the warmest part of the day.

The average temperature of different kinds of soil is about the same. Many believe and it is widely taught that sands are much warmer during the growing season than loams and clays. Because of this belief sands are designated as warm soils and loams and clays cold soils. This belief has some justification yet it is greatly exaggerated. Peat and muck soils in reality are cold soils during the spring months.

Our studies show that sands are only slightly warmer soils than the loams and clays. Daily temperature records for four years show that in the spring the sands always thraw completely first, the loams and clays thaw only one or two days later and the vegetable soils or peats and mucks about two weeks later. Upon thawing the temperature of the sands rises very rapidly and it is quite appreciably above that of loam and clay but it is worthy of note that as soon as the finer soils are also completely thawed their temperature also rises very rapidly and approaches very closely that of the sands. During the spring and summer months, however, the average temperature of the sands is only about 2 degrees higher than that of loams and clays, and during the fall and winter months their difference is very slight.

Muck and peat may be made earlier soils. They warm up slowly after thawing in the spring, due in a very large measure to the evaporation of water at their surface. This was proved by placing a thin layer of sand over moist sands, loams, clays and peat soils respectively. Soils covered in this manner, that is after they have thawed, soon reach practically the same temperature. If one so desires he can greatly increase the earliness of peat and muck soils and thus produce vegetables etc., at an earlier date.

The earliness of sandy soils is due to daily temperature changes. This is extremely important. In the afternoon towards sunset the temperature of the sands is appreciably less than that of loams and clays but in the morning at 5 or 6 o'clock it is somewhat higher than that of the loams and clays. As the sun rises and the air temperature increases the sands warm up faster than the other soils and reach their highest temperature first. As the sun begins to go down and the air temperature likewise falls the sands cool faster than the loams and clays and about midnight their temperature is generally slightly lower than the loams and clays. About 5 a. m. the sands may have a temperature of about 2 degrees less than the loams and clays. When these variations of temperature are averaged it is found that sands are slightly warmer than loams and clays. This property of the sands is favorable to the crops early in the season, inasmuch as they are warm when the sun's rays may be utilized and thus growth may proceed more rapidly early in the season in the lighter soils. Reference is made to the time when temperature is the chief and controlling factor in crop growth.

Covering Soil with Vegetation

Soils covered by vegetation vary less in temperature than when bare. This is because the vegetation forms a uniform covering oyer surface and controls to a very large extent the receipt and loss of heat of the soils and thus gives them a more uniform temperature. Some of the experiments at this college show that a light dressing of straw markedly affects the temperature of the soil in the winter. One day bare sand was almost as cold as the air temperature or twenty degrees below zera, whereas the temperature of the adjacent soil top-dressed with straw was only slightly below freezing.

This is important in practice. During the summer of 1916 alfalfa was seeded on limed and fertilized, deep sand at the collage farm and attained a height of about eight inches before cold weather set in. During the winter, snow and other protective coverings blew away, but in some spots the soil was covered with straw. The plants were all winter killed on the bare places although heaving did not take place.

Straw stacks rather than be permitted to rot down in place should be distributed on the land. If new seeding or fall seeded grains are topdressed with it they doubtless will come through cold winters in better condition and, of course, the fertilizing value of it is worthy of consideration.

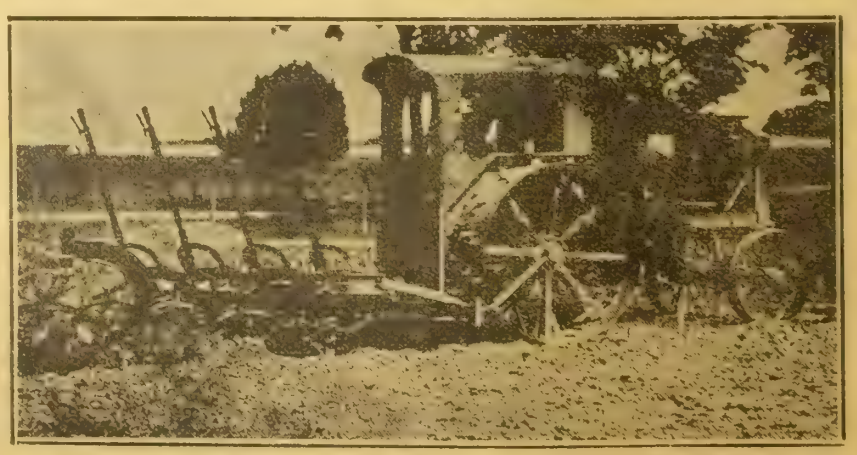
Snow governs the temperature of the soil. In some of the northern counties root crops may be left in the ground all winter without freezing because the snowfall comes early, and remains on the ground until late spring. Where snow was removed from the soil in one case and left on on another the temperature of the soil below the snow was found to be about twenty-five degrees higher than the bare soil. Thus, if snow could be caught and held on exposed places in the field by vegetation or roughened condition of the soil it would be advantageous.

Contrary to the opinion of some, the visit of frosts on muck lands is not due to the nature of the soil but to other conditions. It has been found that the air temperature on a slope is higher than it is over the flat or lower areas. Ten degrees difference in the temperature of the air over a slope and a draw have been reported, the greatest differences being found on those nights when there was little or no wind. This is because the cool air is heavier than the warm and tends to settle over the low or flat areas.

The effect of tillage on the temperature of the soil is slight. Loose or cultivated soils are usually considered to be higher in temperature than if compact or untilled. Our records show that the cultivated soil has only a slightly higher temperature than the other during the spring and summer months. The differences are due to the dry layer formed by tillage, this layer being a rather poor conducter, some of the heat is held in the loose layer. It also loses heat more rapidly than the compacted soil inasmuch as it does not go so deeply into the soil.

Your Soil Problems

LET M. B. F. and the M. A. C. solve your soil problems. The state of Michigan maintains an agricultural college, and the U. S. Department of Agriculture an extension department, employing skilled and experienced men for helping farmers to solve their problems. Use this service. It is free, and Michigan Business Farming will act as a medium to carry it to you. Follow Prof. McCool's discussions closely. If they are not clear to you on any point, or if you have a problem which he does not cover, feel free to write and ask for more specific information.—Editor.



Good plowing with tractor outfit. Note piles of lime to be applied after plowing.

The Farmer and His Hired Man

How Can the Farmer Keep His Hired Help From Going to the City?

By MRS. DORA STOCKMAN

Lecturer Michigan State Grange and Member State Board of Agriculture

MRS. DORA STOCKMAN

MR. HIRED MAN, I am intensely interested in your letter to BUSINESS FARMING which the editor, Mr. Lord, has invited me to answer.

I am interested in the hired man's problem, because he is just one kind of specialist in farming, and all farm problems are of vital interest to other farmers.

It is of vital interest to me as a farmer because many of his problems and mine are the same, and based upon the same fundamental facts.

City vs. Country Living Prices

Now just like a woman, I am going to begin at the conclusion first where the "hired man" says, "here is one good hired man who will move to town before he will stay in the country and live from hand to mouth." That is where the hired men have gone and the farmers, too, and let us see what kind of a trade they have made.

He cites the case of the big farmer who gives the following items to his hired man which if he were to live in Lansing would be equivalent to the following amounts:

Rent, $35 per mo.	420.00
1 year fuel, oil or coal ...$	75.00
Potatoes, average family 30 bushels	30.00
1 cow, average 3,000 lbs. 7c lb.	210.00
250 lbs. dressed pork, 18c pound	45.00
Product of 30 chickens .	100.00
52 weeks @ $10 per week	520.00
Bonus at end of year ...	500.00
Total .....$	1,900.00

or an average of $6.33 per day for 300 days.

Below is the wage figured in terms of what of the wages of the hired man who is "going to move to town," would buy in the city.

2 average cows, 6,000 lbs. milk @ 7c lb. .....$	420.00
Potatoes, 30 bu.	30.00
Rent, $35 per month	420.00
Wages, 52 weeks at $12 per week	624.00
Total .....$	1,494.00

or nearly $5 per day for 300 days.

The prices for these items are for Lansing and could not be duplicated in Detroit where rent as well as the other products is much higher.

The average wage in Lansing, unless for skilled labor, is about $5 per day.

The Farm Income

Now can the average farmer afford to pay the hired man better wages?

According to the 1910 census the following figures were compiled and arranged by W. J. Spillman, Office Farm Management, Department of Agriculture:

The average farm consisting of 131.8 acres is valued at $6,433.67. Interest on capital invested @ 5 per cent	322.18
Farm family labor income on same	318.22
Farm income, total ..$	640.40

The items of income about which no information is available are the value of the milk and cream consumed in the home farm and what the farmer earns for work outside his farm. In some regions this latter item is important. Thousands of farmers receive a large part of their income from labor done for others at times when they do not have profitable employment on their own farms. In other sections of the country this item is unimportant.

The item of expenditure about which no information is obtained is the amount paid for the live stock purchased. This is a very important item in those sections of the country where the fattening of stock is practiced. It is also a considerable sum in dairy regions, but in regions where no live stock except work animals and a few head of miscellaneous stock are kept it is not very important.

So at least one can say that the figures for the farm family income exclusive of interest on investment was no greater than that given, $318.22.

But you will argue, farm prices have doubled in the last ten years. That is quite true, but it is equally true that the prices of farms, farm machinery, costs of living, and labor costs have more than kept pace with the increase of price of farm products.

Let us now compare the farm owner's income with that of the hired man and we find, figured on the basis of doubled prices of farm products and also adding rent to the family income which is not given in the previous figures:

Labor income of average family $318.22 x 2 ...$	636.44
Rent for farm home not figured above	420.00
Total .....$	1,056.44

We have shown that the average hired man's income according to the figures given by the writer is equivalent to the buying power in the city of $1,494.00, but the buying power of the farm owner's labor income is but $1,056.44. The farm owner has the larger income because he has capital invested in his farm and equipment, an amount which in comparison with the farm labor income ten years ago was more than his labor income.

The average farm today would represent also a double amount of capital invested of $12,887.34, this at 5 per cent interest would entitle the farmer to $644.36 interest, an amount more than equivalent to his labor income.

Further, Mr. Hired Man, the farm owner's income is based on the labor of the farm family, which includes work of women and children, where your labor income does not include labor of your family.

Manifestly on the present scale of prices, part of your wages are now paid out of the interest the farmer is entitled to on his investment, out of the fertility of his soil, (which would be giving away his farm piecemeal) or out of his own income which is smaller than yours.

If anyone should go to the city it is the farmer where he can get a higher rate of interest for his money, and where his family are not unpaid laborers.

But Mr. Hired Man and Mr. Farmer, before you go to the city to live, just take a visit to the city and try renting a house, inquire the prices of milk and eggs, pork and potatoes, the price of fuel, water and light bills and taxes. And the fact that the average man in a town like Lansing does not get over $5 per day.

Then figure it out and see if you want to trade places with the AVERAGE MAN. If you have unusual skill and ability, the city offers a premium for such men and women. The average people in the city live from pay day to pay day.

Rather than leave the business of farming, Mr. Hired Man, will you not help the farmer make the farm business more efficient, so that he can pay you better wages?

And more than that help the farmer market his crops so that he will get a larger share of the consumer's dollar. If the farmer got his just share for the crops he produces he could pay his hired help a better income, and Mr. Hired Man you would want to get to buying you a farm of your own. Or if you preferred to live in the city you could live there for less money.

Mr. Hired Man this problem is our problem. We want to help you solve your problem, and we want you to help us solve ours, let us make the farm a desirable place to live. Here's our hand.

The Hired Man Problem as Seen by the Hired Man

I HAVE been a subscriber of your paper for several years. That's the way I have followed the markets on buying and selling; as you have given so much sound advice to your readers in the past, I would like some of it now. There's an old saying, "Fools rush in where angels fear to tread." I know I'm going to start something, but the hired men of today are farmers of tomorrow.

In your next paper I would like to see these questions: How much should a hired man be paid, so he can feed, dress his family and save a little each week? How much should he be furnished besides his wages?

Can a farmer himself buy clothes, shoes, fuel and everything to keep a family of six on $12 per week?

Can the farmer himself live on ten cents a meal? For a family of six, if each meal cost 10c per meal, at the end of the week the farmer would be in debt sixty cents. Figure it out, Mr. Editor, for yourself. Where is the man to buy the clothes, shoes and fuel?

One large farmer here has made this contract with his men. He gives them fuel, either oil or coal for a year, potatoes, one good cow, one hog weighing 250 pounds when killed, feeds thirty chickens and furnishes a good house, ten dollars a week, and at end of the year a bonus of five hundred dollars.

Now this same farmer has kept his help four and five years, and they are perfectly contented to stay another year with him. Why can't other farmers who have had their help one or two years, do the same?

Now if there's any big farmer who can pay the same as this farmer has I'm looking for the job at once. If the farmers want good, married men who understand all kinds of farming, dairying, and all kinds of machinery, they will have to pay the hired man enough so he can live.

Here's one good hired man who will move to town before he will stay in the country and live from hand to mouth. A hired man must needs be jack of all trades. In the last year I have not only done the general farm work, but have run tractor, overhauled tractor several times, run separator for threshing outfit, played carpenter—all on the big salary of $12 per week, two cows, notice I didn't say good cows, which will make about $4 worth of butter a week, and potatoes furnished.

Enough has been said, there are many other hired men getting the same. Give your men a fair living wage, Mr. Farmer, and nine cases out of ten you'll have a man for several years.—A Hired Man, Genesee Co., Mich.

How Have You Solved the Hired Man Problem?

OUR hired man friend who writes above is right in one conclusion, that some farmers can afford to pay their hired men better, but he is wrong in assuming that the majority of farmers can so afford. Some farmers can't keep a hired man. Others seem to have no trouble at all. Good farm help is getting scarcer every day. It is a problem that must be solved. How are we going to do it? The farmer who has had his hired man troubles and the farmer who has solved his hired man problems can HELP us solve this question for all the farmers by telling us their experiences. We want to publish a series of letters upon this subject. Who will be the first to contribute?—Editor.

Succeeds Hartman to G. R. & I. Agricultural Post

MR. D. L. HAGERMAN, county agent for Ottawa county, has been appointed agricultural and industrial agent for the G. R. & I. R. R. to succeed W. H. Hartman, who resigned to become production manager for the Falk Company of Pittsburg, manufacturers of potato products. Mr. Hagerman is a native of Litchfield, Hillsdale county, and has been identified for a number of years with agricultural instruction. He graduated from the Michigan Agricultural College in 1913, and became teacher of agriculture in the St. Johns High School. Four years ago he was appointed county agent for Ottawa county, a position which he has held up to the present time. Mr. Hagerman's experience fits him well for the larger field he has entered, and we expect to see him spread broadcast glowing tales of the wonderful agricultural opportunities that abide in the section of Michigan that is penetrated by the G. R. & I. lines. Mr. Hagerman's headquarters will be at the G. R. & I. building, Grand Rapids.

Four Thousand Farmers Join Beet Association

Work of Organizing Sweeps Over Territory Like Prairie Fire, Enlisting Support of Over Ninety Per Cent

"AS NEARLY as I can estimate from my own records and the reports of the locals," says C. E. Ackerman, manager of the Michigan Beet Growers' Ass'n, "over four thousand out of the ten thousand farmers who grew beets last year have joined the State Association and agreed not to grow any beets this year except under a contract approved by the Association."

With the campaign scarcely six weeks old over forty local associations have been organized, with duly elected officers and paid-in dues. Each association has opened a banking account in which all dues have been deposited and form the nucleus of a fund which will amply finance the work of extending the local associations and carrying on the fight for a fair contract. In every community where a meeting of beet growers has been called, associations have been effected, with a practically one hundred per cent membership of those attending. Locals were organized last week at Mason, Ingham county; Alma, Gratiot county; Coleman, Clare county; Chesaning, Saginaw county. A complete list of all locals organized will be published in an early issue of MICHIGAN BUSINESS FARMING.

Are the Farmers Backing the Organization?

The manufacturers have laid great stress upon their self-manufactured assertion that the present campaign is the work of a few agitators and small beet growers. They have tried to make themselves and the public believe that the really representative beet growers were not behind the movment. Through the influence that the manufacturers have with some of the newspapers in the sugar beet sections, they have tried to scatter this impression through the press, and many and amusing have been the "news" stories which the papers have printed showing how the farmers were falling all over themselves to sign up the old contract. Not long ago, one of these newspapers carried a story under the caption, "Farmers Buck Organization." It was evident that the printed who set up the heading made a mistake in the wording and substituted a "u" for "a" in the word "buck." At least the heading would have been more nearly correct had it read, "Farmers 'Back' Organization," for that is what they are doing almost to a man. Hundreds of farmers signed up the old contract without being told by the manufacturers of the additional $6 per acre charge for labor, and they are now showing their resentment of the deception, and declare they will grow no beets under the old contract.

Manufacturers Stand Pat

As yet the manufacturers show no sign of conceding to the growers, although they have made some admissions which indicate a slight weakening. Writing upon this subject, Mr. Ackerman says:

"The manufacturers seem to admit that the costs to farmers will be 25 to 35 per cent higher in 1920 than they were last year, and 50 per cent more than they were two years ago. They also acknowledge that they cannot get the labor for $6 extra and are offering the farmers $4 an acre more as an inducement to stand on the 1917-18 contract. They still have all their field men and many scale men on full salaries (which the farmer pays in field expense) and they are at all our meetings, at all sales, at all places where they meet the farmers, and they tell with such solemn faces what an awful thing the farmers are doing when they throw up the contracts which the companies are carrying in their pockets unsigned and un-returned and which never would be returned if sugar should drop to 7 cents per pound, and yet they so sadly say, 'what an awful thing it would be if the farmer should cancel a contract.' No consideration seems to enter their minds that the farmer has the same right to cancel when it appears that the shortage of labor, the higher prices therefor, the higher cost of machinery, fertilizer, etc., may cause great financial loss if not cancelled.

"Is a contract legal when one party gets another party to sign and then carries same in his pocket until conditions might make it profitable for him to take his own time and at his own pleasure signing and returning same to the second party regardless of the fact that during that time conditions might have changed so that the first party would profit largely and the second party lose heavily? Let them start to enforce their contracts on one of our members against his will and we will proceed to enjoin the companies from putting out any of their contracts on the ground that facts will show them to be profiteering and at the same time hampering production of domestic sugar by offering a price that is less than the cost of production which will certainly result in the abandonment of at least one-half of the contracted acreage. The best evidence in the world that the manufacturers are familiar with this fact is their effort to secure twice the acreage needed in order to run their plants to capacity.

"Please make this point plain to our brother farmers through your valuable paper. They have called us a bunch of Bolshevists and agitators. They have paid for having such statements printed in the press. They have paid for articles intimating that the United States government has been unfair with them because under the Lever Law which prohibits profiteering it would be necessary to set the price of beet sugar at 12 cents although foreign sugar might go to 20 or 30 cents per pound. Can domestic sugar production be promoted by allowing the manufacturers all the profits of the industry and not paying a cost of production price to the farmer for his beets?

"We are out to defend our interests having due consideration for the consuming public, believing that their interests are also our interests because when cost of production and a reasonable profit all along the line of service is paid, consumers will be amply supplied and at the lowest possible price."

Farmer vs. Manufacturer

IT IS STATED that the sugar manufacturers made seven times as much profit during the season just closed as the farmers. The following figures were presented by J. C. Ketcham at the annual meeting of the Farm Bureau at Lansing:

Sugar beet tonnage, 1919	1,001,000
Estimated average price to farmer	$13.00
Total return to farmer	$ 13,013,000
Cost of producing, (allowing nothing for managerial ability of depreciation ($106 per acre)	11,707,488
Farmers "profits"	$ 1,305,512
Amount of sugar (in pounds) produced from 100,001,000 tons of beets	223,223,000
Average wholesale price	$ 0.12
Gross receipts from sugar	$ 26,786,760
Estimated value of by-products	2,038,025
Gross receipts (sugar and by-products)	$ 28,824,785
Estimated beet and factory cost (based on government reports)	18,590,000
Manufacturers' balance, from which to pay selling costs and profits	$ 10,234,785
Estimated selling cost, based on government reports	1,016,115
Balance, representing net profits	$ 9,118,670

(or) SEVEN times the farmers' profits.

(Note: Many farmers will testify that Mr. Ketcham's estimate of $106 as the cost of producing an acre of beets is too low, but it serves as a basis of comparison between the farmer's and the manufacturer's respective returns from the industry.)

More About Sugar Profits

John Ketcham of the Michigan State Grange has compiled figures based on reports to the Federal Trade Commission showing that Michigan manufacturers are making a profit of 50 per cent on every pound they produce. This is on the assumption that the manufacturers have sold their sugar at the prices fixed by the Government. The growers claim to have evidence that they are not selling at the fair prices. There are many "wash sales," they say, through which manufacturers make exorbitant profits.

One Michigan sugar manufacturer is claimed by the beet men to have made $1,000,000 during the last few weeks by holding sugar. Others are said to have netted more from speculation than from manufacture.

Mr. Ketcham said he could not obtain information that would prove these charges. The evidence gathered by his association is convincing enough, however, so that representatives of the attorney-general of the United States and agents of the department of justice have started an investigation with a view to ascertaining if there has been violation of the Lever Act, he reported.

Figures on Profts

The extent of the profits sugar manufacturers can make without coming in conflict with the law is shown by the fact that the cost o producing beet sugar during the 1918-19 season was $157 a ton 7 4-5 cents a pound, which include money paid to farmers for beets wages of labor, upkeep and depreciation of plant, interest on investment, salaries of officials. The figures are taken from reports submitted to Congress by the manufacturers when seeking a protective tari on sugar.

"The manufacturers are producing sugar this year about as cheaply they did last," Mr. Ketcham said. "They did not pay any more for the beets they are using now than they paid in 1918. Their common labor may cost them a little more, but that would be the main increase. Cost of beets is 72 per cent of the cost of sugar, according to the Federal Trade Commission reports. The big item has stood still.

"With sugar costing less than cents a pound to manufacture, and selling in carload lots at from 11 1 cents up, there is a good profit for the manufacturers. Beets, on the other hand, last year, cost the growers $1.06 an acre. They got an average of $118.30 an acre for their The average profit to each farm was $118. This is on the assumption that the average acreage was 1. Unless a man gives all his time beets 10 acres is about his limit.

Holds Estimate Low

"When the beet growers at t

BEET GROWERS: BE SURE TO ATTEND THESE BIG MASS MEETINGS!

Announcement is made by C. E. Ackerman that three big mass meetings will be held at at the following places and on the dates named:

OWOSSO, TUESDAY, FEB. 24TH—CARO, WEDNESDAY, FEB. 25th—SAGINAW, MONDAY, MARCH 8TH.

The Saginaw meeting will be a "state round-up" and will come at the conclusion of the membership campaign. It is expected that this will be the largest mass meeting of farmers ever held in Michigan, and every angle of the sugar beet situation will be discussed. Speakers who will attend these meetings will include John C. Ketcham, president of the U. S. Beet Growers' Ass'n, C. H. Bramble, overseer of the Michigan State Grange, C. E. Ackerman, manager Michigan Sugar Beet Browers' Ass'n.; A. B. Cook, farm leader, and aggressive in present fight; Forrest Lord, editor Michigan Business Farming, and others.

Cong. Fordney Backs Down on Bean Tariff

Reported as Saying it is Useless to Introduce Measure at This Session of Congress

WHAT looks like a plain case of politics and "passing the buck" is Congressman Fordney's reported statement that he could "get a bill passed through Congress providing a higher bean tariff, but the president would veto it," and "he could not rally enough Democratic votes to over-ride his veto." The congressman's conclusions are, therefore, that it will be useless to introduce the measure, and that the bean growers must consequently continue to compete with the cheaply grown oriental product.

Well, Mr. Fordney, we are from Missouri, and we like to be shown. We folks back home are getting just a little bit tired of this game of "passing the buck" which the Republicans and Democrats have been playing for the last four years. Congress has consistently blamed the president for everything that has gone wrong and taken all the credit unto itself for everything that has gone right, and the president has had a habit of covering himself with glory over the successful outcome of his plans and of throwing the blame back onto Congress when his plans went awry. There simply isn't any such thing as pinning down responsibility any more, as the average type of office holder is so weak-kneed that he cannot bear the burden himself, but must needs shift it off on to others.

The Bean Tariff

When the delegates from the bean growing states presented themselves before the House Ways and Means Committee, they submitted indisputable evidence that the tariff on beans should be increased. The Democratic members of the committee, conspicuous among whom was Claude Kitchin, former minority leader, examined the proof very carefully, and were finally forced to admit the justice of the growers' claims. If there was any out and out opposition on the Ways and Means committee to the proposed tariff, it did not make itself manifest during the hearing. The committee left Washington with Congressman Fordney's positive assurance that "everything possible would be done" to speed the introduction and passage of a special tariff bill. The only proviso to this promise was that in case no general tariff bill were introduced at the present session. The committee took the congressman's word in good faith, and virtually leaving the entire matter in his hands, returned home. Since that time numerous letters have gone forward to Mr. Fordney inquiring the progress of the legislation, but such infrequent replies as have been received by MICHIGAN BUSINESS FARMING have been evasive and unsatisfactory.

Now the congressman says that it is useless to introduce the bill. Why? Because he THINKS the president would veto it, and his efforts would be entirely futile. This statement will appeal to the average bean grower as the weakest kind of excuse for Mr. Fordney's defection in failing to carry out his promise to the growers and do the thing which his own judgment should tell him is in the interest of the majority concerned. We are naturally inclined to wonder just how great Congressman Fordney's influence is among his colleagues. We wonder if he really can muster enough votes to pass the measure? He says so, but there is no evidence to bear out his statement. The congressman reminds us of the man who made out a list of all the men in his town whom he thought he could lick. Casey heard that his name was on the list, so we went to the boaster and said, "I hear yez have my name down wid those whom yez kin lick. Be that thrue?" "Yis," said the other. "Well," rejoined Casey fiercely, "Yez can't lick me," "Are you shure about that?" say the other. "Yis, and I'll prove it to yez." "Well, if what yez say be thrue," says the bold man, "why, I'll scratch your name off the list."

We expect the bean growers to call the congressman's bluff just like that, and have him make good on his boast that he can get his measure through Congress, or else confess that he was just "talking through his hat" for the opportunity it gave him for adding censure to an already much-maligned and afflicted president.

Does the good congressman from the Eighth district think that his constituents would blame him, if after having done all in his power to get the tari bill through Congress, the president then vetoed it? We have never for a moment thought that Mr. Fordney would be able to change the policies of Pres. Wilson, and we are sure that the committee that went to Washington, of which the writer was a member, had no such idea in mind. In fact, the committee was well informed as to the possibilty of a presidential veto, and it is no "news" to them that the president still exercises the power of veto, and still adheres to Democratic doctrines. Let Mr. Fordney perform his obvious duty which is to get this bill thru Congress irrespective of what action he may THINK the president will take upon it. Having done this his constituents will release him from obligations. But until he can convince them that he has made every reasonable effort to carry out his promise they will convict him in their own minds of playing politics and "passing the buck."

Price of Food Shows Big Drop

THE HIGH COST of living is actually on the downward trend. Prices of eggs, butter and potatoes are going lower weekly. Flour also is coming down—so markedly that the return of the 10-cent loaf of bread in the not too distant future was predicted today.

A 50-cent drop on a barrel of flour was recorded today in the wholesale market; carload lots selling for $12.50, instead of $13.

Eggs that retailed today at from 59 to 62 cents a dozen, were selling a few weeks ago at $1, or over. Butter, which last December sold at 76 cents a pound, is today quoted at 66 to 70 cents, while the wholesale price of spuds, per 100 pounds is now from $4.65 to $4.85, as against $5.25 to $5.75 two weeks ago.

The bottom has not been reached on these commodities, dealers declared today. Fifty-cent butter is predicted within two weeks.

Decided drops in the prices of meats and provisions seem certain according to packers.—Chicago News Dispatch.

Other news dispatches carry the positive statements that there is no immediate prospect of lower prices on machinery, clothing, shoes and other manufactured products. Once more, Mr. Farmer, you are admitted to the Odorous Order of Goats. Advance and give the countersign.

Interest is Keen in Business Farming's Straw Vote for President

ALTHOUGH M. B. F.'s straw vote for President has been running less than three weeks t has brought in several hundred returns, forecasting an intense interst in the presidential contest next all. As is usually the case the vote as brought forth a number of surrises. Hiram Johnson leads in the ace. Henry Ford is running a close ace with Gen. Wood. Lowden shows ittle strength. Admirers of Wm. ennings Bryan have sent in so nany votes for that doughty political varrior that we feel under the necesity of adding his name to our list f candidates. It isn't supposed to e a popular thing to "be for Bryan," ut the editor of M. B. F. isn't a bit shamed to acknowledge that he has ong cherished a secret liking for Mr. ryan and a great admiration for his terling personal qualities. (Please do ot tell anybody about this. We might e accused of being a Democrat and disciple of free silver.)

But to return to the straw vote, here are several "candidates" who o not seem to be in the running at ll. Among these are Miles Poinexter, Gov. Harding, Gen. Pershg, A. Mitchell Palmer, Wm. E. Borh, Champ Clark. In our March 0th issue we shall drop all names om our ballot who have not received ten or more votes. Votes have een received for the following perons whose names have not been on e ballot: Wm. J. Bryan, Gov. Coolge of, Massachusetts, Eugene ebs, Robert LaFollette, Judge Gilert Nations, John D. Rockefeller, ol. Goethals, Albert Beveridge.

We are in receipt of printed matr from several of the presidential ndidates setting forth their views national affairs. As space perits we hope to present these to our aders.

Below are a number of letters reived from readers with reference the presidential aspirants:

For Hoover

"In reply to your issue of Feb. 7th to a candidate for president I would place Mr. Herbert Hoover in first place. First, because he is a man, an organizer, and I believe he is not a politician. In saying this I do not wish to cast any reflections upon the present incumbent in the White House, because under the circumstances he has done nobly but has lost his health in pursuance of his duties. Second, he is an army man. By that I mean a man made prominent by the past war. Hoover is broad enough to elect a cabinet of men qualified as business men to administer their various departments with speed and efficiency. His platform consists of two words, "I serve." Since you have asked for the vote, Mr. Hoover has stated he is not a candidate, but I believe that if the people will prevail upon him he will accept the nomination. Personally I don't care what party places him as party counts but naught with a man who places country above the dollar mark.—*Ralph Stewart, Cass County.*

Nominates Goethals

"I see in my M. B. F. that you have started a straw vote for the next president. On looking down the line I fail to find the name of the men that ought to have that honor. May I beg of you to give him that vacant line that I see at the bottom.

General Geo. W. Goethals is one hundred per cent American, and there is no question but what 99 per cent of the men that ever worked under his supervision on the big ditch, or elsewhere, will not only vote for him but get out and work for him. They know he is all wool and a yard wide, and some to spare. We know he stands for nothing but a square deal, regardless of whom it hurts. Very few of the men that worked on the ditch any length of time that did not have some dealing with him in one way or another and they know he is true blue. Hoping to see his name in the next *Cussey, Mecosta Count.*

Admires Bryan

"There are, no doubt a number of good men listed, and perhaps would be excellent timber for the highest office in the United States. But as I see it, none of those whose names are included in the list have stood up for right and principle in as many good causes in which the voters had to decide in the last twenty years as Wm. Jennings Bryan. He has shown himself a champion for the people in bringing about legislature on more questions than any of those listed, and been found on the right side of the questions that have been settled by the voters in the last twenty years, than any one man that I know of, and even that much hooted-at idea of 16 of silver, to one of gold, of bygone days seems to have come out to his credit since Uncle Sam is converting so many silver dollars into bullion and given us so many new silver certificates to do business on instead. Then his stand on peace between nations I think is admirable, although men yelled like mad at the thought of those trying to settle the trouble between the nations of the world in any other way, than in the war that has cost us so much in life and limb, not to speak of suffering and money that had to be given by those engaged in its prosecution and are still suffering on account of the high cost of living, brought about, not by peace, but as a result of war, and will continue until peace is finally established between the nations again.

"Then prohibition of the liquor traffic, election of senators by direct vote of the people, and many other good things brought about by legislation in state and nation had the help and support of Mr. Bryan; and woman suffrage, which is sure to come soon, is, and has been, staunchly supported by the *Commoner* and will be largely due to his help and leadership. —*A. F. Brown, Alcona County.*

My Choice for President

I AM interested in the character of the man who is to be the next president of the United States, and have indicated my choice below:

William E. Borah ☐	Herbert F. Hoover ☐	Frank Lowden ☐
Wm. Jennings Bryan ☐	Miles Poindexter ☐	Wm. G. McAdoo ☐
Champ Clark ☐	Wm. H. Taft ☐	A. Mitchell Palmer ☐
Henry Ford ☐	Woodrow Wilson ☐	John J. Pershing ☐
Gen. G. W. Goethals ☐	Leonard Wood ☐	
Warren G. Harding ☐	Hiram Johnson ☐	

Do you favor extension of government operation of railroads for two more years (yes or no) ..... Do you favor the submission of the warehouse amendment? .....

If your candidate is not listed above write in name.

Gasoline Interurban Car is Nearing Completion

Ford Interests at Dearborn Receive First Body Assembly to be Used in Trial Run on M. C. R. R.—Detroit to Chicago

WONDERS after wonders have been occuring in the machine age of the last few years, fairly revolutionizing [illegible] of industry. Agriculture has been undergoing a change as great as any other business. The automobile, the truck, the tractor, improved farm machinery of all sorts and better mechanical devices for the house, the dairy, etc., all these and many more have arrived in such rapid succession that a farmer is not easily surprised any more at some new marvel of machinery.

But now Henry Ford comes along with something which is creating a real stir in all lines of business. It is the making of a gasoline propelled interurban car, which can haul long chains of freight cars and passenger cars as well. Just as the nation's highways have been thronged with "tin Lizzies," just so the prophecy is that the rail lines may be crowded with busy gasoline motor transports. Inasmuch as transportation is one of the greatest problems of agriculture, (farmers pay more than half the nation's freight) this announcement is of greatest importance.

Detroit newspapers have been lauding the plans for this new device as a salvation for the car shortage, not only in the cities but between cities as well. Quantity production can be assured by such a great manufacturing concern as has taken over the project.

The body for the first of the internal combustion engine-driven interurban cars, which are to be built by Henry Ford & Son, at their Dearborn plant, arrived recently from the shops of the G. C. Kuhlman Cor Co., Cleveland, according to the *Michigan Manufacturer & Financial Record.*

The power plant, which has been on the testing block undergoing the most vigorous tryouts the last two months, has more than measured up to expectations, according to that publication. The trucks for the first car have been completed. So that it is probable that the car's trial run from Detroit to Chicago, in front of the Wolverine Flyer, on the Michigan Central Railroad, will be staged shortly.

Work is not quite so far along on the city car model, which also will be built by the Ford company. This is because Henry Ford and his chief engineer, Charles S. Sorenson, have deemed it wise to build the interurban first, so that the test run to Chicago could be made, to prove to their entire satisfaction that the internal combustion engine, when used to drive a vehicle of the size of an interurban car, would do all they believe it will. This test having been completed, and whatever changes, if there are any, which it may have revealed as being advisable, having been made, construction work on the city car model will begin. Lest the reader get the impression from what has just been said that the car is largely an experiment, even in the minds of those who have developed it, let it be said that Mr. Ford and Mr. Sorenson were never more confident of anything in their lives than that the new interurban and street car will fairly revolutionize interurban and street railway transportation.

"This power plant," said Mr. Sorenson, "is the very smoothest thing you ever saw, and one of the simplest. One unit — the type to be used in the city cars—will develop 80 horsepower at 1,200 r. p. m., and the two-unit type which will drive the interurban cars, will develop twice that much. As you see it running on the testing block, the exhaust makes quite a bit of noise, but there will be a muffler and the engine will run as smoothly and as quietly as a Twin Six or an electric motor. And it has power enough and to spare."

As was told in this paper some months ago, the engine is of the double opposed four cylinder type. It is a new motor, in the design of which Mr. Ford, Mr. Sorenson and Lieut.-Col. Hall, the latter one of the engineers who developed the Liberty motor, co-operated. It is light and compact, runs on ball bearings, and conforms fully with Mr. Ford's oft expressed conviction that the transportation medium of the future is to be of much lighter weight than that now in use —a conviction which has found expression in the Ford automobile.

The total weight of the interurban model, as this car has been built for the test run to Chicago, is about 10 tons, as against 35 for the cars in use today on inter-city electric railroads. The Ford street car, as it has been designed, will weight about nine tons. The D. U. R. city cars weigh about 15 tons. But the weight of the interurban car, at least, probably will be reduced to between six and seven tons before the vehicle has been developed finally for use. This is because the Ford engineers have been obliged under the steam railroad regulations, to build additional weight into the chassis for the trial run to Chicago. For example, the bumper is 800 pounds heavier than it need be when the car is operating on an interurban line. The trucks also are carrying excess weight; the wheels probably will be a ton lighter for interurban use. Weight will also be reduced elsewhere.

The bodies for the two types of car are very much lighter than those of the cars now in use, but, according to the Ford engineers, are strong enough to withstand the most trying usage to which they might be put. The first interurban body weighs only 8,400 pounds packed and with the airbrake equipment attached. Light as they are, they will not telescope in case of collision. The bodies are made of high alloy steel and aluminum.

The power plant will be attached to the chassis, at the center of the car, and will clear nine inches [illegible] the roadbed. The power will be applied to two of the four wheels on the front truck and two on the rear by means of shafts. The control is exactly the same as in the Model T Ford engine, which is so simple that anyone can operate it with ease and dispatch. The engine generates its own electricity to recharge its batteries and light the car, and compresses i's own air for the airbrakes. It also will furnish heat for the car by both hot air and hot water, the air being drawn over the motor by means of a fan at the front of the radiator. The hot water will be circulated from the engine through pipes around the sides of the car.

Two multiple leaf springs tie the axles together on each truck and there is a cross spring for balance. The wheels are of the solid disc type, with a flange to operate on the standard street car tracks.

Mr. Sorenson was asked whether the lightness of the cars would make it possible to use a much lighter rail than that now employed. He replied that instead of the 91-pound rail now used by the D. U. R. (91 pounds weight to the yard of track,) a 40 pound rail would be ample, and pointed to the saving which would thus be effected in the purchase of equipment.

Added interest in the development of the Ford street cars has resulted the last two or three weeks from the announcement of James Couzens, mayor of Detroit, that his newly formulated plan for a municipally owned street car system for the city contemplated the use of the Ford cars. A statement issued by the mayor on January 7 said that Mr. Ford had supplied him with figures showing that the internal combustion street cars could be operated with a saving of 1.68 cents per car mile. According to the latest municipal survey of the Detroit street car system, the cost of operation is 33.4 cents per car mile. Mr. Ford estimates that his car can be operated for 31.4 cents per car mile. On this basis the total annual saving in operating costs alone on the Detroit system would be $909,647.40. These figures, Mr. Sorenson pointed out are conservative.

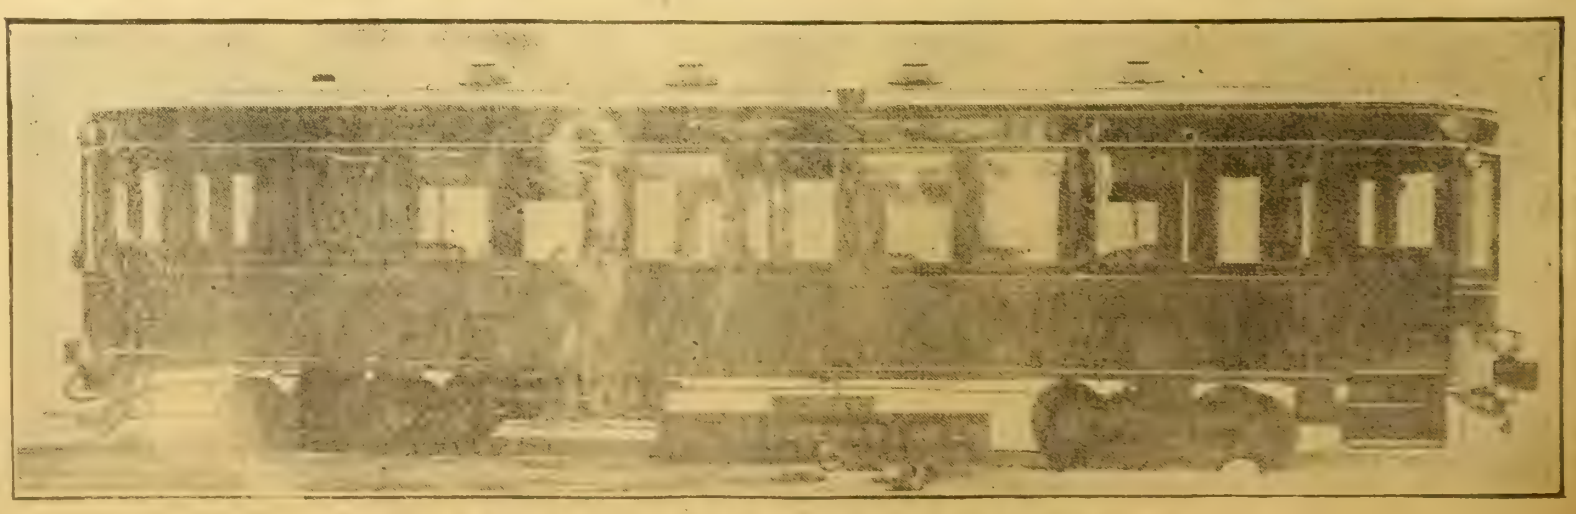
But the saving in gasoline is not the only economy to be effected, according to a detailed statement prepared by the Ford engineers and given out by Mayor Couzens. This statement says that the excess valuation of the D. U. R. electrified system in Detroit, other items remaining the same, and including power plant, distribution system, poles, fixtures and additional capital due to greater cost of electric cars, is $4,133.01. (One of the Ford cars, Mayor Couzens announced, could be built for about $5,0[illegible] again double that sum for the electric street car. The annual interest on $[illegible] 133.0[illegible] at six per cent is $24[illegible] 98.7[illegible] annual [illegible] that [illegible] could save [illegible] were [illegible] For

Henry Ford and the Development of Agriculture

HENRY FORD

FARMERS around Greenfield, Mich., can tell many interesting stories of a young farmer who made a success of his father's big farm and later on his own forty. That young person happened to be Henry Ford. He was raised on a farm and worked one for several years. So his first interests lay with agriculture and that great business has always remained close by him. Long before he conceived the idea of an automobile, he was planning on building a tractor to reduce the drudgery of farm life. When he was only 16 years old, he built an old "steam buggy" in the shop back of his father's farm house at Greenfield. From the time he was 17 until 21, he learned the machinist trade in Detroit, but returned to help his father on the farm. He married a farm girl and worked a forty for several years. But always his mind was on the machine idea for farming. After the automobile was perfected, he threw his energy into the tractor. And now it is the gasoline interurban car, which will greatly help solve the transportation problem of the farmer. But read the story:

Front View of the Car



Side view of the Ford Internal Combustion Engine-Driven Interurban Car

cars substituted for the electrics. Add to this a saving of $67,300 in taxes, and one obtains a total of $315,280.72, which in turn is to be added to the 909.647.40 of operating costs saved by the Ford cars, giving a total saving of $1,224,982.12 annually. Using the 1917 report of the D. U. R. city lines as a basis for computation, the saving set forth above would make possible an increase of 58.7 per cent in annual income were the Ford car used.

The Couzens municipal ownership plan, which provides a bond issue of $15,000,000, probably will go to the people in April, but whether it is adopted or not, Henry Ford & Son are going to enjoy a very great demand for their cars. Letters have been received from street railway and interurban lines from several parts of the country inquiring when the Ford cars will be ready and asking for operating and price data. The Ford company is going ahead with plans for quantiay production.

Interior view of the Ford interurban car.

"We expect," said Mr. Sorenson, "to have a plant here two miles long to build these cars."

Mr. Ford's chief engineer added that it was his conviction that steam railroads would be among the first to utilize the internal combustion street car for their suburban traffic, and predicted also that it would not be many years before these cars would be in use even on transcontinental runs.

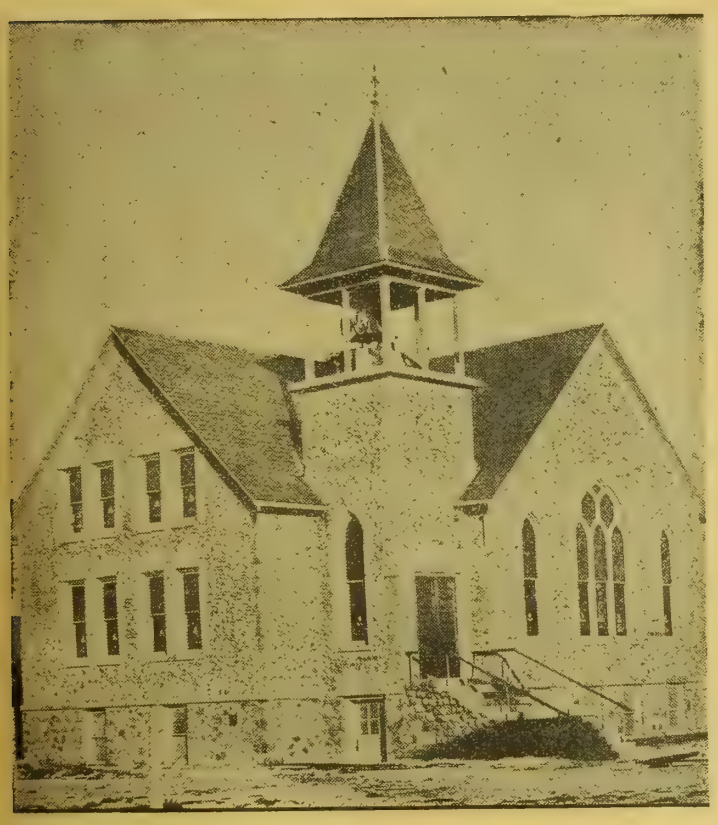
For suburban traffic, Mr. Sorenson pointed out, the cars possess the signal advantage of mobility—that is to say, the fact that they operate in single units would make their use particularly advantageous where a large number of trains were being operated. Their marked economy over steam locomotives, which consume a large part of the power they generate in pulling their own weight," was another vital factor.

"I can take this car from New York to San Francisco with only one filling of gasoline," said Mr. Sorenson. "Can any other power unit give that kind of result? Figuring on the basis of five miles to the gallon of gasoline, it would require 600 gallons of fuel for a transcontinental run. That is only 4,200 pounds at the start, and when you figure the weight saved in a car that weighs only eight tons, where some interurbans weigh 34 tons, that doesn't seem at all prohibitive."

Mr. Sorenson went on to discuss the relative merits of fuels, pointing to the fact that only 2 per cent of the energy of the coal consumed ever reaches the wheels of electric cars. With gasoline, he said, 10 per cent of the energy is finally harnessed. Tests of the new Ford motor indicated that this engine would use 18 per cent of the energy. While on the trial trip to Chicago gasoline will be used, the new Ford motor is so constructed that it can burn benzol or alcohol.

Are We Witnessing the Passing of the Little Country Church and Pastor?

Investigators Claim, According to Literary Digest, That Rural Religious Life is Rapidly on the Decline



"Let not the spiritual and religious spirit that has been fostered for centuries in the little country church, fade and die away."

IF IT BE "that the roots of the religious and moral life of the nation are chiefly in the country church," rural communities are in a fair way to degeneracy, and are becoming means to its downfall, says the Literary Digest. At least this is the conclusion naturally drawn from a three years' survey of Ohio by the Commission on Church and Country Life of the Federal Council of the Churches of Christ in America, which reveals that the countryside is overstocked with churches, too sparsely provided with ministers, and that many of these too-few pastors have been selected without regard to qualification. The result is demoralization of churches and people alike. But where the evil has been recognized and the remedy of interchurch comity and co-operation applied, spiritual awakening has resulted. Having effected cures in particular instances, the commission suggests general application of the remedy.

The results of the survey are summarized in a volume called "Six Thousand Country Churches" (Macmillan) by Charles Otis Gill and Gifford Pinchot. In Ohio more than 4,500, or 66 per cent., of the rural churches have a membership of one hundred or less; more than 3,600, or 55 per cent; have a membership of 75 or less; more than 2,400 or 37 per cent., a membership of 50 or less. Because of the system under which pastors are changed frequently and the divided effort of the ministry among various and widely separated churches, the people who live in the rural districts in Ohio receive too little pastoral service. The pay of the country ministers is small; the support of the church is meagre. In 1917 the majority of the ministers of the largest denomination received less than $1,100 each, while the average was $857 and free use of parsonage.

"A most striking illustration of the churches' inefficiency may be found in southern and southeastern Ohio. Here, in a region covering at least eighteen counties, the failure of the churches may fairly be called pathetic. These counties are: Adams, Athens Brown, Clermont, Gallia, Highland, Hocking, Jackson, Lawrence, Meigs, Monroe Morgan, Noble, Pike, Ross, Scioto, Vinton and Washington. In this area, after more than a hundred years of the work of the churches, the religious, social, and economic warfare of the people are going down. Altho the churches have been here for more than a century, no normal type of organized religion is really flourishing, while the only kind which, during the past fifteen years, has been gaining ground, the cult of the Holy Rollers, is scarcely better than that of a Dervish. The churches have failed, and are failing, to dispel ignorance and superstition, to prevent the increase of vice, the spread of disease, and the general moral and spiritual decadence of the people. . . . In no fewer than twelve out of the eighteen counties, the death-rate from tuberculosis is excessive. Reports of the Ohio Bureau of Vital Statistics for the years 1909, 1910, and 1911 (the latest we could secure on the subject) give the average annual rate from this disease for 100,000 persons, as 125 for the whole state. Of the seventeen counties in the state whose death-rate from tuberculosis is 145 or over, all but five are in this region, and of the five one is a bordering county. . . . The number of illegitimate births in the eighteen counties is likewise excessive. The rate per 100,000 population for the state is 43.9. Of the twenty-eight counties whose rate is above the average, nineteen, or 68 per cent., are either, in the eighteen counties or bordering on them. No fewer than thirteen or more than two-thirds of the eighteen counties, have an excessive number of illegitimate births. . . . Illiteracy also in the eighteen counties is excessive. The percent. of illiterate males of voting age for the state in 1910 was 4.2. There are twenty-nine counties in which that number was exceeded. Of these, fourteen are among the eighteen counties, and five border on them."

These statistical data "do not overstate the urgency of the appeal from the unfortunate overchurched and underministered communities of this section," for "here gross superstition exercises strong control over the thot and action of a large proportion of the people." Immorality, intemperance, and crime are declared to be rife; politics corrupt, and schools badly managed and poorly attended.

As in the eighteen counties some of the older and stronger denominations are well represented—no fewer than 526, or more than one-third of the total number of churches being Methodist Episcopal—"it is evident that the failure of the churches in this area can not be laid to the weakness or poverty of the denominations represented, for they are for the most part neither weak nor poor." On the other hand, "in rural Ohio the worst moral and religious conditions are found where there are the largest number of churches in proportion to the number of inhabitants."

As to the proportion of pastors to population:

"There are twenty-four counties in Ohio in which there are more than 1,000 persons for each resident minister, of which thirteen are among the eighteen counties under consideration and three among the bordering counties. Noble county has a resident minister to every 1,240 persons; Gallit to every 1,396; Lawrence to every 1,450; Pickaway to every 1,458; while Hocking has only one to 1,693, or nearly 1,700 persons."

Here, "as in most rural sections, an absentee ministry is necessarily ineffective." As we read in explanation:

"While the preaching of a good pastor is an indispensable factor in the individual development of his parishioners and in the progress of community life, that of the non-resident is by comparison of little value. It is shooting in the air without seeing the target, like the fire of artillery without the aid of air scouts. There is no greater force for righteousness in a country community than a church with a resident minister, well educated, well equipped, wisely selected, whose term of service is not too short.

"The right kind of resident minister will have a strong and intelligent desire to secure opportunities for the best development of his children and to create a favorable environment for them. He will, therefore, take a keen interest in the schools, in the establishing of libraries, in play and social life, in keeping out evil influences and promoting general decency."

Having thus diagnosed the ailment from which the rural church is suffering, the commission then proceeds to ifs program for cure. The ministry must be better educated, and more care should be used in selecting pastors for this particular kind of work. Church and minister must receive more support, which, in most instances, the farmers are ready to give. Circuits must be so arranged that the pastor may have more time for each church and congregation. Parishes must be made more compact, and in every township at least one resident minister should be established. Co-operation should be substituted for competition, and this co-operation where necessary, should take the form of a community or federated church. The writers say:

"In view of the urgent needs of the rural communities, as a rule, those methods should be adopted which are most acceptable to the local people whose interests are involved. When the people of a community come to desire united Christian action in promoting community welfare, their zeal will usually be strong enough to overcome the difficulties in the way. But this desirable consummation is greatly retarded where opposition is made by the denomination or its officials. Until the church officials and denominations are able to propose some other practicable plan for the readjustment of church life to community welfare, a plan which can be carried out, the demands of the situation certainly require them to help rather than hinder the movement for the formation of federated churches. In any event they will not be able to stop it."

Causes and Effects of Foreign Exchange Fall

Results of Balance of Trade Working in America's Favor and the Flooding of Europe With Paper Money and Huge Financial Burdens

By VERNE E. BURNETT

WHERE are we going to come out in all this financial and commercial mix-up with foreign countries, one is likely to ask these days when there is so much in the papers about the foreign exchange dropping almost daily. The fate of numerous kinds of grains and produce seems to hang upon foreign conditions, as to prices, and geography runs amuck in the financial and business world as never before. In fact, a farmer or any other business man will do well these days to get a pretty fair idea of how the wind blows in regard to such things.

Although there is much to be said about money, its quantity, comparative values and so on, the world has been for too long a time thinking of international trade in terms of dollars and cents, pounds, marks, francs and lire. The period of reconstruction has brought with it the keen realization that it isn't the money which counts so much after all. It is the exchange of goods that rules business. Money is merely a sign or medium of exchange for the immense quantities of goods which are being bartered off between persons and countries.

Well then, how about this trading of goods? It is all in the favor of the United States and has been for years. Today the results are being reaped in full measure, and in sudden jumps, because it is hard for the world to break away from its old ideas in regard to such things as money and trade. An expression, now pretty widely known, has been created under the name of "balance of trade." That means, for example, if the United States exports eight billion dollars worth of goods last year and it imports only four billion dollars' worth, then our balance of trade for last year was the remainder, or four billion dollars. This balance of trade is in a way to be considered as national profit, because foreign countries are obligated financially to us twice as much as we are to them.

The balance of trade in America's favor started on a grand scale early in the war. It has continued and increased during much of the past year showing little sign of let-up. Therefore, one can see an outstanding reason for the tremendous strength of the American dollar on the money exchanges of the world.

The 1919 custom house figures showed a total of exports from the United States of 7,922 millions of dollars, compared with imports totaling 3,904 millions of dollars, leaving us a favorable balance of trade of 4,018 millions. That sum is truly enormous, and should at least temporarily bolster the international credit of any nation to a high pitch.

There is another element which makes German marks, French francs and other European money almost worthless when compared with the dollar of the United States. This country loaned to Europe approximately nine billion dollars during the war. That means that every man, woman and child in this whole great country of ours has loaned just $90 to Europe and is the creditor, collectively, for interest upon that amount.

The interest upon that sum annually is about half a billion dollars, due to the United States, and thus it can be seen that some countries in Europe are having tough sledding merely to pay the interest on their debts, to say nothing of paying back the principal.

Inasmuch as it is the world problem now confronting us, we will glide over the conditions in our own country which we know fairly well, and turn the searchlight upon the foreign nations who buy our grain and goods of all kinds. We do not find a world all in tatters, nor yet is it one with much wealth. It is rather mottled picture. Europe had its war profiteers who are now little afraid of letting everyone know of their great riches. Noblemen have sold lands to be subdivided and are flush in many cases. People interested in the cotton cloth industry in Manchester, England, have been making 90 per cent profit on their investment. The housing problem is far worse in Europe than in America and in many communities production is going forward full blast and prosperity is evident.

But analyze the situation more closely, country by country and you find many factors which cause a doubt as to Europe's ability to pay back to America the enormous war debts plus interest, and at the same time restore the balance of trade and the foreign exchange. Foreign exchange is the expression used to cover the system of comparative values of money. To Americans it means, how much the various kinds of foreign money are worth in dollars and cents. For many years the foreign exchange had held firm, before the Great War, and it greatly aided international trade. But now it is the lowest since the Napoleonic wars about a hundred years ago, thus greatly upsetting business.

Great Britain, the biggest and strongest foreign power, is the best fixed of the powers in the war, outside of America. But even Great Britain is having its difficulties. The British pound, formerly worth nearly five dollars, is now worth only a little over three, and still fluctuating sharply. England like other European countries has seen itself fairly flooded with paper money and the gold supply seems to shrink. Even the United States has far more paper money in circulation than ever before—four times as much as before the war, we are told.

England is sorely perplexed with the Irish question, and Ireland in many parts seems to be seething in preparations for an upturn. The British intend to pay the United States all right, no matter how gloomy her outlook may seem. Her whole spirit of gameness was voiced in a statement by a young London bank clerk who came to the office one morning with many smiles. "The value of the pound has gone up two points in New York," he said to an outsider. The British are confident that their old power will come back some of these days in trade and they will be able to pay off the debts.

The British lost millions of tons of shipping during the war, due to the submarines, and America has gone ahead by leaps and bounds, until there is not so very much difference in the relative strength of the merchant marines of the two powers. The advantage of a strong American marine has been strongly demonstrated during the past year when shipping bottoms were mighty scarce and American grain and goods could be moved and sold while other nations had to wait in line as shipping was rationed out. But Great Britain is building many ships today. Three per cent of her men are reported as unemployed. It might be far worse, considering the demobilization of her great armies, but it might be better.

In general, Great Britain, exhausted though she is by war, has a bright outlook compared with European neighbors. None of the British machinery was ruined by war. She has all her plants running, most of them full blast. Nobility, which used to shun work, has taken to it in earnest. And a mad riot of spending indicates that there must be plenty of money, although some say it is due to a don't-care spirit—"eat, drink and make merry, for tomorrow we get taxed to death." The $90 owing to each American is pretty safe so far as England is concerned, according to the general outlook.

France is a nation which has fooled experts many times. It is necessary to go back to history to show the character of France. After the great French Revolution, ending in the wars under Napoleon, the world decided that France was so exhausted that she could never again rise as a power. But she immediately rose among the rest as a financial and political power. Following the war of 1870 when the Germans swept into Paris and a bloody revolution occurred in the gay capital, the world decided that it was probably all up with France and she could never pay the enormous indemnity which the Kaiser demanded. But France in her thrifty, genial way went to work with a will and in a few years dug up enough to clear all the German debt.

Though Frenchmen have plenty of liquor, it is seldom a Frenchman can be found staggering. They drink slowly of the cheap red or white wines, when they finish a hard day's work. The middle-aged and old men who lived on their incomes before the war have gone to work now—their incomes are too small and besides jobs have had to go a-begging. The young women work, whereas they used to live at home. France is thrifty, and although the northern industrial belt is ruined by the German invasion and retreat, there seems to be hope for great prosperity in the future.

The tourist trade is bound to boom up big. The wines, denied an American market, have South America and British Empire markets which are buying more than ever before. Agricultural France has a ready market for all it can produce and her factories are beginning to roar again.

Belgium, although deprived of much machinery because of the German invasion, has got many of her factories to running again. She is overwhelmingly an industrial nation and she is sincerely at work, comparatively free from strikes. There is some labor unrest, but it has not been so big as painted. And there is great loyalty to King Albert and the government.

Germany is going lower and lower in regard to the foreign exchange. The mark, formerly worth between twenty and thirty cents, is now worth slightly over one cent. Bloodshed in the streets of Berlin, riots, isolation from the rest of the world in nearly every way, the Bolshevik menace from Russia—all these factors make for a poor rate of exchange for Germany money. But the Germans are a most thrifty people possessed with great vigor, and the likelihood of future prosperity, though perhaps far off, is quite probable. She has her factories almost intact and is building up the depleted transport and maritime activities. Italy is about as hard up financially as any of the nations right now. Her interest on debts equals her total national income before the war, and the value of the lire is very low. Russia is regarded with suspicion by nearly all other governments and exchange is hazardous in that sector at present, although enormous potential prosperity might be Russia's, once organized permanently.

Only the high spots could be touched upon, in attempting to cover so great a subject in so small a space. It is hard to believe that anything but general prosperity will return when the wounds of war are healed. Peace and prosperity are the normal conditions, and war and reconstruction, the abnormal. Other great wars have appalled the world and pessimists believed prosperity could never return to former heights. Yet prosperity has gradually grown higher and higher. Revolution and panics may yet sweep over the world before the reconstruction will have spent its course as the aftermath of war. But before long, prosperity must return. It is well to be cautious of bad conditions which are entirely possible on the immediate horizon, but speaking with a deeper vision, there is no need of facing what's coming with a long face. And that bugaboo, the foreign exchange, in its downfall, may well be regarded as a barometer showing the business and trade supremacy of our own country over the rest of the world.

Lupine, the Wonder Soil Builder

(The recent articles in M. B. F. on Carl Schmidt's success with crops on sandy lands have brought forth many inquiries from our readers as to the manner of seeding, etc., of lupine and seradella. At our request Mr. Schmidt has supplied us with the following interesting facts.)

LUPINES will grow under conditions no other legume will, i. e., in soil that is practical clear sand, also in soil that has practically no lime. And although it is only an annual, it is very quick growing and also very deep rooting. Because of these reasons it is valuable in fitting barren lands for future use, getting lands ready for a clover catch and building up worn out land on which clover will not grow any longer.

It can be seeded with oats or barley in spring, in this case I prefer to give the oats and barley a good start by sowing the lupines several weeks later than the grain planting. The reason for that is, that when the lupines are planted with the grains, they grow too rapidly, and when the grain is mowed, the lupines are also cut down and they do not recover well from this check.

I have also planted lupines immediately after mowing the grain crop. I have found it desirable to set up the sheaves in long rows following the binder with the disc harrow, then rolling and immediately drilling the lupine seeds. If possible I would drill in the afternoon, where I mowed in the morning.

Sandland should be kept working and shaded as much as possible, as the midsummer's hot sunrays are destructive to the bacterial soil life. Most soils do not need inoculation for this plant, the nodules usually forming quickly and growing to considerable size. In following this method I have found it advisable to allow the plants to grow, until quite severe frosts freeze them down and ploughing the plants under between frosts.

I have also found the plant very valuable in sowing with fall wheat and rye. It makes a growth of six to eight inches, freezes down, acts as a protection against the winter colds, and holds the snows splendidly. It can be used for pasturing, but I do not advise this, nor do I advise cutting the plants for hay, as the seed sometimes develops a dangerous poison, particularly for hogs, although some European farmers have used it for years without ill effect. But its main value is to start growth in barren soils, to bring the soil bacteria into activitiy and provide humus.

I have used twenty to thirty pounds, per acre, and prefer a mixture of the blue and white blossoming plants. It differs very much from other legumes by producing a heavier crop each year that it is planted in succession.

The resultant green mass is heavy, I have found no other legume to equal it in this respect. I cannot give the approximate green mass weight, as I have always plowed the plants under, and never weighed them. It will be necessary in most cases to use a chain on the plough to turn it under. I have found it cheaper before the war to buy the imported seed than to try and raise it. In later years Nungessen, Dickinson & Co., of Hoboken, furnished me with the seed.

Regarding Serradella my experiments have not been carried on long enough to justify my advising regarding same. But the lupine I can say that it will justify its use in making apparently useless lands useful and fair soils better—*Carl E. Schmidt.*

How I Have Made a Success of Farming in Western Michigan

Drainage, Crop Rotation, Live Stock Production as Practiced in Missaukee County

By A. M. SMITH

President Michigan Potato Growers' Association

HOW CAN I make a profit at general farming in Western Michigan is a most serious and practical question which has been asked by thousands of farmers in this district and for a good many there has been no satisfactory answer. Many of these have undertaken farming with handicaps too great to overcome, for instance, some have settled on poor land such as jack pine plains, or light pine stump land and without capital have tried to make a home out of almost nothing. Failure sure and heartrending is bound to be the lot of such as a rule. The man who can succeed in the face of such conditions is rare indeed.

Banking conditions have made it very hard for many settlers in Western Michigan. Many of the banks take a discount of 5 per cent and charge 7 per cent interest, making loans cost 12 per cent. Farming is a business where profits are too small to stand such a drag on the business. And so the result has been that the banks have grown rich and the farmers have remained poor.

Then there have been drought and pestilence such as grasshoppers, and frosts spring and fall and altogether the lot of the West Michigan farmer has been anything but rosy.

But in spite of all these drawbacks many farmers have been successful and will continue to be more successful as experience shows them the way to avoid and overcome the mistakes and difficulties of the past and originate new methods and plans for the future. There are certain fundamental conditions to success which I would in the first place set forth. Of course it is not necessary to mention that the personality of the individual is fundamental and that such characteristics as industry, frugality, thrift and honesty, must be inherent in the man who would be truly successful. And there is really no sense in a man attempting to make a real success farming on jack pine plains or cultivating big pine stumps as they produce no crop.

To the man who wants to farm successfully in Western Michigan, I would say first of all get hold of a good piece of land, not less than 80 acres and more if possible up to at least 160 acres. And this is easily done as there are many thousands of acres of land in this great territory still unoccupied and partly improved which may be purchased on your own terms, if you will look until you find what you want. By good land I mean, clay loam, or heavy sand loam soil underlaid with clay subsoil which is near enough to the surface so that overturned trees bring up the clay.

There may be other types of soil in Western Michigan on which a man may be successful, but in this article I am giving my own views and experiences of the kinds of soil most to be desired.

Then I would obtain lands with slight natural drainage and avoid low and swampy districts on account of dangers from frosts. Having obtained the kind of land most desirable, the lines of farming to be followed to make a success are very simple.

A good crop rotation consists of a cultivated crop such as corn or potatoes, followed by oats with which clover and timothy or alsike or alfalfa should be seeded. On this sod before plowing it a coating of stable manure should be spread in moderate amount with a spreader if possible and best results are usually obtained from fall plowing. Crops of potatoes should constitute the money crops from the farm and irrespective of all drawbacks and discouragements should be followed year after year to the limit of the farm to produce and the ability of the farmer to handle.

Then a herd of dairy cows should be kept. By dairy cows I mean real dairy cows, and purebreds if possible. What breed? Why of course the one you like the best or the one most popular in your district. For myself I like the Guernseys, as they are a cream and butter breed and as butterfat is the only dairy product sold in our county, I want what I consider a good machine for its economical production. Until purebreds can be obtained, high grades headed by a purebred bull are next best. The heifer calves from the dairy should always be raised and kept until they freshen, when any surplus can be disposed of by selling the most undesirable one. For a number of years there has been a great demand at increasing prices for good dairy cows and the writer has found that the raising of dairy cows for market has been much more profitable than the raising of beef steers. The male calves from grade dairy cattle are as a rule not profitable to raise and it usually pays best to dispose of them when they first come in the best way locally. The skim milk in excess of what is used for raising calves should be fed to pigs as they will prove more profitable than male calves.

In some localities winter wheat is being grown and possibly profitably follows oats in a rotation before seeding to the clovers. A corn crop sufficient to fill the silo and a few acres besides, according to varying conditions should always be grown in the rotation and then you have the system of farming which I believe most profitable in Western Michigan for the average farmer.

Thus in a nutshell I would say, if you want to make money on good land in Western Michigan, you can do it by growing potatoes as a money crop, by selling your butterfat and hogs to provide revenue for current expenses and by growing as much of your own feed for the dairy as you possibly can. And this you can do as far as roughage is concerned for you can always grow the corn for silage, and even when it does not mature it makes fair silage, and usually the clovers grow splendidly and oats also make a very good crop. The concentrates such as cotton seed meal and oil meal one can afford to purchase and with the splendid pasturage usually to be obtained dairying provides a sure and steady income while at the same time providing the fertilizer so essential to the growing of the cash crop and the up-keep of the soil.

A new money crop for Western Michigan is the sugar beet which is being successfully grown on the heavier lands, and some farmers are growing as high as 15 tons per acre of this crop and this crop fits in, in place of potatoes in the program for success very nicely in that it provides many tons of beet tops per acre of succulent feed for the dairy cow, as well as a sure cash return early in the season.

We believe the system of farming outlined above is the only method so far which has provd successful in a full measure and from personal experience and observation we can recommend it. Of course the reader will understand that the plans and methods proposed above are general and have to be taken in consideration with weather conditions and other circumstances. For instance this year many farmers who lost their seeding last year will have to grow peas and oats for hay and may have trouble getting their rotation adjusted this year, but those difficulties have to be met, provided against and planned for as far as possible by the individual farmer.

How to obtain money at fair rates will be the subject of a subsequent article.

"My System of Farming"

WHAT IS your system of farming? Of course, you follow the regular methods of fertilizing, crop rotation, etc., that have been demonstrated to be correct, but isn't there something you have discovered yourself about a particular method—some new wrinkle—that has increased your yield and your profits. If there is, why not tell M. B. F. readers your experience. It may help them to overcome some problems of their own. Here are some suggestions for you to follow: "How I drained the Back Forty," "How I drove out the Quack Grass," "How I increased my Yield of Oats," "My system of Crop Rotation," etc. Tell us about them—Editor.

County Agent Demonstrations to Add Interest to County Fairs

Perry F. Powers, Head of County Fair Associations, Would Make Expositions More Educational

THERE isn't the interest there used to be in the agricultural exhibits at the county fairs. Time was when Peter Perkins mammoth "punkin" attracted more crowds than the "hoss races," and all the farmers from miles around would gather about with admiring eyes and vow they'd beat Peter to it next year.

But now the fair authorities have a most difficult time to get the farmers to exhibit. In the first place, every fair in Michigan is guilty of the mistake of offering of trivial premiums for "fifty-eleven" varieties of fruits, spuds, corn, etc., some of which are so rare as to be almost extinct. By splitting up the premium money on a lot of exhibits that ought never to be made, the fair authorities are unable to offer attractive enough premiums on leading varieties to make it an incentive for the farmer to exhibit.

In the second place, the county fair has deteriorated from an exposition of agricultural exhibits to a display of legs and chance games on the Bowery, third-rate horse races on the course, exhibits of new-fangled machinery and flying machines. These are all right, of course. They have their place and serve well enough to attract the city folks—and maybe some of the men folks from the farms like to wander down the Bowery while the wimmin folks are at the baby show or the embroidery exhibit—but anyway those aren't the things that make the fair, and they never will be.

Perry F. Powers of Cadillac, who is president of the State Association of Fairs, realizes the truth of these statements as does every man who has anything to do with making a county fair a financial success. But Mr. Powers has gone others one step better, and instead of stopping upon the discovery of these truths he has made his plans for putting a little "pep" and interest into the agricultural end of the show, and making the fair what it was originally intended to be—an educational exposition.

Mr. Powers was in Lansing during Farmers' Week and met with the county agents when plans were formulated for carrying out his purpose. From now on, if all the county fair associations adopt Mr. Powers' ideas the county agent will be a conspicuous figure at the fairs and will be just about the "whole show" in the agricultural departments.

Exhibits of prime specimens of farm products are supposed not only to delight the eye, but to arouse the desire on the part of the beholder to grow specimens as fine and large as those on display. But how to do it—that is the question. One might stand and admire a prize bull, or apple, or specimen of grain all day long and when night came he would know more how to produce its equal than when he first set eyes upon it. But the county agent is going to provide that connecting link, the "how" of growing high quality crops.

Alexander Minty's Jr. bull calf Evocant, of Woodcote, the undefeated champion of his class at all shows, including the International.

In the future the man who wins a prize at a fair will be expected to give a statement of how he did it—what it cost him to produce it, what fertilizer he used, what methods of seed selection and cultivation were followed, etc.

In the future the fairs will gradually cut down the number of premiums offered and increase the amount on the standard varieties. This is strictly in keeping with the new idea of standardization of varieties and will serve to encourage farmers to discard some of the varieties they imported from York state, or some other place, and grow instead the varieties that experience and experiment prove do the best on our soils and in our climate.

Exhibits will be made showing the comparative costs of different rations for live stock. There will also be exhibits of the amounts and value of rations required to feed live stock for a certain period of time, as well as exhibits of the amount and value of the products or labor which they produced or performed. These will carry to the farmer some practical suggestions that he has never before been able to get out of the agricultural exhibits, and will tend, it is believed, to make him more interested in the county fairs and exhibits than he has been in the past.

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL

FARMERS ARE SEEKING MICHIGAN LAND

An exceedingly strong demand upon the part of farmers from other states and Canada for improved farms in Michigan, is shown in a statement just given out by the E. A. Strout Farm Agency, detailing the movements of the buyers of 3,668 farms valued at $17,996,400 sold by that agency last year.

Twenty-seven states and the Dominion of Canada were represented among the buyers of the 321 improved farms sold by the agency in Michigan during the twelve months. The largest number of farm families to come into Michigan from an outside state was contributed by Illinois, which sent 56, while 30 came from Ohio and 20 from Minnesota.

Thirteen former Indiana farmers settled in Michigan during the year, as did ten from Iowa, six from Wisconsin, five each from Missouri and South Dakota, and four each from Canada, Nebraska and Pennsylvania. Colorado, Kansas and Montana each lost three farm families to Michigan and Idaho, Kentucky, North Dakota and Oklahoma lost two each.

The states from which came one farm family each ranged from Arkansas to Connecticut, Vermont to Florida, New York to Louisiana, Maryland, Tennessee and Virginia. Residents of Michigan purchased 138 farms in their own state during the year.

Of the 114 residents of Michigan who purchased farms in other states through the Strout Agency during the year, 54 went to New York, 15 to Vermont, eleven each to Maryland and New Jersey, seven to Florida, six to Ohio, four to New Hampshire, three to Maine, two to Pennsylvania and one to Delaware.

Detroit Milk Price About Average

Retail and wholesale milk prices in Detroit and about 60 of the largest cities in the United States are listed in the current issue of the Market Report, an official publication of the Department of Agriculture.

The retail price of 16 cents a quart paid by Detroit milk consumers is probably the average price throughout the country. In many cities particularly in the south, the price is considerably higher. In other cities it is lower.

Among the cities with Detroit in the 16-cent class are Pittsburg, St. Louis, Richmond, San Francisco, Los Angeles, Sioux City, Duluth, Albany, Fargo, Dayton, Baltimore and Wheeling.

Cities paying 17 cents a quart include, Hartford, Conn., Cumberland, Md., Boston, St. Joseph, Newark, N. J., Oklahoma City, Providence, R. I., Nashville, Tenn., Roanoke, Va., and Clarksburg, W. Va.

Cities paying 18 cents or more ranging as high as 25 cents, are Birmingham and Mobile, Ala., Little Rock, Ark., Bridgeport, Conn., Miami and Tampa, Fla., Atlanta, Augusta and Savannah, Ga., New Orleans, Asheville, N. C., Memphis and Chattanooga, Tenn., and Fort Worth, Galveston, El Paso and San Antonio, Texas.

Charleston, S. C., and Miami and Tampa, Fla., pay 25 cents a quart for milk while Atlanta and Savannah, Ga., pay from 20 to 25 cents a quart.

The average bulk price per quart paid by Cleveland milk dealers for their milk during January was 8.7 cents a quart. Their wholesale price to hotels, restaurants and other quantity patrons was 12 cents a quart bulk, and 15 cents in bottles.

Among the cities paying 15 cents a quart, retail, for their milk were Phoenix, Ariz., Pueblo, N. M., Des Moines, Ia., Rochester, N. Y., Cincinnati and Columbus, O., and Newport, R. I.

Among those paying 14 cents or less were Denver, Colo., Peoria, Ill., Indianapolis and South Bend, Ind., Dubuque, Ia., Grand Rapids, Mich., St. Paul, Minneapolis, Columbus, Sioux Falls, S. D., Salt Lake City, Seattle, Wash., and Milwaukee, Beloit and Green Bay, Wis.

Farmers Needed at Indian Schools

The United States Civil Service Commission announces that Indian schools in many states are in need of farmers to have charge, under the direction of the superintendents of agricultural operations on farms connected with the schools, to give instruction in practical farming, and to do extension and instructional work in agriculture among adult Indians occupying their own farms on reservations.

Applicants will be rated upon their training and experience, and their physical ability, as shown by their applications and corroborative evidence.

Further information and application blanks may be obtained from the secretary of the U. S. Civil Service Board at Boston, New York, Philadelphia, Atlanta, Cincinnati, Chicago, St. Paul, St. Louis, New Orleans, Seattle or San Francisco, or from the United States Civil Service Commission, Washington, D. C.

Mecosta Live Stock Co-operators

The Remus Live Stock Shipping Association was formed April 2, 1918. Last year it shipped thirty-seven cars of stock as follows: Cattle, 303 head; calves, 625; swine, 1,345; sheep, 817; goats, 1. A total of 3,091 head. The total weight of which was 668,267 pounds. The farmers received for this stock $82,910.16 after all expenses were paid. The cost of selling, including freight, averaged for the year sixty-eight and one tenth cents (68.1 cents) per hundred weight. The average shrinkage between weights at Remus and those at the stock yards was 3.8 per cent.

Whose goat it was we didn't learn but presume it to have been that of some stock buyer of the past, for now the farmers are the only shippers at Remus and during the past year their membership has increased to 256 and stock has been shipped by them from Altona, Mecosta, Rodney, Blanchard, Weidman and Millbrook. Through their efforts the Pere Marquette railway was induced to build new stock yards at Remus and these are today claimed to be the finest between Petoskey and Detroit.

The coming year looks brighter than previous ones to the association and this venture appears destined to prove as profitable if not more so than the creamery has to the farmers of the community.

Officers for the coming year were elected by acclamation each to succeed himself and are: president and manager, E. E. Compson; vice-president, Geo. Bauman; Sec.-Treas., M. J. Reutz; directors: Elmer Hornback, Lawrence Simon, Valentine Bott, J. K. Hatfield.

Remus Creamery Prospers

The Remus Creamery produced during the past year 220,275 pounds of butter, nearly all of which sold on the New York market as extra. The amount was an increase of 22 per cent over the 1918 figure. From this butter the farmers received $107,063.93 for their butterfat. The highest price paid per pound for the fat was 80 cents, the lowest 48 cents and the average for the year, 60.9 cents and this money was paid the farmer at his own door. Carriers gathering the cream and delivering the checks.

The creamery has manufactured 60 per cent more butter for the first two weeks in January this year than in the corresponding period of 1919. Not all of this is attributed to winter cows as there are new patrons also to be considered but tendency is toward the winter cow.

Little change was made in the directorate of the company the officers and directors being elected as follows: President, Hiram Karcher; vice-president, Conrad Ulrich; sec.-treasurer and manager, M. J. Ruetz, Directors, Geo. A. Mosey, J. E. Hornbeck, Tyler Gordon, Lucius Calkins.

Success for Cass City Fair

Cass City Fair at its annual meeting elected Hugh Cooper, president, C. R. Townsend, vice president, Harry Crandell, secretary and George C. Hooper, treasurer. New by-laws were adopted and the matter of holding a night carnival was left to the discretion of the executive board. The financial report showed a balance of $35 in the treasury and that the association would receive $619.17 from the state next Augus. The total receipts for the year were $4,983.23.

Saginaw Beet Growers Organize

Blumfield township, Saginaw county, sugar beet growers held a very promising meeting, Feb. 6th, 1920, to organize a local branch of the Michigan Sugar Beet Growers Association.

There being a very large crowd and before they went home they were all enrolled as members of the local branch of the Michigan Sugar Beet Growers Association. Officers elected were: President, John Kaul; vice president, Hugo E. Brebs; secretary-treasurer, Geo. F. Sahr.

SEED FRAUDS ENGAGE ATTENTION OF FARM ORGANIZATION

Economic losses to agriculture so appalling in nature that public attention if aroused will immediately be turned to their remedy, are being incurred through the distribution in interstate commerce by certain seed companies of clovers and grass seeds containing noxious weed seeds. This abuse has become so costly that the National Board of Farm Organizations is now initiating a drive for the purpose of calling national attention to the matter with the view of the adoption by congress of legislation which will adequately control the distribution of seeds. Mail order houses, according to complaints made to the Federal Trade Commission, are among the worst offenders.

It is contended that the farmers in Wisconsin suffered a loss through weeds, of $67,000,000 in 1917. This estimate is given by the Wisconsin Department of Agriculture from investigation by the Wisconsin Experiment Station.

C. P. Smith, the seed inspection officer of Maryland, tells how farmers have been imposed upon by mail order houses which offer as an inducement reduced prices together with a glowing eulogy of the quality of the goods they have for sale. Mr. Smith complains that the houses selling the seeds have failed to give an accurate account of the percentage of weed seed in each shipment The consequence is that it may cost more to remove the weeds than the revenue produced by the crops would finance.

"Bargains have ever appealed to the average American and bargains in seeds for planting have been no prominent exception to the rule during the recent months of high prices generally," Mr. Smith writes. "Certain mail order houses have taken advantage of recent conditions and have organized a huge business which has reaped them enormous profits at the expense of thousands of American farmers."

Mr. Smith said the distribution of noxious weed seeds has been extensively carried on in Maryland, New York, Minnesota, Michigan and Wisconsin. Other states have been more or less affected by the campaign to get rich quick through the sale of inferior seeds. Mr. Smith has made public the names of the houses responsible for the alleged imposition on the American farmers.

Jackson Premiums Boosted

Twenty-five per cent increase over all premiums of 1919 at the county fair will be offered this year, according to information given out by Fair Manager W. B. Burris. This offer is made as a special inducement to bring more exhibits to the fair.

To Increase Co-Op. Capital

At a meeting of the Farmers Co-operative association of Fowlerville, it was decided to increase the capital stock to a point that would permit the elevator business for the handling of farm grains by the co-operative method.

Delco-Light is Carrying the Comforts and Conveniences of the City Into Farm Homes

It is furnishing bright clean electric light throughout the house and barn—doing away with the smoky, dangerous kerosene lamp and lantern.

It is providing power to pump water, thus making possible a modern bath and the convenience of running water throughout the house and barn.

It is operating the washing machine, the churn and cream separator, the vacuum cleaner, the milking machine, the fanning mill, and the grindstone.

It is revolutionizing farm life—and at the same time it is saving so much in time and labor that it is actually paying for itself.

One hundred thousand satisfied users throughout the world are the visible evidence of Delco-Light leadership in the Farm Light and Power field.

DELCO-LIGHT COMPANY
DAYTON, OHIO

DISTRIBUTORS:
M. L. LASLEY, 23 Elizabeth St. East, Detroit, Mich.
PRINGLE-MATTHEWS CO.,
18 Fulton St., West, Grand Rapids, Mich.

DELCO-LIGHT

A complete electric light and power plant for farms and country homes, self-cranking—air cooled—ball bearings—no belts—only one place to oil—thick plates—long-lived battery.

Valve-in-Head Motor Runs on Kerosene

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

Join the Early Birds and Read this Story

THIS story, which has just gotten under way, has gone such a short distance that one can still get the swing of the thing by glancing over this synopsis. Join the early birds who are getting in on the opening parts of this wonder-story of Jack London's. Francis Morgan, son of a New York millionaire, who had just died, has grown bored by the city's luxury and tameness and has decided to go on an extensive fishing trip. Regan, a former colleague of Francis' father, is plotting to get the young man out of the way so that Regan may be free to manipulate the great Tampico oil stocks in which young Morgan is heavily invested and in which he has great faith. Regan gets Torres, a dusky-skinned visitor, to lure Francis to the Carribean islands where a pirate ancestor of Morgan had buried a great treasure. The lure works and young Morgan starts out on the trip alone. Becalmed in a small vessel at sea, he lands on an island whither he had been beckoned by a girl on the shore. As the last installment closed, she had excitedly siezed Morgan's hand and led him through the tropical atmosphere of mystery. But you go on and finish it.

IN imitation, such having been her will of him, and such seeming to be the cue of the game, he smilingly pressed his own hand to his heart, although he called neither on God nor the Virgin.

"Won't you ever be serious?" she flashed at him, noting his action.

And Francis was immediately and profoundly, as well as naturally, serious.

"My dear lady . . ." he began.

But an abrupt gesture checked him; and, with growing wonder, he watched her bend and listen, and heard the movement of bodies padding down some runway several yards away.

With a soft warm palm pressed commandingly to his to be silent, she left him with the abruptness that he had already come to consider as customary with her, and slipped away down the runway. Almost he whistled with astonishment. He might have whistled, had he not heard her voice, not distant, in Spanish, sharply interrogate men whose Spanish voices, half-humbly, half-insistently and half-rebelliously, answered her.

He heard them move on, still talking, and, after five minutes of dead silence, heard her call for him peremptorily to come out.

"Gee! I wonder what Regan would do under such circumstances!" he smiled to himself as he obeyed.

He followed her, no longer hand in hand, through the jungle to the beach. When she paused, he came beside her and faced her, still under the impress of the fantasy which possessed him that it was a game.

"Tag!" he laughed, touching her on the shoulder. "Tag!" he reiterated. 'You're it!"

The anger of her blazing eyes scorched him.

"You fool!" she cried, lifting her finger with what he considered undue intimacy to his toothbrush mou stache. "As if that could disguise you!"

"But my dear lady . . ." he began to protest his uncertain unacquaintance with her.

Her retort which broke off his speech, was as unreal and bizarre as everything else which had gone before. So quick was it, that he failed to see whence the tiny silver revolver had been drawn, the muzzle of which was not presented merely toward his abdomen, but pressed closely against it.

"My dear lady . . . " he tried again.

"I won't talk with you," she shut him off. Go back to your schooner and go away . . . " He guessed the inaudible sob of the pause, ere she concluded, "Forever."

This time his mouth opened to speech that was aborted on his lips by the stiff thrust of the muzzle of the weapon into his abdomen.

"If you ever come back—the Madonna forgive me—I shall shoot myself."

"Guess I'd better go, then," he uttered airily, as he turned to the skiff, toward which he walked in stately embarrassment, half-filled with laughter for himself and for the ridiculous and incomprehensible figure he was cutting.

Endeavoring to retain a last shred of dignity, he took no notice that she had followed him. As he lifted the skiff's nose from the sand, he was aware that a faint wind was rustling the palm fronds. A long breeze was darkening the water close at hand, while, far out across the mirrored water the outlying keys of Chiriqui Lagoon shimmered like a mirage above the dark-crisping water.

A sob compelled him to desist from stepping into the skiff and to turn his head. The strange young woman, revolver dropped to her side was crying. His step back to her was instant and the touch of his hand on her arm was sympathetic and inquiring. She shuddered at his touch, drew away and then gazed at him reproachfully through her tears. With a shrug of shoulders to her many moods and of surrender to the incomprehensibleness of the situation, he was about to turn to the boat, when she stopped him.

"At least you . . ." she began, then faltered and swallowed, "you might kiss me good-bye."

She advanced impulsively, with outstretched arms, the revolver dangling incongruously from her right hand. Francis hesitated a puzzled moment, then gathered her in to receive an astounding passionate kiss on his lips ere she dropped her head on his shoulder in a breakdown of tears. Despite his amazement he was aware of the revolver pressing flat-wise against his back between his shoulders. She lifted her tear-wet face and kissed him again and again, and he wondered to himself if he were a cad for meeting her kisses with almost equal and fully as mysterious impulsiveness.

With a feeling that he did not in the least care how long the tender episode might last, he was startled by her quick drawing away from him as anger and contempt blazed in her face, and as she menacingly directed him with the revolver to get into the boat.

He shrugged his shoulders as if to say that he could not say no to a lovely lady, and obeyed, sitting to the oars and facing her as he began rowing away.

"The Virgin save me from my wayward heart," she cried, with her free hand tearing a locket from her bosom, and, in a shower of golden beads flinging the ornament into the waterway midway between them.

From the edge of the jungle he saw three men, armed with rifles, run toward her where she had sunk down in the sand. In the midst of lifting her up, they caught sight of Francis, who had begun rowing a strong stroke. Over his shoulder he glimpsed the Angelique, close hauled and slightly heeling, cutting through the water toward him. The next moment, one of the trio on the beach, a beared elderly man, was directing the girl's binoculars on him. And the moment after dropping the glasses, he was taking aim with his rifle.

The bullet spat on the water within a yard of the skiff's side and Francis saw the g spring to her feet, knock up the r with her arm and spoil the sec shot. Next, pulling lustily, he the men separate from her to si their rifles and saw her threaten them with the revolver into lo ing their weapons.

The Angelique, thrown up into t wind to stop way, foamed alongs and with an agile leap Francis aboard, while already, the skip putting the wheel up, the schoo was paying off and filling. W boyish zest, Francis wafted a kis farewell to the girl, who was sta toward him, and saw her collaps the shoulders of the bearded el ly man.

"Cayenne pepper, eh—those da ed, horrible, crazy-proud Solan the breed skipper flashed at Fra with white teeth of laughter.

"Just bugs—clean crazy, not at home," Francis laughed back he sprang to the rail to waft fur kisses to the strange damsel.

Before the land wind the A lique made the outer rim of C qui Lagoon and the Bull and C some fifty miles farther along on rim, by midnight, when the ski hove to to wait for daylight. A breakfast, rowed by a Jamaica n sailor in the skiff, Francis lande reconnoiter on the Bull, which the larger island and which the s per had told him he might find cupied at that season of the yea turtle-catching Indians from mainland.

And Francis very immedia found that he had traversed merely thirty degrees of latitude fr New York but three hundred ye or centuries for that matter, fr the last word of civilization to alm the first word of the primeval. N ed, except for beech-clouts of gun sacking, armed with cruelly hea hacking blades of machetes, turtle-catchers were swift in provi themselves arrant beggars and d gerous man-killers. The Bull longed to them, they told him th the medium of his Jamaican sail interpreting, but the Calf, which ed to belong to them for the tur season now was possessed by a ma impossible Gringo, whose reckl dominating ways had won from th the respect of fear for a two-leg human creature who was more fe ful than themselves.

While Francis, for a silver doll dispatched one of them with a m sage to the mysterious Gringo t he desired to call on him, the r of them clustered about Francis' s whining for money, glowering u him, and even impudently steal his pipe, yet warm from his which he had laid beside him in sternsheets. Promptly he had a blow on the ear of the thief. the next theif who seized it and covered the pipe. Machetes out sun-glistening their clean-slic menace, Francis covered and trolled the gang with an automa pistol; and, while they drew ap in a group and whispered on ously, he made the discovery t his lone sailor-interpreter was weak brother and received his turned messenger.

The negro went over the turtle catchers talked with a frien ness and subservience, tones of which Fra did not like. The m senger handed him note across which scrawled in pencil:

"Vamos."

"Guess I'll have to across myself," Fra told the negro whom had beckoned back him.

"Better be very c ful and utmostly c tious sir," the ne warned him. "These a mals without reason very problematically l ly to act most unreas ably, sir."

"Get into the boat row me over," Fra commanded shortly.

"No, sir, I regret n to say sir," was the bl sailor's answer. "I si ed on sir, as a sailor I can't see my way r in' you over sir, to tain death. Best th we can do is to get ou

She advanced impulsively with outstretched arms.

is hot place that's certainly and ithout peradventure of a doubt go- g to get hotter for us if we re- ain, sir."

In huge disgust and scorn Francis ocketed his automatic, turned his ack on the sacking-clad savages and alked away through the palms. here a great boulder of coral rock ad been upthrust by some ancient stlessness of the earth, he came own to the beach. On the shore of e Calf, across the narrow channel, e made out a dinghy drawn up. rawn up upon his own side was a ank-looking and manifestly leaky g-out canoe. As he tilted the wa- r out of it he noticed that the rtle-catchers had followed and ere peering at him from the edge the cocoanuts, though his weak- earted sailor was not in sight.

To paddle across the channel was matter of moments, but scarcely as he on the beach of the Calf when rther inhospitality greeted him on e part of a tall, barefooted young an, who stepped from behind a lm, automatic pistol in hand and outed:

"Vamos! Get out! Scut!"

"Ye gods and little fishes!" rancis grinned, half-humorously, lf seriously. "A fellow can't move these parts without having a gun oved in his face. And everybody ys get out pronto."

"Nobody invited you," the stranger torted. "You're intruding. Get f my island. I'll give you half a inute."

"I'm getting sore, friend," Fran- s assured him truthfully, at the me time, out of the corner of his e, measuring the distance to the arest palm-trunk. "Everybody I eet around here is crazy and dis- urteous, and peevishly anxious to rid of my presence, and they've st got me feeling that way myself. esides, just because you tell me it's ur island is no proof——"

The swift rush he made to the elter of the palm left his sentence nfinished. His arrival behind the unk was simultaneous with the ar- val of a bullet that thudded into e other side of it.

"Now, just for that!" he called t, as he centered a bullet into the unk of the other man's palm.

The next few minutes they blazed way, or waited for calculated shots, d when Francis' eighth and last d been fired, he was unpleasant- certain that he had counted only ven shots for the stranger. He utiously exposed part of his sun- lmet, held in his hand, and had it rforated.

"What gun are you using?" he ked with cool politeness.

"Colt's," came the answer.

Francis stepped out boldly into the en, saying: "Then you're all out. counted 'em. Eight. Now we can lk."

The stranger stepped out and rancis could not help admiring the e figure of him, despite the fact at a dirty pair of canvas pants, a tton undershirt and a floppy som- ro constituted his garmenting. rther, it seemed he had previously own him, though it did not enter s mind that he was looking at a plica of himself.

"Talk!" the stranger, sneered, rowning down his pistol and draw- g a knife. "Now we'll just cut off ur ears and maybe scalp you."

"Gee! You're sweet-natured and ntle animals in this neck of the oods," Francis retorted, his anger d disgust increasing. He drew his n hunting knife, brand new from e shop and shining. "Say, let's restle, and cut out this ten-twenty- d-thirty knife stuff."

"I want your ears," the stranger swered pleasantly, as he slowly vanced.

"Sure. First down, and the man ho wins the fall gets the other fel- w's ears."

"Agreed." The young man in the nvas trousers sheathed his knife.

"Too bad there isn't a moving pict- e camera to film this," Francis rded sheathing his own knife. "I'm re as a boil. I feel like a heap bad jun. Watch out! I'm coming in rush! Anyway and everyway for e first fall!"

Action and word went together. d his glorious rush ended ignom- iously, for the stranger, apparent braced for the shock, view the stant their bodies met and fell over on his back, at the same time plant- ing his foot in Francis' abdomen and, from the back purchase on the ground, transformed Francis' flying rush into a wild forward somersault.

The fall on the sand knocked most of Francis' breath out of him, and the flying body of his foe, impacting on him, managed to do for what lit- tle breath was left him. As he lay speechless on his back, he observed the man on top of him gazing down at him with sudden curiosity.

"What d'you want to wear a moustache for?" the stranger mut- tered.

"Go on an cut 'em off," Francis gasped, with the first of his return- ing breath. "The ears are yours, but the mustache is mine. It is not in the bond. Besides, that fall was straight jiu jiutsu."

"You said 'anyway and everyway for the first fall,'" the other quoted laughingly. "As for your ears, keep them. I never intended to cut them off, and now that I look at them closely the less I want them. Get up and get out of here. I've licked you. Vamos! And don't come sneaking around here again! Git! Scut!"

In greater disgust than ever to which was added the humiliation of defeat, Francis turned down to the beach toward his canoe.

"Say, Little Stranger, do you mind leaving your card?" the victor called after him.

"Visiting cards and cut-throating don't go together." Francis shot back across his shoulder, as he squatted in the canoe and dipped his paddle. "My name's Morgan."

Surprise and startlement were the stranger's portion, as he opened his mouth to speak, then changed his mind and murmured to himself, "Same stock—no wonder we look alike."

Still in the throes of disgust, Francis regained the shore of the Bull, sat down on the edge of the dugout, filled and lighted his pipe, and gloomily meditated. Crazy, ev- erybody, was the run of his thought. Nobody acts with reason. I'd like to see old Regan try to do business with these people. They'd get his ears.

Could he have seen at that mo- ment the young man of the canvas pants and of familiar appearance, he would have been certain that naught but lunacy resided in Latin America; for the young man in question, in- side a grass-thatched hut in the heart of his island, grinning to him- self as he uttered aloud, "I guess I put the fear of God into that partic- ular member of the Morgan family," had just begun to stare at a photo- graphic reproduction of an oil paint- ing on the wall of the original Sir Henry Morgan.

"Well, Old Pirate," he continued, grinning, "two of your latest des- cendants came pretty close to get- ting each other with automatics that would make your antediluvian horse pistols look like thirty cents.

He bent to a battered and worm- eaten sea chest, lifted the lid that was monogramed with an "M," and again addressed the portrait:

"Well, old pirate Welshman of an ancestor all you've left me is the old duds and a face that looks like yours. And I guess if I was really fired up, I could play your Port-au-Prince stunt about as well as you played it yourself."

A moment later, beginning to dress himself in the age-worn and moth eaten garments of the ch he added: "Well, here's the old du on my back. Come, Mister Ance down out of your frame and dare to tell me a point of looks in which we differ."

Clad in Sir Henry Morgan's an- cient habiliments, a cutlass strapped on around the middle and two flint lock pistols of huge and ponderous design thrust into his waist-scarf, the resemblance between the living man and the pictured semblance of the old buccaneer who had been long since resolved to dust was striking.

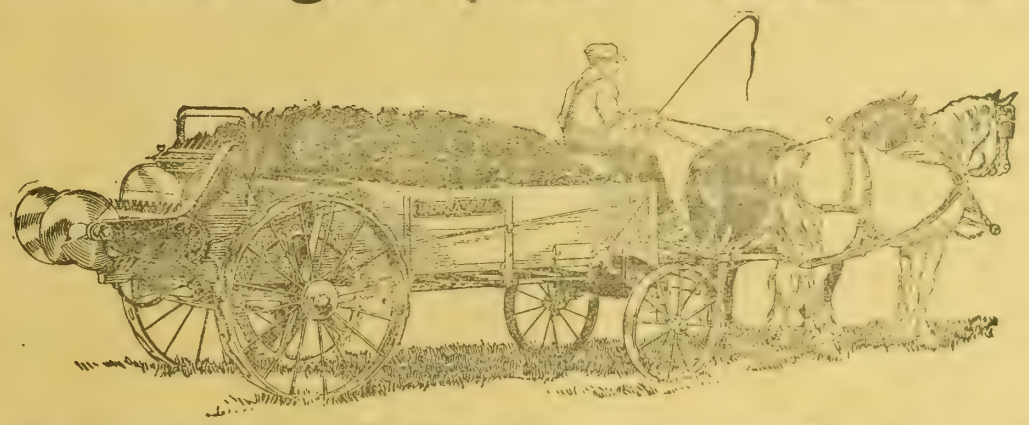
"Back to back again the mainmast,
Held at bay the entire crew . . "

As the young man, picking the strings of a guitar, began to sing the old buccaneer rouse, it seemed to him that the picture of his forbear faded into another picture and that he saw:

The old forbear himself, back to

(Continued on page 23)

THE NEW INTERNATIONAL Challenges Your Criticism!



Anything Missing in this List?

1. **Roller Bearings** — Roller bearings at seven points—the only spreader so equipped.
2. **Double Ratchet Drive**—Walking beam trans- mission from main axle eccentric and extra large ratchet wheel give easy, strong, steady feed. Box tapered to eliminate friction on box sides. Six feed speeds.
3. **Oscillating Front Axle**—auto-type, permitting short turn. No pole whipping.
4. **Power; Both Wheels**—Power is transmitted from both ends of the rear axle—beaters and wide-spread driven from one wheel and the manure feed from the other.
5. **Wheels Track**—Rear wheels track with the front wheels, lightening draft.
6. **Tight Bottom**—There is no clogging, jamming apron, because the spreader has a tight bot- tom. Spreads anything.
7. **Two Beaters** — Two all-steel beaters with chisel-pointed square teeth work from both top and bottom of the load.
8. **Wide-Spread**—The spiral behind the beaters gives the manure a third beating, and spreads it finely and uniformly beyond the wheels.
9. **All-Steel Main Frame**—wood box sides hold only the load.

HERE is a manure spreader value greater than any other on the market. Compare these features with the claims of other spreaders. The *New* International — roller-bear- ing, tight-bottom — is now ready for you. See it at your International dealer's. Do it without delay.

Price-Fixing

THERE IS an old theory that competition is the guardian angel of the Ultimate Consumer. It is supposed to protect him from the greed of the profiteer, to encourage low production cost, high quality, courtesy, prompt service, and all those other nice things with which we used to be familiar. This theory was working more or less satisfactorily when the God of War stepped in, abducted the guardian angel and messed things up in general. The angel has escaped the clutches of the Martian tyrant, but is still singularly annoyed and restrained by the well-meaning attentions of an over-solicitous government, to say nothing of that old flirt, Monty Monopoly, who would pay her board bill if she would let him.

Which is to say that competition, being theoretically, "the life of trade," would actually serve to stimulate production, trade and consumption if allowed unhampered freedom.

Price-fixing is competition's greatest enemy. It abrogates the laws of supply and demand. It sets an artificial value. It protects the inefficient and robs the efficient. It makes fish of one commodity and fowl of another.

Price-fixing may logically and wisely follow monopoly, but has no place in the field of competition. The railroad systems are a virtual monopoly, hence we have the Inter-state Commerce Commission to set the price of their service to the public. The steel, oil, telephone, telegraph, water power, clothing, shoe and certain machinery-making corporations are rapidly assuming the proportions of monopolies, if indeed, some of them may not already be classed under that term. Which certainly means that the time is approaching when their products and service will be subjected to more rigid government control.

Price-fixing during the war and even up to the present moment has been mainly directed at a commodity in the sale of which there is the utmost freedom of competition,—food. There are six million food producers in the United States, all competing with each other to cut down production costs, increase the quality of their product, and all selling freely to the highest bidder. The perishable nature of their product, and the fluctuating values from year to year make it impossible for farmers to connive to monopolize the prices of their goods beyond a certain price or season. And yet, in their frenzied efforts to cut the cost of living, government authorities would throttle this competition and fix arbitrary prices upon the farmer's products.

Michigan Farm Land in Demand

NOTWITHSTANDING the discouragements attendant upon present-day farming there is an unmistakable demand for Michigan farm land not only from residents of Michigan but from the "land-hungry" of other states as well. This is disclosed in a recent report issued by the E. A. Strout Farm Agency, which operates in nearly every state in the union, and last year sold 3,668 farms valued at $$17,996,400.

This statement will serve as ammunition for some of the daily newspaper editors to discharge a verbal broadside upon the pleasures and profits of farming and to take those to task who argue that farming is not properly rewarded. "If farming is in such a bad way as you claim, how do you account for the increase in land values and the demand for farms," the editor of one of the greatest dailies in the middle west propounded to me several months ago. The answer? Prices of almost every important commodity have advanced more than one hundred per cent. since 1914, with one outstanding exception,—land. Land values have increased from 25 to 50 per cent.—not any more—during the same period that other values have doubled. As for the demand for farms, it is only exceeded by the number of farms that are offered for sale.

The most encouraging feature of the Strout report is the fact that more than twice as many non-residents came to Michigan to buy farms as those who left to locate elsewhere. We would suggest to such of our readers who may be planning on selling their farms to locate in other states, that they make a little tour of investigation before the papers are signed.

Confidence

IT'S A great thing to be able to have confidence in other people. But it's a greater thing to so live as to deserve the confidence of others and build a moral fort for its preservation. Misplaced confidence, betrayed confidence, confidence that is held lightly,—they destroy man's faith in his fellow-men.

Scores are the letters received from the readers of Michigan Business Farming declaring their faith and confidence in our principles and approval of our course. "We will abide by your decision," "we depend upon you to tell us which is the right course," "you are the watchman of our rights,"—so run the stream of letters that pour in upon us day after day from all parts of Michigan.

Friends, it is a fearful responsibility that you put upon us. We are but humans. The temptation to take the politic course,—the course that means more business and more friends who know how to get more business,—rather than the more difficult course to which duty points, comes to us as it does to all others engaged in business. We are liable to err. Our judgment cannot be expected to be one hundred per cent. correct. We have made mistakes and we will make them again, but never we hope will the mistake be made because we have deliberately taken the wrong course.

We are here to serve you. We want your opinions and your criticisms, whether they be for us or against us. If you trust us we will try to measure up to your trust. If you put your cause in our hands we will guard it carefully, knowing that to sleep at our post may destroy both your confidence and your cause.

The Farm Bureau and the Railroads

IT IS NOT entirely clear what attitude the State Farm Bureau intended to take upon the question of returning the railroads to the private owners. Nor does the resolution which it adopted make its position any the clearer.

The American Federation of Farm Bureaus adopted a resolution at Chicago last fall favoring the "immediate return of the railroads," but according to a Michigan delegate the resolution was "railroaded" through and there was a question as to whether it represented the honest opinions of the majority of the delegates. In view of the action of the national organization, however, it was anticipated that the Michigan State Farm Bureau would also take a decided stand against a continuance of government control, but the resolution it adopted upon that subject cannot be so construed. This resolution reads in part as follows:

"That this organization is not interested primarily in federal or private *ownership* of the railroads, but in efficiency of them, * * * * * with the belief that such service, * * * * can be arrived at the sooner under private *ownership*."

What does this mean? That the Farm Bureau delegates favored the immediate return of the railroads? It does not say so. The resolution undoubtedly expresses a preference for private ownership, and that's exactly what we have now, but under government operation.

M. B. F. considers it most fortunate for the Farm Bureau that it did not follow the lead of its parent organization and demand the immediate return of the roads, as the question would have instantly arisen as to how representative of the farmers' wishes such a declaration would have been. In our future discussions of the railroad problem we should keep in mind that every farm and labor organization in Michigan up to the meeting of the Farm Bureau had expressed a decided disapproval of the return of the roads at the present time. The State Ass'n of Farmers' Clubs, with one hundred delegates present was the first to take this action. The Michigan State Grange through its four hundred delegates, followed suit, and the Gleaners' one thousand delegates were unanimous in their similar opinion.

If the Farm Bureau is destined, as many claim, to become the mouthpiece through which agricultural thought is to be disseminated throughout the nation, its leaders and those who are elected to sit as delegates in its business sessions, should be extremely careful about expressing their personal views upon debatable questions, lest they be erroneously taken as the views of the majority membership.

Piffle and Poppycock

IF THERE was ever "much ado about nothing" since the beginning of time, it is the weeping and wailing over the passing of booze. The lengths that men will go to secure a few drops of the outlawed stuff, the fury into which its disciples work themselves over the deprivation of their "personal liberty" the zeal with which politicians proclaim their championship of the citizen's "inalienable right" to make, buy, sell and drink the poison, calling upon every "loyal" citizen to spring to the defense of his constitutional privileges, all might well convince a stranger from another world that the destiny of the universe were in the balance.

Booze is gathering its degenerate forces from the four corners of the nation to stick their trembling fingers into the political pot, and elect men to office pledged to the repeal of the constitutional prohibition amendment. These men need have no special qualifications. They may be horse-thieves, escaped convicts, professional gun-men, or scums of the slums,—if they have enough intelligence remaining in their dwarfed brains to register an effective vote for the restoration of booze, they'll get the votes of all the bums in Death alley and of all the booze-makers on Murder boulevard.

The King "keynoter" of this bunch of liphenated libertines is Edward W. Edwards, who was elected governor of New Jersey because he promised to resist the enforcement of the federal prohibition law. After being satisfied that he had bit off a bigger chunk than he could chew, he has since contented himself with a cheap defense of the right of New Jersey to decide this question for herself without federal interference. If the state of New Jersey wants to secede from the union so that she may exercise her precious "right" to get drunk whenever she feels like it, let 'er go.

Thank God that the east no longer rules the United States! Intelligence, science, education, invention, agriculture, industry, religion, morality—PROGRESS—have moved westward. For seventy-five years the west has contributed four-fifths of the nation's greatest men, and performed two-thirds of the nation's greatest accomplishments. 'Twas the west that instituted the primary reform. 'Twas the west that secured the direct election of United States senators. 'Twas the west that first raised woman out of the class of half-breeds and jail-birds and gave her the ballot. 'Twas the west that had the strong, virile manhood to throw off the curse of booze and put upon our statute books an amendment abolishing it forever. It will be the west in the crucial moment when the depraved exponents of personal license meet the stalwart sons of justice who will decide the conflict on the side of temperance and sobriety. Thank God for the west.

There.

WHAT THE NEIGHBORS SAY

FEDERAL CONTROL OF RAILROADS

In dealing with this question we should take into consideration something more than mere figures of the railroad administration. How much was it worth to the United States to have the railroads under Federal control during the war? Was it worth $594,200,000, claimed to be a dead loss by the Railroad Administration? If so, then there was no loss. Again, if the railroad magnates were right in their declaration at their recent Chicago convention that a twenty-five per cent. advance in freight rates will be necessary when the roads are returned to their owners, then we should figure twenty-five per cent. on the total freight earnings during the war and enter this sum as clear profits under Federal control. This is no guess work. It is well known the freight and passenger rates did not rise in proportion to other prices. The general public had the benefit of it. Now, will some of you experts give us the figures on this basis? It is a fact that large monopolies can conduct a business much cheaper than small capitalists can, and any figures given the public to the contrary should be questioned very closely. Our public roads, public schools and public postal service are examples of efficiency at low cost, for comparison with toll roads, private schools and express companies. Federal ownership and operation will do the same for the railroads. Why do some of our farm organizations, while contending for co-operative buying and selling, refuse to see the goal when this co-operative principle is applied to Federal ownership of railroads?—*A Farmer.*

Our congressmen tell us that the roads are going back March 1st. Simultaneously or shortly thereafter, rates are going up, and farmers are going down in their pockets to help pay the 7 per cent. guaranty on watered stock, fat salaries and padded jobs which the railroads have always provided at the expense of the indulgent public. Ah, happy day! No more late trains; cars to burn; twenty-four hour freight service from Detroit to New York.—Editor.

A COMPLETE FARMER SLATE

I was talking with one of my neighbor friends yesterday about the farmers organizing in the state and how your paper was standing by the farmers and giving them the good advice needed in nominating a state legislative and congressional ticket to be voted on at the fall election. I asked him if he was taking the M. B. F. He said that he was not and took a dollar from his pocket and gave it to me to send you in payment of one year's subscription. Now what we want to do is to get down to business and select good men from governor down to coroner. Get them nominated in time for the great battle this fall. I would like to ask the readers of the M. B. F. how many farmers we have in the United States congress. I would like to see a farmer congressman nominated in every district in the state. We can do it if we will get right to work. That will mean for you to drop the two old parties, pull together and victory will crown your efforts.—*J. S. B., St. Louis.*

If you really want to elect some farmers to Congress, better drop the idea of a new party. Farmers as a class will get behind "farmer candidates," but they'll shy like a two-year-old from the suggestion that they break their old party ties. In a good many of the states of the union, farmers stand ready to scrap the old parties, but not so in Michigan. Don't you think, my M. B. F. friend, that you'll stand a much better chance of electing your men if you nominate them upon the dominant party for the state?—Editor.

WILL STAND BY CAMPBELL

I see by the letters in the M. B. F. that some farmers are worrying because Milo D. Campbell said he was a Republican and didn't promise to do all the impossible things that some would like to have him.

Now, we elected two members on the agricultural board last year and they ran on the Republican ticket, so why can't we elect a governor on the same ticket? I don't care as it makes any difference what party he runs on so he is elected. I'd rather vote for a man who makes no promises and did something for one who made a lot of promises and kept none of them. [illegible] on such trifles? The main thing is for all to go to the primary and put Milo D. Campbell on the ticket; then put our shoulders to the wheel and elect him. I for one am willing to abide by the judgment of the men that picked him from a list of very good men to be the farmers' candidate. He has made good before and I am sure will not fall down as governor. Farmers, talk Campbell for governor. Don't let the politicians split your vote and slip in some one that they have lined up for the purpose.—*G. M. Weaver, Kalkaska County.*

Good! We honestly feel that the great majority of farmers and their wives think the same as you do, and will translate their thought into action at the primaries.—Editor.

SITE-VALUE TAXATION

I heartily agree with Mr. Smith in your issue of Jan. 31st. Who will pay the war debts if we "untax wealth?" The income tax rate is being reduced already. Are the war-made millionaires going to be allowed to escape with the plunder? I don't see how Mr. Grenell can be in sympathy with the farmer and at the same time advocate single tax or the "untaxing of wealth." If Mr. Grenell can explain logically how we can untax wealth without over-taxing the poor and middle class I would very much like to have him do so.—*Stanley Warner, Barry County.*

Our head is in a whirl over this single tax controversy. The exponent says the single tax is aimed at the rich; the opponent says it is aimed at the poor. One farm organization endorses it; another condemns it. Said a prominent man to the writer recently: "The single tax is a beautiful theory, but it has never yet worked out successfully in practice." And there you are. Next.—Editor.

SHALL THE STATE FIX THE PRICE OF FARMER'S MILK

After reading an article in MICHIGAN BUSINESS FARMING, under the above heading, I am led to wonder what kind of fool legislation our great lawmakers will undertake next. Now if we have elected men to office, who would even try to pass such a law, we should set ourselves to work immediately to put them where they can not do the public such a wrong, and so great an injury.

Why don't they appoint a commission to prevent grasshoppers and potato bugs from traveling right in broad daylight, from one farm to another, or to stop the frogs making such a noise when the ice thaws out of the pond? That would be of more benefit to the public, and would also afford these law makers something to do, but of course it would take men with a little gray matter under their hair, to solve such problems. A few more laws to control the price of farm products, will result in a lot of people going hungry, and it will not be the farmers either. Just why the law makers want to make the farmers take the rotten end of the deal every time, I don't pretend to know; but that they do is as plain as a mule's ear, or the squeal of a pig.

You say in your editorial concerning this law, that "several of the officers of the Michigan Milk Producers' Ass'n sponsored it." Now if that is true, there are a lot of us that would like to know the names of those officers—*Jesse H. Shales, Washington, Mich.*

The officers of the Milk Producers' Ass'n, who favor legalizing the Detroit Milk Commission, unquestionably believe their attitude to be in the best interests of the dairy industry of the state. Attorney General Groesbeck is of the opinion that the milk commission as it now stands, without legal status, is operating in violation of law, and assuming that the producer, distributor and consumer are all satisfied with the commission's work, he proposes to amend the state constitution and make the findings of the commission legally binding on all parties. It is a subject of such vast importance that we feel the matter should be referred to a vote of the members of the Producers' Association, rather than be left to the discretion of a few, no matter how sincere and able their judgment may be.—Editor.

BACKS THE BEET GROWERS' ASSOCIATION

Enclosed find check to renew my subscription to M. B. F. I like the fearless way in which you attack the problems of Michigan farmers and your market reports are valuable to all farmers. Enjoy reading every number.

Have raised sugar beets for 15 years in the last 16. Am done, however, unless the companies concede the demands of the Sugar Beet Growers' Organization. The time has gone by for any corporation to advance the costs $6 per acre without, at least, consulting the growers on the matter. They fail to consider that farmers' costs had already advanced for labor and taxes and machinery, and in fact for everything they have to buy just the same as for anyone else. But it's the way they have always done. Handed the farmers anything they wished and the farmers have accepted it. A new day is dawning, however. The farmer is thinking more along the line of fair returns and a square deal and the sugar companies would do well to meet the growers and give them a square deal now.

Do the women of Michigan have a right to vote in the presidential election?—*W. E. Hill, Genesee County.*

The most important question involved in the issue between beet growers and manufacturers is the future status of the farmer as a party to the contract. The farmer who seeks to employ his right to arbitrate the terms of the contract with the manufacturer should have the approval and support of his fellow farmers. Your attitude is right. Answering your question, the women of Michigan may vote in the presidential primary which is held the first Monday in April, when you vote for township officers.—Editor.

GREAT BRITAIN AND FREE SPEECH

Wish to commend you on the last issue (Jan. 7) of M. B. F., as I think it the best one we have read. Just now we read much in the big daily papers about the drives made against Reds, radicals, Bolsheviks; anything to excite and divide the American people and detract their attention, while the British controlled press and the Tory element select the next president of the United States, so that American men and money may continue at England's disposal. Besides it is a settled purpose to unload the debt of Europe on America. During the war England seized all sources of information, and then fed us on the Awful tales of Hun atrocities made up in English newspaper offices and were spread broadcast in this country to develop hatred and divide the people, while England carried away billions of our money, grabbed up everything worth taking, the seas, the islands, the trade routes and added to her empire territory larger than all continental Europe, until the map of the world has become the map of Great Britain. * * * * Yesterday it was the Huns and it kept the people scrapping while England got a new grip on the throats of the Republic. Now it is the Socialists and Bolsheviki that keeps us worried and quarreling, while England selects the men for us to vote for. It also furnishes a convenient argument for a sedition law to deprive citizens of their constitutional rights; meanwhile we are deporting Russians to Russia and Mr. Wilson in absolute defiance of the Constitution and at a cost of hundreds of millions to American taxpayers is using American soldiers to help England and Japan in their war on the Russian people, making enemies of a people who were always our friends. Rid our country of British propaganda and intrigue, which during the last five years have all but made the United States a British subject colony. We must elect men who will respect and restore the Constitution and who will be for America and for America alone. Pro-British candidates may declaim against Bolshevism. This is not the issue and is, therefore, no evidence of their fitness. * * * *

The danger does not come from the small group of noisy Reds. The real danger comes from those who are willing to suppress our rights of representative government and thereby furnish ammunition to the Reds. Congress and that New York assembly have made more Socialists than could be made by Socialistic speeches in many a day. It is only when the people feel that their rights to get what they want through the ballot are being denied, that there is any danger of resort to violence in this country.

It is an odd situation that those who profess most loudly their love for American institutions are the ones who are doing the most to make many people believe the only hope of the people is through direct action. When the people begin to feel that Congress and legislatures are becoming nothing but the tools of big business and carrying out the wishes of the capitalistic class then we are getting on dangerous ground.—*D. E. Crosby, R. 1, Fremont, Mich.*

Philip Frances has written a book called, "The Poison in America's Cup", which virtually accuses the Wilson administration of being the tool of Great Britain and charges the United Kingdom with almost every conceivable conspiracy against the peace, the policies and the trade of every nation in the world. Had the book been circulated during the war, Mr. Frances would undoubtedly have been put behind the bars for sedition. Mr. Crosby expresses some of the [illegible] presented in that book, but in the name of fairness and for the sake of the future peace of the American mind and of the American nation we caution [illegible] against a too immediate acceptance of those views. Great Britain may [illegible] arch and dangerous conspirator [illegible] been pictured and it may be well [illegible] American people to be on their guard, but we ought not to condemn [illegible] Saxon relations without [illegible] tial proof than has yet been [illegible] No matter by whom inspired the onslaught upon the people's rights [illegible] semble and express their [illegible] violation of the Constitution [illegible] who value liberty bought by the blood of their forefathers will resent it as such. Sixty days ago there was a strong probability that Congress would [illegible] kind of peace-time sedition bill [illegible]

The Week's Editorial

WORKING FOR THE STATE

If you were hiring a man to tend furnace you wouldn't ask him how he felt about Mr. Wilson's Fourteen Points. You'd want him to be posted on shoveling coal and cleaning out ashes.

But when the people of the State of Michigan get a man to see that the pure food laws are enforced and milk is sold under proper conditions, the fellow who is picked out for them stands a different test.

James W. Helme used to be state dairy and food commissioner. He had the very important duty of appointing the deputies who carried out the immediate duties of the office. In Grand Rapids the other day he testified before a jury and incidentally told how he chose William J. Mickel a deputy in Grand Rapids. He said, "I appointed him because many prominent Democrats in Grand Rapids told me that he was a prominent Democrat." It did not appear that anybody knew or asked before naming Mr. Mickel deputy dairy and food commissioner, whether Mr. Mickel could tell a tubercle bacillus from a hunk of cheese. They just ascertained carefully that he was a prominent Democrat.

Some farmers got together in convention a few days ago. They were not politicians, in the ordinary sense, but because they represented one of the state's most important industries, they were naturally interested in the way the business of the state is handled. They passed a resolution to the effect that something ought to be done toward "checking the expensive and extravagant management of state affairs by placing the business of the state on a sound basis. This, we feel, can only be accomplished by a thorough house-cleaning at Lansing."

Maybe so, maybe so.—*Detroit N[illegible]*

MARKET FLASHES

STRENGTH RETURNS TO WHEAT MARKET

WHEAT PRICES PER BU., FEB. 16, 1920

Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.47		2.60
No. 2 White	2.46	2.53	
No. 2 Mixed			

PRICES ONE YEAR AGO

Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.30	2.30½	2.36
No. 2 White	2.26	2.28	2.34½
[illegible]	2.26	2.27	2.33

After a most unusual slump in the price of wheat, the market shows returning strength. The principal topic of discussion among the traders is the effort of Sen. Gronna, of North Dakota to bring an end to the government's guaranty and let the market take its natural course. It has long been the conviction of this western senator that the government guaranty has artificially depressed the price of wheat and that prices would go much higher if the restraint of the government were removed. This opinion has been shared to some extent by other western folks. Julius Barnes, former head of the Grain Corporation, takes issue with Senator Gronna's conclusions, and denies that the government's guaranty acts as a deterrent to higher prices. It is Barnes' opinion that the government guaranty is a supporting factor in the wheat market, and that without it farmers would be obliged to sell at a price much lower than the guaranty. We are inclined to an acceptance of this view, not because we are in sympathy with government price fixing, but because we believe the time has gone past when the farmers might receive any material benefit from the removal of the guaranty. Six months ago it might have been wise to bring an end to government control, but the present times are too uncertain, the ability of foreign countries to pay for our wheat is too questionable to chance the open market. In view of the unsettled conditions we feel that the government guaranty on wheat has become, for the first time since it was established, a real protection to the wheat grower. Moreover, as Mr. Barnes points out the government guaranty is not a maximum but a minimum price, and all sales of wheat for the past several months have been made at a considerable advance over the minimum. How much effect the government's control of export licenses, wheat supplies, etc., has had upon the natural movement, and consequently the maximum price, is a debatable question. Speaking of the controversy between Sen. Gronna and Mr. Barnes the Price Current Grain Reporter says:

"Senator Gronna of North Dakota has taken his political life in his hands and turned speculator on a broad scale, announcing himself a rampant bull on wheat. He is so cocksure that wheat would advance if the minimum guaranteed price were at this moment repealed he demands that this be done by Congress instanter, and his complacent committee has reported favorably! As Mr. Barnes has said: 'Only the most colossal egotism would presume to forecast the course of prices in the face of world wide unsettlement, which within the past few days has wrecked the United States export trade by the total collapse of overseas finance."

CORN SEEKS HIGHER LEVEL

CORN PRICES PER BU., FEB. 16, 1920

Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.64
No. 3 Yellow	1.53	1.43	1.60
No. 4 Yellow	1.50	1.39½	1.54

PRICES ONE YEAR AGO

Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.47
No. 3 Yellow	1.36	1.30	
No. 4 Yellow	1.31	1.26	

Warmer weather, freer movement, and that old bugaboo, the Argentine situation, acted as bearish influence in the corn market the fore part of last week, but the weather turned colder, the farmers quit selling, and an authentic report from the Argentine exploded the earlier report, and corn is once more in a favorable advancing position, on virtually all markets. A recent report of the latest developments in the corn deal is as follows: "The strength is credited chiefly to the reluctance of the farmers to accept present prices and the inability of the roads to carry enough corn to bring pressure on the market. Corn has a way of dropping enough to encourage a belief among the bears that the slump is on. They sell freely only to have the market turn against them and force covering at a loss. This has happened several times and has resulted in shaking the confidence of the belivers in lower prices. Bears are in the majority in both Detroit and Chicago and the market flatters their judgment just enough to keep them guessing, but they have not been able to escape with any of their plunder. They have been helped by demoralized stock markets, weak foreign exchange and high interest rates from time to time, but there is always one element against them—the supply of grain is small and shows no symptom of increasing. Cash demand takes the corn as soon as it appears on the market and stocks get no chance to increase. As long as this condition remains it appears like a difficult task to get prices materially lower and keep them down.

All of which is exactly in keeping with what M. B. F. has preached for the better part of six months.

OATS ADVANCE WITH CORN

OAT PRICES PER BU., FEB. 16, 1920

Grade	Detroit	Chicago	N. Y.
Standard	.90		1.00
No. 3 White	.91	.87¼	
No. 4 White	.90	.86	

PRICES ONE YEAR AGO

Grade	Detroit	Chicago	N. Y.
Standard	.60	.59	.68
No. 3 White	.60	.58	.67
No. 4 White	.59	.57	.65

Despite cancellation of some export orders for oats, this market has renewed its former strong position and last week saw advances ranging from 1 to 3c per bushel. It is plain that the supply of this grain is limited and that future purchases will undoubtedly be made at higher prices than now prevail.

LAST MINUTE WIRES

DETROIT—Grains firmer. French buyers in market for oats and rye. Beans take another drop. Potatoes firm up. Hay scarce and higher.

CHICAGO—Corn receipts small, prices higher. Oats in demand. Hog market very unsettled. Cattle dull.

Weekly Trade and Market Review

THE COUNTRY is well divided in opinion as to what the strange counter currents of soaring prices, falling exchange, increasing exports, declining imports, advancing wages, declining prices on farm goods, and other phenomena of the day portend. A goodly share of the people are having a deliciously good time,—too good to last. The frenzy of spending, speculation, pleasure-grabbing must come to an end. The outpouring of our national wealth into Europe's maw for nothing in exchange but credit must stop. And it will stop to a certain extent. Everyone is agreed on that. The only question is as to what effect the stoppage will have upon domestic conditions. Will it create a surplusage of American-made goods, for which there will be no domestic market. Will it force factories to close, throw men out of work, and drive people farmward? Will it halt industry, hurt agriculture, and increase industrial unrest? What's the answer?

The Price Current Grain-Reporter pessimistically meditates upon the subject as follows:

To not a few the 'Change phenomena of last week raised the question, Has the end come—is the break so long dreaded, with the inevitable reduction of prices, overshadowing the country? Who can tell? Panics so called (business depressions is a better expression) are not made to order, nor are they prevented by talk of "psychology." They come in the natural order of things when commercial credit is exhausted. Credit is always sound when there is negotiable value in goods behind it; it is never sound without. Just now, thanks again to the industrial idler who has been and still insists upon consuming far more than he has produced or produces, and to the flood of exports with little except luxuries coming back, it looks as though the limit of sound credit resting on goods is tending toward exhaustion. The "signs of the times" give pertinence to former Senator Burton's analysis of the "Indications that Precede a Crisis;" (1) High prices; (2) increased activity and formation of new enterprises; (3) active demand for loans; (4) increasing wages; (5) increasing extravagance in expenditures; (6) mania for speculation; (7) expansion of discounts and loans, rising interest rates, still higher wages, strikes and labor shortage. In a word, when consumption outruns production and the world spends its savings, the crisis comes first to an individual or an institution; then to many; finally to all. Whether the start has really been made is still a mooted question. P. R. Johnson, president of Chemical National Bank, is quoted as having said last week: "The demoralization of foreign exchange may deal a blow to high costs of living in America. It will cut down our exports, thus throwing large quantities of American goods on local markets, and will, in all probability, result in a decrease of prices." That would be wholesome and perhaps may be all.

As for farm products, the evil result of high cost of living agitation, and the sudden withdrawal of export orders, is being seen in lower prices. If the recent declines in food values is a barometer of what may be expected to happen to all commodities, then the predilections of the journal above quoted are not amiss. Anyway, we may as well admit that we are facing a critical and uncertain period, but we folks who are interested in farming may receive great comfort in the thought that whatever may happen to the nation's industry we shall be the least affected of all.

BEAN MARKET A PUZZLE

BEAN PRICES PER CWT., Feb. 16, 1920

Grade	Detroit	Chicago	N. Y.
C. H. P.	6.75	7.50	8.00
Red Kidneys		14.50	14.50

PRICES ONE YEAR AGO

Grade	Detroit	Chicago	N. Y.
C. H. P.	6.75	7.50	8.00
Prime	6.00	7.00	7.50
Red Kidneys	11.25	12.00	12.25

We hardly know what to say to our readers this week on beans. After several weeks of declining prices, reports have it that there is a firmer feeling, but if true this has not yet affected the price. There is an inclination on the part of the bean growers all over the country to cut down their acreage next year. A report from Lompoc, California, which is in the heart of the bean growing district of that state, reads as follows: "The acreage planted to small white beans this season in the Lompoc district will be greatly reduced, and mustard, sweet peas, contract beans, onions, potatoes and barley will be planted in their stead. Hundreds of acres have been seeded to sweet peas and mustard and in many places they are now above the ground."

We do not know how Congressman Fordney's renunciation of his promise to the bean growers to try to secure a special tariff bill is going to affect the market. One thing is certain, however, it is not going to restore people's confidence in the market. On the other hand, were a tariff bill enacted during the next ninety days, or any prospect of an enactment, thereby preventing speculators from using the oriental bean as a club to manipulate the domestic market, the supply of domestic beans would readily be taken up by the demand at profitable prices to the growers. This is what bean growers all over the country have expected to happen, but thanks to Mr. Fordney, the props have all been removed, and it's hard to tell how far the bottom may drop out of the market. There are six more months yet in which to move the crop. So perk up, and be hopeful.

RYE AND BARLEY

Rye is in good demand and is quoted at $1.58 No. 2. France is buying considerable rye at this time. Barley quotations are $2.90 and $3 per cwt.

POTATOES STEADY AFTER SLUMP

SPUDS PER CWT., FEB. 16, 1920

	Sacked	Bulk
Detroit	4.50	4.35
Chicago	4.25	4.25
Pittsburg	4.35	4.25

Eastern markets which were affected by the heavy snow last week, are now strong and higher, says the Hay Trade Journal. Supplies are light and the demand created by the lack of value of motors during the blizzard, caused a good demand for hay. Central Western markets are steady to easy according to the amount of offerings, which have increased considerably during the past ten days.

DETROIT PRODUCE MARKET

The decline that was expected in the poultry deal never came. The week closed with nothing on hand and a firm market. More poultry could have been sold without bringing any weakness. Dressed calves were steady and hogs easy. Butter is steady and quiet. Fresh eggs are in fair supply, but there is enough demand to hold the market firm. Very few Michigan eggs are coming to market, the supply being from the south and southwest. There is a good deal of difference in the quality, which accounts for a range of 1c in prices. A slightly firmer tone is shown in the apple market, but trade continues quiet.

BOSTON WOOL MARKET

Michigan and New York fleeces: Fine unwashed 68@72c; delaine unwashed, 92@95c; 1/2 blood unwashed, 80@82c; 3-8 blood unwashed, 68@69c. At the London wool auction sales prices were unchanged. Americans bought the best breasy merinos and crossbreds.

LIVE STOCK PRICES AT CHICAGO

Weekly average prices at Chicago for good native beef cattle, hogs and sheep, per 100 pounds, and weekly average weight of hogs (highest average on record), have been compiled as follows by the *Price Current Grain Reporter*:

	Average prices			Wt. of hogs

FUTURE OF BEEF

Beef values declined in spite of a lighter January movement. Why? Simply through lessened demand. There is less beef going abroad and our local demand has not been sufficiently strong to offset it.

Now with every evidence of goodly cattle supplies in the country what does the immediate future offer? A higher market? We doubt it greatly. When we look back to 1913 w find our food values have increased 50 to 200 per cent. But isn't it reasonable to conjecture that there is a limit and that possibly in some quarters at least that limit has been reached? We should so govern our operations therefore that we shall be able to meet changing conditions without regarding them as revolutionary or as anything more than the natural result of readjustment in the general order of things.—*N. H. S., Clay, Robinson & Co., Chicago.*

SAGINAW MILLING CO. LOSES LICENSE

Julius H. Barner, wheat director, announces that the licenses granted to the Saginaw Milling Company, of Saginaw, Mich., with a branch at Richmond, Va., have been revoked, effective at noon, Jan. 29, 1920, until further notice, the Wheat Director license being revoked in its entirety and the Food Administration license insofar as the dealing of the above company in wheat and wheat products are concerned. The Food Administration licenses of this company were revoked for failure to keep accounts and render reports as required, and taking unjust and unreasonable profits in excess of permitted margins above proven cost of production during the ten months' period ending June 30, 1918. Due to the revocation of the Food Administration license and because of misconduct leading up to such revocation the company's Wheat Director license was revoked.

SEEDS

Timothy seed has advanced 20c and in alsike declined 25c. Red clover seed is firm and active.

They all like M. B. F. !

I would not be without M. B. F. for many times its cost. Therefore, have decided to renew up to 1924, five years.—*A. G., Quimby, Mich.*

HUDSON SUPER SIX

Endurance Makes Hudson the Largest Selling Fine Car

More Than 80,000 Owners Value That Quality Most Because It Means Long Dependable Service, Free of Car Troubles

Hudson outsells all the world's fine cars, only because of qualities that count in every day service.

Chief of these is durability. All motorists so regard it.

And endurance is written everywhere in Hudson history.

Since Hudson made its unrivalled endurance records, it has led all other fine cars in sales every month and every year.

That proves how experienced motorists judge car worth.

How Hudson Gained Leadership

It was not speed that gave it sales leadership; though Hudson holds more stock car speed records than any car, and with cars embodying the Super-Six principle won more points in speedway racing than the fastest special racers ever built.

It was not power; though Hudson holds the fastest time ever made up Pike's Peak, in the classic of all hill climbs.

These Qualities Inspire Pride In Hudsons

They are valued of course by more than 80,000 Hudson owners. They contribute to the rounded supremacy of performance which distinguishes the Hudson everywhere. And it is natural to feel pride of ownership, and affection for a car that none can rival in fleetness, or in hill-climbing.

But few will ever care to use the full limit of Hudson speed. Few will meet hills to test its limits of power.

What does count every day of use is sure, dependable transportation. What does count after many months of service is the way Hudson retains its smooth, silent powers of superior performance, undiminished.

It means the assurance and reliance in your car that you feel in a watch that has served you for years, and never gave you cause for doubt. You are not disturbed by speculation regarding probable car troubles. Because with Hudson, car troubles are not thought of because of their remoteness.

And remember that the Super-Six principle which accounts for all Hudson's speed, endurance and performance records, is exclusive in the Hudson. No other maker can use it. For the Super-Six motor, which adds 72% to Hudson power, without added weight or size, was invented and patented by the Hudson.

Mark How Hudson Now Fulfills Its Prophecy

Every year has seen some improvement in the Hudson. The new models approach nearer the builders' ideal than they ever believed practicable. It is today a finer machine than those early models, which made performance records, no other car has equalled.

Hudson also leads in style. Its influence shapes motor design each year.

Demand for such advantages as Hudson's inevitably means that immediate delivery is not possible for all who want them. Many have waited months for the model of their choice.

Even should you not want your Hudson until next year, now is not too early to place your order.

Hudson Motor Car Company, Detroit, Mich.

A Department for the Women

Edited by MABEL CLARE LADD

TO BRIGHTEN COUNTRY LIFE

THERE'S a restlessness in the air; a longing for something different. Dissatisfaction with present surroundings is rampant. It's the will-o'-the-wisp call of spring. Every year it comes with the first balmy breezes and many there are who are led to believe that they should make a change of some kind, and under the spell of the elusive spring days take a drastic step, only perhaps to afterwards regret it.

It's the mothers of the land who must direct the steps of the children, keeping them busy, and yet keeping them interested in their work.

Thr is prhaps, no better, more instructive occupation for the youth of the land than the Boy Scout movement, and while it is not so easy for the children of the country to organize, still they can at least be taught by the parents the rudiments of the Scout law. Books for Boy Scouts can be secured for a very little and these the boys will enjoy reading, and in the hazy spring days, they will find much joy in learning to build fires the Scout way, while the Scout Oath is one which every boy in the land would do well to take. When the boys realize that the biggest men of the nation today are looking to them to fulfill the oath to keep themselves "physically strong, mentally awake and morally straight" and to serve God and County, they will be glad to qualify for this work and in so doing, their energies will find a healthy outlook.

So much for the boys—and so little for the girls. Continually we hear this cry. And yet the girls can be organized into community welfare clubs with meetings directly after school. And their organization can be known as the Chorus Club, where they meet to have a "sing fest."

It was demonstrated during the war that everyone likes to sing—at least to try to sing—that it is a natural outlet for human emotions—and it was because of this known tendency that music leaders were provided for every camp, whose duty it was to lead in the singing.

At college, the favorite twilight pasttime of the girls is to gather around the fire at twilight and—just sing. Everything they know they sing, some perhaps out of tune, but nobody cares, for it is an expression of happiness, an outlet for their feelings, and something to do.

Have you thought of organizing a Community "Sing?" If not, why not sound out your neighborhood and you will be surprised to find how many will be glad of the opportunity to meet at the homes of their neighbors once each week and just sing. It's an opportunity to get together, to exchange ideas and to broaden our visions as well as to give expression to ourselves through song equally good for young and old.

HELPFUL HOUSEHOLD HINTS

A SMALL PIECE of gum camphor placed in a vase of water will keep cut flowers a long time.

Orange fritters are a delicious accompaniment to fried ham.

The addition of a tablespoonful of cream to brown gravy makes it deliciously brown.

Scraps of cream cheese may be made useful by mixing them with butter and milk, or a little cream. This should be spread on thin, wafer-like crackers, made into sandwiches and served with salad.

Cheese may be kept soft and good for a long time if wrapped first in a cloth wrung in vinegar, and then in a dry cloth.

One large tablespoonful of butter, blended, will thicken a half pint of milk and water for sauces.

A raw potato cut in half and rubbed on fingers stained with vegetable parings will remove the discolorations.

When cleaning delicate fabrics, lace, ribbons, plumes, etc., use a mixture of gasoline and flour. Mix this as you would flour and water. Dip the articles in and scrub them thoroughly.

When necessary to boil a cracked egg add a little vinegar to the water; this will prevent the white from boiling out.

Horseradish is much improved for table use by mixing it with sweet turnips or rutabaga, one part of the latter to two of the former.

Whip cream in a pitcher instead of a bowl. You can do it in half the time and without spattering.

By wetting a spoon with which you are to serve jelly, you will find that the serving is more easily accomplished.

The Voice of the Women

A-rocking of the cradle we have wondered,
A-stitching with the needle we have thought
Of nationhood and of its seething problems
And fair solutions wrought and to be wrought.

We pondered and we wondered in the silence,
We taught our little children as we might;
And sometimes in the quiet we were dreaming
Of the time our lives might rise into their right.

The time when we might think and speak unhampered
And voice our aspirations for the race,
And join in world-emancipating campaigns,
And walk beside our men with even pace.

The "process of the suns" has brought the dawning
Of the day, the dreamed-of day, and yet we pause;
Afraid, yet not afraid, we tread the portal
Of this new world with its problems and its laws.

Yet shall we venture forth on its arena
And offer of our best as woman's meed,
Bracing our strength of soul into its service
And stinting naught that we may meet its need.

Yea, sisters, shall we venture, woman-hearted,
That from the sphere of home our lives may bear
The best, the truest, tenderest of its spirits,
That every sphere of humankind may share.

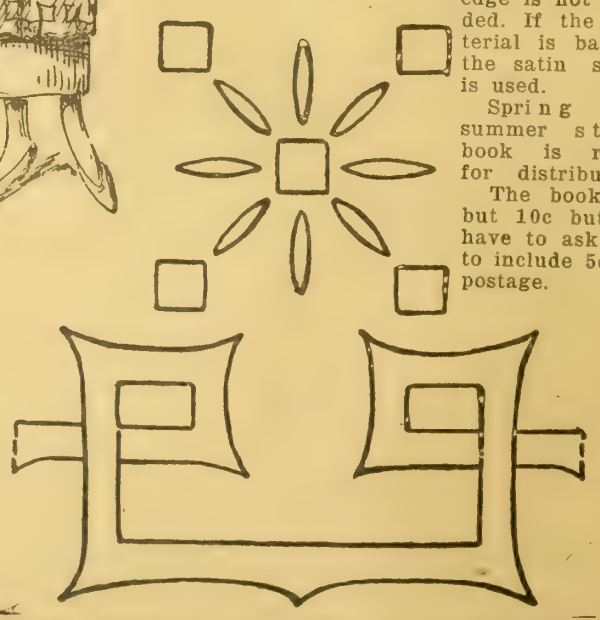
Year, brothers, we come forth to walk beside you,
To bear with you all chances of the way;
Adventuring our all in the endeavor,
That we together reach the Better Day

HOME NEEDLEWORK

ALREADY Milady is wondering what she shall have for spring, and thinking about her wardrobe. If the dress is to be made at home, and any fancy work done on it, it is indeed high time that it were begun for time slips away and when those first lazy days of spring catch us, there is no desire to sew.

The dainty model shown this week will attract the girl and younger married woman who is slender. It has the new neck line and short sleeves, and is dressy enough to wear anywhere. For the young Miss who embroiders and wishes to cut expenses, this dress is "just the thing." When the material is silk, rope floss is used or beads follow the outline and the edge is not padded. If the material is batiste, the satin stitch is used.

Spring and summer style book is ready for distribution. The book is but 10c but we have to ask you to include 5c for postage.



Women in Politics

Conducted by JUDSON GRENELL

LAND, LABOR, WEALTH, CAPITAL

THE VOTING woman will always be mislead as to what to vote for, unless she has an understanding as to the source of wealth. It may sound to her unreasonable to be told, for example, that the paper money she regards with so much favor, is not wealth, but that gold and silver coins, which are much less desirable for trading purposes, are actual wealth. So far as she can see they perform the same function—she exchanges them for those things that satisfy her desires.

If paper money was real wealth, all that it would be necessary to do to make everybody wealthy would be for the government to set the printing presses going, and to give everybody all the "money" desired. But experience has shown that the larger the supply of paper money, the less will the dollar buy. It is said that when the South, during the civil war of the '60s, was "on its last legs," a Richmond citizen was compelled to take to market a wheelbarrow of paper money in order to buy a peck of potatoes.

A few words on what wealth consists of is not out of place in this brochure.

Land

The first factor in creating wealth is land. Nothing can be produced except from land or upon land. And in this connection the word "land" is used as embracing all the natural forces of the world—even the universe—air, water, electricity, etc. It means more than the mere soil.

Labor

The second factor in the production of wealth is labor. Labor, applied to land, produces wealth. It is a short-sighted person who says: "I am not a farmer; I do not use land." Everyone uses land; it in some form sustains life; it is walked on; slept on. Between the miner taking ore out of the ground and the farmer guiding his plow through the crop-yielding soil there are a thousand and one activities; and in proportion as each activity is a necessary part in making a plow, those thus engaged are land users.

In fact farming is the only employment in which all mankind may engage and be sure of a living. "Mother Earth" is no flight of imagination.

Wealth

In proportion as labor is intelligently applied to land will wealth be produced. Here the instructor, the investigator, the recorder, the scientist, even the banker, helps to make labor productive. Each is entitled to such reward as will adequately repay him for his exertion. And when finally the harvest—say wheat—is ready to be transported to the mill to be ground into flour, its distribution will not be fair unless each factor in its production is equitably remembered.

Capital

When the excess of wealth above the immediate needs of the producer is used to produce more wealth, it is called capital. A barrel of flour in the kitchen bin is wealth; a barrel of flour in the store to be exchanged for money is capital. The iron ore (land) manipulated (labor) into a baker's iron stove is capital. The greater the accumulation of capital used productively, the richer society becomes, and the more productive is labor.

Rent

For the use of land, rent is paid; for labor, wages are tendered; and capital is reimbursed by interest. As land is not the product of labor, it is not capital, nor is labor skill capital. Yet just as paper money performs the same function as does metal money, so do land and labor at times apparently perform the functions of capital. However, in the discussion of eco-

nomic problems, it is necessary to keep in mind that these things—land, labor, wealth, capital—are really different; to indiscriminately use them as meaning the same thing is only to create confusion.

A person can at one time be a land owner, a laborer, a capitalist. Into which class he falls depends upon the extent of his stake in the land, whether his labor is his principal means of livelihood, or the quantity of capital he possesses. From what source does he obtain the greater portion of his income? That is the determining factor. One with brains and experience can do society a greater service as a director of production than as a manual worker. The rewards for all are greater—greater in every direction. Increased production insures a decreased first cost that inevitably results in lower prices. In this benefit the entire community eventually shares. That is one of the reasons why the arts and invention have made the luxuries of one generation the necessities of the next; the prices have fallen so that the things produced are within the financial means of the mass.

Landlords

The land owning class is in a peculiarly happy position. As population increases, without any effort on the part of the land owning class the value of land constantly tends to increase. This is caused by competition for its use; there is a restricted supply. Things produced by labor will bring in a free market only the cost of production, because production is unlimited, and prices constantly tend to this minimum. But as a land is a fixed quantity, and an absolute necessity if there is to be any production at all, its ownership gives a monopoly as positive as anything that can be imagined. Wages and interest may decrease, but rent, for land, is sure to increase with increase of population.

Exploitation

No Michigan woman voter should look with complacency on the flow of wealth into the possession of those who do not earn it. For such flow must of necessity be at the expense of those who produce the wealth. It is exploitation. By keeping in mind the supreme fact that wealth is produced by labor, and by labor only, it is not hard to distinguish between the rightful ownership of wealth, and to so vote as to favor the producer as against the exploiter.

Most people are wealth producers. The scientist who extracts plant food from the air, and so helps the farmer to make two blades of grass grow where only one grew before, should not his reward be large?

To frown upon the possession of unearned wealth is to help protect the home against some more or less insiduous kind of robbery. Let the frowning be followed by that right action which reflects itself in the results coming from placing a ballot in the ballot box.

The Little Things of Every Day

Through little things she shows her love:
The Little Things of Every Day.
I think this earth must live and move
Thru women dear who ease our way.
The world applauds our outward life:
(It does the same for many more!)
But she and I—we know no strife;
There are no ashes on our floor!)

My socks are whole; my coffee good;
I find the water warm to shave;
(And I have never understood
The way my collars dodge their grave)
She always knows where I have hid
The letter that I want so much;
Oh! Things do just as they are bid!
My tie comes right at her first touch.

The Little Things of Every Day!
In these she shows her love for me.
I dread each hour when she's away;
My life gets so complex, you see.
I lose my shirts and never can
Remember where I put my hat,
(I'm just a simple, selfish man,
But, Ah! she likes me, 'spite of that.)

All I can do is take her hand
When sunrise slips past sentries red,
And tell her that I understand
The homely halo 'round her head.
(Some men would say she'd have more style
Without her cap that looks so old,
But I don't mind, I have her smile,
Besides—the bacon might get cold!)

Of super-women, fine and brave,
I've read a lot; I say no more;
Except that they would never save
The thing you dropped outside the door.
Let poets rave of beauties fair,
Of women clever, brilliant, gay.
My woman does three times her share;
The Little Things of Every Day!

—H. C. L. J.

Never in the world were there doughnuts like Calumet doughnuts. In no others will you find that toothsome, tender goodness. It's the same with all bakings.
CALUMET
Baking Powder
Makes Most Palatable and Sweetest of Foods
Never anything but the very best—light, flaky and wholesome—because this 30-year favorite of leaveners is absolutely pure in the can—pure in the baking. Contains only such ingredients as have been officially approved by United States Food Authorities.
Made in the world's largest, cleanest, most modern Baking Powder Factory.
You save when you buy it—moderate in price. You save when you use it—has more than the ordinary leavening strength—therefore you use less. You save materials it is used with—never fails. Order today. Improve the quality of your bakings. Reduce baking costs.
Calumet Doughnuts
½ Cup sugar, 1 Egg, 3 Level teaspoons shortening, 1 Level teaspoon salt, ¾ Cup milk or water, 2½ Level teaspoons Calumet Baking Powder, 2½ Level cups flour. Lemon and mace flavor.
How to make them-Cream sugar and shortening together, add well beaten egg, then add milk. Next mix in flour and baking powder well sifted together. Work dough as little as possible. Turn out on well floured board and roll out quarter inch thick; cut with doughnut cutter and fry in boiling hot fat.
CALUMET BAKING POWDER
NOT MADE BY THE TRUST
CALUMET
BAKING POWDER
CALUMET BAKING POWDER CO
CHICAGO
Valuable 72-Page Cook Book
Handsomely illustrated in colors. Most complete and dependable recipe book ever issued. Hundreds of helps in reducing household expense. Scores of selected recipes. Better ways of making better foods. Send slip found in can of Calumet and three 2-cent stamps to help cover cost of packing and mailing. Calumet Baking Powder Co., 4100-4124 Fillmore Street, Chicago, Ill.

The Children's Hour

DEAR CHILDREN: This is the time of the year when old Biddy is clucking around for getting that eggs are high and mother would like to have her lay instead of insisting on sitting on that nest all day. But there is a reason for it. The old hen wants some little chickens of her own, and if you can persuade mother to give you a setting of eggs with the promise that if you will take entire charge of the old hen while she is setting; give her food and water, and that when the chickens hatch you will, under the direction of mother, feed the little chickens, water them, see that they are under cover the cool spring nights, you will find that you will have started a nice little account of your own. And you can gain thereby a vast knowledge of business methods. You don't see how? You have seen chickens hatched out all your life and never thought much about their being any business connected with it? Just listen. If you will but put all your attention to this game, you can learn how to conduct a poultry farm of your own when you are older, how much it costs, etc.

In the first place, mother should charge you with the regular cost of a setting of eggs. Then you will be charged with the price of the mother hen. Now secure a book and put down this cost on the debit side of your little book which you will call your Poultry Ledger. Charge up the amount of feed you give the mother, and when the chickens are hatched the amount of feed it takes to feed them. Be sure they have plenty of water and a nice green place to run in, and in the early spring you can sell all the roosters as spring chickens, pay mother for the setting of eggs, the mother hen and the feed used, and then you can continue to feed the pullets until they begin to lay and and then from the sale of your eggs you will have a nice little bit of spending money if you have been successful and you will have learned a good bit of bookkeeping, as from all the sales you will make, you will place the amount you get on the credit side of your ledger, and at the end of the season you will know just how much it costs to raise chickens and get them ready either for market or laying when they begin to pay for themselves. I would be glad to have as many children as try this experiment write me, as it will be interesting to know how many little business farmers we have among our readers. Affectionately yours, LADDIE.

Answer to Last Week's Puzzle

Six answers—One is 10 T and 14 S.

The Wonderful Adventures of a Raindrop.

By Ethel Allen Murphy

PART V.

"'AT LENGTH our stream joined a great big, big stream. The stream was so big that we thought we had met the sea. But we had many, many miles to go yet, and many were the sights we saw. At length we rolled in a great, wide, slow-going, yet powerful stream, out to meet a moving mass of waters.

"'When the first shock came we had to drop a lot of our soil that we carried, and then we parted around a fan-shaped island that people called a delta. I wonder how many soldiers in the United States School Garden Army have gardens in the rich, rich soil like that of the delta! Where is New Orleans, Garden Lady? Somehow I fancy that the last great city we passed was New Orleans, and as we joined in that vast stream that bore us toward the sea I think I heard the waters whisper and say, "It is the Mississippi—the Father of Waters. And there are thousands upon thousands of gardens tended by the children of the United States School Garden Army in the states through which the Father of Waters passes."

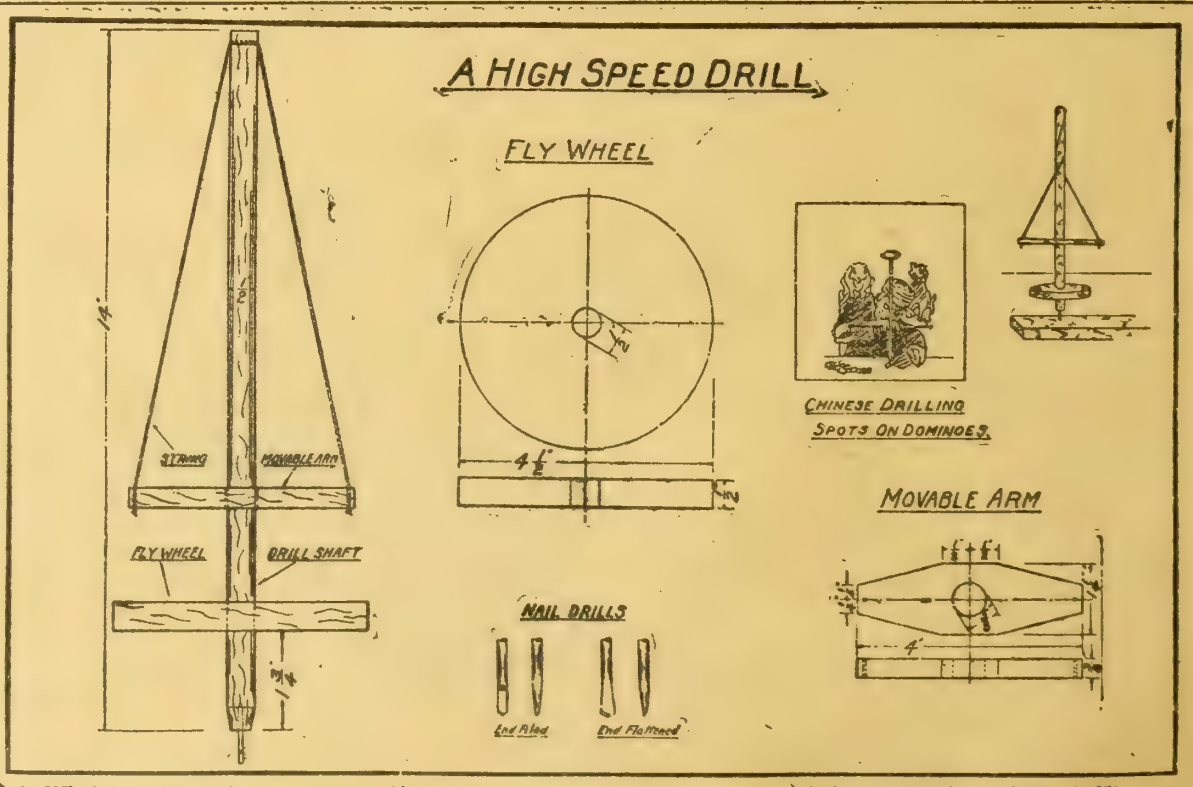
"'But now we felt a shock go thru us and a new salty tingle ran into us. The moon's power, too,d rew us with great force. When the first shock came we had to drop a lot more of our soil that we had carried. But finally I was out into the wavy course of the great ocean current that bore me to the great open sea.

"'Now we knew the sky as we had never known it. It seemed to mingle with us, yet to be always calling us!

"'Far, far off,' we said, 'the ocean and sky meet and mingle as the rivers did in the sea. And always we had dreams of some great joy that was coming to us out of that sky. Voices came to us out of those great spaces—the breezes, the great sweeping winds, and the thunder called to us. We could not understand it all, but we were sure that some day we should rise into that other sea above us.

"'One day great happiness filled us. It seemed that out of that sky somebody was smiling a warm, loving, golden smile on me. Somebody was calling to me without any sound, drawing me, trying to lift me. I felt that it was a lovely Sun Spirit who loved me. Then I felt myself grow full of warmth and joy. I became all light and floaty. I felt myself rising up! Up! Up! I left my heavy salt grains in the ocean. Oh, it was wonderful! Such warmth was all about me that I melted into the air, where I seemed to be rocked asleep at the heart of a golden mist in a warm, happy dream. Such a wonderful dream, Garden Lady.'" (*To be continued*)

Toys and Useful Articles That a Boy Can Make



YEARS ago, when fires were not as easily started as they are now, because there were no matches, the Indian was compelled to find something to take the place of matches. He had several schemes. He made sparks by striking pieces of flint together, or started the fire by whirling an arrow with the end embedded in soft dry wood, by means of his bow cord. A contrivance similiar to the drill shown was also used for starting fires, the whirling motion of the drill shaft heating the wood and causing it to burn. By driving a brad in the end of the old fire lighter we will make a drill. While some people were using the drill for starting fires the Chinese were using it for drilling spots on dominoes and chess men.

The drill shaft may be a piece of round stick that you may be able to pick up or it may be shaped from a piece of straight grained wood. If you are going to make the shaft plane a piece of the proper length one-half inch square and then plane off the corners, finishing till perfectly round with sandpaper. Bore a hole through the top end for the string. Point the other end of the shaft for the drill and make drill point by either flattening the end of a finishing nail after driving it into shaft and filing off the head or filing it to shape.

Make the flywheel of heavy wood, as the heavier the wheel the better the drill will work.

Fish line or other stout cord should be used for assembling the movable arm to the shaft. The string must not be stiff but very pliable so it will wrap about the shaft easily. Tie a knot in the string each side of the shaft, this will keep the string from slipping through the hole in the shaft. Thread the ends of the string through the holes bored in the ends of the movable arm and knot two or three times.

To operate the drill wind the string around the shaft by turning the movable arm on it. Then press down on the arm, releasing the pressure as the arm reaches the end of the downward stroke, this will cause the string to wind in the opposite direction on the shaft raising the arm for the next stroke. It will require a little practice to operate the drill evenly.

OUR BOYS AND GIRLS

Dear Laddie:—This is the first time I am writing to you. This is the second year my father is taking the M. B. F., and we all like it very much. I am 13 years old and am in the 6th grade. My teacher's name is Sister Bertha. She is a very good teacher. We have four horses, six cows, five sheep and about 70 chickens. As my letter is getting long I will close hoping to see it in print. You will find my story below.—Mary Gross, Eagle, Mich.

The Bird's Nest

A little bird was looking for a place to build her nest. She could find no place she thought would be safe enough. At last she flew into the loft where the farmer kept his corn. There she saw just what she wanted. The farmer's coat was hanging on the wall. She would build her nest in one of its pockets. Soon she had the prettiest nest you ever saw and it was so safe. It was not long until there were three little birds in the nest. One morning the farmer came in and took his coat from the nail. When he saw what was in the pocket he laughed and laughed. He hung the coat up again and went to tell his wife. When the birds flew away he took the nest and has it yet.

Dear Laddie:—This is my first letter I have written to you. I like the Children's Hour fine. I am 12 years old and in the 7th grade at school. I have a very nice teacher. I have three brothers and two sisters. My brothers' names are Cecil, George and Francis. My sisters' names are Bonnie and Doris. We have two miles to go to school, but we go with our brother as he goes to high school, three miles. I live on an 120-acre farm. We have quite a number of Chester White Hogs. My father gave one to me but I had bad luck with it, as it died today. My mother has given me half share of the chickens if I take care of them. I am going to try my luck raising them next year. I hope to see this letter in print. I would like to have the girls write to me.—Thelma Westalls, Breckenridge, Mich.

Dear Laddie:—I am a girl 11 years old. There are three of us children, my two brothers, Blaine and Allen, and myself. We live on an 80-acre farm. My father keeps quite a few cows and we send our milk to the Perrington condensery. For our pets we have four cats, Pinkey, Buster, Beauty and Billy; two rabbits, Polly and Peter, and a dog named Bonny. Our school is about 20 rods from here and we have a good teacher, Miss Donehue. I am in the eighth grade. My father has taken the M. B. F. two years and likes it very much. I like to work the puzzles out. I hope to see this, my first letter in print.—Your little friend, Eloise Barrett, N. Shade, Gratiot Co.

Dear Laddie—I have written to you before and I saw my letter and story in print. We used to live on a farm in Clare but moved to Saginaw. I like it here. I have five blocks to go to school. I go to the Emerson school. My teacher is Mrs. Rademaker. We have taken the M. B. F. for over a year and like it. I received a thrift stamp last year for my story. Well as I have a few more minutes, will tell you what I got for Christmas. I got a new dress, a nail file, some jewelry, a box of stationery and 4 handkerchiefs. A nice skating place is here, at Hoyt Park. Well I will close.—Hulda Reynolds, Saginaw.

Dear Laddie—I am a boy 11 years old and in the 6th grade at school. I have two brothers, Harold, 16, and Gerald, 9. I have no sisters. We have 12 head of cattle, three horses Prince, Maude and Nell, and 9 pigs. Mother has two turkeys and about 200 chickens. My grandfather takes the M. B. F. and likes it very well. —Arleigh Schofield, Farwell.

a mainmast, cutlass out and flashing, facing a semi-circle of fantastically clad sailor cutthroats, while behind him, on the opposite side of the mast, another similarly garbed and accoutred man, with cutlass flashing faced the other semi-circle of cutthroats that completed the ring about the mast.

The vivid vision of his fancy was broken by the breaking of a guitar string which he had thrummed too passionately. And in the sharp pause of silence, it seemed that a fresh vision of Sir Henry came to him, down out of the frame and beside him, real in all seeming, plucking at his sleeve to lead him out of the hut and whispering a ghostly repetition of:

"Back to back against the mainmast
Held at bay the entire crew."

The young man obeyed his shadowy guide, or some prompting of his own profound of intuition, and went out the door and down to the beach, where, gazing across the narrow channel, on the beach of the Bull, he saw his late antagonist, back up against a great boulder of coral rock, standing off an attack of sack-clouted, machete-wielding Indians with wide sweeping strokes of a driftwood timber.

And Francis, in extremity, swaying dizzily from the blow of a rock on his head, saw the apparition, that almost convinced him he was already dead and in the realm of the shades, of Sir Henry Morgan himself, cutlass in hand, rushing up the beach to his rescue. Further, the apparition, brandishing the cutlass and laying out Indians right and left was bellowing:

"Back to back against the mainmast,
Held at bay the entire crew."

As Francis' knees gave under him and he slowly crumpled and sank down, he saw the Indians scatter and flee before the onslaught of the wierd pirate figure and heard their cries of:

"Heaven help us!" "The Virgin protect us!" "It's the ghost of old Morgan!"

Francis next opened his eyes inside the grass hut in the midmost center of the Calf. First, in the glimmering of sight of returning consciousness, he beheld the pictured lineaments of Sir Henry Morgan, staring down at him from the wall. Next, it was a younger edition of the same, in three dimensions of living, moving flesh, who thrust a mug of brandy to his lips and bade him drink. Francis was on his feet ere he touched his lips to the mug; and both he and the stranger man, moved by a common impulse, looked squarely into each other's eyes, glanced at the picture on the wall and touched mugs in a salute to the picture and to each other ere they drank.

"You told me you were a Morgan," the stranger said. "I am a Morgan. That man on the wall fathered my breed. Your breed?"

"The old buccaneer's," Francis returned. "My first name is Francis. And yours?"

"Henry—straight from the original. We must be remote cousins or something or other. I'm after the foxy old niggardly old Welshman's loot."

"So'm I," said Francis, extending his hand. "But to hell with sharing."

"The old blood talks in you," Henry smiled approbation. "For him to have who finds. I've turned most of this island upside down in the last six months, and all I've found are these old duds. I'm with you to beat you if I can, but to put my back against the mainmast with you any time the needed call goes out."

"That song's a wonder," Francis urged. "I want to learn it. Lift the stave again."

And together, clanking their mugs, they sang:

"Back to back against the mainmast,
Held at bay the entire crew . . ."

CHAPTER III.

BUT A splitting headache put a stop to Francis' singing and made him glad to be swung in a cool hammock by Henry, who rowed off to the Angelique with orders from his visitor to the skipper to stay at anchor but not to permit any of his sailors to land on the Calf. Not until late in the morning of the following day, after hours of heavy sleep, did Francis get on his feet and announce that his head was clear again.

"I know what it is—got bucked off a horse once," his strange relative sympathized, as he poured him a huge cup of fragrant black coffee. "Drink that down. It will make a new man of you. Can't offer you much for breakfast, except bacon, sea biscuit, and some scrambled turtle eggs. They're fresh. I guarantee that, for I dug them out this morning while you slept."

"That coffee is a meal in itself," praised Francis, meanwhile studying his kinsman and even and anon glancing at the portrait of their relative.

"You're just like him, and in more than mere looks," Henry laughed, catching him in his scrutiny. "When you refused to share yesterday, it was old Sir Henry to the life. He had a deep-seated antipathy against sharing, even with his own crews. It's what caused most of his troubles. And he's certainly never shared a penny of his treasure with any of his descendants. Now I'm different. Not only will I share the Calf with you; but I'll present you with half as well, lock, stock and barrel, this grass hut, all these nice furnishings, tenements hereditaments, and everything, and what's left of the turtle eggs. When do you want to move in?"

"You mean . . .?" Francis asked.

"Just that. There's nothing here. I've just about dug the island upside down and all I found was the chest there full of old clothes."

"It must have encouraged you."

"Mightily. I thought I had a hammerlock on it. At any rate, it showed I'm on the right track."

"What's the matter with trying the Bull?" Francis queried.

"That's my idea right now," was the answer, "though I've got another clue for over on the mainland. Those old timers had a way of noting down their latitude and longitude whole degrees out of the way.

"Ten North and Ninety East on the chart might mean Twelve North and Ninety-two East," Francis concurred. "Then again it might mean Eight North and Eighty-eight East. They carried the correction in their heads, and if they died unexpectedly, which was their custom, it seems, the secret died with them."

"I've half a notion to go over to the Bull and chase those turtle-catchers back to the mainland," Henry went on. "And then again I'd almost like to tackle the mainland clue first. I suppose you've got a stock of clues, too?"

"Sure thing," Francis noded. "But, say, I'd like to take back what I said about not sharing."

"Say the word," the other encouraged.

"Then I do say it."

Their hands extended **and gripped** in ratification.

(*Continued next week*)

FEDERAL FARM LOAN SYSTEM ATTACKED BY ENEMIES

(*Continued from page* 3)

reasonable terms is no more heinous than a tax exemption in favor of the stock holdings of the National Banks in the Federal Reserve Banks and in favor of wealthy people who invest their money in state and municipal and county bonds, the income of which cannot be taxed one cent by federal, state or local governments.

In order to establish successfully the great commercial credit system represented by the Federal Reserve Act and the great agricultural credit system represented by the Federal Farm Loan Act, I think that the Congress was justified in granting exemptions from taxation of the stock held by the National Banks in the Federal Reserve Banks and of the farm mortgages and bonds of the Federal and Joint Stock Land Banks; but if the exemptions from taxation in favor of the Agricultural Credit System are to be repealed, then with equal justification the exemptions from taxation in favor of the commercial credit system should be repealed.

Apparently, in the eyes of these selfish interests, the farmer is entitled to no consideration; and it is equally apparent that in their eyes capital and wealth are entitled to every consideration.

The agricultural class, upon whose prosperity and welfare the life of the people of the United States depends, will not now consent to see this great Land Bank System destroyed for the benefit of those who for years have taken advantage of the farmer's necessities by selling him credit at extortionate rates of interests and on hard and unsatisfactory terms.

I do not say that there should be no amendments to or changes of the Farm Loan Act. The system is new and the test of experience will undoubtedly show that beneficial amendments of the law may from time to time be made.

The Federal Farm Loan System must be preserved. The tax exemption on the mortgages given by the farmers to the Federal Land Banks and the Joint Stock Land Banks and upon the bonds issued by these banks must be continued so that the great basic industry of agriculture, upon which rests the prosperity of all, will not be burdened unnecessarily. The business of food production is fundamental. No one must be permitted to collect one cent of unjust tribute from it.

The highest producer in the St. Joseph Cow Testing Association for the month of January was a full-blooded Jersey owned by E. E. Sheap, of Sturgis. She produced 1,086 lbs. of milk with a test 6.6 per cent and a butterfat of 71.6.

There were 6 cows that produced over 50 per cent. of butterfat; there were 17 cows that produced over 40 per cent. of butterfat; there were 34 cows that produced over 35 per cent of butter fat. Of these 13 were Holsteins, 12 were Jerseys, 7 were Guernseys and the rest were scrubs.—*Richard Strabbing, Tester St. Joseph Co. Association.*

Your father probably bought APEX Seeds from this house

For 35 years APEX field seeds have been bought by the farm owners in Michigan whose desire has been to obtain the highest, purest quality seeds produced.

APEX seeds are strictly Northern grown—vigorous, rugged, sound—especially suited to Michigan soils and climate.

All APEX seeds must be perfectly clean and tested by analysts to comply with Michigan Seed Laws before they can carry the name APEX. A solid, 35 year record of honest satisfaction stands behind them.

POCKET ELECTRIC .....FLASH LIGHT FREE

For Two NEW Subscribers to M. B. F.

Every man, woman or child in the country ought to carry an electric flash-light at night and here is the handiest size of all. Flat, just-a-hand-full yet throws a powerful light, brighter than a clumsy lantern. We have secured a limited number of these lamps from one of the best makers in America. They are never sold at retail for less than $1.50, some dealers charge $2, but until our supply runs out we will send one complete flash-light, including nitrogen bulb and Franco battery for only two NEW subscribers to Michigan Business Farming at $1 each. Send $2, two new names and the lamp will come by prepaid parcel post. Address, Premium Manager, Michigan Business Farming, Mt. Clemens, Mich.

ACID PHOSPHATE--EUROPEAN POTASH

We offer your choice of twenty brands of thoroughly cured, fine drilling fertilizers. **All the Acid Phosphate you want.** Mixtures containing from 1 per cent. to 15 per cent. Potash Delivered prices on request. State requirements.

Address, Lock Box 175, Ann Arbor, Mich.

BE SQUARE

THAT'S been our creed ever since the Burch factory was opened in 1875. It has been the reason Burch announcements have been accepted at 100 per cent by people who knew.

So when we tell you that in the Burch Pulvo-Packer and Pulverizer we have a wonderfully effective implement for every good farmer, you know it is true.

HERE ARE THE REASONS

Because it packs the loose soil just enough to enable the plant roots to take hold, pressing out all air spaces.

Because it cuts and crushes every clod that impedes the young plants.

Because it creates a mulch that holds back the evaporation of moisture.

Because its heavy spring construction gives maximum efficiency to the rear section, insuring perfect work at light draft.

Because it is built to stand up, with the best materials put together right.

See it at the Burch dealer's or write to us for our special Catalogue NP3 which describes it fully.

FARMERS SERVICE BUREAU

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you.)

OPTIONS ON GERMAN MARK

Several of our subscribers have sent us literature from a New York broker advising the purchase of "options" on German marks. These circulars make the following alluring statement "Right now we firmly believe options on foreign currency offer an unusually attractive investment opportunity. True, there is a speculative investment involved which makes them all the more attractive, but just the same the chance for substantial profit making seems so nearly assured as to render the speculative risk small in comparison. For example, every increase of 1 cent on an option of 10,000 marks, francs or lire mean a profit of $100; or 100,000 marks, francs or lire a 1-ct. increase equals a profit of $1,000." This concern offers "options" on 10,000 marks for $40, on 25,000 for $85, on 50,000 for $160, etc. As a final bait this tempting bit is offered: "In 6 months $40 invested should return a profit of $1,800; $300 to $350 invested should return a profit of $10,000."

When a man offers you an investment proposition that may pay a dividend of from 7 to 10 per cent, look into it. It may be worth something. But when a man mentions dividends of 100 per cent and 4,000 per cent put another lock on your money vault. It's a terrible temptation and stronger men than you have succumbed to it. Anyone who buys options or titles to the coin of foreign countries is taking a hundred to one shot. If Germany can pay her war debts and bolster up her credit, in a long, long time, the German mark may creep back to par value. If Germany breaks under the strain and the Bolshevists get control of the government we may expect a repudiation of the coin of the realm, in which case holders of options and German marks will be able to turn their holdings over to the children as playthings. If there were any present confidence in the early restoration of German, French and Italian credit, their coin wouldn't go begging for a market. You couldn't buy it at two to ten cents on the dollar. And if the government and business men of other countries have no faith in the early strengthening of that credit, why should you?—*Editor.*

(Since the above was written German marks and other foreign coins have declined still further in value, and the end is not yet.)

MICHIGAN SENATORS AND REPRESENTATIVES

Will you kindly tell me the names and addresses of my senators and representatives at Washington, D. C.?—F. E. M., Hemans, Mich.

Senators—Chas. E. Townsend, Jackson, Mich., and Truman H. Newberry, Detroit, now on trial at Grand Rapids for violation of the election laws. Your representative is Louis C. Cramton, of Lapeer. Mr. Cramton has shown himself a consistent friend of agriculture, and M. B. F. feels that the seventh congressional district is fortunate in having Mr. Cramton for their representative.—*Editor.*

WIRE WORMS

Please send me some simple and easy way to get rid of the wire worms. They work on our potatoes and spoil them for selling or eating. They work mostly in the clay.—J. R., LeRoy, Mich.

The control of wire worms is very difficult—in fact, we know of no way of getting rid of them effectively. They are most inclined to work on soils that are poorly drained although in some cases they do much damage on soil that is well drained. Plowing the land in the late fall and letting it remain in the rough during the winter months will reduce the number of wire worms but will not kill all of them. Wire worms and white grubs are most likely to occur where a sod land has been plowed for potatoes. In case either of these insects are known to be present in large numbers in the soil it is a good plan to plant some other crop than potatoes and one on which they can do little harm, for a year or so after the sod has been plowed. Regretting that we cannot give you a more satisfactory means of controlling this insect but hoping that this information will be of some service to you.—*C. W. Waid, Extension Specialist, M. A. C.*

OLD NEWSPAPER DEBT

I would like to ask what is the law in regard to collecting for newspapers. One was sent to my boy seven years old. We rejected the paper and also 'phoned to have it stopped, but they kept sending it. Now they have sent me a letter threatening to sue me if I do not pay within ten days. Will I be holden for the pay as we never signed for the paper.—W. H. W., Lenawee County.

Pay no attention to the threats. If you can show that you ordered the paper stopped, we do not think they can force you to pay. The sure way of preventing trouble of this kind is to notify the mail carrier not to leave the paper in your bor. He is instructed to notify the postmaster, who in turn sends the publisher a notice, who under the law is required to stop the paper and to pay the return postage on all he sends you after notification has been given him.—*Editor.*

CONGRESSIONAL ELECTION

I would like to ask you to publish in the M. B. F. when the congressional primaries are to be held in Michigan, and what form is used in getting candidates' names on the ballot.—J. S. B., St. Louis.

United States congressmen are elected every two years. They are nominated on their respective party tickets at the primary election, held the last Tuesday in August of every even year. The nominee on each party ticket becomes the candidate for that party at the elecion in November, and the person receiving the highest number of votes, declared elected. To become a candidate for congressman and have his name printed on the ballot, a man or his friends must file with the secretary of state thirty days before the primaries a number of petitions equivalent to not less than two per cent., and not more than four per cent. of the total vote cast for the secretary of state in his district at the preceding general election.—*Editor.*

RED KIDNEY BEANS

I am a farmer living in the north central part of Midland county. The farmers in this section of the county are too far from the railroad, it being from five to ten miles, to raise sugar beets for a cash crop, and so the majority of us have been depending on beans, that is, navy or pea beans.

Now the price of white beans has not been high enough so that any great number of the farmers in this community have been able to raise them at a profit.

The price of red kidney beans looks very attractive to myself and many others in this community and what I am getting at is this: Can we raise red kidney beans in this climate? Can they be threshed with the common beaner? Do they require any different planting conditions, care or harvesting than the white beans and can the local elevators handle them without special machinery?

I would also like to hear from some farmer who has red kidney beans for sale and the price of same, also how many to sow per acre. I would respectfully suggest that you answer these questions through the columns of your valuable farm weekly as I think it would be of interest to a number of farmers in all parts of the state. I will support Milo D. Campbell for the nomination and election for governor.—E. S. M., Hope, Mich.

Red Kidney Beans can be successfully grown in all parts of Michigan where White Beans are raised. The same machine is used in threshing Reds as the other dries. The planting conditions are practically the same. It is advisable not to plant as many beans in hill. If the soil is heavy, we would recommend planting less than where it is light, as the Red Kidney has a heavy foliage. The conditions of harvesting are the same as White Beans. No special machinery is used. We recommend forty to forty-five pounds to the acre.

We are paying farmers six and one-quarter today on handpicked basis for White Beans, and twelve and one-half on handpicked basis for Red Kidneys. We believe that the Reds will be worth about twice as much as the Whites for another year, and will continue to be much higher.—*Lewellyn Bean Co., Grand Rapids.*

SENSE AND NONSENSE

A KICK

Rooster—Why do you stand those eggs on end. Do you want to raise a family of acrobats.

Help Wanted

Nancy was saying her prayers. "And please, God," she petitioned, "make Boston the capital of Vermont."

"Why Nancy!" exclaimed her shocked mother. "What made you say that?"

"'Cause I made it that way on my examination-papers today and I want it to be right."

Illogical

Lenine, says a message, declares that Great Britain must recognize Russia. Meanwhile the Bolsheviki are doing their best to make it unrecognizable.

Necessities and Luxuries

"Just bought a fine motor-car for immediate delivery."

"What style car did you get?"

"A 'Dashing Demon Six.' Now, if I could only get a half a pound of sugar somewhere the whole family would be happy."

A PUZZLER

Bug — The doctor said I should take a mustard bath, but how can I take a bath with dry mustard?

Unfortunate Introduction

Aunt Nellie—"Well, Bobby, dear, did you see Santa Claus this time?"

Bobby—"No, auntie; it was too dark to see him, but I heard what he said when he knocked his toe against the bedpost."

Common New York Incident

A man from the backwoods of Western America visited New York for the first time one Christmas and went into a restaurant to have his Christmas dinner.

All went well until the waiter brought him a napkin. The eyes of the backwoodsman flamed and, pulling a six-shooter from his hip-pocket, he told that waiter his mind.

"You take that blamed thing away at once," he said, evenly. "I reckon I know when to use a handdkerchief, without having them darned hints thrown out!"

STUCK UP

What became of that snobbish brother of yours?

Oh, stuck up to the end—he died on flypaper.

Uncle Rube Spinach Says:

CHEER UP—YOU'RE A LIVIN'

COMES the joyful news that the cost of livin' is a-goin' up, way up, twenty-five per cent or more, the amount, no doubt, dependin' on how many more investigatin' clubs are formed an' how much money will be at their disposal. Prob'ly you've noticed that as soon as a thing has stood a real thorough investigation the price has been boosted up a few notches. Sugar you-know, an' bread; shoes an' sauerkraut; limberger cheese an' shavin' soap; oh yes, the investigators are the boys that can whoop the prices up; long may they wave! Mebbe I hadn't ort to a said that, some folks might think I meant to hang 'em, but I can't rub it out so I'll let 'er go jest as she is.

Well, anyway, we're told that shoes will probably be higher 'n'count of the awful prices farmers are a-gittin' for their beef hides. I've been told by shoemakers that from 90 cents to a dollar an' a quarter will cover the leather cost in any pair of shoes, so I guess shoemakers must be gittin' awful high wages or somethin'—that's why shoes cost so much, don't you see?

Men's clothes must be higher on 'count of the turrible price farmers are a gittin' for their wool. A man well-versed in the makin' of men's clothing, said jest a few days ago that in men's suits, that sold for from 50 to 70 dollars, there could only be about five dollars' worth of scoured wool, an' in suits costin' at retail today, from $75 to $100, seven dollars would cover all the cost of the finest scoured wool that could possibly be put in.

Women's clothes are also goin' higher—well we might say let 'em go—we don't care if the women don't—gosh! They've been a-goin' higher an' tighter for three or four years now an' we're kinda gittin' used to it—but if they're goin' to cost more, why, we want to kick right now. Why the dickens, should women's dresses cost so darn much money when there is so little to e'm? Well the great cry goes over the land that lack of production an' high wages are the cause of the raise in prices, this from the manufacturers an' the jobbers an' the profiteers, or whatever they be. Lack of production an' high wages?

The labor unions say: "Give us less hours an' more money; cut down from 10 or 12 hours to six or eight an' production is one of the causes of the lower the cost of livin'. Now, it looks to a man on the fence that if lack of production is one of the causes of the high cost of everything, then shorter days, seems like, would make a greater shortage—an' create a higher price. Shorter hours in the factories means increased expense to the farmer; he must compete with the hours an' wages paid in the city, if he has any help at all, consequently he must have a higher price for his products, an' for every extra nickle paid the farmer, the middle men, the real moneymakers, get a quarter or more. An' so the cry goes out agin'—livin' has gone up; give us more wages an' shorter days, an' when the end will come no livin' man can tell, it's a continuous circle an' unless somethin' is done to remedy things there will be much sufferin' an' death among those who, with a fixed income, too often pitifully small, can not keep up with the risin' prices an' sooner or later must give up the unequal struggle.

Jest natcherally now, you ask, "What's the remedy for all this sort of thing?" Well, by gosh! There don't seem to be any remedy; the government through the attorney general an' others, has spent millions of dollars jest investigatin'—'course there's been a few little fellows—profiteers on a one-horse scale, so to speak, arrested, men who have taken in profits of a hundred dollars, have been prosecuted vigorously we are told, an' mebbe they should ort to be prosecuted. The idea of takein' jest a few hundred dollars when the opportunity was wide open to take millions, shows that such men are not safe to be at large; they might git in the way of the big profiteers an' cause 'em more or less trouble, don't ya know? Anyway the remedy don't seem to lay in investigatin' committees, that's a cinch; an' somehow it don't appear to me as anyways likely that shortenin' the hours or raisin' wages will solve the problem. Cuttin' a quarter time off'n a day's work wouldn't increase production more's I c'n see; kinda looks like tween the producer of raw material an' the consumer of the finished product. Surely five dollars' worth of wool in a 70-dollar suit of clothes, don't look as though the grower of wool was makein' a heluvalot out of the clothin' business. Seems like somebody in between must be gittin a rake-off somewheres don't you think?

The National Clothing Men's Association has adopted resolutions pledgin' themselves to "co-operate in the prosecution of profiteers in the clothin' business," but wisely adds, "there ain't any such animals," an' so there you are, nobody to blame an' so of course, no remedy.

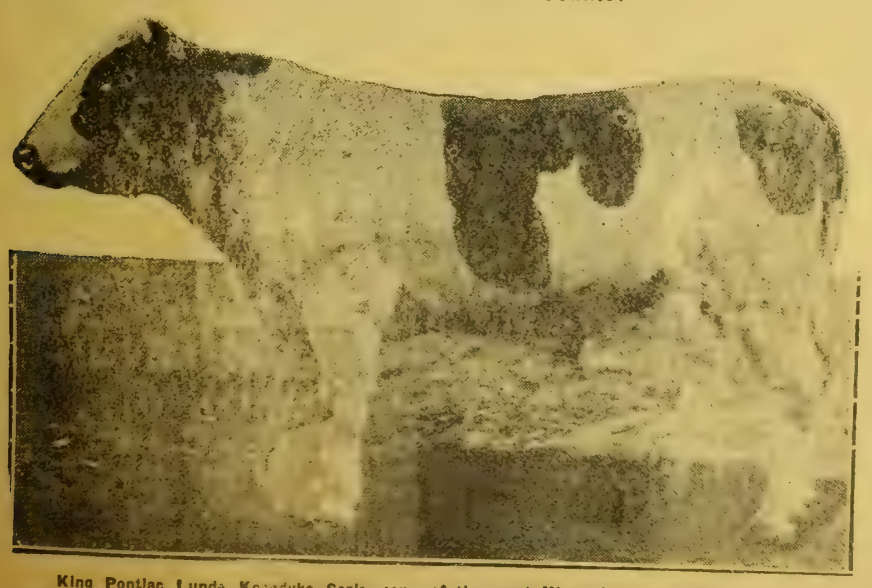
Here's what John H. Copper, president Copper & Coppe,r says: "We may keep high wages; we may keep our prosent scale, and still reduce the cost of living by a simple remedy—WORK—good, hard, honest, faithful service, not eight hours, rather 10 and then some. Let us for one year, at least, resolve to work, and work like H!!!!" Can anybody offer a better solution? Cordially—*Uncle Rube.*

WORDS OF APPROVAL FROM M. B. F. FOLKS

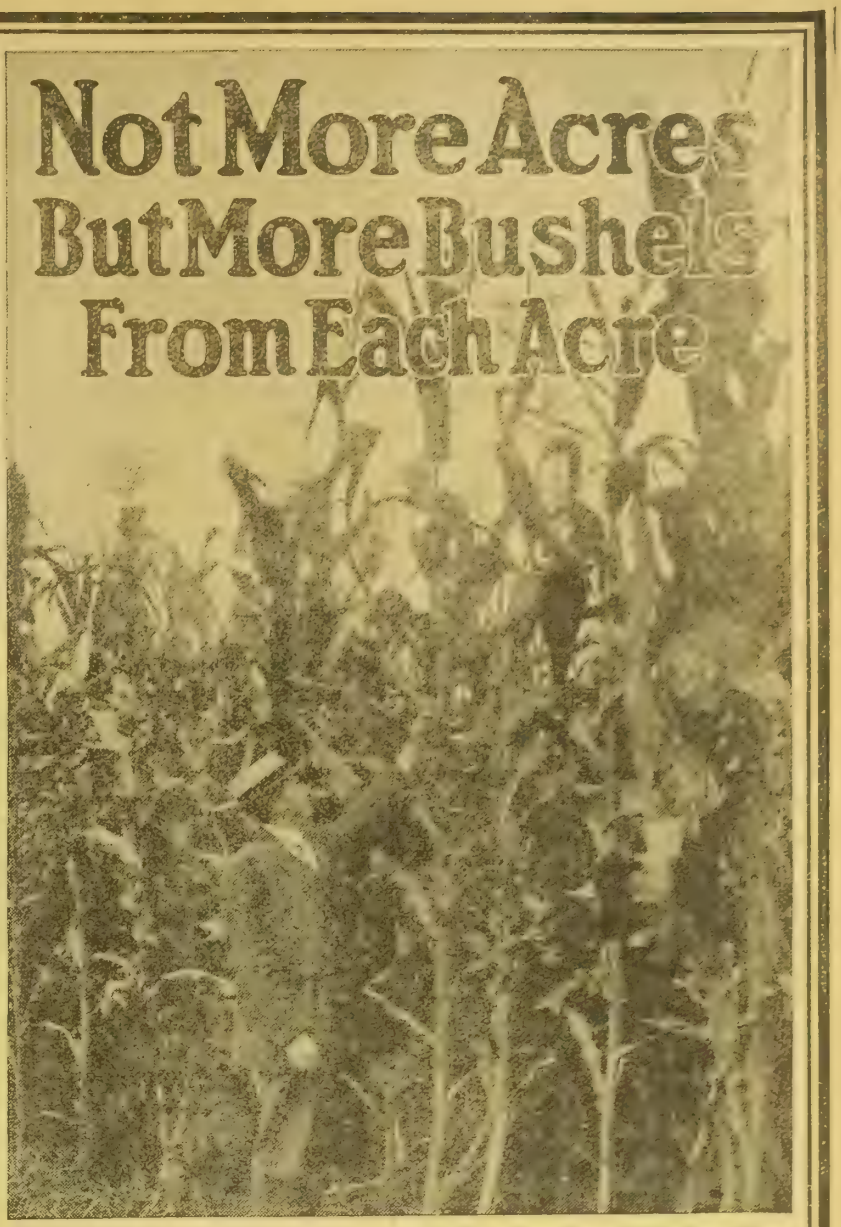
It's a pleasure for me to renew my subscription to your paper—money well spent I think—hope the Farm Bureau is a go. Our county has not been canvassed yet. Would say that I am anxiously waiting for the time to come.—*Fred Haight, Ionia County.*

Am enclosing money order for $2 and another coupon duly filled out. Consider M. B. F. an indispensable help to every progressive farmer.—*Daly & McCallum, Cheboygan County, Mich.*

Hurrah for a farmer governor! And whoop it to 'em, Mr. M. B. F. All we want is a square deal. Keep M. B. F. coming every minute.—*G. F. Kremer, Clinton County.*



King Pontiac Lunde Korndyke Segis, son of the great King of the Pontiacs, heads the fine splendid herd of Mr. T. M. Sprague, Battle Creek, Mich.



Cut Your Labor Cost with A·A·C· Fertilizer

TO PLANT MORE acres requires more labor; it is expensive to increase production by this method. Make the acres that you work grow more bushels of grain or vegetables, or more tons of hay or silage. Fertilized acres are the most profitable,—they make the biggest return per man and per team;—and *because they produce more,* the cost per bushel or per ton is less.

A·A·C· Fertilizers

Supply the plant food to grow big crops, and frequently the cost is returned several times over in increased yield and better quality. They also benefit the succeeding crops. We spare no expense to maintain "A. A." Quality for we consider our business reputation as valuable as our invested capital.

"How to Get the Most Out of Fertilizers" is a valuable little book of 60 pages. Every farmer should have it for reference. We will gladly send it if you will tell us the number of acres of each crop you expect to grow.

See the local A. A. C. Agent in regard to your requirements. If there is no agent in your town, write for the name of our nearest agent, or ask for the agency yourself. We have factories and warehouses conveniently located throughout the United States east of the Mississippi, also at Los Angeles, California.

Is Your Farm for Sale?

Write out a plain description and figure 5c for each word, initial or group of figures. Send it in for one, two or three times. There's no cheaper or better way of selling a farm in Michigan and you deal direct with the buyer. No agents or your farm, send in your ad today. Don't commissions. If you want to sell or trade just talk about it. Our Business Farming Farmers' Exchange gets results. Address Michigan Business Farming, Adv. Dept., Mt. Clemens.

AGENTS WANTED,

We want several Live Wire Representatives to take subscriptions, whole or spare time. Hundreds of our friends are netting a nice sum each week by doing a little extra work. A trial will convince you. For particulars write,

MICHIGAN BUSINESS FARMING
MT. CLEMENS, MICH.

County Crop Reports

CHIPPEWA—In the issue of Business Farming issue of Jan. 17, 1920, W. P. H. asks if grain can be kept in concrete flood granary. He is answered by a manager, farm & cement products. I wish to advise W. H. P. that such granary will mold grain on a cement floor. I have built more than one granary and took all precautions but the result is the same: moldy grain on bottom if left for any length of time. I am not a county agent nor have I cement or lumber for sale, but advise anyone wishing to build a cement granary to lay in dove tail strips when building cement floor of granary on which to nail a board floor, leaving strips slightly more than flush. Also to stand dove tail strips when making forms for side walls on which to nail bin supports. The side walls do very well without lumber lining, but floor never.—J. L. R. The following prices were paid at Brimney:—Wheat, $2.30; oats, 85; hay: No. 1 timothy, $25, No. 1 light mixed, $24; potatoes, $2; hens, 20; springers, 22; butter, 60; butterfat, 70; eggs, 60.

GENESEE—Farmers are working up wood, doing teaming, and attending auction sales, besides doing their regular chores. The weather has been warmer and we have had quite a bit of snow lately. Crops are not harmed at present for they are protected by snow. The farmers are selling some potatoes, hay and live stock. Auction sales are plentiful and prices received are working lower. Several farms are for sale and the owners intend to go to the cities. There will be an extreme shortage of farm help this year.—C. W. S. The following prices were paid at Flint—Wheat red, $2.45, white $2.42; corn, $1.50; oats, 90; rye, $1.35; hay: No. 1 timothy, $27@$30, No. 1 light mixed, $25@$27; beans: Pea, $6.25, red kidney, $11; potatoes, $2.75@$3; onions, $6.50; cabbage, $7; cucumbers, $2.50; hens, 24; ducks, 32; geese, 28; turkeys, 40; butter: creamery, 60, dairy, 55@60; eggs, 50@55; sheep, $9@$10; lambs, $12@$13; hogs, $15.50@$15.75; beef steers, $9@$10; beef cows, $7.50@$8.50; veal calves $17@$18; apples, $2@$3.

MANISTEE—The farmers are making good use of the nice weather this last week, cutting wood, hauling manure and other odd jobs that will help out when spring comes. A few have flu again this winter in these parts. Farmers' Institute and Mid-winter Fair at Bear Lake this week. Those that are logging have been doing good work these last few days, also the gravel haulers on county roads. The buyers are quoting prices on potatoes again, but claim they can not get cars to ship and do not care to stock up very much.—C. H. S. The following prices were paid at Bear Lake and other points in the country:—Wheat, $2.10; corn, $1.40; oats, 90; rye, $1.30; buckwheat, $1.45; beans: C. H. P., $6, red kidney, $11.50; hay, $32@$35; rye-straw, $$10; wheat-straw, $$12; oat-straw, $16 potatoes, $3; hens, 25; springers, 25; butter, 55; butterfat, 58; eggs, 50; beef steers, $8 alive; beef cows, alive, $5; veal calves, $20@25 dressed; hogs, alive, 13, dressed, 17 1-2.

MANISTEE—The farmers are cutting wood and doing chores. A few are trying to log a little but it takes most of their time breaking roads. The weather has been very cold and blowy most of the time, but the last few days have been fine. The roads are getting so a team can get over them without much trouble. Not much selling in this corner of the county. Buyers have stopped buying potatoes and there is not much else to sell here. Not much being bought except feed. Hay is high and hard to get. At that straw is in good demand.—C. H. S. The following prices were paid at Bear Lake and local markets—Wheat, $2.10; corn, $1.40; oats, 90; rye, $1.40; buckwheat, $1.30; beans: C. H. P., $6.25, red kidney, $10; hay, $35; rye-straw, $15; hens, 25; springers, 25; butter, 55; butterfat, 60; eggs, 50; beef steers, 8; beef cows, 7; veal calves, 20 dressed; hogs, 13.

INGHAM—Week of very good weather, thawing a little most every day. The roads are now passable. Lots of sickness and several deaths from flu. Three auction sales for next week. Farms are changing hands. Prospect of our stockbuyer, who has bought stock and shipped for years, going in with the Shippers' Ass'n. Good prospects of farmers either buying or building an elevator at Mason. Let the good work gon on.—C. I. M. The following prices were paid at Mason Feb. 6:—Wheat, $2.30@$2.40; oats, 80; rye, $1.55; beans, $6.50; potatoes, $2.25; hens, 22@25; ducks, 18@23; butter, 55; butterfat, 61; eggs, 60; lambs 16; hogs, 14; beef steers, 8@12; veal calves, 18.

MONROE (W)—We have had a week of warmer weather and the sleighing is all gone. In some places the roads are very icy. Farmers are not doing very much besides chores. Auction bills are being tacked up and it looks as if there would be quite a good many changes this spring. Labor is just as scarce as last year and the farmer is up against it. Some say work what land you can and let the rest go. That does not sound very good when you go to pay your taxes.—W. H. L. The following prices were paid at Petersburg:—Wheat: red, $2.15, white, $2.15; corn, ear, $1.80; oats, 82; rye, $1.37.

MONTCALM—The farmers are hauling potatoes and getting up their summer wood. Farmers in this neighborhood are doing chores for each other as the flu is fierce. Some families are all sick in bed and the sest take care of them.—B. B. W. The following prices were paid—Wheat, $2.30; oats, $1.10; rye, $1.68; hay: No. 1 timothy, $30; No. 1 light mixed, $28; straw-rye, $13; wheat-oat, $15; beans: pea, $8, red kidney, $14.75; potatoes, $3.50; onions, $2.50; hens, 24; springers, 22; ducks, 18; geese, 18; turkeys, 30; butter, 65; butterfat, 68; eggs, 48; hogs, 15; veal calves, 8@16.

JACKSON, (N. E.)—[illegible] week has been changeable weather but there is little doing among the farmers. Chores and cutting wood are the main jobs on foot at present. Winter grains are again covered with snow but the ground remained frozen during a recent thaw thus saving the crops. Price took a tumble the fore part of the week but have recovered slightly, except beans and they are going lower. Reports indicate the farmer stands to lose in Congress on the bean tariff No price, no beans will be the slogan for 1920. Unable to give prices on live stock as all is now shipped co-operatively.—A. F. W

LAPEER—Farmers are busy cutting wood and attending sales, and there are a good many to attend. Everything selling good. Some farm changing hands at very good prices. Some hogs and cattle going to market.—C. A. B. The following prices were paid at Imlay City:—Wheat, $2.25; corn, $1.40; oats, 80@85; rye, $1.30@$1.40; beans, $6.50; hay, $22@$25; rye-straw, $6@$8; potatoes, $2.25; onions, $2; hens, 22; springers, 22@24; butter, 57; butterfat, 59; eggs, 50; wool, 60; beef steers, $9@$10; beef cows $6@$8; veal calves, $12@$18; sheep, $6; lambs, $15@17; hogs, $13.

CALHOUN.—Farmers are doing their chores. The well ones are taking care of the sick. The saw mill has shut down on account of the grip. Not much moving on account of sickness. The following prices were paid at Battle Creek:—Wheat, $2.40@$2.38; oats, 85c; rye, $1.40; hay: No. 1 timothy, $30; No. 1 light mixed, $30; straw-rye, $12; wheat-oat, $13; potatoes, $3; hens, 25c; butter, 55; lambs, 10@15; hogs, 59; beef steers, 8@10; beef cows, 5@7; veal calves, 10@16.—C. E. B.

SANILAC, (N. E.)—January passed without customary thaw. February has come in milder. Fields fairly well covered with snow at this writing, which will help wheat and meadows. Some hay and grain moving. Clover seed being sold quite freely. Stock wintering good. Farmers seem to have plenty of feed. The order of the day seems to be hauling coal, (when car arrives) fertilizer and manure, and doing the necessary chores. Politics warming up some.—G. T. A [illegible]

MIDLAND—The following prices were paid at Midland, Mich., by Orr Bean and Grain Co., on Feb. 13:—Wheat, S., 2.40, F., $2.35; corn, shelled, $1.40; oats, 82; rye, $1.40; buckwheat, $2.85; beans, $6; barley, $2.75; peas, $3.90.

POTATO PRICES HAVE PASSED HIGH MARK

(*Continued from page 2*)

mean disappointment to all of them. It is my opinion that one reason for the unusually high prices for the last few weeks has been the inability to move potatoes as freely as would have been possible if more cars had been available. Growers who are in a position to sell at present prices and hold in the hope of securing higher prices are taking chances. On the other hand, for a large number of them to endeavor to get into the market at once for fear the prices will be lower later would force prices down unduly. As has been previously stated what is needed is a uniform movement of the balance of the crop for the remaining portion of the season.—*C. W. Wald, Extension Specialist, M. A. C.*"

Hale Tennant Thinks High Point Reached

"Your letter of February 10, relative to prospective potato prices, is received.

"There seems to be a pretty general conviction around operators in potatoes that the recent high mark in prices would not be equaled again during the season. My judgment would be that the market will decline for some little time until a point is reached where the shipment is inclined to be checked, with a final raise at the close of the movement, but this is simply a rough guess.

"In a recent visit with Mr. Church he indicated that the crop movement seemed to be pretty much in line with the final estimates of their department, and if this true, I hardly expect to see potatoes reach a very low level at any time during the movement. The recent prices have, no doubt, some effect in slowing down consumption, which should be taken into consideration.—*Hale Tennant, Field Agent in Marketing.*

Duroc Breeders Have Successful Sale

THE MICHIGAN Duroc-Jersey Breeders' Association held their First Annual Sale Feb. 6th at the Agricultural College, Lansing, Mich. The sale was a success from every standpoint, it being the object and desire of the association to sell to farmers in all parts of the state, believing this would wake up the community they went to and create sentiment for better hogs, and demonstrate the worth of the Duroc. The sale was well attended, the work of the auctioneer, Col. Andy Adams of Litchfield, Mich., and assistants, Dr. Hutton, of M. A. C., and J. E. Reuppert, of Perry, was "near professional" and very satisfactory. This being our first sale it was decided by the members not to consign any "show stuff", but put in a good high class lot of pork producing individuals, that will make good with the farmers, and be a credit to the consignor and the breed. One of the most gratifying features of the sale was the fact that there was but one purchase made by a consignor, which is conclusive evidence that it was a clean-cut transaction from start to finish.

We wish to thank those in anthority at M. A. C. for their kindly indulgence in granting permission to use the building and grounds for our sale.

The average price paid for bred sows was $101.00, the highest priced sow sold at $150.00 and was consigned by W. C. Taylor, of Milan, Mich. The top gilt sold for $140.00 and was consigned by J. B. Miller, Ithaca,Mich.

Four Thousand Farmhrs Join Beet Ass'n

(*Continued from page* 6)

Saginaw convention, Dec. 8, submitted figures showing their cost an acre to average $106. they did not figure anything for management or depreciation. They figured labor only, and they put their own labor in at rates from 35 to 50 cents per hour."

Opposition Dwindling

Gradually the little opposition that has shown itself to the beet growers' demands is being levelled, and all forces who ought to support the beet growers' rights are uniting harmoniously. Even the Michigan farm paper which in its issue of February 7th, opined that the beet growers' efforts were belated and accused the leaders of the movement of encouraging the curtailment of a necessary food product, has, true to our prediction, come down off the fence, but the straws which showed which way the wind blows enticed it to the ranks of the growers, instead of the manufacturers of which fact we are glad to bear testimony.

The Farm Bureau has taken immediate action upon the recommendation adopted at the Lansing meeting, and Mr. Ashley M. Berridge, a member of the executive committee, has been delegated to attend the meetings of the growers and acquaint the public of the true facts through the Bureau's publicity department.

Thus, with the united efforts of all interested in Michigan agriculture, there can be but one outcome of the contest—success for the sugar beet growers.

"Keep M. B. F. coming!"

YOU WANT THIS WEEKLY IN YOUR MAIL BOX EVERY SATURDAY, BECAUSE—

——it brings you all the news of Michigan farming; never hiding the plain facts.

——it tells you when and where to get the best prices for what you raise!

——it is a practical paper written by Michigan men close to the sod, who work with their sleeves rolled up!

——it has always and will continue to fight every battle for the interest of the business farmers of our home state, no matter whom else it helps or hurts!

One Subscription price to all! (ONE YEAR.....$1) (THREE YEARS...$2) (FIVE YEARS.....$3) No Premiums, No free-list, but worth more than we ask.

MINNEAPOLIS CHICAGO

Boys! Girls! This School Outfit YOURS for a LITTLE Extra Work

During the past 30 days more than 50 "LIVE WIRE" boys and girls have secured this dandy outfit which consists of 3 pencils, 1 pen holder, 1 combination pen and pencil, 12 pen points and holder, 1 pencil sharpener, 1 ink and pencil eraser and 1 aluminum collapsible drinking cup, all packed in a beautiful box, without it costing a penny.

HOW THEY DID IT

They simply called on two of their friends who were not taking Michigan Business Farming, had them look over one or two recent copies and explained just what this weekly has done and is doing for the farmers of Michigan and convinced them that they ought to be taking M. B. F. if they expected to keep abreast of the times and derive the same benefit over 70,000 farmers are now enjoying. Then they explained that they were working for a school outfiit. That settled it, their friends subscribed and now the School Outfit is theirs.

HERE'S YOUR CHANCE

All you have to do to win this outfit is to call on two of your friends who are not now taking M. B. F. and ask them to help you win the outfit by giving you their subscription to M. B. F. for one year at $1.00 each. Send us the $2.00 with their names and address plainly written and the outfit will be yours.

Get your Father, Mother, Big Brother or Sister to help you.

For Cows Only

KOW-KURE

W. Nicholls, Trempealeau, Wis., writes: "I have used KOW-KURE with entire satisfaction. The first box I used saved for me two valuable Guernsey cows which would not breed."

Most barrenness is caused by a weakened condition of the nerves and muscles of the genital organs. In such cases, KOW-KURE is an unfailing remedy, because it acts directly on these organs, giving them the strength to function properly. You take no chances in using KOW-KURE; it has a quarter century of success back of it.

KOW-KURE is equally valuable in preventing or treating Abortion, Retained Afterbirth, Milk Fever, Bunches, Scours, etc. Sold by feed dealers and druggists; 60c and $1.20.

Send for valuable free treatise, *"The Home Cow Doctor."*

Dairy Association Co., Lyndonville, Vt.

Do Away With BARRENNESS

Profitable Growing of Beef Cattle

(The second installment of this article, taken from Farmers' Bulletin, No. 1075.)

Double Nursing

DOUBLE nursing is a modification of the systems described and is very economical when properly applied, but is not practiced very extensively. In this system about half of the cows of the herd nurse 2 calves each and the other half, from which the calves are taken, are milked. This plan works exceptionally well when all the cows in a herd are heavy milkers.

The breeding herd may be so handled that either spring or fall calves are raised. The best time to have calves dropped is a question frequently debated among cattlemen. Some prefer having calves dropped in the spring (late in February, in March, or early in April,) while others prefer having them dropped in the fall (September and October.) As a rule the question should be decided by individual farm conditions, taking into consideration the feed supply, pasture, equipment, and labor.

When calves are dropped in the spring one wintering is saved; they do not require so close attention during their first winter, when carried over as stockers; cows may be wintered more cheaply by using a greater amount of coarse roughage; less labor is required to handle the calves during the winter and less pasturage is required during the summer, since cows and calves run together.

When calves are dropped in the fall the cows are in better condition at calving time; they give more milk for a longer period; the calves make better use of the grass during their first summer; they escape flies and heat while small, and are weaned at the beginning of calving time.

Other advantages of each method over the other might be mentioned but those given are the most important. In either case the calves should be dropped within a period of not more than 60 days, to give as much uniformity as possible to the calf drop.

Spring calves should be weaned before the end of the pasture season in the fall to allow them some time time on grass if winter pasture can not be provided. If they are to be finished as baby beef they should go into dry lot at the end of the pasture season and be ready for market the following June or July.

Fall born calves should be weaned after they have been placed on pasture in the spring and gradually increased allowance of grain should be given them, with hay and silage added later in the summer. For baby beef they should go into dry lot for finishing at the end of the pasture season, and be ready to market in December or January.

Calves which are not intended for baby beef need not receive grain so early or in so large quantities, because they are making their growth without fattening. They can utilize much larger amounts of roughages, such as stalk fields, meadows, silage, and straw, with a pound of cottonseed meal as a supplement. A regular fattening ration need not be supplied until the calves are mature.

The Kind of Herd Bull to Use

Buying a good herd bull is the first step in growing better calves at much less cost per pound. In common or native-cow herds, calves sired by purebred bulls weight on an average about 125 pounds a head more when 1 year old than calves of the same age sired by the average run of scrub bulls, andd they will sell for about 2 cents a pound more as stockers and feeders. Two-year-old steers sired by good, purebred bulls weigh on an average about 200 pounds a head more than steers sired by scrub bulls, and sell for about 4 cents a pound more as stockers and feeders.

This difference in price of the two classes of calves and steers applies not simply to the difference in weight but to the total weight. For instance, in the case of yearlings, scrubs weigh about 300 pounds, and when they sell for about 9 cents a pound as stockers and feeders, they bring $27 a head, while grades at the same age weigh about 425 pounds, and will sell for about 2 cents more, or 11 cents a pound, bringing $46.75. Two-year-old scrubs weigh about 525 pounds a head, and assuming that they sell for about 8 cents a pound, will bring $42 a head, while grades of equal age weigh about 725 pounds, and at 4 cents more a pound (about 12 cents) as stockers and feeders, bring $87.

A still more interesting story may be told in favor of steers sired by good pure-bred bulls when the two classes are fattened and sold for beef. For instance, throughout the year 1918 scrub steers sold at about 10 to 12 cents a pound, while the better class, or grades, went from 16 to 18 cents. Nor is this all. Two-year-old scrub steers weigh about 525 pounds, and when fed a fattening ration for 120 days they will scale possibly 700 pounds. Two-year-old grade steers weigh about 725 pounds, and after a fattening ration for 120 days they will then weigh about 965 pounds. At 1918 prices the fat scrubs would sell for about 12 cents a pound and the fat grades for about 16 cents, the scrubs bringing $84 a head and the grades $154.40.

These figures show a difference between the values of the two classes of yearlings and two-year-olds as stockers and feeders, and of fat steers, respectively, of $19.75, $45 and $70.40 in favor of those sired by a good pure-bred bull.

There is practically no difference in the cost of feed for the two classes of calves up to the yearling age, but from that time on grades develop more capacity and require more feed than scrubs. The difference in cost of feed, however, is a very small item when the values are taken into consideration.

The big difference lies in the kind of bull used.

Care and Feed for the Bull

The bull should be the best-cared-for individual in the herd. Not only should he have special feed at times but he should be kept in a separate paddock or lot and should not have the freedom of the herd except during limited seasons of the year. Unless a special lot can be provided, some means of giving the bull exercise should be devised.

The bull should be well fed during all seasons of the year, but especially

so just previous to the breeding season. The bull's ration may consist of roughages mainly, but a small quantity of grain also should be used.

The exact quantities of feeds that should be given depend largely upon the size, age, and individuality of the animal, and the ration must be varied according to requirements. As a general rule excessive quantities of silage should not be fed to a bull doing heavy service. A safe rule to follow is to feed one-half as much silage as would constitute a full ration for an average cow.

Care of the New Born Calf

If the breeding cows are in a vigorous, healthy condition at time of calving they will probably need little, if any, assistance. While it is true that most calves born need no assistance whatever, yet it is true also that many that die would have lived had they had assistance at the proper time. As soon as the calf is born it should have the fetal membrane removed from its nose and mouth at once. Unless the calf is strong and vigorous, insert a finger into the mouth and give the tongue a slight pull. Pressure on the ribs may be necessary sometimes to stimulate breathing. Allow the cow to dry and care for the calf alone. Afterwards the calf may need some assistance to find the udder. The calf should get the first milk—the colostrum—which acts as a mild purgative unless the cow's udder is feverish.

The calf should make fast continuous growth from time of birth. A common expression among beef-cattle growers is, "Keep the stomach of the calf full of milk and grain at all times." Give it all the milk from its dam, for a short period at least, unless too much milk is produced.

Feeding Calves

The success of growing cattle for market depends to a large extent upon the start which is given the calves. This, aside from the calf's breeding, is probably the most important consideration. Without the proper breeding a choice steer is rarely if ever produced, but the same is equally true of the feed and early care of the calves. No matter what system of breeding is practiced, the calves should have the best possible start. In straight beef production only a small quantity of feed in addition to milk is needed for the calves up to weaning time, but nevertheless they should be taught to eat grain and hay so that the transition during weaning will not result in loss of flesh.

When calves are intended for baby beef they should be started on some grain when between 4 and 6 weeks old. A mixture of equal parts, by weight, of shelled corn, whole oats, and wheat bran is satisfactory. The corn and oats may be fed ground until the calves become accustomed to eating; then they may be fed whole. When fed whole they are less likely to cause scours. The grain allowance should be increased gradually up to weaning time so that the lack of milk will not hinder growth and fattening. In other words, calves intended for baby beef should be kept on full feed from the time they are started on a supplemental ration until they are sold.

Calves from cows that are milked should be taught also to eat supplemental feeds within a few weeks after birth. The quantity of grain and hay consumed at first necessarily will be limited, but should be increased gradually until the calf can do without milk when from 6 to 8 months old. Fall calves that are fed skim milk and supplemental feeds during the winter months put on very good gains on pasture the following summer.

The protein requirements of the growing calf should be amply supplied. After weaning, legume hays and silage may form the greater part of the roughage and one-half to three-fourths of a pound of cottonseed meal or linseed meal given in addition to grain. The grain ration may be increased gradually until the calves are receiving a fattening ration.

COX SALE. FEB. 26th

On February 26th, Mr. Wm. Cox, of Williamston, Mich., sells 20 head of breed sows and gilts, and four service boars. Anyone in the market for the Prolific Big Type Poland China hogs will do well to write Mr. Cox for his catalog and plan to attend the sale, but if unable to do so please send your bids early to me in care of Mr. Cox and I assure you that you will be pleased with the business that I will conduct for you. I will guarantee to please you and I charge no fee.

Mr. Cox's herd will be in excellent shape by sale day and unless something unforseen happens they should be a great boon for Poland China history for Michigan as I believe it will be the last sale for this winter season. Mr. Cox is selling some of the best of his herd as he wished to make this sale a success as he plans for another sale next year.

Mr. Cox is a splendid man to meet and a gentleman and I am sure that he will use you right and be glad to meet you personally.

All aboard for Mr. Cox's sale. and do not forget the place and the date. Send your bids to Felix Witt, in care of Mr. Wm. Cox, of Williamston, and he assures you, you will be pleased.—F. Witt, Fieldman, M. B. F.

Veterinary Department

COW DRIED UP IN LEFT QUARTER

I have a cow which after last year's calfing dried up on the left hind quarter. She calved again a few months ago and dried up on the left front quarter, so she is dry on both leftside quarters. There seems to be a lump above the teats inside the udder. I have used milking devices with more harm than success. The cow eats and seems to be O. K. with no fever at the udder. Can you advise what I can do to get the milk going again? The other two teats are milking all right.—H. G. D., South Branch.

These cases usually start with a slight inflammation of the mammary gland; and almost without exception, even approved treatment and most careful handling, these attacks ultimately impair the function of the gland involved. In the early stages the local signs of inflammation are usually confined to one quarter of the udder; later both quarters on one side or both front or rear quarters may be involved. In rare cases the entire udder is involved.

In the early stages a good cathartic should be given, hot applications applied to the udder for twenty-four hours; keep the affected quarter milked out as much as possible. The more experience one has regarding the value of a milk tube in these cases, the more he is inclined to discard them; it being almost an impossibility to use a milking tube in a stable without infecting the quarter.

If the case is of long standing and the inflammation has subsided, with the quarter lost, any attempt to restore the same will be a disappointment in nine cases out of ten.—*Veterinary Editor.*

TEETH TROUBLE

I have a colt three and one half years old who is not in very good condition, although I have been feeding him two quarts of oats and the same amount of bran three times a day with stock food. Also as soon as a bridle is put on he will slobber worse than usual when fed on clover in the spring. Is this the cause of his hard keeping, and what is the cause and remedy?—W. J. T., Bentley, Mich.

The evolution of the permanent molar teeth has considerable to do with a colt's condition at this age; the third molar reaches the alveolar margin at 3 years, expels the temporary shell at 3 and 3 1-2 years and gains the table level at about 4 years; it is also at this age the intermediate or center front teeth erupts, therefore the gums are swollen and very sensitive. It is also at about this age a colt is very susceptible to stomach worms. Give this colt the following at one dose:

Santonin, 20 grains; oil terebinth, 3 ounces; aloes barb., 6 drams; Ol. Linc., 1 pint; followed by alterative tonic consisting of—

Terri Sulph. ex. 1 ounce; Quinine sulph. 1-2 ounce; Powd. Nux Vomica, 1 1-2 ounce; Powd. Gentian, 3 ounces; Potassium Nit., 1 12 ounces. Mix and divide into 12 powders. One three times a day.

MEAT ALL RIGHT

I butchered a male pig that I supposed had been properly castrated, but found one of its testes near its bladder. Is there anything that can be applied or any way of curing this meat to make it free from smell and fit for us to eat?—Subscriber.

In this case your pig was a Cryptorchid. The testicles of a cryptorchid may be found floating anywhere with the abdominal cavity. The testicle is usually small, undeveloped and its secretion is sterile. It may develop to the normal size, or even larger, after the opposing testicle is removed by castration, but its secretion remains sterile through life, therefore the meat is free from odor and will make perfectly wholesome meat.

"This nation depends more on dairy foods for its physical welfare than any other foods, and the dairy farmer truly performs a tremendous service in the production of such foods."

—P. M. SHARPLES

"There are no substitutes for dairy foods."

There is a cream separator expert in your neighborhood—

the SHARPLES dealer

HIS advice on modern dairy equipment can mean a lot to you. He stands ready to help the farmer, and his sound judgment on farm and dairy equipment can be relied upon—proved by the fact that he sells the Sharples Suction-feed Cream Separator.

He has elected to sell the Sharples only after a careful study of all cream separators. He has proved to his own satisfaction that the Sharples *"does"* skim clean at any speed." He will gladly demonstrate that fact to you.

The Sharples Suction-feed has other exclusive features; simple, one-piece bowl (no discs), knee-low supply tank, automatic once-a-month oiling system, simple construction that means longer wear. Let the Sharples dealer in your neighborhood show you how these features (found on *no other separator*) will increase *your* dairy profits.

CATTLE

HOLSTEIN-FRIESIAN

MR MILK PRODUCER

Your problem is more MILK, more BUTTER, more PROFIT, per cow.
A son of Maplecrest Application Pontiac—132652—from our heavy-yearly-milking-good-butter record dam will solve it.
Maplecrest Application Pontiac's dam made 35,103 lbs. butter in 7 days; 1344.3 lbs. butter and 23421.2 lbs. milk in 365 days.
He is one of the greatest bred long distance sires.
His daughters and sons will prove it.
Write us for pedigree and prices on his sons.
Prices right and not too high for the average dairy farmer.
Pedigrees and prices on application.
R. Bruce McPherson, Howell, Mich.

For Sale: Registered Holstein bull calf from 24 lb. dam and 31 lb. sire, price $100. Born, Oct. 18, 1919. Wm. Griffin, R5, Howell, Mich.

HOLSTEINS

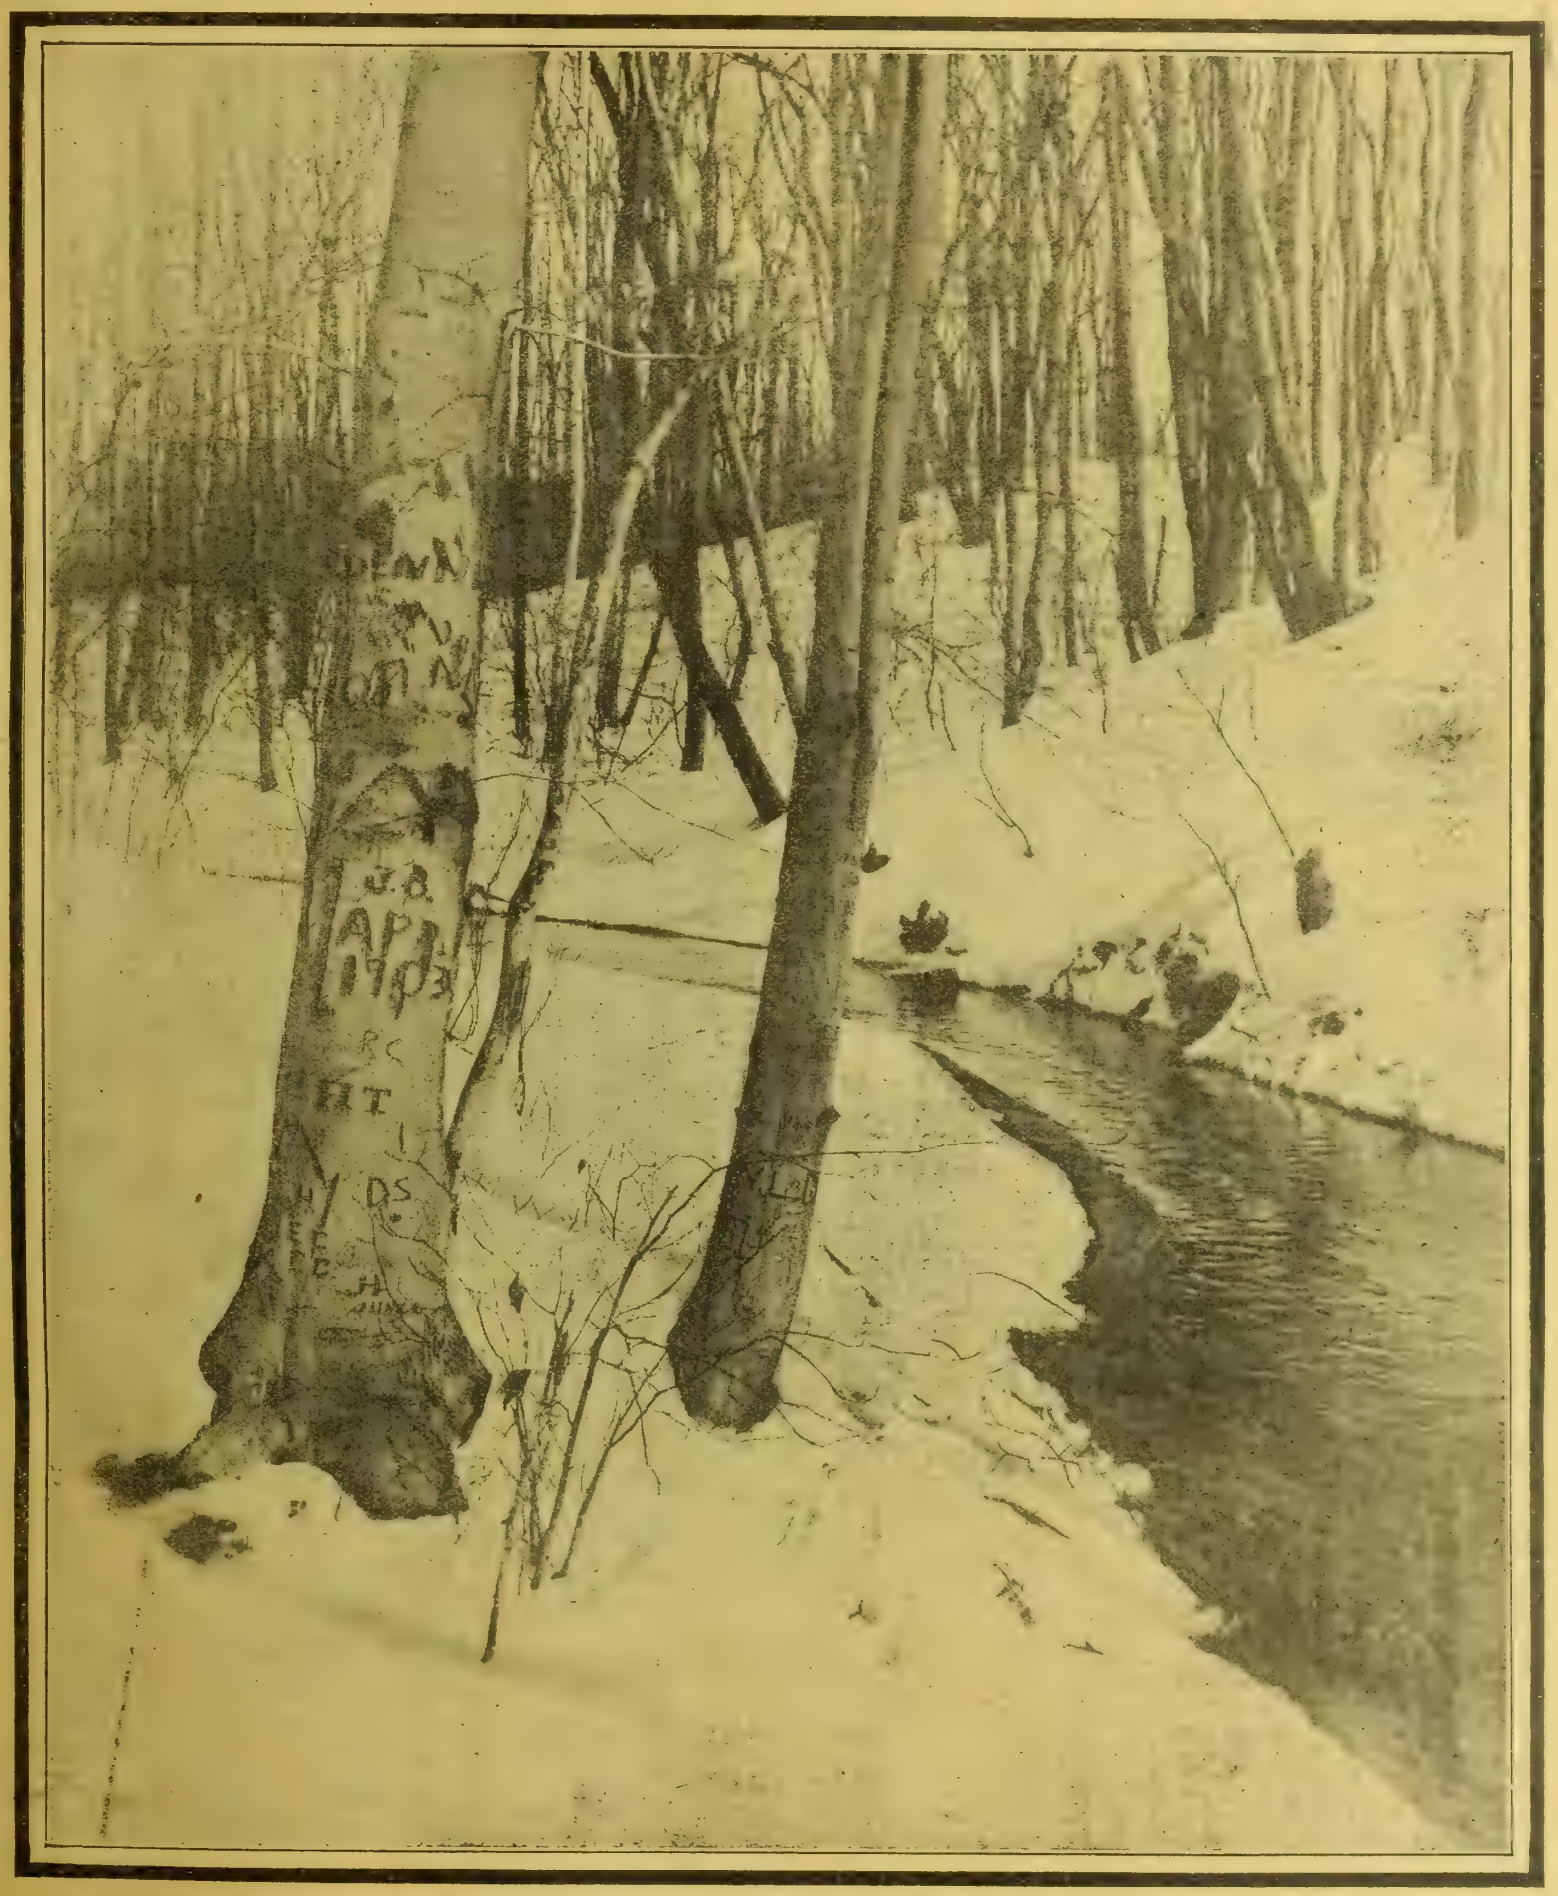
MICHIGAN BUSINESS FARMING

An Independent Farmer's Weekly owned and Edited in Michigan

Vol. VII, No. 26 | MT. CLEMENS, MICHIGAN, SATURDAY, MARCH 6, 1920 | $1 PER YEAR



Just because the Wood-chuck saw his shadow.

In this issue: If You Divided All the Money,—How Much Would You Get?—Live Stock Slump Held Only Temporary—Value Michigan's 1919 Crop Reaches $343,000,000—Shiawassee Joins Beet Growers' Movement—Farmer and Hired Man

The Giant Farm Hand

—with his strength of a thousand men is ready to clear your land of stumps and boulders, to dig your drainage ditch, and to plant your trees. His name is

DU PONT

Red Cross Dynamite

Safe, sure, inexpensive

In this golden year for the farmer, every idle foot of ground you own and do not cultivate is costing you money, and every stump in your fields is not only making it harder for you to plow and cultivate, but is occupying valuable land that might be growing crops. Get them out! Progressive farmers are using millions of pounds of Red Cross Dynamite every year to do this and similar work.

Put the Giant Farm Hand to work for you. If your project warrants, we will send a demonstrator to show you the easiest and cheapest way to do your work.

See Your Dealer

In any case, find out what the Giant Farm Hand can do for you — and how. Write for "Handbook of Explosives" today.

WILMINGTON DELAWARE

Boys! Girls! This School Outfit YOURS for a LITTLE Extra Work

During the past 30 days more than 50 "LIVE WIRE" boys and girls have secured this dandy outfit which consists of 3 pencils, 1 pen holder, 1 combination pen and pencil, 12 pen points and holder, 1 pencil sharpener, 1 ink and pencil eraser and 1 aluminum collapsible drinking cup, all packed in a beautiful box, without it costing a penny.

HOW THEY DID IT

They simply called on two of their friends who were not taking Michigan Business Farming, had them look over one or two recent copies and explained just what this weekly has done and is doing for the farmers of Michigan and convinced them that they ought to be taking M. B. F. if they expected to keep abreast of the times and derive the same benefit over 70,000 farmers are now enjoying. Then they explained that they were working for a school outfiit. That settled it, their friends subscribed and now the School Outfit is theirs.

HERE'S YOUR CHANCE

All you have to do to win this outfit is to call on two of your friends who are not now taking M. B. F. and ask them to help you win the outfit by giving you their subscription to M. B. F. for one year at $1.00 each. Send us the $2.00 with their names and address plainly written and the outfit will be yours.

Get your Father, Mother, Big Brother or Sister to help you.

The Farmer and His Hired Man

Letters From M. B. F. Readers Show That There are Two Sides to the Farm Labor Question

He "Started" Something

THE Genesee county "hired man" started something just as he thought he would and the accompanying letters show what he started. They are the first of many we have received upon this subject, all of which will be published in due season. We hope that our readers will not entirely confine themselves to a recitation of their experiences, but will suggest whatever thoughts they may have to remedy the situation.—Editor.

The Farmer's Side

The "hired man" has certainly started something with me. In 1917 I had one hired man whom I paid $30 per month. We farm 170 acres. That was the year that it was too cold for beans or corn to mature. We had been advised by the farm bureaus to plant a large acreage of each. The corn was killed in the milk and was almost a total loss. The beans, only a few of them even got dry enough to keep. The whole crop was almost a total loss. That year I lost the interest on my investment, my own work, my wife's work and more money than I paid the hired man. My "hired man" saved $240 and made a payment on 40 acres of land which I sold him for $1,200. The next year, 1918, I farmed 370 acres and had two hired men. The one I had the year before received $40 per month and the new man $35 per month for the summer. The war was on and we put in 50 acres of beans which were promising the finest crop until the hot winds struck them the last week of July then they withered up and we harvested about three bushels per acre and the government so manipulated things that we have never been able to sell them. That year I filled out an income tax blank and found I had lost my own work, the interest on my investment, my wife's work and $358. One hired man saved a little over $300 and the other $200, and I sold the new man 180 acres of land in order to pay him. In the year 1919 I had the same two men, paying one $50 per month and the other $40. This year we farmed over 500 acres and we had good crops and good prices. The man who was getting $40 per month quit, sold me back his land, put all the savings of two years into an automobile and rode away. (He is now living from hand to mouth on $5 per day in Detroit.) The other man married bought 80 acres more land of me and rents next year 200 acres of my land besides working his own 120 acres. This man has in less than four years acquired a home of 120 acres for which he paid $3,600, turning in his savings and $500 of other money which he had and now owes me only $1,900. He began working at $30 per month and never received over $50 per month. As fast as he bought his land he rented it to me on shares and turned his share right in towards paying for the land. Of course I sold him the poorest land I owned, some though, I wanted to get rid of, but I always stand ready to buy it back at the price he paid me for it. In all these years I have worked for my board and clothes and my wife has worked for her board and clothes and we have had no interest on our investment. The good year of 1919 wiped out the losses of 1917 and 1918 and paid for a tractor which is about worn out.

For 1920 I am undertaking to farm 120 acres with the help of one man whom I have promised $50 per month with house, garden, cow, pig, chickens and some time off to help his father harvest an apple crop if there is any. I also promised him 1-3 of the profits after deducting from the value of the products the interest on the investment, the pay for what I can do and other expenses. If I can only get a little for my work and interest on my investment, I will be pleased. I do not expect any profits.—*John C. Stafford, VanBuren County, Mich.*

"Mrs. Hired Man" Has Her Say

Mrs. Hired Man is full of suppressed feeling on the subject of the farm, so she is going to try to get some of it on paper for the benefit of M. B. F. readers. Every Mrs. Hired Man will agree with her and every farmer may well take notice, for these are the sentiments of not one, but many wives.

Let the men thresh out the financial side of the problem. We are concerned with weightier matters.

How many will agree that eating, working and sleeping are the sum total of life? I will not. Yet that is all we do. For two years we have been on this job, and no such excitement as a concert, lecture, show or even neighborly visit has ever broken "the even tenor of our way." Why not?

We are as completely tied to the land as the serfs of Russia ever were. The commandment might read: "seven days shalt thou labor and do all thy work," then we would be obeying it. More than that, when it rarely happens that the work is done, there is no way to go. Never once have we had the use of a horse for any social purpose. We have gone to town together when business was such that we both had to go. We occasionally have the pleasure of going to church if the car is running and there is room. In the neighborhood we are simply X's hired man, and it is an actual fact that I have met only one woman outside of the farmer's family. Talk about social standing! I play the piano well; am interested in all current affairs, thanks to the papers and magazines; am well educated; in the past have been considered quite a desirable acquaintance. Yet I might just as well be on an island in the South Seas as on this 240 acre farm. Even my husband is so dragged out by the long hours that his first thought is for rest.

It is not just the man who is sold out, body and soul, to the farmer; his wife is also, and the returns do not make such slavery worth while.

I will cry as with one of old, "give me liberty or give me death."

Not as part of my argument but incidentally I would say that the following is true:

1. We are allowed 1 quart of milk per day.
2. We buy our own potatoes.
3. We buy our butter.
4. We buy all our own chicken feed.
5. We buy our meat.
6. We get $50 per month and rent and fuel and fruit that grows on the place.
7. The owner values his farm at $35,000.—*Mrs. Hired Man, Clinton County.*

The Hired Man's Side

I have read your valuable magazine for some time and in regard to the farmer and his hired man, would say I have worked on the farm for several years and am just as far ahead today as I was when I began.

I have read the items. "the farmer and his hired man," but have not seen the question asked, how many hours must a hired man work each day on a farm? Ans. About sixteen or seventeen hours, the only time he has to himself from four-thirty or five o'clock in the morning until seven or eight at night is just time enough to eat his meals, he has chores to attend to three times a day. Let this hired man go to the city and work as many hours as he does on a farm each day, at fifty or sixty cents per hour and see what it amounts to, in a year.

Furthermore, how many farmers can afford to pay their hired men a bonus of five hundred dollars at the end of the year.—*A Hired Man, Shiawassee County, Mich.*

MICHIGAN BUSINESS FARMING

March 6th
1920

If We Made an Even Division of All the Money—

How Much Do You Think You Would Have?

A Little Figuring Shows That the Combined Pocket-book is Not so Fat as You Think

By GEORGE E. ROBERTS
Vice President of National City Bank, N. Y. City.

FROM THE AMERICAN MAGAZINE

The accompanying article was published in the March issue of the American Magazine, one of the most interesting and helpful journals in the country. It is by special permission of Mr. John M. Siddall, the editor, that we are able to present it to the readers of Michigan Business Farming.

IF ALL THE wealth in this country which is known as "capital" were to be divided among all the people, how much would each person receive? Would you be richer or poorer by such a division?

If the money which is paid annually for the use of this capital in industry were to be taken from its owners, and given, instead, to the wage earners, by how much would their income be increased?

There is a widespread belief that the workers, as distinguished from the employers, have not been getting a fair division of what is produced in industry.

The radicals are telling the workers to take over the industries and run them "for their own benefit." They declare that their share would then be far greater than it is under the present system.

There is nothing more important than to get the truth about this matter. For no one will deny that the best state of society would be that which afforded the greatest good to the greatest number.

We must realize at the outset that there are capitalists of all degrees. The man who owns a single bond, or who has a hundred dollars in the savings bank, or has bought a single share of stock in a company, or owns his own little store, or his stock of goods, no matter how small, is a "capitalist."

Any money which is employed in industry or business is active capital. Profits are the amount which remains after the other expenses of an industry or a business have been paid. They are the share which goes to the people who have put their money to work in the enterprise. It is paid to them in the shape of interests on notes and bonds, and as dividends on capital stock.

If we are going to do away with private capital altogether, you will have no more right to own one bond, or one share of stock, than another man will have to own a thousand. If you deny that anything shall be paid for the use of money, you will have to give up any return on your own savings.

But perhaps you have not saved anything! All you have is the salary, or the wages, you receive. And you think this income of yours will be very much greater if the people who have saved money and invested it should get nothing in return, and the profits which now go to them should be divided among the workers.

On this point I am going to quote a man who has made a careful investigation. Professor Wilford I. King, of the University of Wisconsin, a few years ago published a book called "Wealth and Income of the People of the United States." He used government figures in arriving at his conclusions.

Professor King found that if all the profits which now go to pay interest and dividends were to be divided among all the wage earners, in proportion to the pay they are receiving, each man would get not more than twenty-five per cent more than his present income from his labor.

Of course if he has saved money and invested it, he would lose the income from that; and this loss might wipe out the gain in his salary or wages.

Just what you could do with your savings is not clear, if nobody paid anything for the use of money. But if you can conceive it possible that money could be used without giving any return for it, that all profits could be added to wages, the result must nevertheless seem disappointing to the people who have been thinking that such an arrangement would give the wage earners a great deal more.

The plain truth is that each one would receive not to exceed a fourth more than he now gets. If you have $20 a week now, you would have $25 then; and so on. Professor King says this is an extreme rather than a moderate estimate.

Professor David Friday, of the University of Michigan, has made a similar study of incomes. He found that the average wage in the chief industries in 1918 was about $1,350 a year. He also found that if all interest and dividend payments, that is, the amount paid for the use of capital, were divided among all the workers in these industries, their average wage would be increased by about $330 per year. This agrees with Professor King's estimate, which was based on pre-war figures.

Professor Friday adds significantly that the average wage would increase by $330 a year—provided no decrease in the products of industry was brought about by this confiscation and distribution of profits.

But such a decrease would inevitably come. If all private savings were seized and put into industry without giving the owners any return for the use of their money, people would naturally hide whatever they were able to lay by.

If, by your energy, ability and thrift you were able to save part of your wages or salary, would you let somebody have it to use for nothing? No; you would keep it yourself, as you would have a perfect right to do.

Your common sense will tell you what would be the effect of this idleness of money. Your savings are your surplus. Capital is simply the accumulated savings of all the people. But capital which does not work, money which lies idle, is of no benefit to anybody.

A bag of gold pieces, or a package of bills, hidden away in a box, might as well be a bag of pebbles, or a bundle of waste paper, so far as its present value to the people is concerned.

What would become of the industries which pay us our wages and our salaries, if people refused to put their savings into those industries? Business must have capital. The merchant must have money to buy his goods. The manufacturer must have money in order to build his plant and install his machinery. Where are they going to get this money if nothing is to be paid for its use? You won't let him have yours. Your neighbor won't give up his savings. You can see for yourself what the result would be.

You will have to admit that something must be paid for the use of money. But you may think that the amount paid has been too great; that the human workers should receive more than three fourths of the total product of industry.

That is a subject which is being studied by the best minds in the country. Many attempts are being made to establish a standardized "fair profit" arrangement which will meet the complex conditions of business. There are many difficulties to be overcome. And again your common sense will make you appreciate how far from easy the problem is.

For example, suppose you have saved $5,000 and have put it to work for you in a certain factory. You have studied the matter carefully. You believe that the plant turns out a product which will be in demand and that the men at its head are honest and capable.

You find that your judgment has been good. The factory is managed well, the business grows and is prosperous. Because its managers are hard workers and have unusual ability—just as you thought—the profits are such that you receive 10 per cent on the money you invested. The chances are that you might object if you were told that a "fair profit" was only 6 per cent, and that therefore you could not have more than that.

I am not saying that this would be a just arrangement. I am merely suggesting that you yourself might claim that it wasn't. And I make this point only to show that the question of the adjustment of profits is a complicated one.

It is only the people who have nothing to lose, and who think they have everything to gain, who profess to find these problems simple. To the thrifty man, who has saved even a few hundred dollars, there are many things to be considered.

There is another theory advanced by some people which is even more difficult to accept. This is the theory that everybody should receive the same pay no matter what he does. Under the system these people would inaugurate, the manager, the skilled worker and the unskilled worker would be paid alike. The editor of a great newspaper would get the same as the office boy. The engineer at the throttle of the Twentieth Century Limited, with scores of lives in his keeping, would be paid the same as the section hand who shovels dirt along the right of way.

This may seem a glorious arrangement to the office boy and the section hand; although, if they have any brains at all, even they would laugh at it.

* * *

A great many people complain because they think the heads of business are paid too much. They hear of the high salaries received by executives, such as presidents of railroads, or of large industrial corporations, and they think that these men cannot be worth all that money, no matter how competent they are. They say that there cannot be so much difference between the value of any two men as to justify paying one of them $50,000 a year and the other one only $1,500 a year.

* * *

Imagine what it means to a business which has aggregate transactions of perhaps $100,000,000 a year. A competent executive at its head may easily gain millions to the organization; and an incompetent one may cause it to lose millions. An able and brilliant man, if he can be found, is well worth $100,000 a year to that business.

Suppose you were ill and had to have an operation; would you pay more to have it performed by the finest surgeon in the country than you would pay an inexperienced and stupid doctor? If you had a lawsuit on your hands, would a keen and trained lawyer be worth more to you than a dull-witted one with almost no legal experience? If you wanted to buy a ring, would you pay more for a diamond than you would for a piece of glass? If you were going to buy an automobile, would you give more for a new, high-powered, seven-passenger car than for a second-hand "flivver?"

(To be concluded in an early issue)

The Profits of Industry

THE SUBJECT of a more equal distribution of wealth has been discussed to some extent by M. B. F. readers, and one or two have advocated the abolishment of the "profit system," as a means to that end. While we firmly believe that something should be done to prevent the centralization of wealth in a few hands because of the power that such control of wealth gives to the possessors, it has always been our opinion that the decentralization of this wealth would not add so much to the per capita income as generally supposed. This opinion is borne out in the accompanying article. Were an equal distribution of wealth to be undertaken, how much more or less would the land-owning farmer have after the melon was cut and divided. According to the figures the average farmer would have much less after the division than he had before. His hired man would get only a very small share of the plunder. The balance would go to other hired men and wage earners of the city. It would be a case of dividing the earned wealth of the few among the many, so that the few would sacrifice much and the many would gain but little per capita.

We do not present Mr. Roberts' article as an argument that all industry is pure and deriving only fair returns upon its investment. For such is not the case. We present this article to show just exactly what it was intended to show that an even distribution of wealth would be impractical and unjust and could not possibly be a cure for poverty and unrest.

Live Stock Decline is Held Only Temporary

Shortage of Hogs and Beef Cattle Throughout the Country Points to Better Markets

By JOSEPH M. CARROLL
(Special Chicago Representative)

WHAT IS the trouble with the live stock situation at the present time? This is a question that would receive a multitude of answers, depending upon the source from which they come. However, when looked upon in a consevative manner, it appears the markets have been the victim of circumstances brought about largely by propaganda.

Pressure and then more pressure has been put behind the fact that the meat export business of this country is waning to a pre-war basis. This is undoubtedly true due to the cause of foreign money values dropping to such low levels. This naturally brought the traffic to a standstill less the foreign buyers pay premium prices for their commodities.

For some time past exchange rates on European nations have been in a dangerous position and when the English standard dropped so sharply attention was drawn to the fact more so than ever. At the time, it was stated that the foreign nations had run their trade balances down to such a level that their credit was on the verge of dropping off. To remedy this, it was suggested that they import less, increase production at home and send more products from their country to offset what they are requested to buy on the outside.

Only recently, the American Institute of Meat Packers, which includes practically all the firms in the industry, both large and small, issued a statement that there was no export demand for American meat. They gave the adverse exchange conditions and rebuilding in Europe as the reasons for this state of affairs. It was a very bearish statement and while it has been known that the exchange conditions would undoubtedly slacken the call, the statement as issued by the packers was looked upon as propaganda to further their campaign to force prices to a pre-war level.

In the statement it was made known that foreign countries have resumed meat production to an extent that the affect will be noted in a slackened demand for the American product and it would result in an over-supply in this country. The statement went on to say that sales of American pork have stopped in France, almost ceased in Holland and that England has a several month's supply on hand. It also hears the fact that Germany, is unable to pay for the products which they need from this country.

The report of the institute was far-reaching and according to some men in the trade, was to bearish as they believe conditions are not as bad as painted by the packers. However, the papers of the country carried the report of cessation of export shipments and it had the affect of lowering prices. On the day the report was issued, hogs declined 50c per hundred in most markets, the cattle trade was very dull at weak to lower prices while only moderate supplies seemed to prevent declines in the sheep trade.

Cattle prices have been working lower for some time past. During the past sixty days, practically all the cattle that have been fed grain have been sold at a loss to the owners. Just why the man handling this grade of stock should be punished at this time has been a mystery to most men in the trade. Packers stated that the demand has been lacking in local consumptive circles and the small export orders and then prospects of discontinuance undoubtedly would mean a surplus on their hands. The best part of it is, the packers discount the prices before the reasons fully develop.

Considerable dissatisfaction has been noted among the cattle feeders during recent weeks. They are unable to explain why packers should be pounding values at this time when the industry needs plenty of encouragement after the experience of the past season.

Last fall when these feeders were stocking up they had to contend with packer competition. The western range cattle are a desirable grade of

The kind that Michigan Produces

stock to be finished in native territory. Feeders wanted them keenly but at the same time packers were in the market for light weight beef and their competition forced feeding cattle prices to a relatively high level. The feeders were lead to believe that the demand would hold good for some time to come and on that account paid the prices for the thin stock. Now when the cattle are coming back to market, it is hard to get the buyers to look at them and when they are sold, prices are on such a level that losses have resulted in majority of cases. In many instances the selling price, after 80 to 100 days feeding, has been lower than the cost as feeders.

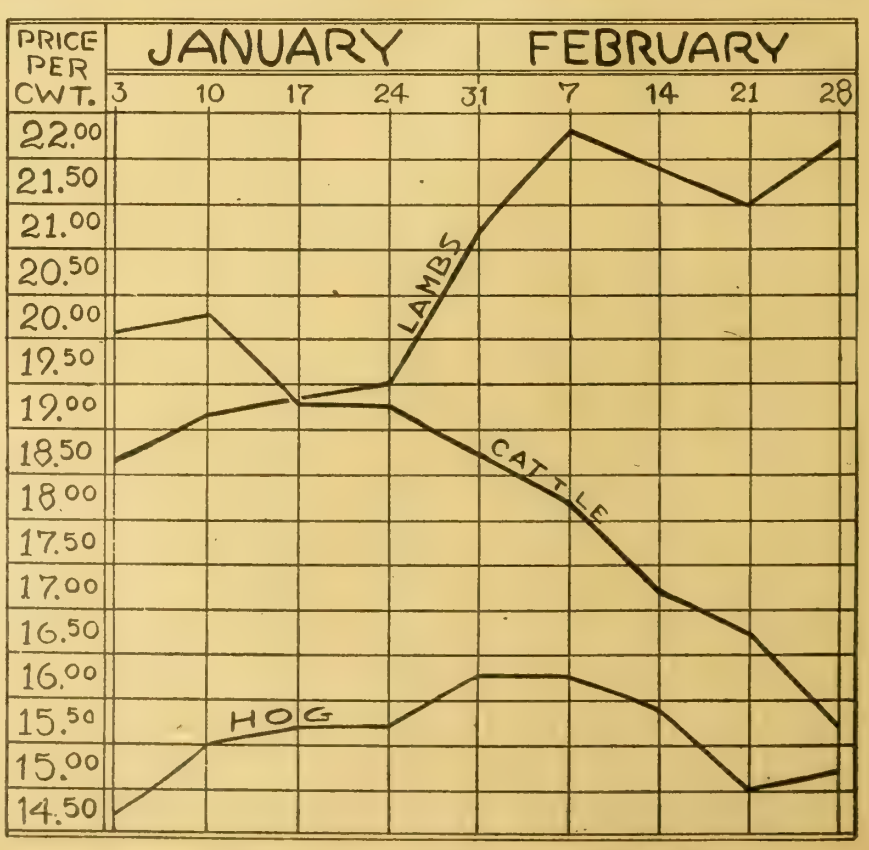
There are many feed lots still sheltering cattle that were put in at high prices. Owners are carrying them longer than expected, living in hope that conditions would assume a brighter aspect and allow them to get out on their ventures with an even break. The unsettled conditions in the fat cattle market, losses to feeders, indifferent opinions as regards the future of the business has been responsible for the small stocker and feeder demand since the first of the year. The damage has been done as far as most feeders are concerned and they have decided to stay out for the present and watch developments.

Steer prices have ruled at a relatively narrow range during recent weeks. The better quality cattle, which have been fed the longest, have shown most decline from the high time. At the same time, packers have purchased the cheap grades with fair action. Killers claim there is no demand for the better classes of cattle, the consumptive demand calling for low priced cuts, eaters wanting quantity instead of quality.

Arrivals of cattle at all markets have been rather small for this season of the year. The receipts around the outset of the year were rather large but for the past several weeks supplies have been diminishing, yet the market has failed to respond to the lighter receipts. The cattle industry was the first hit by the clamp on export business as killers used this factor as a club some months ago. Argentina and Australia are now furnishing large quantities of meat for the English trade, and taking care of the demand that we filled during the war. During hostilities it was a case of getting meat supplies from the nearest point in order to save shipping. However, the signing of the armistice released shipping for the Argentina and Australia business and cut off the demand from this country.

In the hog market the situation has been somewhat different. During the opening month of the year an unusual advance put prices on a relatively high basis. Packers had an idea that they were going to put up some cheap product at this time, banking on large arrivals following the small liquidation last November and December. However, the large receipts did not materialize and instead of getting hogs around $10 as some expected, sales were made up to $16 at the high time. It was out of the ordinary to see prices make such an advance during the opening month of the year which is generally a weak period in the trade.

However conditions have been uneven since then and the bloom has been removed from the market. The buyers have had several factors to put to work to bear prices. Falling exchange conditions, talk of cessation of export business made the finest material with which to work.



Trend of the live stock markets during January and February.

Duing the semi-panicky days on the stock exchange and the board of trade, buyers at the stock yards were carrying out their end of the game by declining hog prices $1.50 within a two days period. This break eliminated practically all the advance scored earlier in the year. Later they succeeded in another campaign and at the lowest time, prices were at the bottom level for the year so far.

Just how far this decline will be carried is questionable. Hog feeders state that with grain prices at their present level, they will be unable to stand much of a decline, as they have been working on a very slim margin for some time past and since the present crop of hogs has started to move to market, talks of losses have been heard.

There is still talk of lowering the meat prices to reduce the cost of living. Every once in a while some agitator will make such a statement, leading the public to believe that the meat prices are holding other commodities at a high level. But records show that live stock prices are sharply below a year ago. This cannot be said about other food products while on the other hand the consumer is paying more than ever before for bulk of products that enter into everyday use in the household. That does not bear out the statement that meat prices are holding other commodities at a high level. If other foods would follow the course of meats, there is no question but that prices and cost of living would take a drop. The public is not clamoring for lower meat prices, because in the average shop a person can readily notice the difference when compared with the high time. But some butchers have failed to adjust their retail prices to keep in line with wholesale costs. In some neighborhoods it seems values have changed little despite the lower live stock prices. In such instances the people have a reason to complain but general price cutting should not be carried out because of this at the expense of the producer and feeder who has no recourse when his stock is ready to market.

The recent break in hog prices is rumored as a means for packers to cheapen up on the product they have in their cellars. Since early in the year, it is stated in market circles, an eastern syndicate has been buying pork products in anticipation of a broad export demand. Packers sold considerable product to this outfit and the smaller packers of the east were finding an outlet through this source. Much of the meat was sold for May delivery and on a basis of $15 and $15.50 hogs. Now the packers are figured to be lowering market prices, to cut costs so the product can be turned over at a good margin. This undoubtedly is one of the reasons for the decline, as packers are reported to have a supply of stock on hand that was put in at prices higher than present levels.

Most men in the trade are of the opinion that the recent decline is only temporary. They look for an adjustment of conditions that would work for higher levels. Some have predicted that within the next 30 days, conditions would take a turn for the better.

It is known that this country has a monopoly on the fats of the world. While foreign nations are reported returning to a pre-war basis in live-stock production, it is the belief that it will be some time before they will be able to get along without the help of this country.

Germany is in great needs of meat products, especially pork and lard. So great is the needs there, that it has been stated if they were able to buy in a free manner they would clear out the cellar of every packing house in this country. Germany has endeavored to place large orders with the packers in this country They realize that at the present value of their money it is practically impossible. But they want to make the deals on a long credit basis, giving treasury notes, bearing interest as se-

Value of Michigan's [illegible]19 Crops $342,602,000

Michigan Co-operative Crop Reporting Service Issue Annual Statement of Crop Production and Acreage

By COLEMAN C. VAUGHAN, *Secretary of State*
and
VERNE H. CHURCH, *Field Agent, U. S. Bureau of Crop Estimates.*

THE MONEY value of crops grown in the State of Michigan during the past year is probably the greatest on record, not because of unprecedented acreages or yields but because of the higher price levels reached. The value of the crops mentioned in this bulletin is $342,602,000. The small fruits, truck crops, chicory, mint, and various minor crops are not included, because quantitative estimates are not available. Neither is the value of live stock included, as that will be reported at a later date.

The total acreage of the crops included, exclusive of the fruits, is 8,856,000. This is a remarkable showing on the part of Michigan farmers when the difficulties under which they labored are taken into consideration. Farm labor was extremely scarce and high in price. Many farmers and farmers' sons have left the farms and moved to the industrial centers, in many cases the farm being entirely abandoned. The cost of farm machinery and all farm supplies is so much higher in recent years that farming operations on many farms are necessarily handicapped by lack of working capital. It is apparent that these difficulties were overcome by increased hours of farm labor, the shifting of crop rotations, and by the use of improved methods of machinery.

SUMMARY OF CROPS GROWN IN MICHIGAN, SEASON OF 1919

CROP	Acres (000 om't)	Yield per acre	Production (000 om't)	Price Dec. 1	Total value (000 om't)	Value per acre
Winter wheat	950	20.3	19,285	$2.10	$40,498	$42.63
Spring wheat	85	11.2	952	2.10	1,999	23.52
Corn	1,650	39.0	64,350	1.38	88,803	53.82
Oats	1,475	25.0	36,875	0.71	26,181	17.75
Barley	280	19.0	5,320	1.18	6,278	22.42
Beans	310	13.0	4,030	4.20	16,926	54.60
Rye	900	15.0	13,500	1.28	17,280	19.20
Buckwheat	48	13.8	662	1.37	907	18.91
Potatoes	826	88.0	28,688	1.35	38,729	118.80
Tame hay	2,650	1.2	3,180	23.40	74,412	28.08
Sugar beets	110	9.1	1,001	11.28	11,291	102.65
Clover seed	72	1.4	101	27.50	2,778	38.50
Apples (agricultural)			6,484	2.20	14,265	
Apples (commercial)			1,109			
Peaches			480	3.10	1,488	
Pears			426	1.80	767	
Tota	8,856				$342,602	

Winter Wheat

The crop of 1919 was one of the best ever grown in the state. The acreage was the largest since 1915, and the average yield per acre, 20.3 bushels, was the largest except that of 1915 in the last 15 years. The total production was also the largest except that of 1915 in the same period of time, being 19,295,000 bushels. This record production was the result of unusually favorable conditions throughout the growing season. The winter was mild and the abandoned acreage from winter-killing was exceptionally small.

The amount of wheat purchased by mills and elevators during the month of December is estimated at 1,190,000 bushels; the amount purchased since August 1, 7,810,000 bushels.

Spring Wheat

During the past four years the acreage of spring wheat has increased from a few thousand acres to 85,000. While the yield was 18.0 bushels in 1918, it was only 11.2 bushels in 1919. The estimated production for the past season is 952,000 bushels, having a value of nearly $2,000,000.

Corn

One million six hundred fifty thousand acres were grown in the state this year. The average yield per acre was 39.0 bushels, and if all of the acreage had been devoted to grain this yield would have produced a crop of 64,350,000 bushels. As a matter of fact, approximately 35 per cent of the acreage went into silos. Treating this as being of equivalent value per acre as the grain crop, the crop is worth $88,803,000, or more than that of any other year in the history of the state.

Oats

The crop was relatively the poorest of those grown in the state this year, and was the smallest production since 1907, being only 36,875,000 bushels as compared with 66,320,000 last year. The season was unfavorable for the spring grains, and many thousands of acres of oats were not harvested at all and many thousands were cut for hay. The yield per acre for the total acreage of 1,475,000 was only 25 bushels. The value of the crop, based on December 1 prices, is $2,181,000.

Barley

Barley suffered similarly to oats the yield being only 19 bushels per acre. The acreage was also 20,000 less than last year, so that the production of 5,320,000 bushels was nearly four million less than that of last year. If sold on December 1, it would have brought a total of $6,278,000.

Beans

The bean crop is estimated at 4,030,000 bushels or approximately 850,000 bushels less than last year. While the acreage was only 60 per cent of last year's the yield was 13 bushels as compared with nine produced last year. At an average value of $4.20 per bushel ,the crop was worth $16,926,000.

Rye

The most marked change in acreage of any crop is that of rye which has increased from 325,000 in 1916 to 900,000 in 1919. At 15 bushels per acre, a production of 13,500,000 bushels is obtained, the largest of any state except that of North Dakota. The valuation of the crop is $17,280,000, which is in marked contrast to the valuation in 1905 when the crop was only 2,146,000 bushels and was worth $1,266,000.

Buckwheat

This crop is grown in many sections only as a catch crop—that is, a substitute for crops that for some reason could not be planted in season. As planting conditions in 1919 were more favorable than in other recent years, there was less need for substitution and the acreage of buckwheat was consequently smaller than usual, and less than in any year since 1905. The yield was 13.8 bushels and produced a crop of 662,000 bushels worth $907,000.

Potatoes

The potato crop, based on December 1 prices, was worth $38,729,000. The production amounted to 28,688,000 bushels or about the same as last year. Fourteen thousand less acres were grown but the yield was slightly larger, and the quality was excellent. It is estimated that 10,460 cars will be shipped from the commercial area as compared with an available supply for shipping 12,000 cars last year. The commercial crop graded as follows: No. 1, 78 per cent; No. 2, 15 per cent; culls, 7 per cent.

Tame Hay

The estimated production of 3,180,000 tons, or about 500,000 tons greater than last year. The yield was lighter than usual, being 1.2 tons per acre. Two million six hundred fifty thousand acres were devoted to the crop, which is a slightly larger area than last year. Owing to the high average price of $23.40 per ton, the value of the crop is the highest on record, being $74,412,000.

Sugar Beets

The final revision of the estimated acreage, yield and production is not available, but the preliminary estimates are 110,448 acres harvested, a yield of 9.1 tons per acre, and a total production of 1,001,000 tons. As the average price paid to farmers was $11.28 per ton, the average per acre value of the crop amounts to $102.65, and the total crop value, $11,291,000.

Clover Seed

The clover seed acreage is much less than usual, being estimated at 72,000 acres. One hundred one thousand bushels is the estimated production as compared with 90,000 bushels last year. The average price per bushel was $27.50, and the total value, $2,778,000.

Apples

The apple production is placed at 6,484,000 bushels as compared with 9,792,000 bushels last year. The crop was generally good from Oceana county northward along Lake Michigan to Traverse City, but was generally light in the southwestern counties. Over the remainder of the state, the agricultural crop was probably the lightest in many years. The commercial portion of the crop is placed at 1,109,000 barrels, that of last year being 1,495,000 barrels.

Peaches

While the state produced over two million bushels in 1915 and again in 1916, the crop this year was only 480,000 bu., although this was much larger than that of last year when only 85,000 bushels were produced. The average price was $3.10 per bushel and the total value was $1,488,000.

Survey of Acreage, Yield, Production and Value of Important Michigan Crops

CORN

YEAR	Acres harvested	Average yield per acre	Total production (000 om't	Average price Dec. 1	Total value 000 om't)	Average value per acre
1905	1,229,000	34.0	41,776	0.46	19,217	15.64

Shiawassee Joins Be[illegible]rowers' Movement

Farmers at Owosso Mass Meeting Swear Allegiance to State Association and Will Stand by the Colors of Organization

Is This Treason?

SAID A. B. COOK before the mass meeting of farmers at Owosso: "I have raised beets longer than any other man in Shiawassee county. But I did not sign a contract for 1920 acreage, and I will NEVER sign another beet contract until the farmers have a part in its making. If that is treason, make the most of it."

THE BOAST of the sugar manufacturers that they had Shiawassee county "sewed up" was a little premature, or else it was a bad job of "sewing." Hundreds of farmers of that county who signed the blanks presented by the field men of the Owosso Sugar Company, without being advised of the higher cost of labor, have written the companies and cancelled their acreage. This fact came out at the big mass meeting of five hundred growers held at Owosso on Tuesday of last week, every last man of whom got to his feet and by his standing signified that he would join the beet growers' association and accept the terms it may negotiate for them with the manufacturers.

The attendance and the enthusiasm at the Owosso meeting was a surprise even to the most sanguine leaders. Manager, C. E. Ackerman explained what had already been accomplished by the growers in other counties, and expressed the hope and belief that Shiawassee county would join solidly in the movement and hasten the day when the manufacturers will no longer dictate the terms of the sugar beet contract. John Ketcham, who had been to Washington to present the claims of the sugar beet growers to the Attorney General told the farmers that the Department of Justice was already at work investigating the relative costs and profits of sugar beet growing and beet sugar manufacturing, and that the Attorney General had faithfully promised that he would assist the growers to get a square deal. This encouraging information, Mr. Ketcham said, should induce the growers to stand pat and not sign any more contracts.

Colorado Represented

Albert Dakan, of Longmont, Colorado, chairman of the research and publicity committee of the United States Beet Growers' Ass'n, was present and made some startling charges against the sugar beet trust. These charges were all the more interesting to Michigan beet growers because they involved a prominent Michigan man, Chas. B. Warren, present Republican national committeeman and large stockholder in Michigan sugar companies. Mr. Dakan has spent the better part of the last several years in digging up official records showing the methods employed by the sugar trust in securing control of the beet sugar industry of Colorado, Utah, Michigan and other states, and he throws an illuminating light upon the manner in which the sugar companies at the command of the trust bought up prominent farmers, subsidized newspapers, and hoodwinked the farmers. Mr. Daken said in part:

"H. O. Havemeyer was a genius in business organization. By 1900 he was absolute master of the U. S. sugar business. About that date he saw the beet sugar industry looming high on the western horizon and realized its meaning as a competitor and set out to seek control. Many truly independent companies were springing up in Michigan, Colorado and Utah-Idaho territory. To these regions the secret agents of Havemeyer proceeded. In every beet sugar factory community competing sites were secured by these agents. They bluntly told the independent factory owners to give Wall Street control or Wall Street would build competing plants beside those already built and pay any price, "even $10 per ton for beets." The going price to farmers was $4.50 per ton.

"No independent factory could stand out against the sugar trust's millions. By 1906, Havemeyer reigned absolute in both beet and cane sugar in the nation.

"The people of the United States then began to tire of exploitation at the hands of the great captains of industry. Officials were elected to serve humanity instead of mammon. Among other things a suit was started to dissolve the sugar trust. Its offices in Wall Street, Denver and other cities were raided by federal officials who secured thousands of private, confidential letters and records. These were admitted under oath by the sugar men as correct and printed in the record of that case which is pending in the U. S. District Court in the Southern District of New York.

"The sugar beet growers' committee secured the above record and many other documents in its search for information.

The confidential letters of the sugar men tell such an astounding story of brazen exploitation that it is deemed wise to present a few of them. The methods of C. S. Morey in the states of Colorado, Nebraska, Wyoming and Montana, are duplicated or practiced by Charles B. Warren of Michigan, and Bishop Cutler, of Utah. The private letters show intimately how these minions of the sugar trust secured "prominent farmers" in every factory community to spy on their brother farmers, throw cold water on farmers' organized efforts and keep the trust officials posted and also keep country newspapers in line. These letters also tell how sugar factory managers are really community managers, who dominate commercial clubs, county fairs, school boards and local politics, designedly in the interest of the trust.

"Every farmer should have copies of these letters. The story they so graphically tell teaches him the absolute necessity of organization on his part for self protection. The same men who were trained by Havemeyer to exploit the farmer still sit in the seats of power in the sugar business of this country. There is no evidence that they have reformed. Beet growers have as yet only an imperfect organization, still it has won many millions of dollars for them, as the following records prove. It looked like a hopeless task to tackle such a power, but its the story of David over again.

Why Beet Growers Found it Necessary to Organize

This question is strikingly answered by the following letters: (p. refers to page of Sugar Trust Suit Record.)

"117 Wall St., New York.

"Mr. C. S. Morey, Denver, Colo

"Dear Sir: It occurred to me today that you might probably be willing to assume a confidential relation between me and my associates in reference to a possible purchase of the stocks of the different Beet Sugar Corporations in your state. Your early and favorable consideration will be appreciated.—H. O. HAVEMEYER, Pres. Amer. Sugar Refining Co. (p. 332, Vol. 1.)

Morey Accepts and Boards Wall Street's "Boat."

"Denver, Colorado.

"Mr. H. O. Havemeyer, 117 Wall Street, N. Y.

"Dear Sir: I stated frankly to Mr. Thatcher and Mr. Granger that I had put myself in your boat and was going to act with you in every way.—C. S. MOREY.

Gets Some "Good Farmer Friends" to Help Run the Boat.

"Mr. H. O. Havemeyer, 117 Wall Street, N. Y.

"Denver, Colorado.

"Dear Sir: We have thought best to let the farmers cool off a little and are not taking any hand in the matter of their meetings aside from having some of our good farmer friends present to keep us posted and also to counsel the farmers to be sensible and moderate in their demands. If we get in too tight a place we shall consult with you before we make any change whatever in our contracts.—C. S. MOREY. (p. 442.)

"Prominent Men" to Help "Fix Tax Assessments."

"Denver, Colorado.

"Mr. H. O. Havemeyer, 117 Wall Street, N. Y.

"Dear Sir: Nearly every prominent citizen of Fort Collins owns a farm and a great many of them are beet growers. We want the influence of the community on our side. The influence of a few very strong men would save us a good deal of money in water rights, litigation and in the assessment of our property taxes.—C. S. MOREY. (Vol. 4, p. 1867.)

"Voluntary Raise" Exposed

"Mr. C. S. Morey, New York City.

"Dear Sir: 'We must take the initiative in this matter and before the farmers make their demands we must publicly announce that we voluntarily raise our price. After having seen Mr. Havemeyer in New York wire me at an early date what course you advise us to pursue so that I may take advantage of the situation, and disarm our farmers by making the first announcement.—C. A. GRANGER, (General Manager.)

Cities Instructed to Aid Wall Street

"In December, 1911, the beet growers sent a committee of three men from Colorado to Washington before the Hardwick Committee. These men gave the farmers' side of the business. Immediately after their testimony was in a general letter sent to Commercial Clubs to select "good farmers to go to Washington and attempt to discredit what the farmers committee had done quite thoroughly. The Commercial Clubs of Northern Colorado responded with alacrity, carefully handpicked a strong delegation of "prominent good farmer friends," as Morey describes them, and sent them to Washington and they did their best for the sugar trust.—(Senate Lobby Probe Report, Vol. 2, p. 1383.)

Business Men and Public Mislead

"The officials of the Greeley sugar factory in order to checkmate the farmers' committee, took some prominent Greeley business men, among whom was the editor of the local leading paper, down to the factory opened the books and 'showed them that that factory was only making about 3 per cent on its investment. This was a willful misrepresentation, for the farmers' committee has possession of documentary evidence of a very great profit made at that factory over the period disclosed and the methods used by the company in doctoring its books for such deceptive purposes. Then for years the sugar company officials have systematically conveyed half truths to business men in confidence and have vaguely threatened to 'close down or move a factory unless the business men joined in helping squelch the farmers' movement for a better price.' Go into almost any sugar factory town and some credulous 'business men will be found who turn pale with fear for the loss of a factory, at the mention of the farmers' efforts.' The company officials have always stoutly affirmed that they voluntarily raised the price of beets without any reference to the farmers' demands, indeed would have paid more if the farmers had stayed home and kept still."

(*Note: Mr. Dakan has given M. F. a very convincing report of what organization has accomplished for the farmers of the western states. This will be published in a later issue, together with correspondence showing how the manufacturers not only manufactured sugar but public sentiment as well, favoring their cause. When you read this you will better understand the source of some of the stories that have appeared in the country press about the enormous "profits" of beet growers.*)

Does It Pay to Organize?

NO ARGUMENT should be needed other than that contained in the accompanying report of Mr. Albert Dakan that farmers must organize for their protection against the selfishness of the sugar trust and other trusts. Some farmers are slow to organize. Others are jealous and suspicious of their neighbors. Others are skeptical. They think belonging to an organization means just paying in dues and attending meetings. But, my friends, in this day and age it means something more than that. If you have confidence in the integrity of the officers of the organization which you are asked to join, with your help that organization can become a tremendous power for good, and the small dues you pay to help support it will be returned to you a thousandfold. Read what Mr. Dakan says about the value of organization to the beet farmers of the western states. Here in Michigan we have never had a substantial organization reaching into all the beet counties. But even the THREAT of organization and the holdings of a few meetings have had the effect in the past of inducing the manufacturers to pay a higher price after they had solemnly declared that they could not afford to pay a higher price. Have the manufacturers in the state of Michigan ever raised the price of beets voluntarily? Have not all the increases been as a result of some suggestion or urging or forcing on the part of the growers themselves. If even the semblance of an organization has been able to gain these concessions in the past what cannot a solid and well financed organization do in the future? Every beet grower in Michigan knows what the answer is. The Michigan Beet Growers' Ass'n is young but it has already enrolled over seven thousand members. Join now if you have not already done so, and put this association in a position where it can negotiate the terms of all future contracts, and spare you the annual controversy over the price.—Editor.

WE expect to meet five thousand beet growers at the big mass meeting to be held in Saginaw next Monday, March 8th, at the Saginaw Auditorium.

The All-American Farmer-Labor Congress Perfects Co-operative Plans

Organization Leaders Prepared to Apply Co-operatize Principle to Ally Commercial Activities

THE ALL-American Farmer-Labor Co-operative Congress just held in Chicago was a most important meeting in this country in its practical results, according to a statement issued by the Farmers' National Council. Over four hundred delegates representing leading National and State farm and labor organizations, many local Federations of Labor, International Unions and the big Railway Brotherhoods, spend three days in discussing the practical problems of direct trading, of co-operative banking and of standardization of co-operative methods.

The day before the Congress opened Mr. C. H. Gustafson, president of the State Farmers' Union of Nebraska, and president of the All-American Farmer-Labor Co-operative Commission issued an interview denying the statement which had been given wide publicity, that the Congress contemplated starting a third political party and expressing his great regret that any such rumor had been started.

Organization

The committee on Organization, of which Mr. George P. Hampton, managing director of the Farmers' National Council was chairman, favored the continuance of the Commission created by the November Conference, with power to add to its number and recommended that the plan as reported be approved by the Congress as defining the work of the Commission during the coming year. That plan and scope included educational work on co-operation, unifying, strengthening and standardising existing co-operative organizations and planning for the extension of co-operatition on a sound basis. It also included a joint legislative program of farm and labor forces for the two year extension of government operation of the railroads, for retention of the government built ships and of natural resources still in public ownership, the enactment of the Kenyon-Anderson bill to control the packers, and financing of the costs of the war through the highest rates of taxation levied during the war. The Organization Committee also recommended that a National Farmer Labor Co-operative Congress be held every year on Lincoln's Birthday, and that the preparation of a budget covering the cost of maintaining the work of the Commission and the committees provided for be assigned to a special committee appointed by the chairman of the Commission. An amendment from the floor was adopted that the Committee should all report to the Commission, and the committee's report was unanimously adopted by the Congress.

Banking and Credits

The Committee on Banking and Credits of the Commission recommended a general endorsement of the credit union movement and that such steps as are possible be taken to aid the further development of credit unions in states where laws make them possible of successful operation, and that action be taken to secure the enactment of credit union laws in states of the union where adequate laws do not exist and that United States congressmen be petitioned to enact at as early a date as possible a general law authorizing the creation of credit unions and of people's banks. It recommended too, the appointment of a permanent committee of five members to serve without pay to carry out the committee's recommendations, to be composed of the following members: Warren S. Stone, C. H. Gustafson, Geo. P. Hampton, Sydney Hillman and Frank A. Rust.

It was recommended that this committee be empowered to select additional members resident throughout the United States to co-operate in its work, to encourage the establishment of National or State banks to meet community needs, and to be affiliated with the Federal Reserve Board whenever possible. This report too, was unanimously adopted by the congress.

Direct Trading

The Committee on Direct Trading endorsed the establishment of direct trading and marketing and that a special committee be appointed to draft a plan of organization to safeguard the interests of all organizations having this purpose, now in existence. It also suggested that the Congress ask that the thousands of army motor trucks not used, should be turned over to be used to cheapen the cost of distribution of farm products.

Standardization of Co-operative Methods

The Committee on Standardization of Co-operative Methods advocated that co-operative stores be uniform in appearance and that there be uniform arrangement of goods and stated that while in the short time the co-operative work has been carried out in this country it has not been possible to work out a system of bookkeeping which would be universally applicable; that a tentative system of uniform accounting has been developed to the point which makes it possible to keep records so that accounts of stocks and sales may be taken weekly, monthly and quarterly and be audited.

Co-operative Legislation

The Committee on Co-operative legislation recommended that a national law for incorporation of co-operative societies be prepared and presented to congress by a committee of five after investigation and that a uniform model co-operative law for states be prepared; advocated endorsement of the principles of the Plum Plan and endorsed the two year extension of government operation of the railroads.

The committee on co-operative education urged a nation wide campaign on the fundamental principles of co-operation and the essentials of the Rochdale system and the establishment of training schools for co-operation.

The Committee on a Co-operative Press advocated the establishment of co-operative newspapers as rapidly as possible.

Women and Co-operation

The Committee on Women and the Co-operative Movement of which Miss Jennie Buell, secretary of the Michigan State Grange was chairman, advocated that women become identified with the co-operative movement to the same extent as the men and on the same basis and with equal representation and that existing community groups in the beginning be made the nucleus for direct trading between the producers and consumers. The reports of all the committees with a few amendments were adopted by the Congress.

Resolutions were adopted endorsing especially the principles of direct trading provided in the marketing section of the Kenyon-Anderson bill to control the packers, and the general principles of that bill reaffirming the delegates belief in the enforcement of the constitution of the United States as it is written, and endorsing the world war veterans organization's efforts in this direction, and opposing the sale of the German ships and all the ships we have constructed.

Results of the Congress

The results of the Congress are chiefly four: (1) The fact was put before the American people though the splendid publicity given the Congress that while competition may be the life of trade, co-operation is the life of the traders—and we are all of us traders. This general appreciation of the importance of co-operation is essential to the extension and success of the co-operative movement. (2) Steps were taken to secure the establishment of credit unions on a sound basis and state and national banks to be affiliated with the Federal Reserve Bank whenever possible. (3) Plans were perfected for the standardization and effective operation of co-operative organizations to avoid mistakes of inefficiency, and the too great haste which makes waste. (4) Knowledge of the successful direct trading such as is carried on by the farmers' union of Nebraska was sent throughout the country and the delegates, both labor and farmers determined to organize co-operatively so that, as expressed by Mr. Gustafson consumers co-operatives could meet at city gates the co-operative organizations of farmers bringing their products to these city gates.

Hiram Johnson Leads; Hoover, Wood and Ford Follow in Order Named

Bryan Stands Fifth in List, Followed by Lowden and LaFollette: the President Makes Poor Showiug

THE FEATURE of last week's return in M. B. F.'s straw vote was the support given to Sen. LaFollette, whose name is not included among the candidates. Bryan has showed up strong since we listed him among the candidates, and is frequently indicated as second or third choice where the voter has some other preference. But the most popular of all is Hiram Johnson, who has received nearly twice as many votes as the next nearest candidate. Johnson is to visit Michigan this month, and make a tour of the state in company with Louis C. Cramton, his campaign manager.

Thousands have not yet voted and they'll have to hurry to get in their votes before the presidential preferential primary in April. Let's roll up a big vote and see how close we can come to forecasting the primary vote. When you renew your subscription, send in your vote. If you have already renewed your subscription, send in the vote anyway.

What Our Readers Say About the Candidates

BRYAN, HIS CHOICE

I like your plan of Straw Vote for President. "Wm Jennings Bryan" is my choice, you may ask why? I will tell you. In what I have read of his history I have always found him fighting for principle when he knew it was a losing game. That is the kind of a man I want at the head of our government. I am so tired of policy measures when it is anything to get there.

I believe Bryan is as near the Lincoln type of man as we have got in our nation today. Would like to see him win out. These other men are probably good men and represent a barrel of money, but "the love of money is the root of all evil". This is what our guide book says and don't we see it demonstrated. Men trying to carry out their selfish ends regardless of right or wrong. May the Lord help us to get the right man, this is my prayer.—*E. O. Coates, Benzie County.*

LaFOLLETTE FOR PRESIDENT

After looking over the names of the candidates I fail to find my ideal of a statesman. In this crisis of our national life the principles of personal right and personal liberty have been almost taken away from us. If we are to regain and maintain those rights we must have leadership that is tried, true and honest. A leader that has been hired and has proven his qualities, one that has not wavered from his cause, when assailed by the press of the country with intense abuse, one who, by the force of his own far-reaching and clean understanding unimpeached integrity and power, has faced alone the storm of falsehood and deceit. Such a man is R. M. LaFollette.—*Will Sischo, Fremont, Mich.*

FORDNEY GETS A VOTE

We would favor our good Mr. Fordney, who is honest and reliable. It would seem such a healthy change. There are some names in your list that it seems a pity to print in same columns with others of real honest Americans. I would take from the list the names of Woodrow Wilson, Wm. G. McAdoo, Herbert F. Hoover, and because of Wm. H. Taft's Irish-English explanations he would be sure not to get the nomination. We want no generals for an executive. No more war stuff to cripple the masses at the gain of the classes. There are other names like Senator Lodge and LaFollette that would look like success for party and country.—*N. D. Crosby.*

HOOVER GETS TWO

I enclose straw vote slip. Please record two votes in our family for Herbert Hoover. We believe that this nation should have a real business executive of proven ability at its head during the coming years of reconstruction, and unquestionably Mr. Hoover has demonstrated that ability. I look at this like all farmers must look at the matter of election of public officials from now on. Choose the best man for the place and eliminate about ninety per cent of this foolish ineffectual partisan squabbling. —*A Reader.*

HOOVER FOR PRESIDENT

Why not a campaign for a farmers' candidate for President? Do you know of any candidate, who understands better the world's food supply and its distribution than Herbert Hoover? The fact that he is not seeking the nomination recommends him to me.—*F. B. W., Washtenaw County.*

CLIP THIS COUPON

My Choice for President

I AM interested in the character of the man who is to be the next president of the United States, and have indicated my choice below:

William E. Borah ☐	Herbert F. Hoover ☐	Frank Lowden ☐
Wm. Jennings Bryan ☐	Miles Poindexter ☐	Wm. G. McAdoo ☐
Champ Clark ☐	Wm. H. Taft ☐	A. Mitchell Palmer ☐
Henry Ford ☐	Woodrow Wilson ☐	John J. Pershing ☐
Gen. G. W. Goethals ☐	Leonard Wood ☐	Robert LaFollette ☐
Warren G. Harding ☐	Hiram Johnson ☐	

of the warehouse amendment? .....

If your candidate is not listed above write in name.

Profitable Gains From Feeding Sugar Beet Silage

Experiments Show That This Type of Silage Has a High Feeding Value

(Continued from last week)

THESE CATTLE were delivered to the beet growers from the range in November, 1918. Marketing began on February 10 and was concluded about April 1, 1919. The 2,250 steers showed an average gain of 170 pounds per head. The average spread in the price of the feeders and the finished cattle was 2 1-2 cents per pound. The beet growers in some instances pastured the cattle upon their different fields for a time after receiving them, but were fed and finished mainly with alfalfa hay, beet-top silage, and beet pulp. The most satisfactory practice was to start with pulp and hay and later add the silage, finishing with about 30 to 35 pounds of silage and 15 to 20 pounds of hay per day. Not many feeders used grain. Several used a light spread of beet molasses upon the pulp or hay. After making deductions for the market price of hay and all other feeds and also for wages for the time spent in feeding, the 32 beet growers made net profit of more than $40,000 in feeding this lot of steers. This did not credit the operation with the several thousand tons of manure which was later spread upon the beet fields, thus greatly aiding to maintain soil fertility.

John Stosich was one of the most successful of the 32 feeders. His 26 steers were delivered to him on November 22, 1918, at an average weight of 1,018 pounds. On March 11 they weighed out at 1,265 pounds gross, showing a gain of 247 pounds per steer. During the first three weeks the steers were grazed on the fields, gleaning feed from along the fences, irrigation ditch banks, and the autumn growth on the grain and other fields that otherwise would have been waste. On December 15 they were started upon a light feed of hay and about 75 pounds of wet beet pulp per head each day. The pulp was gradually increased to 140 pounds. On February 1 beet-top silage was mixed with the hay and pulp. The pulp was gradually decreased, and finally the beet-top silage was entirely substituted for it, finishing the steers on 30 pounds of silage and less than 20 pounds of alfalfa hay daily. The steers produced 225 loads of manure, which Mr. Stosich spread upon 15 acres that were seeded to beets in April, 1919.

These results are mentioned in detail because they illustrate an entirely profitable method of marketing surplus hay with the beet tops and other farm-grown feeds. At the same time they produce a fertility that renders it possible to increase the beet tonnage

Siloing and feeding the beet tops mixed with pulp, hay, and molasses were the incentives which started the beet growers in this particular district to feeding cattle. They would not have undertaken to do the feeding had it not been for the increased supply of feed they had secured as a result of siloing their beet tops. Their winter profits in the feeding operations handsomely supplemented their earnings from the growing of crops during the summer. They had no worry about marketing and delivering surplus hay. They were enabled to fertilize properly an increased acreage and to meet the perplexing problem of maintaining soil fertility. This procedure has stabilized the beet crop with these growers, and it has also greatly aided them in establishing a crop rotation, which is seriously needed in most beet-growing areas. Making better use of the beet tops will reduce the hay requirements and allow part of the alfalfa land to be plowed. More feeding means more manure available on the farm, while better fertilized soil allows other intensive crops to be grown profitably in rotation with beets, grain, and alfalfa. The procuring of the steers and the supervision of their feeding were done by an experienced feeder employd by a sugar company. The entire enterprise also had the assistance of the farm bureau and the extension division of the University of Idaho.

Profitable Gains

A sugar company in Colorado owns and operates several thousand acres of land tributary to its sugar factories, feeding regularly several thousand head of cattle. One lot of 135 steers made an average gain of 2.3 pounds per head daily in a period of 115 days, counting the shrinkage in buying on the Denver market and on the outshipment to the Kansas City market. This company found the following ration per steer per day to be good: 25 pounds of beet-top silage, 60 pounds of beet pulp, 10 pounds of alfalfa hay, 4 pounds of beet molasses, and 3 pounds of cottonseed cake. Accurate records of the operations showed a labor cost of 70 cents per ton for hauling the tops and filling the silo. This company calculates that cured silage was produced at the rate of 35 per cent of the weight of the marketed beets and that a heavy crop of beets will yield from 5 to 6 tons of silage per acre of beets. A 10-ton crop of beets has yielded 3 1-2 tons of cured silage per acre. In estimating siloing capacity (the earth-silo type) about 38 cubic feet for each ton of beet tops is calculated, allowing a settling of 12 inches for a well-packed silo 5 feet in depth. The following analysis of corn silage was made at the company's laboratory:

Comparative Analysis of Beet-Top and Corn Ensilage

Constituents	Beet-top silage. 1	Corn silage 2
Moisture	64.36	68.50
Ash 3	9.25	1.51
Crude protein	2.87	3.12
Crude fat	.44	80
Crude fiber	5.46	6.53
Nitrogen-free extract	17.62	20.54

1 It is possible that silage produced from beet tops grown in other localities might show a higher or a lower feeding value.

2 The analysis here given for corn silage is considerably higher than the generally accepted standard analysis for the product.

2 Dirt gathered with the tops makes a high ash content.

Opening the e silo

A Value Nearly Equal to Alfalfa Hay

A firm of feeders in the northern Colorado district after an experience of several years says—

We believe 1 ton of tops properly siloed is worth almost, if not altogether, as much as a ton of alfalfa hay for feeding to cattle. Any farmer, regardless of the size of his beet field, can cheaply make a pit, save all of his tops, and feed them at any time, as there is no limit to the time that they will keep. We have been very successful in getting good gains on our cattle since we started feeding them in this way.

Collateral Value

The average beet grower concludes that 2 tons of good beettop silage is worth 1 ton of good alfalfa hay. Very few men who have fed the silage think that it has a value less than 50 per cent of the value of hay. Those who consider the value as great as the estimate above quoted probably reach conclusions that are not entirely based upon the intrinsic value of the silage. There are two collateral values in the silage that are not shown in the laboratory analyses, namely, (1) the succulent character of the feed, which stimulates an appetite in the animals and causes them to consume greater quantities than where dry, cured feeds only are used; and (2) the beet-top silage when fed with alfalfa hay helps to balance the ration and causes the animl to utilize better all the feed consumed.

Type of earth silo used in the west. Commercial types of silos are best and do not require so much care in packing, etc.

Extensive Feeding Tests

A firm of extensive beet growers in Idaho feeds several thousand sheep and grows from 75 to 150 acres of beets each year. For two successive seasons they have made and fed about 500 tons of beet-top silage. They recently made the following statement:

We did not keep check on all of our feeding all winter, but we weighed the feed to some of the herds of sheep long enough to satisfy ourselves that a ton of beet-top silage is worth as much as a ton of hay. We have also proved to our satisfaction that beet-top silage for fattening sheep and cattle is cheaper and will fatten quicker than grain or corn. We think that the tops, if gathered immediately after being cut off, will weigh half as much as the beets.

It should be noted that the above statement is based upon observation rather than upon actual test by weight, but it shows what value the growers place upon beet-top silage used as a stock feed. The growers referred to above find that by feeding 3 pounds of beet-top silage per head per day they can reduce the hay requirements for sheep more than half.

After an experience of two seasons with beet-top silage a successful Idaho feeder offers the following suggestions:

The beets should be topped from windrows or piles and the tops gathered immediately, free from dirt, and placed in small piles or hauled directly to the silo. Pack firmly in the silo. If the silo is located on sandy soil, build a concrete retaining wall for each side. It is important to eliminate the dirt. Th pounds of beet-top silage per head day were fed for a period of 40 day 800 head of sheep, about one-half e and one-half lambs, which made a of 4 pounds per head more than sh of like quality that were fed entirely beet pulp and hay. The silage comes warm, even in mid-winter, and is grea relished by the sheep.

Sheep grazing on beet tops left in the field

This feeder made 125 tons of sila from 25 acres of beets. It cost h about $1 per ton to gather and silo t tops.

Unanimous Approval

As against the very few adve experiences which hase been report the following statement taken fr the *Farm Bureau News*, the offic organ of the Sevier County (Uta Farm Bureau is offered:

Without an exception, every man siloed beet tops last year reports e lent results and savings from the f that it furnished. Most of the far reporting rate the value of the silag about 2 tons of silage equal to 1 to the best alfalfa hay. One or two say that it is nearly equal in feed value to alfalfa hay.

Feeding Aged Ewes

One man had bad results in feed beet-top silage to aged ewes. Sa ples were taken from the silo analyses indicated that the silage normal. It is likely that the cause of trouble was the feeding weak ewes of too much of the suc lent silage at the outset. In most stances, those who use aged ewes f that silage will cause them to prod more milk for their lambs than t otherwise would, which allows th better to sustain their usual large p centage of twin lambs. Two instan were reported where the milk was excessive when beet-top sil was fed to aged ewes, and the ud became swollen and feverish and g trouble in this respect. Beet-top si should always be fed lightly at start.

Feeding Steers

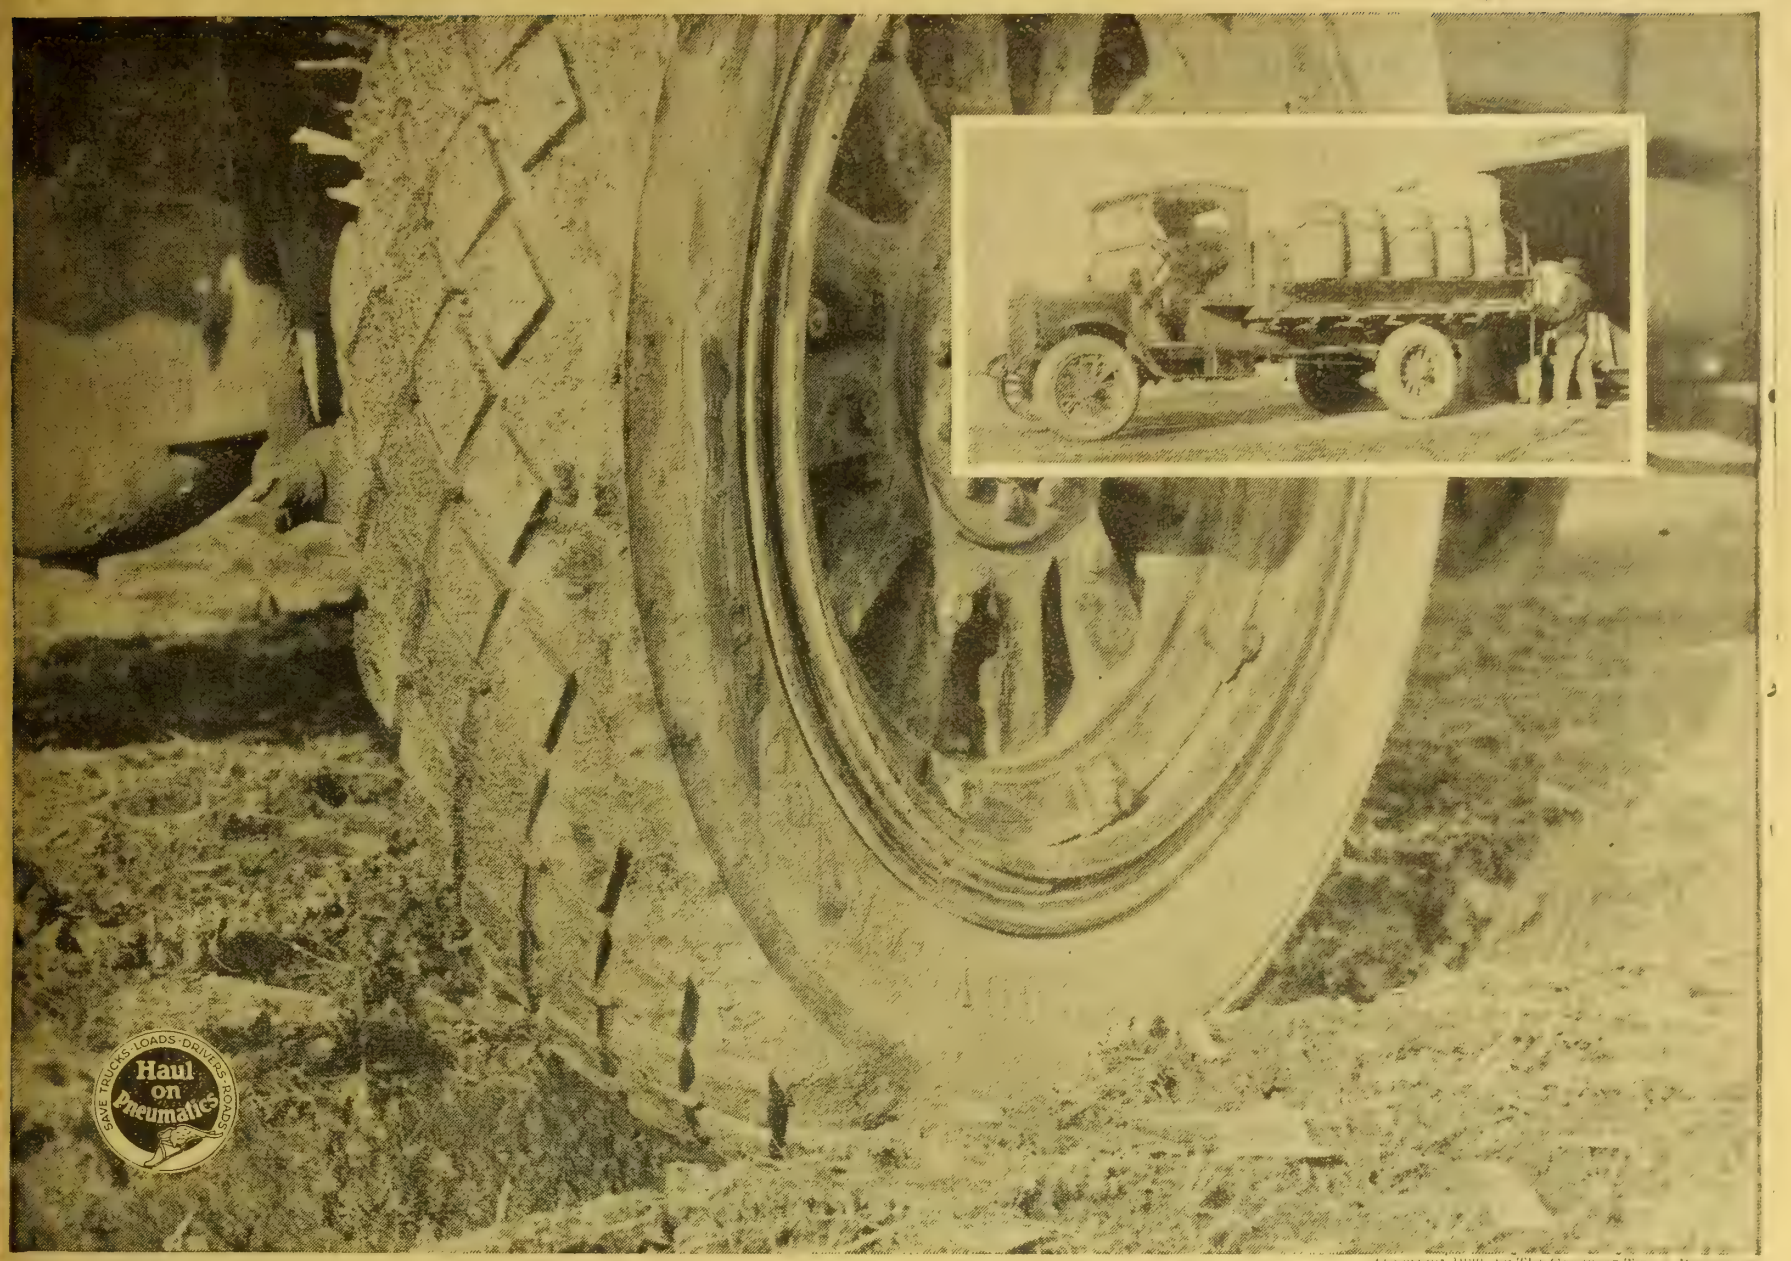
In another instance an exten feeder lost several head of st while feeding beet-top silage. The were gathered carefully from a sa soil. The silo was located on a sa spot. It is difficult to gather from a sandy field and then silo sandy earth with sandy side wall a pit silo without having an exces proportion of sand in the silage. some instances as much as 5 per of the net weight of the silage found to be sand and dirt. Comp ing in the stomach of the anima almost sure to follow when the sand or dirt in the silage.

Beware of Moldy Silage

Steers have died as a result of properly feeding hay and grain. important that the moldy silage is found on and near the surfac sides of the silo be carefully rem and destroyed. Moldy silage is more dangerous than moldy stra moldy hay. These often cause with animals.

In a few instances horses wer allowed to get to the beet-top silo gorge themselves. Even good sila not recommended for horses, pig calves. Moldy silage is almost su cause trouble if fed to any kin stock. The total number of ba results reported from the feedin beet-top silage is very small.

(Further details on gathering s aging and feeding the by-produc beets may be found in Farmers' B letin No. 1095 which may be obt free by writing the Bureau of Pu tions, U. S. Department of Ag ture, Washington, D. C.)



Copyright 1920, by The Goodyear Tire & Rubber Co.

"BECAUSE I use a truck on Goodyear Cord Tires I load potatoes, onions, etc., in the fields and haul to Louisville, 12 miles, in 50 minutes. Horses take 2 hours. The pneumatic-tired truck saves much labor and expense on my two farms totaling 180 acres."—Jacob Rupp, Farmer, R. F. D. No. 1, Louisville, Kentucky

THERE are farmers everywhere throughout this country today who have practically duplicated the experience related above by this Kentuckian.

They have proved that Goodyear Cord Tires free them from slow hauling, either by horses or solid-tired trucks, and thus free them from one of the worst handicaps ever placed on farming effort.

The use of the spry Goodyear Cords has the effect of moving a farm closer to town, of speeding up the other power-driven machinery on it, and so of getting each day's work done most easily and quickly.

Thus the perfected pneumatic truck tire is a powerful factor in that progress which not only is increasing decisively the income of the farmer but also is making his activities far more pleasant.

Its traction, cushioning and nimbleness have been made thoroughly practical for farm trucking by Goodyear Cord construction, which adds a tremendous toughness well known to rural users of Goodyear Cord Tires.

Accurate information detailing the results attained by farmers, ranchers and country motor express lines with pneumatic-tired trucks can be secured by writing to The Goodyear Tire & Rubber Company, at Akron, Ohio.

WEEKLY AGRICULTURAL DIGEST

SHIAWASSEE BREEDERS'

The Shiawassee Co. Jersey Breeders' Association held its first annual winter meeting on Wednesday, February 18 at Owosso. Owing to impassable roads and an epidemic of "flu" only about twenty people were out for the meeting. In spite of small attendance a very enthusiastic meeting was held. A business session was held at 10:30 in the office of County Agent H. E. Dennison, at which time election of officers was held for the ensuing year. The following officers were re-elected, President F. M. Crowe, vice-president, F. A. Thompson, Secretary, L. C. Reynolds, and treasurer, Mark Grout. Directors for the coming year are F. G. Frederick, Geo. Winegar, Sr., C. S. Richardson, H. C. Moore and Chas. Vandermark.

A luncheon was held at Christian's tea rooms at 12:00 after which the following program was given:

"Jersey Cattle in their Native Home," Professor A. C. Anderson; "The Value of Live Organizations in Promoting Jersey Interests," Mr. Alvan Balden, president of the Michigan Jersey Cattle Club.

At 3:00 the breeders attended the Lincoln theatre in a body to see the film, "Hearts and the Jerseys," which was loaned by the American Jersey Cattle Club for the occasion.

Plans for the ensuing year if carried out will put the Jersey Breeders of Shiawassee county on the map. Action looking toward Register of Merit testing and the standardization of breeding through the selection of similar blood lines in sires were some important things done at this time.

Shiawassee county has nearly two hundred head of pure bred Jerseys and with a good live organization working in connection with the state and national organizations the breeders feel that this county can become a real Jersey center.

Live Stock Shippers Being Penalized

According to the new rules adopted by the Chicago Live Stock Exchange a co-operative shipper of live stock is not an absolute criminal at least an offender against the rulers of the stockyards and as such must and will be fined for each and every offense. Where the specially privileged stock buyer may sell a carload of cattle at the yards for a commission ranging from $14 to $18, the co-operative shipping association's farmer must pay from $14 to $25. The same rate applies to calves and in the case of hogs the stock buyer can get away with a charge of from $10 to $12, but Mr. Farmer for his crime of butting in in an attempt to cut down his expense of doing business must pay from $12 to $16. Great game, isn't it? Yes, for it is estimated that the co-operative shipping association shipping to the Chicago markets will during 1920 pay from one and one-quarter to one and one-half million dollars more into the pockets of the Chicago Live Stock Exchange than they did in 1919.—*Organized Farmer.*

Dep't of Agriculture Seeks Co-Operation of Farm Organizations

In seeking solutions for present-day problems in which agricultural interests of this country are so vitally interested, it is the desire of the United States Department of Agriculture to secure co-operation and frank suggestions from any and all organizations directly concerned with farm progress, declared Edwin T. Meredith, Secretary of Agriculture today, in welcoming a delegation of 100 farmers representing the National Board of Farm Organizations in session in Washington.

"The industries which this department is designed to serve are of tremendous magnitude and there is no one, I believe, who appreciates this more keenly than the Secretary of Agriculture," said Mr. Meredith. "If we are to serve the farmers of this country, and through them the Nation as a whole, they must have contact with the department and the department with them. Therefore, I am speaking no idle phrase when I say that I want the suggestions which you men and others can give. Frank, honest criticisms will be gladly received also. It is by such contact of mind with mind that the best results will be obtained. I want you men to know that whenever you come to this department with suggestions or requests for help, we will do all in our power to serve you."

Muir Co-Op. Association

The Co-operative Shipping Association of Muir and Lyons has purchased lots on east Main street in Muir. Whether this means the erection of a general warehouse, an elevator or coal sheds is not yet given out, but it evidently presages a branching out into other lines of business by the association, which is already doing the bulk of the shipping of live stock.

OAKLAND BUREAU ACTIVE

C. B. Cook, Oakland county farm bureau agent, has returned from Columbus, O., where he was called for the fifth time to explain to Ohio farm bureau men the manner in which Michigan and Oakland county have built up their strong organizations. Mr. Cook and B. F. Beach, farm bureau business advisor, have four meetings scheduled for the week in communities desirous of establishing branches of the farm bureau.

Greatly Reduced Food Production Is Threatened

Serious risk of reduced food production this year because of high wages demanded by farm laborers, high cost of farm equipment and supplies, and because of pronounced movements of people from the farms to the cities is indicated by reports and letters that are reaching the United States Department of Agriculture from many sections of the country.

The most definite of these reports come from New York state, where records of the population on 3,775 representative farms on February 1 this year and February 1 a year ago were made by Federal and state workers. It was disclosed that during the past year the number of people on these farms decreased nearly 3 per cent and the number of hired men decreased more than 17 per cent. If the same ratio holds for all farms in the state about 35,000 men and boys left farming to go into other industries, while only about 11,000 have changed from other industries to farming. This is a more rapid movement from the farms to other industries than took place in the early part of the war.

The same condition in varying degrees exist in all sections, according to the Federal Bureau of Crop Estimates, although they are not so acute farther from industrial centers.

Another New York report, applicable in some degree in every part of the country, is that farm wages this year will average 14 per cent higher than they were in 1919, although in 1919 they were 80 per cent higher than they were at the beginning of the war. Estimates from 350 farmers in all parts of New York state indicate that experienced farm help, hired by the month, will be paid this year about $52 a month and board, as compared with $45.50 last year. Experienced married men, not boarded but provided with a house and farm products, are expected to receive on the average about $68.50 a month in cash as compared with $60 last year.

Numerous letters to the Department of Agriculture from its field workers or from farmers indicate a widespread disposition to cut down plantings so that the work of cultivating can be attended to by the farmer himself or by members of his family. The assertion that farmers can not pay the high wages demanded in competition with other industries and make a profit on their products is frequently made. Many farmers also, declare it is unfair to them to be under the necessity of working ten, twelve or more hours a day when the tendency in other industries is toward a shorter working day and a decreased output.

U. S. LIVE STOCK FIGURES

In the United States, the total value of all live stock decreased from $9,828,000,000 on Jan. 1, 1919, to $8,561,000,000 on Jan. 1, 1920 as compared with $5,890,000,000 in 1914 and $4,911,000,000 in 1919. Total numbers of all live stock in 1920 were 215,760,000, compared with 218,446,000 in 1919, 190,655,000 in 1914 and 196,480,000 in 1910.

While milk cows have been Wisconsin's most valuable class of live stock since 1914, it has become the most valuable in the United States this year, when horses and other cattle both gave it place. Milk cows numbered 23,747,000, as compared with 23,475,000 in 1919, 20,737,000 in 1914 and 20,625,000 in 1910. Total value was $2,022,000,000, compared with $1,836,000,000 a year ago $1,118,000000 in 1914 and $728,000,000 in 1910.

Other cattle decreased from 45,085,000 in 1919 to 44,385,000 in 1920, as against 35,855,000 in 1914 and 41,178,000 in 1910. Value was $1,915,000,000 compared to $1,993,000,000 in -1919, $1,116,000,000 in 1914 and $785,000000 in 1910.

Horses numbered 21,109,000 in 1920, 21,482,000 in 1919, 20,962,000 in 1914 and 19,33,000 in 1910, and were valued at $$1993,000,000)this year, compared to $2,115,000,000 last year, $2,292,000,000 in 1914 and $2,143,000,000 in 1910.

There were 72,909,000 swine in on farms in the United States in 1920, compared to 74,584,000 in 1919, 58,933,000 in 1914 and 58,186,000 in 1910. They were valued at $1,386,000,000 this year, compared to $1,643,000,000 last year, $613,000,000 in 1914 and $533,000,000 in 1910.

Sheep have declined in number steadily since 1910. On Jan. 1, 1920, there were 48,615,000, compared to 48,866,000 a year ago, 49,719,000 in 1914 and 52,4[illegible]8,000 in 1910. Total value in 1920 wa[illegible] $512,000,000; in 1919, $568,000,000; in 1914, $200,000,000, and in 1920, $216,000,000.

Fifteen Million Loaned to Farmers During January

During the month of January, 1920, an aggregate of $15,055,985 was loaned to 4,402 farmers of the United States by the Federal Land Banks on long-time first mortgages according to the monthly statements made to the Farm Loan Board. The Federal Land Bank of St. Paul leads in the amount of loans closed, the same being $2,607,300, the Federal Land Bank of Houston following with $2,487,985. The other banks closed loans in January as follows: Spokane, $1,969,200; Louisville, $1,322,700; Omaha, $1,132,800; Columbia, $1,041,500; New Orleans, $988,200; Wichita, $924,000; Baltimore $780,200; St. Louis, $702,250; Springfield, $578,300; Berkeley, $571,400.

During January 6,377 applications were received by the twelve banks asking for $25,073,153, and during the same month 6,352 loans were approved by them amounting to $21,552,875.

On January 31, 1920, there were operating in the United States 3,944 Farm Loan Associations, and the total mortgage loans made by the Federal Land Banks through these associations to 118,189 farmer-borrowers as of that date amounted to $318,445,231. Deducting from this amount the loans paid off in full by borrowers to-wit: $7,941,265, the grand total of loans now in force is distributed within the Federal Land Bank Districts as follows:

St. Paul	$42,378,400
Spokane	41,164,270
Omaha	38,925,890
Houston	36,088,750
Wichita	26,161,300
St. Louis	23,874,100
Louisville	22,588,100
New Orleans	21,870,900
Columbia	16,972,100
Berkeley	16,191,100
Baltimore	12,716,100
Springfield	12,127,940

Up to January 31, 1920, interest and amortization payments due by borrowers to wit: $7,941,265, the Banks amounted to $18,788,277.65. Of this amount all but $287,426.53 or 1.3 per cent had been paid, and of this sum $108,031.03 represent delinquent instalments maturing during the month.

Townsend Measure Would Relieve States of National Highway Expense

Main Features of Michigan Senator's Bill Described and Commended by National Grange

SENATOR Chas. E. Townsend, senator from Michigan, is author of and sponsor for the Townsend Highway bill, one of the most important pieces of constructive legislation now pending in Congress. This bill proposes to substitute for the present "hit and miss" co-operative State Aid System. A fully operative National System by which there would be built and maintained entirely at National expense a National connected highway system. It has the support of farmer interests in a large way; of automobile owners as represented in all their large organizations; of highway organizations quite generally; and of the automobile building industry almost to a man.

Readers of MICHIGAN BUSINESS FARMING will be interested in this bill its principal provisions, and some of the things that have happened to it before it reached the present form in which it was written and introduced just prior to the holiday recess of the Senate.

The following paragraphs from a recently issued statement by Senator Townsend gives the principal provisions of the bill:

"1. Authorizes the construction and maintenance of a national system of highways exclusively at the expense of the national government."

"2. Creates a Federal Highway Commission to be named by the president with the advice and consent of the Senate to take over all the highway functions now exercised by the Department of Agriculture, and to construct and maintain a national highway system.

"3. The national highways shall consist of two main highways in every state, comprising one per cent of the total highway mileage of each state as ascertained by the commission, where one per cent is not sufficient to cause these highways to connect with (a) adjacent states, (b) bordering countries, (c) waterways, the commission is authorized to extend the mileage in that amount."

"4. All highways shall be adequate for present and future needs, with a right of way 66 feet, and a minimum surface of 20 feet.

"5. The commission is directed to consult the state highway departments as to locations of those highways and is further authorized to have all the work undertaken by the State Highway Department, supervisory power remaining with the commission.

10. For the purpose of carrying out the Act there is appropriated $50,000,000 which shall become immediately available; $75,000.000 for the fiscal year beginning July 1, 1920, and $100,000,000 for each of the three succeeding years, in all $425,000,000."

An earlier draft of this bill introduced in the 65th Congress and printed, was distributed widely by Senator Townsend. Among others, it was sent to over 7,000 different subordinate granges. According to reports made public by the National Grange office in Washington, the replies received were over 12 to 1 in favor of the Townsend bill. Following this referendum, a number of changes, suggested by the Granges, were incorporated in the bill. It was sent to hundreds of other organizations with similar results, and the result of the constructive criticisms from all these sources is embodied in the present bill.

At its session in Grand Rapids in November, 1919, the National Grange passed the carefully prepared resolution dealing with the highway problem and referring to the Townsend plan, endorsing its principal features, and instructing its Washington representative, Thomas Clark Atkeson to co-operate with others in perfecting a satisfactory bill and securing its passage and enactment if possible.

A study of the fundamental economics of the highway problem explains both the reason for the action by the Grange, and the reason farmers generally are favoring the Townsend plan, when it comes to their attention.

Roads were at first the work of the individual, the foot path, the bridle path. Next they were the work of the neighborhood or community. Then in this country the towns (in the north) or the counties (in the south) took hold of the problem. Automobile development brought about hard surfaced expensive highways, and now town and county aid has grown into state and federal aid. All this did not happen or develop by accident. There is a fundamental economic reason, but a reason and a condition which has escaped general attention.

Whom does this road benefit?

At first it was, of course, essential to the individual. He needed it to get to his dwelling place. But as agriculture developed to a productive industry, as cities grew and the surplus products of the farms became the food of villages and cities, then the benefit of the road shifted. That shift in benefit has reached its height at this moment, and today the road is of more benefit in dollars and cents to the city dweller than to the farmer himself.

A good road cheapens the hauling cost of every pound of freight that goes over that road. Haulage cost is an item, added to production cost that along with the other items of distribution, is passed on to the consumer to pay. Decrease the cost of haulage, the consumer benefits. The bulk of the freight hauled over American roads is farm products going to market.

A good road by a farm does not make that farm a pound more of grain or meat or anything else; nor does it enable a farmer to produce any farm product at less cost to him. What the good road does to the farmer is to increase the livability of country life, give better access to church, school; some opportunities and recreation, but these are items difficult if not impossible to translate into cash value.

When propositions to spend millions on hard-surfaced roads are presented to the farmers, these facts are the ones they think about. Every step in the development of highway policy has come because of this situation, whether it was appreciated or not.

Good roads are of benefit to the whole public. The Townsend bill is the first appreciation of this in a broad national way. The Townsend bill undertakes to set apart suffcient mileage of highways, estimated at one per cent of the total in each state, to make up a national system. These roads which would be the most expensive to build because the most necessary and hardest used by the great increasing truck trafffic, the government would build and maintain at its own expense. This is the broadest recognition yet in evidence of the appreciation of all the public, that good roads are of benefit to all the public, by reason of their efficiency in reducing transportation costs on all commodities hauled over these roads.

It is hoped and expected that the enactment of the Townsend bill and the building of this national system will lead to and be followed by similar activity on the part of the states. A state relieved by the national construction of the part of the national system in that state—the roads of most importance and greatest expense in the main—will have its resources available to build the next important roads on greater mileage because less expensive. In like manner, counties and towns can work out thir problems, each from resources untouched

Only Essex Shares Hudson's Qualities

They Show Why Essex Went 3037 Miles in 50 Hours

A critical public has judged the Essex.

In the year past it set a world's sales record.

More than $35,000,000 was paid for 22,000 Essex cars now in service.

That shows how men wanted what Essex offered.

Now Essex proves the accuracy of motordom's judgment.

Let the official tests speak:

On the Cincinnati Speedway a stock chassis Essex made a new world mark of 3037 miles in 50 hours, under observation of the American Automobile Association.

With other trials the same Essex ran a total of 5870 miles in 94 hours, 22 minutes driving time, averaging over a mile a minute.

Both Have This Motor Heat Control

Still another Essex phæton holds the world's 24-hour road mark of 1061 miles.

The Essex and Hudson are of course totally different types.

But note the advantages Essex shares with Hudson.

For instance, the radiator shutters by which efficient operating heat is maintained in coldest weather. They mean everything to satisfactory winter driving. Closed, they keep the heat in.

No unsightly hood covers are needed. They give summer efficiency to gasoline. They end hard starting. And in warm weather, opened, they give the maximum cooling.

The Performance Leaders in Every Community

The Essex, of course, does not cost as much as the Hudson, and though it is admittedly the runner-up in performance, it can never be all the Super-Six is.

In speed—in acceleration—in hill-climbing—in endurance—no stock car ever matched Hudson's famous records.

In every community you will find the two cars most noted for performance are the Hudson Super-Six and Essex.

Demand for both is so large that only by placing your order ahead can you insure delivery when you want it.

Essex Motors—Detroit, Michigan

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

Synopsis of Preceding Chapters

FRANCIS MORGAN, son of a New York millionaire, who has just died, has become bored by the city's luxury and tameness and has decided to go on an extensive fishing trip. Regan, a former colleague of Francis' father, is plotting to get the young man out of the way so that Regan may be free to manipulate the great Tampico oil stocks in which young Morgan is heavily invested and in which he has great faith. Regan gets Torres, a dusky-skinned visitor, to lure Francis to the Carribean Islands where a pirate ancestor of Morgan has buried a great treasure. The lure works and young Morgan starts out on the trip alone. Becalmed in a small vessel at sea, he lands on an island whither he had been beckoned by a girl on the shore. The girl mistakes Francis for a lover she has quarreled with. He is chased from the island by her father and brothers. Francis explores another island where a young man threatens his life and then saves it from savages who attack young Morgan. Francis and the young man discover they are related. The young man, who's name is Henry Morgan is also hunting for the hidden treasure. They form a partnership. Francis discovers that Henry is the lover of the girl on the island and that her name is Leoncia. Francis returns to the first island to get Leoncia to forgive Henry.

"MORGAN, Francis Morgan, as I explained there, Henry and I are some sort of distant relatives—forty-fifth cousins or something like that."

To his bewilderment, a great doubt suddenly dawned in her eyes, and the old-familiar anger flashed.

"Henry," she accused him. "This is a ruse, a devil's trick you're trying to play on me. Of course you are Henry."

Francis pointed to his mustache.

"You've grown that since," she challenged.

He pulled up his sleeve and showed her his left arm from wrist to elbow. But she only looked her incomprehension of the meaning of the action.

"Do you remember the scar?" he asked.

She nodded.

"Then find it."

She bent her head in swift, vain search, then shook it slowly as she faltered:

"I . . . I ask your forgiveness. I was terribly mistaken, and when I think of the way I . . . I've treated you . . . "

"That kiss was delightful," he naughtily disclaimed.

She recollected more immediate passages, glanced down at her knee and stifled what he adjudged was a most adorable giggle.

"You say you have a message from Henry," she changed the subject abruptly. "And that he is innocent . . . ? This is true? Oh, I do want to believe you !"

"I am morally certain that Henry no more killed your uncle that did I——"

"Then say no more, at least not now," she interrupted joyfully. "First of all I must make amends to you, though you must confess that some of the things you have done and said were abominable. You had no right to kiss me."

"If you will remember," he contended, "I did it at the pistol point. How was I to know but what I would get shot if I didn't."

"Oh, hush, hush," she begged. "You must go with me now to the house. And you can tell me about Henry on the way.

Her eyes chanced upon the handkerchief she had flung so contemptuously aside. She ran to it and picked it up.

"Poor ill-treated kerchief," she crooned to it. "To you also must I make amends. I shall myself launder you, and . . . " Her eyes lifted to Francis as she addressed him. "And return it to you, sir, fresh and sweet and all wrapped around my heart of gratitude . . . "

"And the mark of the beast?" he queried.

"I am so sorry," she confessed penitently.

"And may I be permitted to rest my shadow upon you?"

"Do ! Do !" she cried gaily. "There ! I am in your shadow now. And we must start."

Francis tossed a peso to the grinning Indian boy, and, in high elation turned and followed her into the tropic growth on the path that led up to the white hacienda.

Seated on the broad piazza of the Solano Hacienda, Alvarez Torres saw through the tropic shrubs the couple approaching along the winding drive way. And he saw what made him grit his teeth and draw very erroneous conclusions. He muttered imprecations to himself and forgot his cigarette.

What he saw was Leoncia and Francis in such deep and excited talk as to be oblivious of everything else. He saw Francis grow so urgent of speech and gesture as to cause Leoncia to stop abruptly and listen further to his pleading. Next—Torres could scarcely believe the evidence of his eyes, he saw Francis produce a ring, and Leoncia, with averted face, extend her left hand and receive the ring upon her third finger. Engagement finger it was and Torres could have sworn to it.

What had really occurred was the placing of Henry's engagement ring back on Leoncia's hand. And Leoncia, she knew not why, had been vaguely averse to receiving it.

Torres tossed the dead cigarette away, twisted his mustache fiercely, as if to relieve his own excitement, and advanced to meet them across the piazza. He did not return the girl's greeting at the first. Instead with the wrathful face of the Latin, he burst out at Francis:

"One does not expect shame in a murdered, but at least one does expect simple decency."

Francis smiled whimsically.

"There is goes again," he said. "Another lunatic in this lunatic land. The last time, Leoncia, that I saw this gentleman was in New York. He was really anxious to do business with me. Now I meet him here and the first thing he tells me is that I am an indecent, shameless murderer."

"Senor Torres, you must apologize," she declared angrily. "The house of Solano is not accustomed to having its guests insulted."

"The house of Solano, I then understand, is accustomed to having its men murdered by transient adventurers," he retorted. "No sacrifice is too great when it is in the name of hospitality."

"Get off your foot, Senor Torres," Francis advised him pleasantly. "You are standing on it. I know what your mistake is. You think I am Henry Morgan. I am Francis Morgan, and you and I, not long ago, transacted business together in Regan's office in New York. There's my hand. You shaking of it will be sufficient apology under the circumstances."

Torres, overwhelmed for the moment by his mistake, took the extended handed and uttered apologies both to Francis and Leoncia.

"And now," she beamed through laughter, clapping her hands to call a house-servant, "I must locate Mr. Morgan, and go and get some clothes on. And after that, Senor Torres, if you will pardon us, we will tell you about Henry."

While she departed, and while Francis followed away to his room on the heels of a young and pretty mestiza woman, Torres, his brain resuming its functions, found he was more amazed and angry than ever. This, then, was a newcomer and a stranger to Leoncia whom he had seen putting a ring on her engagement finger. He thought quickly and passionately for a moment. Leoncia, whom to himself he always named the queen of his dreams, had, on an instant's notice, engaged herself to a strange Gringo from New York. It was unbelievable, monstrous.

He clapped his hands, summoned his hired carriage from San Antonio and was speeding down the drive when Francis stolled forth to have a talk with him about further details of the hiding place of old Morgan's treasure.

After lunch, when a land-breeze sprang up, which meant fair wind and a quick run across Chiriqui Lagoon and along the length of it to the Bull and the Calf, Francis, eager to bring to Henry the good word that his ring adorned Leoncia's finger, resolutely declined her proffered hospitality to remain for the night and meet Enrico Solano and his tall sons. Francis had a further reason for hasty departure. He could not endure the presence of Leoncia—and this in no sense uncomplimentary to her. She charmed him, drew him, to such extent that he dared not endure her charm and knew if he were to remain man-faithful to the man in the canvas pants even then digging holes in the sands of the Bull.

So Francis departed, a letter to Henry from Leoncia in his pocket. the last moment ere he departed, was abrupt. With a sigh so quickly repressed that Leoncia wondered whether or not she had imagined it, he tore himself away. She gazed after his retreating form down the driveway until it was out of sight, then started at the ring on her finger with a vaguely troubled expression.

From the beach Francis signaled the Angelique, at anchor, to send a boat ashore for him. But before it had been swung into the water, half a dozen horsemen, revolver-belted, rifles across their pommels, rode down the beach upon him at a gallop. Two men led. The following four were hand-dog half-castes. Of the two leaders, Francis recognized Torres. Every rifle came to rest on Francis, and he could not but obey the order snarled at him by the unknown leader to throw up his hands. And Francis opined aloud:

"To think of it ! Once, only the other day—or was it a million years ago?—I thought auction-bridge at a dollar a point was some excitement. Now, sirs, you on your horses with your weapons threatening the violent introduction of foreign substances into my poor body, tell me what is doing now. Don't I ever get off this beach without gunpowder complications? It is my ears, or merely my mustache, you want?"

"We want you," answered the stranger leader, whose mustache bristled as magnetically as his crooked black eyes.

"He is the honorable Senor Mariano Vercara e Hijos, Jefe Politico of San Antonio," Torres replied.

"Good night," Francis laughed, remembering the man's description as given to him by Henry. "I suppose you think I've broken some harbor rule or sanitary regulation by anchoring here. But you must settle such things with my captain, Captain Trefethen, a very estimable gentleman. I am only the charterer of the schooner—just a passenger. You will find Captain Trefethen right up in maritime law and custom."

"You are wanted for the murder of Alfaro Solano," was Torres' answer. "You didn't fool me, Henry Morgan, with you talk up at the hacienda that you were some one else. I know that some one else. His name is Francis Morgan, and I do not hesitate to add that he is not a murderer, but a gentleman."

"Ye gods and little fishes !" Francis exclaimed. "And yet you shook hands with me, Senor Torres."

"I was fooled," Torres admitted sadly. "But only for a moment. Will you come peaceably?"

"As if——" Francis shrugged his shoulders eloquently at the six rifles.

"I suppose you'll give me a pronto trial and hang me at daybreak."

"Justice is swift in Panama," the Jefe Politico replied, his English queerly accented but understandable. "But not so quick as that. We will hang you at daybreak. Ten o'clock in the morning is more comfortable all around, don't you think?"

"Oh, by all means," Francis retorted. "Make it eleven, or twelve noon—I won't mind."

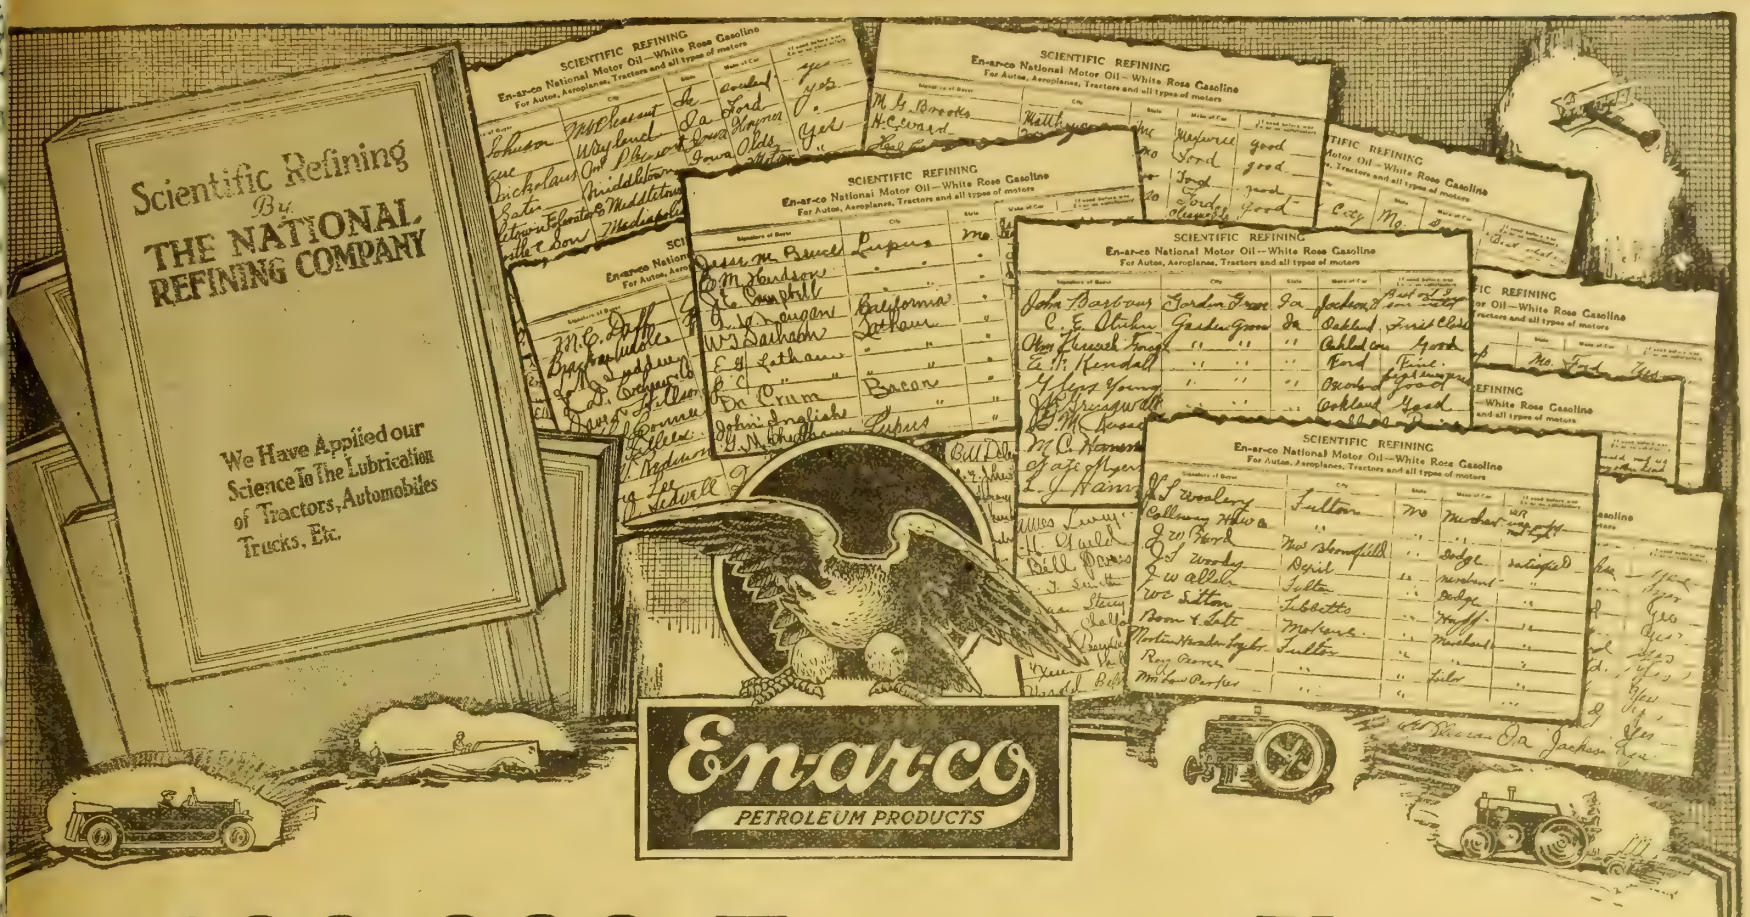
The escape from Torres and his murderous gang



100,000 En-ar-co Users

Endorse This Scientifically Refined Oil

LARGE oil users no longer select their oil in a haphazard way. They know there are vital differences. So they try many brands. And they carefully test and compare them.

One user writes: "We have used many different oils in order to make a test, and we have decided to use En-ar-co exclusively in the future as we believe it is the best oil for us."

Another writes: "We are using En-ar-co exclusively and expect to continue to do so, as it meets our demand for a high grade oil better than anything we have ever used."

We have in our files more than a hundred thousand letters and signed testimonials. All enthusiastically endorse En-ar-co Motor Oil and testify to its superiority over all others.

En-ar-co Motor Oil

Refined Again and Again

The unvarying high quality of En-ar-co Motor Oil is due to our scientific method of refining.

The selected crude oil is placed into huge stills and heated to a high temperature. The vapor is caught, condensed into a liquid and put through a refrigerating process. Then the oil flows into still where it is reduced to the proper consistency. Finally it is filtered again and again until laboratory tests show the oil to be entirely free from impurities.

These impurities found in oils less scientifically refined limit the performance of the most expensive motor cars and cause repair expense.

Get full power from your car. Keep it free from carbon. Eliminate friction. Keep your repair expense to the minimum. Lubricate with En-ar-co Motor Oil. Start TODAY.

All En-ar-co Products Excel

There are many other En-ar-co Products. All excel as does En-ar-co Motor Oil.

White Rose Gasoline — clean, uniform, powerful. National Light Oil for Tractor fuel, also best for lamps, oil stoves and incubators. Black Beauty Axle Grease for wagons. Always look for the En-ar-co trade-mark!

Auto Tour Game FREE!

The coupon below will bring you FREE the fascinating En-ar-co Auto Tour Game, in which autos compete in a cross country race (not a road map). Grown folks as well as children will enjoy this game. Two, three or four can play it. Send in the coupon NOW.

The National Refining Company

2024 Rose Building, Cleveland, Ohio

Branches in 89 Cities

En-ar-co Motor Grease

Best for Transmissions, Gears and Differentials on Motor Cars and Tractors

This Great Game FREE

THE NATIONAL REFINING COMPANY,

"HEARTS OF THREE"

(*Continued from page* 12)

"You will kindly come with us Senor," Mariona Vercara e Hijos, said, the suavity of his diction not masking the iron of its intention. "Juan! Ignacio!" he ordered in Spanish. "Dismount! Take his weapons. No, it will not be necessary to tie his hands. Put him on the horse behind Gregario."

Francis, in a venerably whitewashed adobe cell with walls five feet thick, its earth floor carpeted with the forms of half a dozen sleeping peon prisoners, listened to a dim hammering not very distant, remembered the trial from which he had just emerged, and whistled long and low. The hour was half-past eight in the evening. The trial had begun at eight. The hammering, from which place of eminence he was scheduled at ten next morning to swing by a rope around his neck. The trial had lasted half an hour by his watch. Twenty minutes would have covered it had Leoncia not burst in and prolonged it by the ten minutes courteously accorded her as the great lady of the Solano family.

"The Jefe was right," Francis acknowledged to himself in a matter of solioquy. "Panama justice does move swiftly."

The very possession of the letter given him by Leoncia and addressed to Henry Morgan had damned him. The rest had been easy. Half a dozen witnesses had testified to the murder and identified him as the murderer. The Jefe Politico himself had so testified. The one cheerful note had been the eruption on the scene of Leoncia, chaperoned by a palsied old aunt of the Solano family. That had been sweet—the fight the beautiful girl had put up for his life, despite the fact that it was foredoomed to futility.

When she had made Francis roll up the sleeve and expose his left forearm, he had seen the Jefe Politico shrug his shoulders contemptuously. And he had seen Leoncia fling a passion of Spanish words, too quick for him to follow, at Torres. And he had seen and heard the gesticulation and the roar of the mob-filled court-room as Torres had taken the stand.

But what he had not seen was the whispered colloquy between Torres and the Jefe, as the former was in the thick of forcing his way through the press to the witness box. He no more saw this particular side-play than did he know that Torres was in the pay of Regan to keep him away from New York as long as possible, and as long as ever if possible, nor than did he know that Torres himself was in love with Leoncia, was consumed with a jealously that knew no limit to its ire.

All of which had blinded Francis to the play under the interrogation of Torres by Leoncia, which had compelled Torres to acknowledge that he had never seen a scar on Francis Morgan's left forearm. While Leoncia had looked at the little old judge in triumph, the Jefe Politico had advanced and demanded of Torres in stentorian tones:

"Can you swear that you ever saw a scar on Henry Morgan's arm?"

Torres had been baffled and embarrassed, had looked bewilderment to the judge and pleadingness to Leoncia, and in the end, without speech, shaken his head that he could not so swear.

The roar of triumph had gone up from the crowd of ragamuffins. The judge had pronounced sentence, the roar had doubled on itself, and Francis had been hustled out and to his cell, not entirely unresistingly, by the gendarmes and the Comisario, all apparently solicitous of saving him from the mob that was unwilling to wait till ten next morning for his death.

"That poor dub, Torres, who fell down on the scar on Henry!" Francis was meditating sympathetically, when the bolts of his cell door shot back and he arose to greet Leoncia.

But she declined to greet him for the moment, as she flared at the Comisario in rapid-fire Spanish, with gestures of command to which he yielded when he ordered the jailer to remove the peons to other cells, and himself with a nervous and apologetic bowing, went out and closed the door.

And then Leoncia broke down, sobbing on his shoulder, in his arms: "It is a cursed country, a cursed country. There is no fair play."

And as Francis held her pliant form, meltingly exquisite in its maddeningness of woman, he remembered Henry, in his canvas pants, barefooted, under his floppy sombrero, diging holes in the sand of the Bull.

He tried to draw away from the armful of deliciousness, and only half succeeded. Still, at such slight removal of distance, he essayed the intellectual part, rather than the emotional part he desired all too strongly to act.

"And now I know at last what a frame-up is," he assured her, farthest from the promptings of his heart. "If these Latins of your country thought more cooly instead of acting so passionately, they might be building railroads and developing their country. That trial was a straight passionate frame-up. They just knew I was guilty and were so eager to punish me that they would not even bother for mere evidence or establishment of identity. Why delay? They knew Henry Morgan had knifed Alfaro. They knew I was Henry Morgan. When one knows, why bother to find out?"

Deaf to his words, sobbing and struggling to cling closer while he spoke, the moment he had finished she was deep again in his arms, against him, to him, her lips raised to his; and, ere he was aware, his own lips to hers.

"I love you, I love you," she whispered brokenly.

"No, no," he denied what he most desired. "Henry and I are too alike. It is Henry you love and I am not Henry."

She tore herself away from her own clinging, drew Henry's ring from her finger, and threw it on t floor. Francis was so beyond h self that he knew not what was ing to happen the next moment was only saved from whatever might be by the entrance of the Co isario, watch in hand, with aver face striving to see naught else t the moments registered by the se ond hand on the dial.

She stiffened herself proudly, a all but broke down again as Fra slipped Henry's ring back on h finger and kissed her hand in fa well. Just ere she passed out t door she turned and with a whis ed movement of the lips that devoid of sound told him: "I lo you."

Promptly as the stroke of the cl at ten o'clock Francis was led o into the jail patio where stood gallows. All San Antonio was ously and shoutingly present, cluding much of the neighbo population and Leoncia, Enrico lano, and his five tall sons. En and his sons fumed and strutted, the Jefe Politico, backed by the C isiaro and his gendarmes was ad ant. In vain, as Francis was fo to the foot of the scaffold, did L cia strive to get to him and did men strive to persuade her to le the patio. In vain, also, did father and brothers protest Francis was not the man. The J Politica smiled contemptuously ordered the execution to proceed

On top the scaffold, standing the trap, Francis declined the istrations of the priest, telling in Spanish that no innocent man ing hanged needed intercessions the next world, but that the men were doing the hanging were in of just such intercessions.

They had tied Francis' legs, were in the act of tying his a with the men who held the n and the black cap hovering nea put them on, when the voice of singer was heard approaching without and the song he sang wa

"Back to back again the mainmas
Held at bay the entire crew

Leoncia, almost fainting, rec ered at the sound of the voice, a cried out with sharp delight as descried Henry Morgan enteri thrusting aside the guards at gate who tried to bar his way.

At sight of him the only one pr ent who suffered chagrin was T res, which passed unnoticed in excitement. The populace was accord with the Jefe, who shrug his shoulders and announced t one man was as good as another long as the hanging went on. A here arose hot contention from Solano men that Henry was likew innocent of the murder of Alfa But it was Francis, from the scaff while his arms and legs were be untied, who shouted through the mult:

"You tried me! You have tried him! You cannot hang a m without a trial! He must have trial!"

And when Francis had descend from the scaffold and was shak Henry's hand in both his own. Comisario with the Jefe at his ba duly arrested Henry Morgan for murder of Alfaro Solano.

CHAPTER IV.

"WE MUST work quickly that is the one thing sur Francis said to the li conclave of Solanos on the piazza the Solano hacienda.

"One thing sure!" Leoncia cr out scornfully ceasing from her guished pacing up and down. "T one thing sure is that we must s him."

As she spoke she shook a passi ate finger under Francis' nose to phasize her point. Not content, shook her finger with equal empha under the noses of all and sundry her father and brothers.

"Quick!" she flamed on. "I course we must be quick. It is th or . . . " Her voice trailed off the unvoiceable horror of what wo happen to Henry of they were quick.

"All Gringos look alike to Jefe," Francis nodded sympathe ally. She was splendidly beaut and wonderful, he thought. certainly runs all San Antonio, shrift is his motto. He'll

Is that good old battery of yours getting balky?

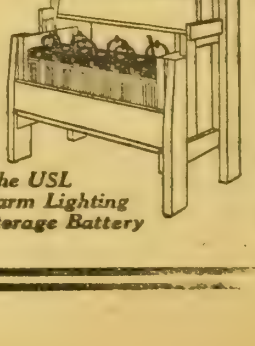
IT may require only a skillful repair to bring back its snappy motor-spinning power. No matter what make of battery you have in your car, drive to your nearest USL Station for Golden Rule Service.

USL Service Stations don't have to sell a fixed number of batteries each month, that's not the USL Policy. Often when a man thinks his battery is done for and wants to buy a new USL, our Service Stations show him how they can save money for him by repairing his battery and giving him an adjustment guarantee for eight months. That is "Golden Rule" service.

USL Service Stations are expert at keeping *electrical systems* in tune so they will treat the batteries *right*. It is important to remember this.

USL Service Stations sell only the USL Battery which has long life Machine-Pasted Plates. USL Batteries are shipped "Dry-Charged." This avoids all before-sale deterioration and the customer is assured a perfect battery with every bit of its life intact.

If you are having trouble with your automobile battery or your farm lighting battery, be sure to see the USL Service Station Man and have the trouble corrected at once.



The USL Farm Lighting Storage Battery

U.S. Light & Heat Corporation, Niagara Falls, N.Y.

Likely there's one of our fifteen hundred service stations in your town. If there isn't, for the address of the handiest, just drop a post card to the nearest of the following distributors:

United Electric Service Co., Detroit, Mich.
U. S. Auto Supply Co., Chicago, Ill.

"The judge, the e, the Jefe Politico, unfortune- are all united in believing that d. Which is the most regret d. Which is most regrettable. which is not what I came to see bout. I came to offer my ser- n any and all ways you may and. My life, my honor, are r disposal. Speak. I am your "
pping suddenly and gracefully e knee before her, he caught and from her lap, and would instantly flooded on with his , had not his eyes lighted on amond ring on her engagement g. He frowned, but concealed rown with [illegible] drive it from his features and to speak.
knew you when you were small, la, so very, very charmingly and I loved you always—No, ! Please. My heart must Hear me out. I loved you s. But when you returned your convent, from schooling abroad, a woman, a grand and noble lady fit to rule in the house of the Solanos, I was burnt by your beauty. I have been patient. I refrained from speaking. But you may have guessed. You surely must have guessed. I have been on fire for you ever since. I have been consumed by the flame of your beauty, by the flame of you that is deeper than your beauty."

He was not to be stopped, as she well knew, and she listened patiently, gazing down on his bent head and wondering idly why his hair was so unbecomingly cut, and whether it had been last cut in New York or San Antonio.

"Do you know what you have have been to me ever since your return?"

She did not reply, nor did she endeavor to withdraw her hand, although his was crushing and bruising her flesh against Henry Morgan's ring. She forgot to listen, led away by a chain of thought that linked far. Not in such rhodomontade of speech had Henry Morgan loved and won her, was the beginning of the chain. Why did those of Spanish blood always voice their emotions so exaggeratedly? Henry had been so different. Scarcely had he spoken a word. He had acted. Under her glamor, himself glamoring her, without warning, so certain was he not to surprise and frighten her, he had put his arms around her and pressed his lips to hers. And hers had been neither too startled nor altogether unresponsive. Not until after that first kiss, arms still around her, had Henry began to speak at all.

And what plan was being broached around the corner of the ell by her men and Francis Morgan? Her mind strayed on, deaf to the suitor at her feet. Francis! Ah—she almost sighed, and marveled, what of her self-known love for Henry, why this stranger Gringo so enamored her heart. Or any man? No! No! She was not fickle nor unfaithful. And yet? . . . Perhaps it was because Francis and Henry were so much alike, and her poor stupid loving woman's heart—while it had seemed she would have followed Henry anywhere over the world, in any luck or fortune, it seemed to her now that she would follow Francis even farther. She did love Henry, her heart solemnly proclaimed. But also did she love Francis, and almost did she divine that Francis loved her—the fervor of his lips on hers in his prison cell was inerasable; and there was a difference in her love for the two men that confuted her powers of reason and almost drove her to the shameful conclusion that she, the latest and only woman of the house of Solano, was a wanton.

A severe pinch of her flesh against Henry's ring, caused by the impassioned grasp of Torres, brought her back to him, so that she could hear the spate of his speech pouring on:

"You have been the delicious thorn in my side, the spicked rowel of the spur forever prodding the sweetest and moist poignant pangs of love in my breast. I have dreamed of you. and for you. And I have my own name for you. Ever the one name I have had for you: the Queen of my Dreams. And you will marry me, my Leoncia. We will forget this mad Gringo who is already dead. I shall be gentle, kind. I shall love you always. And never shall any vision of him arise between us. For myself, I shall not permit it. For you . . . I shall love you so that it will be impossible for the memory of him to arise between us and give you one moment's heart-hurt."

Leoncia debated in a long pause that added fuel to Torres' hopes. She felt the need to temporise. If Henry were to be saved . . . and had not Torres offered his services? Not lightly could she turn him away when a man's life might depend upon him.

"Speak!—I am consuming!" Torres urged in a choking voice.

"Hush! Hush!" she said softly. "How can I listen to love from a live man, when the man I loved is yet alive?"

Loved! The past tense of it startled her. Likewise it startled Torres, fanning his hopes to fairer flames. Almost was she his. She had said loved. She no longer bore love for Henry. She had loved him, but no longer. And she, a maid and woman

FREE
That Crib Didn't Cost Me a Cent
Martin Cribs
A Post Card Brings it FREE And Post Paid For The Asking
We Want to Send You
a copy of our brand new Corn Crib Book on *Martin "Corn Saver" Cribs and Bins.*
We want to mail every farmer a copy of this handsome book FREE and postpaid. It's the biggest and finest book ever published on Metal Corn Cribs and Grain Bins. And it contains a world of valuable information on how to store your corn and grain and make more profit out of it.
It Tells
—How, with a Martin "Corn Saver" Crib, you can get 10 to 20% more out of your corn crop every year.
—How these modern steel cribs cure every single ear of your corn in a clean, hard, sound condition and bring the top market price for it.
—How they will protect every ear from the ravages of rats, mice, birds, mould and thieves.
—How they completely banish the danger of fire destroying your crop.
—How you can store your corn in them safe from waste, safe from loss of any kind and make more money.
Every Farmer Should Have a Copy
of this big valuable book. No matter whether you raise 20 acres or 2000 acres of corn, there is a size and style of MARTIN "CORN SAVER" CRIB built to fit your needs. They are made of galvanized steel—cheaper than wood cribs—rust-proof—never need repairs—and last a lifetime.
Now is the time to send for this big FREE book and find out all about these modern "Corn Saver" Cribs. Send a postal with your name and address and we will mail it to you free and postpaid along with our SPECIAL LOW PRICES. Don't delay. Write today.

The Militarists Take a Licking

AFTER every war there is a certain amount of unscrambling to be done. Useless fighting equipment is scrapped and the vast army of private soldiers and petty officers is demobolized. But there is always a large number of army officers who do not want to be unscrambled. They enjoy the easy, respectable job of officering, and they and their friends try to induce Congress to provide them with an army or something to officer. In these efforts they are encouraged and aided by another substantial group of citizens who have money invested in Mexico or other foreign countries, or perhaps would invest their money in other countries if they could be assured of the protection of the United States government in case the people of the other countries would not stand for the exploitation of their natural resources. Naturally they want a large standing army and compulsory military training. Between this class of citizens and army officers in the American Legion Congress has been pestered to death to enact such legislation. But they are not the only ones who have been busy. The men and women of the United States who have something more at stake than army jobs and investments in foreign countries have been doing a little lobbying themselves and because they represent a very considerable part of the population Congress has been obliged to listen to them. As a result, the army reorganization bill has been passed by the House minus the clause for compulsory military training.

Military training is a dead issue in this country now, but there is something that goes with military training which is a very live issue, and that is physical training. In every grade in every school in the United States physical training should be taught as a part of the curriculum. In the lower grades this training need not be more than the simplest calisthenics, deep breathing, chest expansion, body bending, etc., but in the higher grades, the dumb bells, the Indian club, the basket ball, and the more intricate gymnastics should be brought into use. Moreover, the taking of these courses should be as compulsory as the reading or arithmetic lesson. We are not a nation of weaklings as some of the military training exponents claim, but we have not yet developed as strong a race of men and women as it is possible to develop. Too many of our children are sickly and too many of our adults are chronic sufferers. The time to build the body aright and enure it to the hardships and diseases of life is when it is young and yielding. We do not want,—we will not have,—compulsory military training, but we should by all means have compulsory physical training.

Effect of Industrial Activity on Agriculture

THE MICHIGAN Manufacturer and Financial Record is greatly perturbed over the suggestion recently made by Orlando Barnes, of the State Tax Commission, that the state derive an additional source of revenue from the income tax, and the editor of that journal seizes the opportunity thus presented to vent his long accumulated spleen against the agricultural interests of the state, likening those who would compel the people of the cities to pay their just portion of the state taxes to the man who killed the goose that laid the golden eggs. Listen to this mess of error:

"The farmer who has seen Michigan pass from an agricultural state to the fifth industrial area of the nation; who has seen great industries grow up until they furnished employment to thousands of men; who has experienced the doubling, trebling and quadrupling of his farm values by reason of the great markets that the industrial cities have built up at his very doors; who has been so blind that he could not see his own opportunity as a producer, and so dense that he could not present the attractive side of farm life to his sons, letting them grow up to become recruits for the city's industrial life, has engendered a jealousy in his own mind."

We will not accuse the editor of this organ of the industrial interests of hypocrisy. No doubt he believes all that he has written. But his ignorance of the rural mind and the influence of industrial prosperity upon the markets for farm products, the value of farm property, and upon the farm labor supply is truly pitiful. Yes, it is altogether true that the farmers have seen the industrial centers of Michigan grow into great and prosperous cities. And at the same time they have seen their farm help migrate in a steady stream to the factories of these great cities which have bid for their services and secured them because the farmer could not meet the competition. They have seen their farm values and assessment increase by leaps and bounds, but it has not occurred to their critics that this increase has added nothing to the productive capacity of the farms nor to the farmers' net income. Farm values are high in the lower part of the state, not because the demand exceeds the supply or because the net income from the products of these farms is much greater than in former years, but because we are in a period of price inflation and the land speculator has put an artificial value upon the farms which is partly upheld by the speculation in the immediate vicinity of the big cities where fancy prices are paid for farm property to subdivide into city lots. It ill becomes those who have taken the farmers' sons and hired men to criticize the farmers for their failure to keep them.

A careful investigation will prove that the proximity of great manufacturing centers to agricultural communities is a curse rather than a blessing to the communities, and that the largest number of abandoned farms are found in the eastern states where industrial activity is the greatest.

Lost, Strayed or Stolen

WINTER is hanging on with a powerful grip. Snow-bound fields and roads, and ice-bound lakes and brooks give no sign that spring is anywhere about. Even the old-timers who remember so vividly the fierce winters of the early eighties and ninetes whistle and say, "Gosh all hemlocks!" when they look at the thermometer these late winter mornings. Where is spring? Is she lost, strayed or stolen?

Paradoxical as it may seem, the shortest month of the year is at the same time the longest month of the year. Or so it seems to those who are anxious for the springtime. December, January and February are, according to the almanacs, the months of winter. March is supposed to usher in the spring. But March fell down on the job this year all right as we haven't seen anything of spring in these parts. How about yourself?

Ah, well, all things have an ending. Each day the old earth swings her northern latitudes a little nearer the sun and in the places having a southern exposure the snow melts a little nearly every day. Very soon now,—perhaps tomorrow or perhaps a couple weeks from tomorrow,—the feathered harbingers of spring will put in an appearance; the little fringes of ice that cling to the edge of the swifter streams will break up and float away; the snow in the meadows and woodlands will yield to the warm smiles of the sun and the soft touch of the southern winds.

Then the earth will soften and John will be scolded for tracking in the mud. And the Plymouth Rock rooster who seems to think that the minute the snow is gone his hard ought to speed up production, will scold his wives for not laying more eggs. And we shall all feel again the great joy of living throbbing in our veins, and we shall want to be out of doors, and smell the freshness of the ozone left by the first warm rains. These are the signs of spring. Let 'em come.

Milo Campbell After Wool Gougers

MILO CAMPBELL, candidate for governor, bearded the lion in his den, so to speak, when he appeared before a Boston club last week and attacked the Boston wool dealers as gougers and profiteers some of whom were present at the meeting. For a long time Mr. Campbell has been on the trail of the men who were responsible for the gigantic wool swindle during the war, which took millions of dollars out of the pockets of farmers and placed them in the pockets of the Boston wool dealers. Mr. Campbell's publish charges and his personal appeals to the department of justice failed to secure action against the offenders, whose guilt was substantiated in the public eye when they failed to make answer to the charges. As a result of Mr. Campbell's investigations and disclosures of the wool trust, there must come an elimination of the excess profit takers resulting in greater returns to the producer and cheaper clothing to the consumer. We admire Mr. Campbell for his courageous exposure of the Boston wool trust, and feel proud that we are to have the opportunity of supporting him for governor of the state of Michigan.

Wheat Guaranty Will Continue

THE GUARANTEE on wheat will continue despite the desperate efforts of Sen. Gronna of North Dakota to have it removed. The farmers did not feel like changing their entire wheat holdings upon Gronna's judgment, and so petitioned Congress not to consider the Gronna proposal.

Some farmers are worrying about the wheat market. They are not certain whether they ought to sell their crop now or take a chance on a higher price. It must be borne in mind that the government guaranty expires June 1. Between now and then a farmer can secure at least the minimum government price. After that date he must take his chances. Should the exchange situation clear up, there is good probability that wheat prices would advance, but if there is no improvement in the trade conditions, there is little prospect of any material price changes. We caution farmers to study this situation very carefully lest they be caught with their grain on a falling market when the government guaranty is removed.

The editor of a newspaper who owns a block of stock in a sugar company suggests that the attorney general investigate the losses of the sugar companies and make the farmers help share them. Sure, that will be all right. Share the profits of the beet sugar business the last ten years with the farmers, and the farmers will have plenty of cash to pay their share of the losses.

The Michigan Manufacturer & Financial Record admits that for eight years the "balance of power in the state legislature has been held by the industrial counties." Well, why brag about it? We only have to look at our tax receipts to know the statement is correct.

Order your lime and fertilizer yearly. With the fertilizer shortage, the car shortage, the farm help shortage and the food shortage a good many farmers are going to be short on crops and cash next fall.

A clothing expert is reported as saying that a suit of clothes which cost $25 last fall will cost $100 this fall. If that's the case, most of us will have to go back to the old spinning wheel.

WHAT THE NEIGHBORS SAY

PRICE FIXING

I see on the third page of your issue of Feb. 7th an article by John D. Miller, "Shall the state fix the price of farmers' milk?" and you invite criticisms of the proposed law. Will say, yes, the state should fix price of milk, but the proposed law should get no mercy from farmers or anyone else. It would be unfair to the producer in more ways than one. In fact, Lenine is much fairer to his people than a lot of proposed legislation is to the people of this state. How shall we get a fair price? Well, here is one way it could be done: Let the Gleanrs, Granges, Farmers' Clubs, etc., each year at their annual round-up elect one of their number as a part of a committee to meet at a certain date with the pure food commissioner and determine what the actual cost of producing milk is for that year as near as may be and then add ten per cent to the actual cost and that shall be the price of milk for that year or it might be for a three months' period or a six months' period. Then let the municipality where milk is sold organize a milk committee of such a nature that it could absolutely control the situation and the city become responsible to the State Dairy and Food Commissioner who shall see that on complaint the city is treating everyone fairly. Milk prices to be published in papers of city as often as they are made and the price the milk producers get also to be published. And at same time there should be a clause compelling manufacturers and all others handling goods in this state of whatsoever kind to label their goods in such a way as to show prices they sold gods at and the date of such sale and that every jobber or dealer through whose hands the goods shall go, shall also brand the price and date he sold the goods for, or in other words: the cost plus 10 per cent shall be the selling price of the goods. If it shall be determined that a 10 per cent increase is not a sufficient amount for handling the goods, then a commission of experts from that trade, business or profession shall determine what shall be a just profit. The findings of the commission shall be subject to appeal and revision by the Supreme Court of the state. There to be no haggling in justice and circuit courts. I believe that if the principles mentioned were carried out we could get appropriate justice instead of the wild helter-skeltering nightmare of profiteering we have now.—*Wm. Kilpatrick, Cheboygan.*

That's a rather novel suggestion, to say the least. But would it work? No two individuals or firms produce goods at exactly the same cost. A firm may lose money one year only to make it up the next. Under legalized price-fixing he would have to bear his losses, but his gains the following year could not exceed ten per cent of his cost for that year. Again, production fluctuates. At one period there is a great surplus of food and other commodities, and rather than bear a total loss the producers thereof bid against each other which lowers the price and has a natural tendency to increase consumption. In order to make such drastic price-fixing legislation effective there would have to be maintained a very elaborate and expensive administration machinery to care for the inevitable complaints and punish the profiteers. What do our other readers think of Mr. Kilpatrick's suggestion?—Editor.

STANDS WITH BEET GROWERS

I enclose my subscription to your paper. I am with the beet growers first, last and all the time. I did not know there was a move on foot to get better prices for our beets until I received your circular. I had three and a half acres of beets last year, worked them good, and had them nice and clean, and got only $35 from them after all the expense was paid. The sugar company takes absolutely no risk. They take a note for the seed with 7 per cent interest. We give them a note for the work with interest. If we raise any beets, all right. If we don't we lose our work and pay them for their side of it just the same. I am ready to sign a contract with every beet grower in the state not to sow a beet seed unless they will sign on the $12 contract based on 9 cent sugar. If all the beet growers will do that they will see how quickly the sugar companies will come across. They are going to put an extra expense on us by raising the wages of the help they furnish. Unless we can get the $12 contract I will never plant another seed.—*J. W. Noble, Genesee county.*

You feel exactly the same as most of the beet growers do, whether they grow one acre or fifty acres of beets. If the farmer is to take the major risk he ought to have the major profits out of the industry, and he is going more than half way when he rests his claim on an even 50-50 split.—Editor.

BOOST BY TELEPHONE

While I hve not written to you before complimenting you upon your unswerving stand on all problems pertaining to the farmers' interest, I wish to thank you nevertheless. I am behind any movement that will have a tendency to improve farming conditions. I believe Mr. Campbell is the right man to make the run for next Governor and I pledge my vote and support in his campaign. As I believe in boosting the good cause I am enclosing $1 bill to renew my subscription for one year. Am also sending two other subscriptions, one year each for which they agree to pay later. The reason I am not sending their money is that I called them on the telephone this morning and got their subscription that way. (Tell others to boost over the telephone when time is limited.—*Reader, Conway, Mich.*

WILL JOIN THE FARM BUREAU AND RUN IT

Am enclosing amount for three years' subscription. Have great confidence in your paper, and know that the farmers of Michigan feel that in your paper and work they have a watchman of their interests that is always on the job. That is just what we need, and lots of it. A majority of farmers depend upon you to know what is wrong. We shall join the Farm Bureau and we shall run it.—C. O. Richwood, Ionia County.

All right, Mr. Booster, we accept your suggestion and thank you for your interest and help.—Editor.

SITE-VALUE TAXATION

"The proof of the pudding is in the eating." So please allow me space to answer a question put by Mr. Stanley Warner in your issue of Feb. 21.

Mr. Warner says: "I don't see how Mr. Grenell can be in sympathy with the farmer and at the same time advocate single tax or the 'untaxing of wealth.'" And another correspondent says: "The single tax is a beautiful theory, but it has never worked out successfully."

It is because I look upon the farmer as the most excessively taxed of all wealth producers that I advocate "untaxing wealth." For nearly all that the farmer possesses is wealth. What I mean by "wealth" is those values created by human exertion. Thus to untax wealth is to untax farmers.

Two values attach to every farm: one is wealth value, which is usually large; the other is unearned increment value, also known as social value, which is invariably small. I would untax the wealth value entirely, and increase the unearned increment tax in order to absorb the unearned increment.

"But," someone may say, "what difference does it make whether we raise taxes from land values or from wealth values?"

It makes all the difference between being a prosperous farmer or a tax ridden farmer. Do the farmers of Michigan realize that the "unearned increment" in land value in the city of Detroit alone, is more than all the unearned increment attaching to Michigan farm land? That is to say, on 50,000 Detroit acres there is a billion dollars of unearned increment. And less than a thousand persons and corporations and estates own over half of the value of the city of Detroit.

That is to say, shifting taxation from wealth to unearned increment would relieve the farmers and make the owners of the values they have not earned pay the taxes.

Farmers think the single tax law will tax land. Not so. It aims to tax land value—a very different thing. Land value makes a city lot on Woodward avenue, in the center of Detroit—a lot 60x100 independent of improvements, worth on the market $300,000. This is a social value, and is produced by the million people living in and around it; by one person, black or white, rich or poor, as much as by any other person. This social value ought to be made to pay the taxes, because it is independent of the individual exertions of the units.

The taxation of site values means the untaxing of values created by labor. It will encourage industry and enterprise and discourage land speculation. And in this untaxing the farmer, of all classes, will receive the greatest benefit.

Now one word as to the single tax being fine in theory, but which never has been tried. If a thing is right in theory it will work; when it does not work it proves that that theory somewhere holds a fallacy

The single tax (site-value taxation) is working. It has been working for a number of years. Those who are living under single tax conditions are prospering. They have resisted every effort to go back to the "tax everything" blundering and inequitable way of collecting revenue.

The single tax is working in the Canadian northwest, in Australia, in New Zealand. That is one of the reasons why 25,000 farmers from the U. S. entered Canada last year and took up land. They pay no taxes on their improvements. Used land, worked, pays no more taxes than unused land being held for speculative purposes. The social value (unearned increment) and not the improvements made (wealth) determines the tax. Farming is encouraged; land speculation is discouraged.—*Judson Grenell, Washtenaw County.*

Well, we're getting down to concrete cases now. Give us some more of them. —Editor.

POLICY OR DUTY

In sending my vote on president, I think Johnson is the best successor to the Americanism and vital principle of Roosevelt. I believe in the ultimate operation of the railroads by the government but it might not be best to try to continue under the present circumstances. It might be wise to turn the roads over to private operators again for trial. I think the farmers would do well to choose the M. B. F. as the best agent and representative of their interests. So many farm papers now offer to be the agents and advertising mediums for speculators and manufacturers and their claim to be a farmers' paper is a pretense.

I don't see why a farm paper cannot be published for the interests of farmers and at the same time be the best advertising medium.

In regard to the Farm Bureau. I thing the great task of the farmers is to convince the nation that food productions and soil conservation must be made a national issue. That the financial, manufacturing and business interests of the country must co-operate with the farmers by equalizing prices that farmers may be enabled to keep up the soil, the farm equipment and labor supply.

Farmers cannot keep up the fertility of the soil and the food supply while all the organized industries are using the press fixing and price-fixing power against them. Exploitation must be stopped, the soil is already on strike, and it will require national co-operation with the farmers to recompense her and induce her to call off the strike.

We cannot maintain the present standard of living, increase the population and continue to exhaust the soil. We are undermining the foundations of our structure to build it up and it is pretty top heavy.

We are flouting God and nature and defying the law of compensation. What we need is a higher standard of righteousness and common honesty and a regard for nature. If we build up our character and our soul we will have nothing to fear.

A plunge into debauchery of character and natural resources is the greatest danger that threatens us.—*—John E. Belt, Lapeer County.*

There is no reason why the interests of farmers and the manufacturers of the commodities which they use should clash. Anything that makes the farmer more contented and more prosperous should be encouraged by those who want to trade with farmers. Most of them realize this, and it is only an occasional advertiser who withdraws his patronage from a farm paper because he is displeased with its policy. A good many farm papers, however, live in fear of their advertisers, and color their editorial policies and news stories to make them pleasing to their advertisers. This is a policy which M. B. F. will never adopt. It will lose its advertising, if need be, before it will sacrifice the interests and respect of its readers. But we are convinced that we shall not often be confronted with such an alternative as that, for we believe that the majority of men who advertise in these columns like the majority of farmers who read these columns are big enough to concede us a right to hold and express our opinions and will not seek to lead us from our chosen conrse. —Editor

The Week's Editorial

A WRONG CONCLUSION

Some town people (you have heard them, so have we), have in times past apparently forgetful of what their own attitudes have been concerning matters of public welfare, have accused the farmer of being the author, abettor, and instigator of all kinds of anti-enterprise propaganda and have therefore deplored his retirement from his agricultural pursuits to take up his abode among the urban dwellers, where churches, schools, etc., will be more convenient for himself and family.

Such accusations may be true of some farmers somewhere, but North Branch's experiences in this particular have been decidedly negative to the imputation. We, of town, if we will but frankly admit it, must take off our hats to the farm folks of this community. They have us standing still when it comes to public as well as individual improvements.

What would have become of the good roads program now so generally being carried into effect hereabouts if the farmers had been afraid of taxation, and the "tight wads" some people are pleased to call them? Our farmers have eagerly assumed heavy burdens of taxation that their market places might be made more easily and agreeably accessable and the comforts of the pleasure drivers inestimably enhanced. Furthermore, they have and are continually building better, more modern and sanitary equipped homes, as well as otherwise making their premises more sightly and productive.

Those who have sold, leased or turned over their farms to the control of their sons and have come to this village to reside, with very few exceptions, if any, can be counted among those who are ready and willing to support every reasonable movement for municipal improvement, and are the least of the canters against the taxes which such undertakings would involve.

In view of the object lessons so conspicuously in evidence, we will be obliged to be up and moving if we keep pace with our farmer friends.—*North Branch Gazette.*

BRITISH PROPAGANDA

I wish to tell you that you publish the only farm paper in Michigan, that is worth the price of subscription. The old style of "pussyfoot" farm papers make a fellow tired. I also wish to say that D. E. Crosby hit the nail squarely on the head in every sentence he wrote in your Feb. 21st issue. Thousands, yes, millions of people have felt the same way but

(*Continued on page 27*)

MARKET FLASHES

WEEKLY TRADE AND MARKET REVIEW

There is no improvement in the exchange or money situation. Exports have fallen to a negligible uantity, the effect of which has already been seen upon prices of food products. The demand for loans from all classes of industry was never greater, and because of the huge decrease in the nation's gold supply the Federal Reserve banks have been obliged to call in some of their loans to member banks, which in turn are becoming more stringent in their loans to patrons. In a measure, this is a good thing. Millions of dollars have changed hands since the war through speculation, encouraged and aided by the ease with which the big speculators have been able to secure money. This class of loans will be the first that the banks will shut down on, and with good effect upon the crazy speculative tendencies of the time. However, if the gold supply continues to decrease farmers may experience some difficulty in securing loans for their farming operations this spring and summer, and in any event will be obliged to pay top-notch interest charges. The country realizes, however, that the farmers credit needs must be supplied, and he will probably be the last to suffer in case of a money stringency. The situation is not particularly encouraging, neither is there cause for alarm. The Federal Reserve System was provided to meet just such emergencies with which we are confronted and confidence is expressed that it will not fail to keep the financial structure intact and the wheels of commerce going.

The most serious thing that the farmer faces today is the falling prices on his products. This started several weeks back, but has continued, with intermittent recoveries which have not lasted long. It looks like the first step in the gradual downward revision in the high cast of living, but why the most numerous and essential class in the United States be the first to feel the brunt. Could the markets of the world be unlocked to American food products through the stabilizing of the money exchange and larger purchasers of European goods the tenor of the markets would be exactly the opposite.

LAST MINUTE WIRES

DETROIT, March 3rd.—Corn up 2c, oats 1c, and rye 3c. Market strongest in month. Beans firmer. Potatoes higher. Cattle and hogs firm after weak start.

CHICAGO, Mar. 3rd.—Corn market firm upon receipt of crop reserve reports. Oats advance 2 cents. Hogs steady; firm; sheep and lambs weak. Potatoes strong and higher.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

WHEAT DEMAND SLOW

WHEAT PRICES PER BU., MAR. 1, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.47		2.60
No. 2 White	2.45	2.53	
No. 2 Mixed			
PRICES ONE YEAR AGO			
No. 2 Red	2.30	2.30½	2.38
No. 2 White	2.26	2.28	2.34½
No. 2 Mixed	2.26	2.27	2.33

There is no denying the fact that the upward trend seen in the wheat market several weeks ago has been halted, and many think permanently for the balance of the year. Exports for the week ending Feb. 14th were 2,708,000 bushels, and for the following week 3,882,000, as compared with 5,468,000 bushels exported for the week ending Feb. 22nd, 1919. The *Price Current Grain Reporter* says in this connection: "Prospects are for a large carryover of wheat at the end of the crop year, as the export movement has dropped to almost nothing, actual clearances of domestic grain during the first two weeks of February, as near as can be ascertained, having been around 2,000,000, only a remarkably small showing."

We must watch the wheat market very carefully for the next three months. The government's guarantee expires the coming June, and no man knows what will happen thereafter. If Europe is not going to be in any condition to take a large part of our supplies we are going to be obliged to take a loss on our wheat after June 1st or hold it over another year. Indications point to a below normal crop in 1920. "Winter wheat conditions are by no means bright," says the above journal, "and there is sufficient evidence at hand to indicate that the abandoned acreage this year will be somewhat above normal, and unless weather conditions are ideal a small crop will be secured. Scattered reports from the northwest do not indicate any increase in the spring wheat acreage, but this will ultimately be offset by the large amount of grain carried over into the new crop."

We have been asked by a number of readers to advise them personally what to do with the balance of their wheat holdings. If we only knew! Were trade conditions normal wheat would be selling now for 25 per cent more than it is. If trade conditions improve during the next few monthhs which is very doubtful, the foreign business would soon shoot the price upward, but if you want our honest opinion, we will say that the farmer who can get $2.20 net for his wheat will be money ahead in the long run to get it while the getting is good.

CORN GETTING BEARISH AGAIN

CORN PRICES PER BU., MAR. 1, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.60
No. 3 Yellow	1.56	1.50	1.57
No. 4 Yellow	1.52	1.48	1.54
PRICES ONE YEAR AGO			
No. 2 Yellow			1.54
No. 3 Yellow	1.38	1.33	1.52
No. 4 Yellow	1.33	1.31	1.49

After the bulls upset all the dope of the bears at the beginning of last week and actually turned a declining into an advancing market, the bears again got control, and are using the expectations of a freer car movement as an argument that the great bear movement has begun. As a matter of fact, the only bulls who've got the courage of their convictions and the power to back them up are the farmers who want $1.50 for corn, f. o. b. loading stations. If these boys persist long enough in their demand for dollar and a half corn, they'll get it, despite the roars of the bear speculators. The market dopesters figure out that henceforth and forever, now that the railroads have gone back to the private owners, all trains will run on the nick of time, empty cars will be available at every siding for loading, and crops will be moved from producer to consumer like clock-work. Of course, they're going to be fooled, but they don't know it, and their ignorance is keeping the grain markets in a wabbly condition with prices most uncertain. However, we cannot see how a freer movement of the crop at this time when farmers are hanging back from selling is going to result in lower prices. We should think that it would have exactly the opposite effect. Free car movement, enabling dealers to fill contracts and orders on schedule time, makes everybody feel good, and there is nothing more conducive to a bull market than good feeling and optimism. If they but know it, the farmers hold the situation in the palm of their hands, and can feed the market at virtually their own price providing their grain is handled promptly all down the line.

RYE AND BARLEY

Rye is little higher, but there is no particular strength to the market, being influenced by substantially the same conditions that are affecting other markets at this time. Barley prices have not changed for some time, and the market is easy. Rye $1.61 per bushel. Barley $2.90@8 per cwt.

OATS HOLDING THEIR OWN

OAT PRICES PER BU., MAR. 1, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 White	.94	.	1.03
No. 3 White	.83	.88	
No. 4 White	.82	.86	
PRICES ONE YEAR AGO			
Standard	.61½	.60	.68½
No. 3 White	.61	.59	.67
No. 4 White	.60	.58	.65

Oats are not so strongly affected by the conditions that are bearing other grain markets. France is taking considerable of the crop under financial arrangements entered into last fall. Some difficulty is being experienced, it is true, in export contractors meeting their obligations, but even this has litte effect upon the general situation. There will continue to be occasional fluctuations in the oat market, but unless trade conditions become demoralized, the trend will continue to be upward at least until we know something about what the 1920 acreage is to be and the growing conditions.

BEANS AT STAND STILL

BEAN PRICES PER CWT., MAR. 1, 1920			
Grade	Detroit	Chicago	N. Y.
C. H. P.	6.75	7.50	8.00
Red Kidneys	14.25	14.50	14.75
PRICES ONE YEAR AGO			
C. H. P.	7.75	6.75	7.50
Prime	7.00	6.00	7.00
Red Kidneys	10.25	11.50	11.50

The bean situation looks bad, but according to those who deal in beans and watch the market closely, the looks "be deceiving." We want to caution our readers right here that the recent drop in beans means nothing at all. In fact, the cheering news comes that beans will probably go a little lower, BUT this will be in preparation for the rise that is expected to come. We are advised that little if any trading is being done at present prices. The world must have beans and it can only defer its purchases about so long and then it must go into the market and bid for the supplies. The present dullness may continue for another month or perhaps two at the outside, but basing our judgment upon information that we believe to be absolutely reliable, buyers will be actively in the field by that time, and in view of the short supply prices are bound to soar. The market today is in no condition to warrant a farmer selling.

POTATOES STEADY

SPUDS PER CWT. MAR. 1, 1920		
	Sacked	Bulk
Detroit	4.66	4.60
Chicago	4.60	4.70
Pittsburg	4.67	4.60
New York	4.50	4.40
PRICES ONE YEAR AGO		
Detroit	1.70	1.90
Chicago	1.70	1.75
Pittsburg	2.00	1.90
New York	2.05	1.90

The unseasonable cold weather has held the potato market firm and price changes of the past week have been upward on most markets. The Chicago market was easy at the opening of the week, but on Thursday and Friday last, there were advances ranging from 10 to 20 cents per cwt. The Detroit market has been a good one all season long, and at no time with the exception of the early part of February were the supplies over sufficient. In spite of the cold

"I've Bought APEX Seeds for 35 Years"

It is no uncommon thing today to find farm owners in Michigan who have used APEX seeds for 35 years consecutively.

Their sincere respect for the APEX brand, after a 35 year period, is well worth remembering when *you* purchase seeds.

To carry the brand APEX—seeds must be absolutely high grade, vigorous and pure of quality—they must pass analysts' tests for germination and Michigan Seed Law requirements—they must be grown in the North of America to insure their success in the hardy, rugged soils and climate of Michigan.

For 35 years produced under the name of APEX by Michigan's Seed Specialists.

FIELD SEEDS

weather the big markets like Chicago and Pittsburg are getting plenty of supplies, and a week or two of warm weather would certainly mean lower prices.

Each day that passes more firmly convinces us that potatoes will not go again to the high level of late January, and we urge our readers to get their holdings on the market before warm weather arrives. An early spring might prove disastrous to the market, but weather conditions point to cool weather well into April and should afford farmers every opportunity to move their crop at fair prices. According to authentic reports the high prices here have attracted foreign growers and several thousand bushels of Danish potatoes have come in through the port of New York the last two weeks. And more are on the way if we can believe the following from the *Chicago Packer*:

"The information comes from Denmark to the effect that there would be several heavy consignments of potatoes in here within the next few weeks. The New York branch of the Department of Agriculture received a cable Tuesday stating that the steamship "Frederick the Eighth' which left Copenhagen February 19 had 7,433 sacks of potatoes aboard. The sacks weigh 150 pounds each. It requires about 12 days for the trip so the boat should dock in New York harbor the fore part of next week. There are also about 200 tons of Danish cabbage aboard.

"Some of the potato men who are importing Danish potatoes evidently expect to do some business, as up to the middle of this week, custom house permits for the admission of foreign potatoes into this port covered about 365,000 sacks. Potato men do not expect anything like this amount here because importers in all commodities always ask for permits greatly in excess of what they expect to receive."

Record prices were made on hay this week in Eastern markets due to protracted storms and consequent famine conditions. Consumers' stocks have been working down for several weeks and they have been forced into the market regardless of prices. Country roads are almost impassable on account of deep snow and heavy drifts and the amount of hay loaded is very small. Shippers, however, are making every effort to get hay to market and with a break in the weather increased supplies and a return to normal values is certain. Railroads are furnishing cars more freely but the rail movement is slow because of the storms. Future prices will depend entirely on the movement to market and conservatism on the part of shippers is necessary to avoid losses on goods that can not move immediately, for when the movement does increase consumers will buy in limited quantities and the decline will probably be even sharper than the advance.—*Hay Trade Journal.*

CATTLE MARKET CONTINUES DOWNWARD COURSE

Detroit—Receipts, 746; canners and cutters, 75c lower; butcher cows 50c lower; all other grades closing dull and 25c lower, some going over unsold; best heavy steers, $10.75@11.25; best handy weight butcher steers, $9@9.75; mixed steers and heifers, $8.75@9; handy light butchers, $8@8.50; light butchers, $6.50@7.50; best cows, $8@8.50; butcher cows, $6@7; cutters, $5@5.50 canners, $4@5; best heavy bulls, $8@8.50; bologna bulls, $7@7.50; stock bulls, $7@7.25; milkers and springers, $65@125. Veal calves: Receipts, 547; market steady; a few fancy brought $21.50@22; bulk of sales, best, $20@21; others, $8@15. Sheep: Receipts, 13,000; estimated tomorrow, 10,000; firm; lambs, $17.50@20.30; culls and common $14@17.25 ewes, medium, good and choice, $11.25@14.50; culls and common $6@$10.75.

DETROIT PRODUCE MARKET

Eggs in good supply and brisk demand. Butter steady and quiet and receipts not large. Farmers are not liberal sellers of potatoes and there is an increasing demand. An advance is quoted and the market is firm in other vegetable lines owing to moderate offerings. All fruits are in moderate demand and quiet. Receipts of poultry are small and the market holds its firmness owing to active buying by consumers.

Apples—Western boxes, $3@4; Spy, $3.25@3.50; Baldwin $3@3.25; Greening, $3.50@3.75; Steel's red, $3.75@4 per bu.

Honey—White comb, 32@35c a lb.

Cauliflower—$2.50@2.75 per case.

Potatoes—$7 per 150-lb. sack.

Onions—Indiana, $5.75@6 per 100-lb. sack.

Calves (dressed)—Fancy, 37@28c per lb.

Dressed Hogs—Best, 19@20c; heavy 17@18c per lb.

Live Poultry—Spring chickens, large, 36@38c; Leghorns 35@36c; hens, 38@40c; small hens, 36@37c; roosters, 23@24c; geese, 30@35c; ducks, 40@45c; turkeys, 44@45c; lb.

Dressed Poultry—Chickens, 37@38c ducks, 40@42c; geese, 28@30c per lb.

SKY IS CLEARING

Couldn't do without BUSINESS FARMING no-how. Here's my $1. I am going to write Mr. Fordney today and give him my respects. I am farming 180 acres, every foot of it available tiled to perfection and one of the best kept up farms in the Thumb and through such shysters as Mr. Fordney we are kept grubbing. I am one of the fellows promised by Mr. Wilson a golden harvest through the war. He said if we did not reap it it would be our own fault. Consequently I started in with 55 acres of beans and kept from two to seven men all summer hoeing and cultivating. If my memory serves me right we got the Pinto Deal. I have been 41 years farming and have done enough overtime work to have made 5 men rich as farmers would reckon, and thank the Lord I believe the sky is clearing for a fairer dawn. Hoping and trusting.—*J. D. S., Tuscola County.*

Our Many-Tongued Ancestors

Born of the diverse nations of the earth, Americans appreciate, now more than ever before, the necessity for national unity; one flag, one purpose, one form of patriotic understanding.

A confusion of tongues makes for a confusion of ideas and principles. Everything which goes toward the up-building and maintenance of a one language people makes for national strength and national progress.

It is in such service that the Bell Telephone has played so vital a part. Its wires reach every corner of the country, making intimate, personal speech between all kinds of people a matter of constant occurrence.

But the telephone is no interpreter. If its far reaching wires are to be effective, those who use them must speak the same language. The telephone best serves those who have become one with us in speech.

Yet uniformity of language is not enough from those who would gain the greatest good from the telephone, neither is financial support enough; for complete service makes essential true co-operation on the part of every subscriber.

WHAT'S A FARMER?

A farmer is:—

A capitalist who labors.

A patriot who is asked to produce at a loss.

A man who works eight hours a day twice a day.

A man who has every element of nature to combat every day in the year.

A man who is a biologist, an economist and a lot more ists.

Who gives more and asks less than any other human being.

Who takes unto himself for his own sustenance and that of his family, those of his products that other people will not utilize.

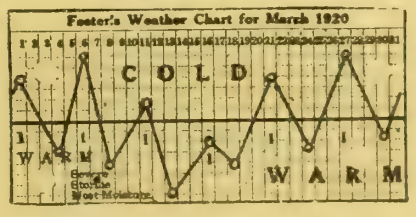
Who is caricatured on the stage and in the daily papers, but who can come nearer taking hold of any business and making it go than any other American alive and in captivity.

That's what a farmer is.

—Sharpless News.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for MICHIGAN BUSINESS FARMING



WASHINGTON, D. C., March 6, 1920—Warm waves will reach Vanconver about March 8, 13, 18, 24, and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of March 9, 13, 19, 25; plains sections 10, 14, 20, 26; meridan 90, great lakes, middle Gulf States and Ohio Tennessee valleys 11, 15, 21, 27; eastern sections 12, 16, 22, 28, reaching vicinity of Newfoundland near March 13, 17, 23, 29. Storm waves will follow about one day behind warm waves and cool waves about one day behind

These disturbances will control the weather of the Provinces and States from near March 8 to 29. Most severe storms and most precipitation are expected during the week centering on March 12. Most precipitation is expected where most has occured and least where least has occured since first of last December, because no material change has occured in the causes.

High temperatures are expected to cross continent during weeks centering on March 6 and 27. General low temperatures are expected during the ten days centering on March 13.

Fair cropweather is expected for March, east of Rockies, except in river valleys that extend east and west with high ridges south of them. Cropweather of March in the southern part of the cotton belt and on Pacific slopedoes not promise best results. There are two dangers that the crops of 1920 must contend against. Too much rain in large sections and the cutworms that such weather favors and a shortage of rain in other sections together with the bugs that dry weather favors.

These extremes of wet and dry will not continue all thru the crop season and therein lie our best hopes. Then excessive rains are sometimes followed by a deficiency of moisture and thus the farmer worries along between hawk and buzzard. But no worse mistake could be made than to flee from the evils you know on the farm into the evils you do not understand in the cities. The best investment anyone can make at this time is to buy a good little farm and keep it as a nest egg.

Edited by MABEL CLARE LADD

AGAIN the Lenten season is with us and we hear of the foregoing of pleasures and luxuries. Every person certainly has a right to his own belief in this matter, but I was impressed the other day by a little Sunday School lesson I heard a progressive woman teaching her class in connection with this subject:

"I gained my inspiration from the resolution adopted by the Boy Scouts during Scout week," she said—to "do one kind act each day during that week," and I just thought that if we tried to do one kind act or say one kind word to some one less fortunate than ourselves, we would be following very closely in the footsteps of our Savior, and so I am going to adopt their slogan during the Lenten season, and I hope that when the season is past the habit will be so firmly grounded, that I shall continue it throughout the year. And I am simply making the suggestion to you today. I shall not ask for a definite promise, but think it over, girls and see if, in perhaps taking some of your own time in the doing of a kind act for another, you will not find that you are not keeping the true letter of the law."

And when the next day I called on a sick friend, only to find that this same Sunday school teacher, who is a busy woman with a family of five to do for, had been there before me, with a cup of custard for the sick woman, I knew that she was living her religion every day.

We haven't heard from our poet, Mrs. Dillenbeck, for a long time, so I am glad this week to be able to give you a poem particularly adapted to the season, from her pen, entitled: "A Simple Prayer."

Shrubs and flowers add to the attractiveness of the home grounds. Mrs. Wm. Yuill, of Yale, R 6, is here shown tying up her plants. This is one of the pictures awarded a prize in our picture contest.

WOMEN ENTER THE GAME

IT WAS just about this time last year that Mrs. Julia Martin sat in her sitting room on the farm where she had come as a bride, and faced the problem of the future for herself and two sturdy, growing boys. The ravages of the flu had claimed her husband, whose early efforts had directed to paying for stocking his farm, and now, just when he was in a position to turn his work into money which might be laid aside for the future, he was taken and as his widow sat in her home, she realized that the task before her was no easy one.

Should she sell the farm for what she could get for it and move into the city twenty miles distant and there secure some work for herself and endeavor to make enough to keep her boys in school, or what should she do. To hire help and run the farm of eighty acres she knew from experience was out of the question, for hadn't Will vainly tried to get a man just during the harvest time.

Were she to move to the city, what would she do? She had married young—never had any business training, and, although she was an excellent housekeeper, wife and mother, what could she realize on that now if she were to go to the city. No one would want even a housekeeper who had two growing boys to feed.

One thing was sure. She had made up her mind that her boys should receive a good education. They must continue in school.

All her life she had spent on a farm. She understood gardening poultry raising and knew that she could soon learn what was necessary to know about small friut raising. And she was healthy and strong.

Gradually, the light dawned on her. She would advertise sixty acres for sale, reserving for herself the end twenty. On this twenty she would build a very modest little cottage, where, with all the rooms on one floor, it would take the minimum of effort to do the housekeeping. Then she would invest in an incubator, a brooder, build some small chicken houses in the most approved style and start in to raise some chickens for early market, and keep hens for winter eggs.

And she would have her strawberry bed transplanted before she sold the big house and the sixty acres. She would invest in some raspberry bushes and currant shrubs. With the help of her two boys nights and mornings she figured that she could raise enough on the twenty acres to feed her chickens without buying and also the one cow which she planned to keep.

Her plans are now complete—already the first eggs are in the incubator and when a friend who knew her offered to take me out I was more than delighted. "Perhaps some of our readers will get an idea," thought I. And so I pass it on to you for what it is worth.

But before closing I must tell you of her plans to "sell her goods." "Everyone tells me that people in the cities are more than anxious to get fresh vegetables, chickens, eggs, etc., and so I have figured out that I shall not need a machine to take my products to markets, but instead I am asking each of my friends who knows a family in the near-by city who own a car, to give me their names and addresses, and I am going to write them a little note, and see if I can't market my products without stepping out of my yard.

"Just a minute, let me read you a letter I have framed up and see if you think it will work." Full of admiration for this energetic little woman, I awaited with curiosity, the reading of the letter which she was to send out.

"I am planning to write each one personally, for while it may take some time at first, I figure that when once I get a customer, I shall never need to write again and that each customer I get will tell their neighbors if they are pleased, and after I am once started, my project will advertise itself." Here is the letter:

"Dear Mrs. Brown:

"Our mutual friend, Mrs. Graham, advises me that you own a machine and often motor into the country on Saturday afternoons and in the evening. I have a small garden truck farm and also raise poultry, for sale and thought you might be interested in motoring out and securing a supply of fresh eggs, a chicken or fresh vegetables from the garden.

"You can reach me by telephone and if you can arrange to call the evening before, can have a chicken dressed for you.

"I am advising just a few people as of course I can supply only a limited number of customers. Therefore if you wish to secure your vegetables and eggs from me, please notify me as soon as convient as I do not wish to notify more people than I can supply.

"Yours very truly,"
(Mrs.) Julia Martin.

This little woman had thought herself unprepared to face the world alone and yet her resourcefulness amazed me and I am sure that she will make a success of her venture. Her boys will be kept in school and away from the city until they have their morals firmly grounded and will live wholesome lives.

POULTRY FOR PROFIT

THERE is no gainsaying the fact that there is money in raising poultry and in the sale of eggs—for some people—and the people who make the money out of this business are those who give thoughtful consideration and study to the subject — in other words who make a business proposition of it. Most farms have a few chickens—there are enough scraps from the table to feed a few; the flock is increased and it is necessary to have regular feed for the chickens. But often no attention is paid to the breed or strain, it's just a hit and miss assortment of chickens, when the truth of the matter is that in order to be a truly paying proposition, as much attention should be given to the breeding of chickens for laying or for early marketing as to the other farm stock.

It is generally the women of the farms to whom falls the care and the feeding of the flock, then why should not she make of it a business—secure the chickens which are known to be layers if she is going into it to raise hens for the eggs, or select a strain which will be ready for market most quickly if she is raising broilers.

If one goes into the business for real profit, then of course it pays to secure an incubator. In some agricultural schools, the running of an incubator is taught as part of the regular course in agriculture.

Cromwell, in his book "Agriculture and Life" states:

The larger incubators heated by water, which in turn is heated by coal, give better satisfaction. There are a number of rules for running the incubator which are easily learned. Here are the principal ules:

1.—Select part of the hens that show constitution, vigor and vitality.

2.—Trapnest these the first year. Sell the eggs. Do not allow male bird to mate with these the first year.

3.—After a reasonable rest with good feeding, mate the best layers from these with males whose ancestors were known to be egg strains. From these matings get eggs for setting.

4.—Set the incubator in a well-ventilated room where the temperature does not vary rapidly or far.

5.—Overhaul incubator carefully to see that it is in good order and be sure that you understand all parts.

6.—Start the incubator some days before you are to put in the eggs to be sure that you understand how to run it. Be sure that the lamp burns freely and that the regulator regulates.

7.—Disinfect the incubator carefully before each setting is put in.

8.—Be sure that the incubator is set level as this insures an even distribution of heat in the incubator.

9.—Use high grade oil that will not smoke or char the wick.

10—Keep the lamp burner clean. If necessary boil it.

11.—Be sure that the wick is long enough to reach the bottom of the lamp. Put in a fresh wick for each hatch. Many hatches are spoiled by having the lamp go out or the temperature go too high because of a faulty wick.

12.—Fill the lamp in the afternoon. This insures a supply of oil and a freshly trimmed wick for night.

14.—Do not handle or even touch the eggs with oily hands.

15.—Test eggs on the sixth or seventh day, throwing out infertile eggs.

16.—Keep the machine dark during hatching time. Do not open it unless absolutely necessary.

17.—Follow the manufacturer's directions. He probably knows best how his machine should be run.

18.—Leave the chicks in the nursery for twenty-four to forty-eight hours after hatching. They do not need feed.

19.—Don't spend your valuable time helping weak chicks. If they can't get out of their shells, they probably are not worth helping.

20.—Have the brooder ready and transfer the chicks to it without chilling them. Start with the same temperature for the brooder that you had in the incubator and lower gradually, say five degrees per week, beginning after the second or third day.

A SIMPLE PRAYER

By C. Shirley Dillenback

Help me to earn by honest toil and not by strife,
My daily bread, so fitly called the staff of life;
Nor stint the measure of my daily toil—
Though those who merit may not reap the spoil;
To help each comrade that I find in dire distress,
Although, perchance, there never is redress—
To seek each day such comforts as will give,
Contentment with the humble life I live;
To see some good in everyone I meet,
Though it be a beggar of the village street,
Or fallen maid whom others fain would shun—
Let me remember each as someone's cherished one;
To keep my faith though others strive for gold
And earn at last a shelter in the fold—
Where each receives the merits he has won
So let me live until the race is run
In harmony with all my friends and God
As those in ancient times who tilled the sod.

We are very sure that Our Page will be much more attractive than it has been from the fact that we are receiving so many pictures of homes and farm scenes of our members. All that we can use will be paid for with a special prize, and those that are not available for use will be returned.

More and more the subscribers are coming to learn that our Personal Service Shopping Department is a real benefit. Special patterns have been secured for subscribers during the past week, and we bought a rubberized apron with pockets for one subscriber who was going down south and wanted such an apron to hold her wash cloth, hair pins, and the numerous other articles a woman needs in the dressing room. These aprons are very handy as they can be tied around the waist while you are dressing and all your toilet articles are close at hand, and at night they roll up and the different articles are kept in their separate compartments, much like the comfort kits the soldier boys used to use. They would be fine to take on a long motor trip.

The Food and Drug Department of the state have felt the hardships of the "flu" as well as others, and because of their depleted forces, have not been able to get our questions relative to patent medicine answered as yet, but never fear, we will keep after them and secure the information for those who inquired.

WOULD RELIEVE STATES OF HIGHWAY EXPENSE

(*Continued from page 11*)

by the larger and more expensive systems. This is the ideal of the Townsend bill.

This is what is comprehended in the resolution of the National Grange which reads as folliows:

"The present and potential development of high power motor trucks and high speed passenger cars practically revolutionized the highway conditions and necessities of this country, and with due regard for the demands of the present and the future necessities for permanent, hard surfacd highways we believe that the time has come when all the National Government highway activities should be unified in a single administrative department, under such limitations of powers as will secure the greatest possible degree of efficiency and economy in the expenditure of national funds. We favor the working out of a national highway law that will best serve the welfare of the whole country and distribute the expense of highway construction equitably between the beneficiaies."

There should be no misapprehension about this unduly relieving country people of highway expenses. After all these hard roads are built for the expense of which the farmers will pay their full share of all taxes direct and indirect, there will still remain several million miles of dirt roads which the country people will build and take care of just as they always have done. State highway departments will have a man-sized job in every state after the meagre one per cent called for in the Townsend bill are built and maintained by the Federal Government.

Senator Townsend has a broad and statesmanlike grasp of this whole problem. Farmer people everywhere will make no mistake in urging the passage of this bill by the present Congress.

WE THANK YOU

Can't get along without M. B. F. Best paper in the state for the farmers. Hope we land our governor.—*Reader.*

CALUMET Saves

Calumet Baking Powder forms the very foundation of kitchen economy. It is the best way to reduce the high cost of living.

There's nothing you can do, nothing you can use that will help so much in keeping down food expense.

CALUMET is so perfectly made—so perfect in keeping quality — that bake-day failure is impossible. Nothing is wasted or thrown away. Everything used with it—flour, sugar, eggs, flavoring—is converted into wholesome bakings.

Makes Most Palatable and Sweetest of Foods

You save when you buy it—moderate in cost. You save when you use it—has more than the ordinary leavening strength — therefore you use less. You save material it's used with.

Made in the world's largest, most modern baking powder factory. Contains only such ingredients as have been officially approved by U. S. Food Authorities.

Order today! Conserve! Economize! SAVE.

All Baking Materials

Lily White

"The Flour the Best Cooks Use"

makes the kind of bread you can serve three times a day and always have it eaten.

And good bread is an excellent body-builder. It is a splendid food for children.

In fact, there's nothing better for the kiddies than good bread and butter or bread and milk.

It makes them grow sturdy and healthy.

But you MUST have GOOD bread for old or young. It should be light, tender, flavory and wholesome—just the kind LILY WHITE, "The flour the best cooks use," bakes.

Better baking satisfaction or your money back is guaranteed.

Valley City Milling Company

Grand Rapids, Michigan.

The Children's Hour

DEAR CHILDREN: One of our little friends asked me this week how many subscribers it would take to earn a pencil box, and so I know that some of you are still interested in getting subscriptions for your favorite paper and earning prizes. The pencil boxes are awarded for only one new subscriber. If you are working for a prize ,be sure and send the names of your subscribers, with the $1.00 for each subscriber, direct to me and tell me what prize you wish.

I still have a couple of flash lights which I ordered at Christmas time so that I would have them on hand as soon as they were won, and I know there are just lots of boys who could get just one subscriber and earn one of these lovely flash lights. There is also left from the Christmas prizes a Boy Scout jack knife on a chain, which is just lying here waiting to be won, and it only takes one subscriber to get that also.

One little girl inquires this week if I am Scotch. I know that my name sounds Scotch, and it may be possible that way back in my history some of my ancestors came from Scotland, but it is so far back that I am unable to trace it, so I guess I am mostly just "Yankee." Affectionately yours—LADDIE.

THE JUNIOR COOK
Rudabago

Many times tasty and inexpensive vegetables are not used as much as they should be because the cook doesn't know the best way of preparing them. Rudabago is the very cheapest of all winter vegetables and when cooked this way is one of the most delicious.

Peel and cut into inch size pieces about 2 pounds of rudabago.

Wash, cover with water and put on to cook, in a tightly covered vessel.

After it has boiled hard for ten minutes, put over a low fire and cook for 1 and one-half hours.

Take off cover, mash the vegetable with a wire masher and add 1 teasponfull of salt—more if desired.

Stir well. Increase heat slightly and cook for one-half hour more.

By this time the vegetable should be thick and a rich yellow and should be cooked dry enough to serve on a plate with meat without seeming "watery."

At the end of the half hour add 1 tablespoonful meat drippings (bacon is best) and cook five minutes more. Serve hot.

If any is left over, pour in a baking dish, cover the top with cracker crumbs, dot with meat fat and bake 20 minutes o until browned and hot.

Answer to Last Week's Puzzle

Girls Names—1. Harriet. 2. Bernice. 3. Druisilla. 4. Katie.

EN-AR-CO AUTO GAME FREE!

On page 13 of this issue at the botton of the National Refining Company advertisement is a coupon, which if mailed with two 2-cent stamps to this address, 2020 Rose Building, Cleveland, Ohio, will bring any reader of M. B. F., an exciting game called the "Auto Tour."

If your father, brother or uncle owns a tractor or an automobile, just ask him how much oil or gasoline he buys per year, and write in the name of his machine on the coupon. The company want to send circulars and quote prices, but there is absolutely no obligation to buy. The game comes free for the information and the two 2-cent stamps.

OUR BOYS AND GIRLS

Dear Laddie—This is the first time I have written to you. I am a girl, 11 years old. I am in the 5th grade at school. I have three-quarters of a mile to go to school. My teacher's name is Clinton Stevens. I like him very well. We live on a 40 acre farm. For pets I have two yellow cats. We have 2 horses, 4 cows and 1 calf and about 40 chickens. My letter is getting long so I will close, hoping to see my letter in print.—Eva Sherman, Worley, Mich.

Oranges

OUTSIDE the snow lay thick upon the ground and the wind whistled round the eaves, but inside the fire crackled merrily and under the reading lamp a bowlful of oranges, round and yellow, smiled like so many little shining suns and invited Jamie to partake of their sweetness.

"My, these oranges are good, grandma," said the little boy, pulling off the fragrant peeling. Where did they come from?"

"Probably from Florida or California where it's nice and warm most of the time," said his grandma, looking up from her knitting. "Let's see—are they navel oranges?"

Jamies held one up for her to see.

"Yes, they are navels. Then they came from California, most likely for most of the Florida oranges have seeds in them."

"What is a navel orange, grandma?" Jamie asked.

His grandma picked up an orange. "Do you see that little cluster of skin at the end? Sometimes inside of that is another tiny little orange. And then navel oranges never have any seeds."

"How'd that happen? Did some smart man make them grow that way?"

"No, they grow that way naturally."

"How do new orange trees grow if there'n any seeds to plant?" the little boy wanted to know.

"They are budded or grafted," said his grandma.

"What does that mean?" Jamie asked.

"A small piece with buds on it is cut from a tree that is bearing oranges, and set in the wood of a tree which has become too old to bear any more fruit. It is tied securely into the slit bark of the old tree, and after a while it begins ot grow and makes a fine young tree."

"Don't any oranges grow from seeds?" asked Jamie.

"Oh, yes, but the best trees are made by budding. If you plant several orange seeds in a flower pot and keep them nice and warm and give them plenty of water, you can raise a little orange tree yourself—a seedling, but it won't grow very large."

"How big are regular orange trees?"

"About as high as this ceiling. The leaves are always green, and there are blossoms, green fruit and ripe fruit on the trees all at the same time."

"How funny! How long does it take for oranges to get ripe?" Jamie asked.

"About a year, but there are usually three crops a year, and the trees keep right on blossoming all the time."

"Do the trees grow in orchards?" the little boy asked.

"Yes, they are set out in rows, with ditches containing water between them."

"Water? What for?"

"The countries where the oranges grow have what they call dry seasons when there isn't any rain, so the trees have to be watered and this is done by the ditches—irrigation ditches, they are called," explained his grandma.

"How many oranges grow on one tree?" asked Jamie.

"Anyway from 250 to 500 a year in California, although in more tropical countries there are more than that on one tree."

"One time I had an orange that was red inside. What kind of an orange was that?" Jamie wanted to know.

"That was a blood orange," said his grandma.

"Are there many kinds of oranges, grandma?"

"Over a hundred different varieties. Did you ever eat a tangerine?"

"I always call tangerines kid glove oranges. Why do people call them that?" asked Jamie.

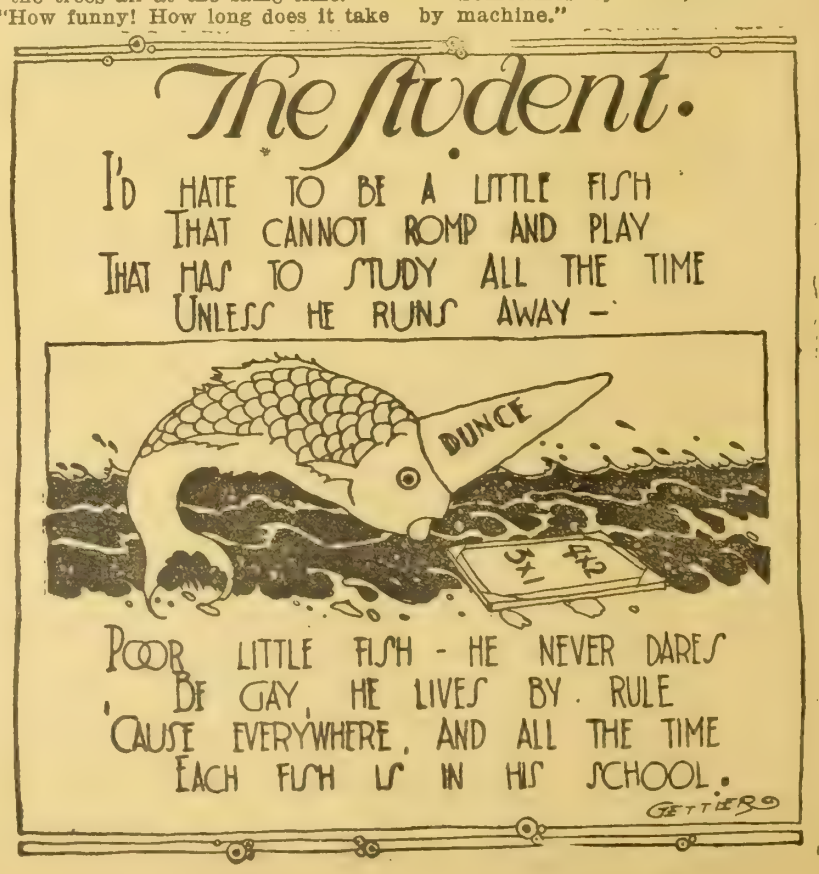
"I suppose it is because they are so easy to peel and eat that you could do it without soiling your gloves."

"I wonder if I could!" laughed Jamie. "But what makes some oranges kind of brown, grandma? Is that another kind?"

"They are called russet oranges," replied his grandma, "but they are not any special variety. You could here, because the orange growers did not know how to pack them so they wouldn't rot. They have to be handled very carefully. Each orange is picked by hand and put into a bag or basket. The pickers and packers must have their finger nails cut very short, for the slightest prick in the skin causes the orange to decay. And they must not be bruised, either. After they are picked they are set aside for a few days to rest—curing, that is called, then they are sorted."

"How are they sorted?" Jamie wanted to know.

"Sometimes by hand, but usually by machine."



The Student.
I'D HATE TO BE A LITTLE FISH
THAT CANNOT ROMP AND PLAY
THAT HAS TO STUDY ALL THE TIME
UNLESS HE RUNS AWAY -
DUNCE

4th
POOR LITTLE FISH - HE NEVER DARES
BE GAY, HE LIVES BY RULE
'CAUSE EVERYWHERE, AND ALL THE TIME
EACH FISH IS IN HIS SCHOOL.
GETTIER

Dear Laddie—I am a farmer boy. I am 12 years old and in the 6th grade. For pets I have a little black dog. My father takes the M. B. F. He likes it very much. As my letter is getting long must close.—Donald Miles, Vermontville, Mich.

Dear Laddie—I have never written to you before. I am 10 years old and in the 4th grade. My father takes M. B. F. and likes it very much. I like to read the boys' and girls' letters and stories. My hair is light and I have got blue eyes. I will close hoping to see my letter in print.—Agnes Dora Peterson, Rodney, Mich.

Dear Laddie—I thought I would like to join the Children's Story Club. I am 10 years old and in the 3rd grade. I have 1 mile and a quarter to walk to school. I have 5 brothers and one sister. I like to read the Doo Dads. Well, I will close and if my letter escapes the waste basket. I will write a story. Good bye, Horace Cooper, Pewamo, Mich.

Dear Laddie—This is the first time I have written to you. I am 10 years old and in the 5th grade in all of my studies but one and that is spelling. I am in the 6th grade spelling. Our teacher's name is Alice L. Hughes. For a pet I have one rabbit and 20 chickens. I hope to see my letter in print. Well I must close.—Gerald E. Dobbyn, McDonald, Michigan.

Dear Laddie—This is the first time I have ever written to you. I am a girl, 11 years old and live on a 40 acre farm. We have 4 cows, 4 pigs and 2 horses. For pets I have a dog, 12 years old and a cat 2 years old. I go to school every day. My teacher's name is Miss Evelyn Kinyon. As my letter is getting long I will close, hoping to see my letter in print.—Mildred Rowden, Auburn, Mich.

Dear Laddie—This is the first time I have ever written to you. I am a girl 14 years old and in the 8th grade. My teacher's name is Miss Gould. I like her real well. I like to read the boys' and girls' letters. I also like to read the Doo Dads. I have no sisters or brothers. I would like to have some one of the members of the Children's Hour write to me. I hope to see my letter in print. Velma P. Gilmore, Remus, Michigan.

Dear Laddie—This is the first time I have written to you. I am 10 years old and in the sixth grade. I go to the McNitt school. My teacher's name is Anna Cook. I like her very well. I did not go to school today. We have 5 calves, 8 cows, 6 pigs, 15 sheep, 3 horses and for pets I have a cat and a dog. I would like to know how to get a pencil box. If you will write and tell me how I could get one I would be well pleased. I will close, hoping my letter will escape the waste basket. Yours truly, Sylvia Nostrant.

Dear Laddie—This is the first time I have written to you. I am a girl 10 years old. My father is a bookkeeper at the Federal Sand and Gravel Co. We live about a mile from town, so my sister Jean and I stay with my aunt Fannie in town and go to school. I like to read the Children's Hour. Are you Scotch? I thought by your name you was; I am. My uncle James Bell sells farms and he takes the Michigan Business Farming, and my other uncle is Senator McRae and he takes the Business Farming too. I like the Doo Dads but they were not in the paper this week. This is all for this time, hoping to see my letter in the Business Farming.—Elizabeth McRae, Greenbush, Mich.

Dear Laddie—This the the second time I have written. Before I did not see my letter in print so am writing again. I am a little girl, nine years old, and am in the fifth grade. My birthday is the 9th of January. I live on a 80 acre farm We have 50 chickens about 15 turkeys, four horses, 12 cows, 5 pigs, one big one and four little ones. We have a car which we got in the fall. It is an Overland. I have two brothers and one sister. Thelma will be 21, the 23 of February. Floyd is 13 and in the 5th grade Philip is 6 and in the 1st grade. My teacher's name is Miss Jessie McKellar, which is very nice. My letter is getting long. I hope my letter is in print. I wish some of the girls and boys would write to me. We'll close for this time Martha A. Bell, Freeland, Mich.

Dear Laddie—This is the first time I have written to you. We take the M. B. F. and like it very much. I like to read the boys' and girls' letters. I live on an 80 acre farm. Then we have an 80 acre farm rented and we bought 40 acres more. We have 7 horses, 25 head of cattle and 12 pigs and 9 of them are little pigs. They are very curly. And I have 5 other sisters and two brothers. Their names are Ida 16, Walter, 14, Ralph 11, Edith 9, Marion 7, Esther 3, Velma 1 year. I am 13 years old and in the 6th grade at school. My teacher's name is Miss Colby. I like her very much. I would like to see some more of the Doo Dads. I will give a riddle: 30 white horses upon a red hill, now they chant, now they dance, now they stand still. Answer: your teeth. Hoping to see my letter in print.—Miss Blanche Thomas, Sandusky, Mich.

"HEARTS OF THREE"

(*Continued from page* 15)

of delicacy and sensibility, could not, of course, give name to her love for him while the other man still lived. It was subtle of her. He prided himself on his own subtelty, and he flattered himself that he had interpreted her veiled thought aright. And . . . well, he resolved, he would see to it that the man who was to die at ten next morning, should have neither reprieve nor rescue. The one thing clear, if he were to win Leoncia quickly, was that Henry Morgan should die quickly.

"We will speak of it no more . . now," he said with chivalric gentleness, as he gently pressed her hand, rose to his feet, and gazed down on her.

She returned a soft pressure of thanks with her own hand ere she released it and stood up.

"Come," she said. "We will join the others. They are planning now, or trying to find some plan to save Henry Morgan."

The conversation of the group ebbed away as they joined it, as if out of half-suspicion of Torres.

"Have you hit upon anything yet?" Leoncia asked.

Old Enrico, straight and slender and graceful as any of his sons despite his age, shook his head.

"I have a plan, if you will pardon me," Torres began, but ceased at a warning glance from Alesandro, the eldest son.

On the walk, below the piazza, had appeared two scare-crows of beggar boys. Not more than ten years of age, by their size, they seemed much older when judged by the shrewdness of their eyes and faces. Each wore a single marvelous garment, so that between them it could be said they shared a shirt and pants. But such a shirt! And such pants! The latter, man-size, of ancient duck, were buttoned around the lad's neck, the waistband reefed with knotted twine so not to slip down over his shoulders. His arms were thrust through the holes where the side-pockets had been. The legs of the pants had been hacked off with a knife to suit his own diminutive length of limb. The tails of the man's shirt on the other boy dragged on the ground.

"Vamos!" Alesandro shouted fiercely at them to be gone.

But the boy in the pants gravely removed a stone which he had been carrying on top of his bare head, exposing a letter which had been thus carried. Alesandro leaned over, took the letter, and with a glance at the inscription passed it to Leoncia, while the boys began whining for money. Francis, smiling, despite himself at the spectacle of them, tossed them a few pieces of small silver, whereupon the shirt and the pants toddled away down the path.

The letter was from Henry and Leoncia scanned it hurriedly. It was not precisely in farewell, for he wrote in the tenor of a man who never expected to die save by some inconceivable accident. Nevertheless, on the chance of such inconceivable thing becoming possible, Henry did manage to say good-bye and to include a facetious recommendation to Leoncia not to forget Francis, who was well worth remembering because he was so much like himself, Henry.

Leoncia's first impulse was to show the letter to the others, but the portion about Francis withstrained her.

"It's from Henry," she said, tucking the note into her bosom. "There is nothing of importance. He seems to have not the slightest doubt that he will escape somehow.

"We shall see that he does," Francis declared positively.

With a grateful smile to him, and with one of interrogation to Torres, Leoncia said:

"You were speaking of a plan, Senor Torres?"

Torres smiled, twisted his mustache, and struck and attitude of importance.

"There is one way, the Gringo, Anglo-Saxon way, and it is simple, straight to the point. That is just what it is, straight to the point. We will go and take Henry out of jail in forthright, brutal and direct Gringo fashion. It is the one thing they will not expect. Therefore, it will succeed. There are enough unhung rascals on the beach with which to storm the jail. Hire them, pay them well, but only partly in advance, and the thing is accomplished."

Leoncia nodded eager agreement. Old Enrico's eyes flashed and his nostrils distended as if already sniffing gunpowder. The young man was taking fire from his example. And all looked to Francis for his opinion or agreement. He shook his head slowly, and Leoncia uttered a sharp cry of disappointment in him.

"That way is hopeless," he said. "Why should all of you risk your necks in a madcap attempt like that, doomed to failure from the start?" As he talked, he strode across from Leoncia's side to the railing in such way as to be for a moment between Torres and the other men, and at the same time managed a warning look to Enrico and his sons. "As for Henry, it looks as if it were all up with him——"

"You mean you doubt me?" Torres bristled.

"Heavens, man," Francis protested.

But Torres dashed on: "You mean that I am forbidden by you, a man I have scarcely met, from the councils of the Solanos, who are my oldest and most honored friends."

Old Enrico who had not missed the rising wrath against Francis in Leoncia's face, succeeded in conveying a warning to her, ere, with a courteous gesture, he hushed Torres and began to speak.

"There are no councils of the Solanos from which you are barred, Senor Torres. You are indeed an old friend of the family. Your late father and I were comrades, almost brothers. But that—and you will pardon an old man's judgment—does not prevent Senor Morgan from being right when he says your plan is hopeless. To storm the jail is truly madness. Look at the thickness of the walls. They could stand a siege of weeks. And yet, I confress it, almost tempted when you first broached the idea. Now when I was a young man, fighting the Indians in the high Cordilleras, there was a very case in poina. Come, let us all be seated and comfortable, and I will tell you the tale . . . "

But Torres, busy with many things declined to wait, and with soothed amicable feelings shook hands all around, briefly apologized to Francis, and departed astride his silver-saddled and silver-bridled horse for San Antonio. One of the things that busied him was the cable correspondence maintained between him and Thomas Regan's Wall street office. Having secret access to the Panamanian government wireless station at San Antonio, he was thus able to relay messages to the cable station at Vera Cruz. Not alone was his relationship with Regan proving lucrative, but it was jibing in with his own personal plans concerning Leoncia and the Morgans.

"What have you against Senor Torres, that you should reject his plan and anger him?" Leoncia demanded of Francis.

"Nothing," was the answer, "except that we do not need him, and that I'm not exactly infatuated with him. He is a fool and would spoil any plan. Look at the way he fell down on testifying at my trial. Maybe he can't be trusted. I don't know. Anyway, what's the good of trusting him when we don't need him? Now his plan is all right. We'll go straight to the jail and take Henry out, if all you are game for it. And we don't need to trust to a mob of unhung rascals and beach-sweepings. If the six men of us can't do it, we might as well quit."

"There must be at least a dozen guards always hanging out at the jail," Ricardo, Leoncia's youngest brother, a lad of eighteen, objected.

Leoncia, her eagerness alive again, frowned at him; but Francis took his part.

"Well taken," he agreed. "But we will eliminate the guards."

"The five-foot walls," said Martinez Solano, twin brother to Alvarado.

"Go through them," Francis answered.

"But how?" Leoncia cried.

(*Continued next week*)

The Markers Change Place Automatically

IF YOU have never operated a new **International or C B & Q Corn Planter**, you have a treat in store for you. These planters have every convenience for efficient, labor-saving operation. For instance, when you reach the end of a row it is not necessary to pull the marker over—there is a folding marker on each side and the pressure of the soil automatically swings one out and folds the other in, lifting it out the way, as you turn the planter. This is an *exclusive feature on International and C B & Q planters.*

You will appreciate also such features as the foot drop lever for planting head rows or dropping hills without wire; the tongue adjustable to the height of the team, insuring accurate checking; variable drop clutch that will drop 2, 3, or 4 kernels to the hill as desired; check spring that makes action of shaft quick and dropping of valves accurate; foot lever and balancing spring that help raise runners.

The next time you happen to be in town, ask your International dealer about these planters. Meanwhile, let us send you a descriptive catalog.

CULL BEANS FOR CATTLE

Will you please tell me through your valuable paper whether cull beans are good for brood sows and fattening hogs, and if so, how much, and how to prepare for feed. Also are cull beans, corn and oats ground together good for milch cows?—A. E., Burt, Mich.

When used in proper quantities beans may be fed to dairy cattle with good results.

There are three ways in which cull beans may be fed:

1. They may be ground and mixed with other grains.

2. They may be fed whole by soaking from ten to twenty-four hours before feeding.

3. They may be fed after cooking. The cooking of cull beans entails considerable labor and where a considerable number of cows are to be fed this method of preparing is seldom feasible. When the beans are soaked it is best to put the wet beans on the silage and then drop the ground feed on both of them. This causes the provender to stick to the silage and the cow ingests all of the material together.

It has been our experience after a good many trials in feeding beans that a cow will not consume over three pounds of the dried beans per day and still clean up her feeding regularly. So in making a grain mixture it is not advisable to allow more than three pounds of dry beans for each mature cow fed.—*A. C. Anderson, Prof. of Dairy Husbandry, M. A. C.*

FARMERS SERVICE BUREAU

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you.

TAX EXEMPTION LIMIT

I have a forty acre farm near the village of F—— and would like to know how many cows and horses I may keep without taxes. I have three jersey cows and a span of horses. I like the M. B. F. very much and will soon have to renew. —Mrs. M., Oakland County.

The law does not specifically exempt any number of animals from taxation. A person who is a householder is entitled to an exemption of $500 on household provisions, furniture and fuel and an exemption of $200 on personal property actually used in his business. Your subscriber, therefore, would be entitled to an exemption of $200 worth of livestock used on his farm if he is actually a householder in the township. Horses and cattle not over one year old and sheep and swine not over six months old on the second Monday of April are also exempt from taxation.—*B. F. Burtless, Secretary Board of State Tax Commissioners.*

DETROIT MILK PRICE

Please give me some information about the Detroit Commission's milk price. I have not seen anything of it in your Michigan Business Farming for a long time. I wish you would publish it in your Business Farming every time the Commission sets the price.—J. J. H. ,Vassar, Mich.

We referred your letter to Mr. R. C. Reed, secretary of Michigan Milk Poducers' Association. His answer follows: Will say that we will try in the near future to give the report of the Detroit Commission findings. Frequently, I do not know of the meeting of the Commission until a very short time prior to its sitting and have about all that I can do to keep my locals advised in proper time. The Commission is not called by myself; it is a law unto itself and does its own sweet will, which has been very fortunate for the producers of Michigan up to the present time. There will be no meeting of the Commission until the latter part of next month as the milk price for March is on the same basis as the milk price for February, or $4.05, f. o. b., Detroit.—*R. C. Reed, Secretary, Michigan Milk Producers' Ass'n.*

LUPINE SEED

With great interest I followed up articles about lupine and seradella. I know these plants and their value and though as much as I would like to sow them and as hard as I tried for the last two years I could get no seed. Some seed stores didn't know it at all. Some didn't handle it. Now if I could get information where to obtain some if only several pounds of each I'd very much appreciate the favor. —P. K., Big Rapids, R 1.

Mr. Schmidt advises that he procured his seed from Nungessen, Dickinson & Co., of Hoboken, New Jersey.

AUCTIONEE R'S LICENSE

I would like to know if I have got to get a license for auctioneering farm sales and how much is that and do I have to have a state and county license?—J. M. E., LeRoy, Mich.

An auctioneer must file a bond with two sureties in the sum of $2,-500. This will entitle him to act for four years. There are certain duties he must perform as pointed out in the statute. The law applies to each partner of a firm. See C. L. 1915, Sec. 7021 and following. Apply to Secretary of State.—*W. E. Brown, legal editor.*

OAT SPROUTER

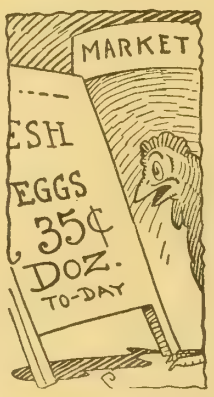
I have just bought a house with a furnace and wish to know how to make oat-sprouters.—Subscriber.

On the basis of 100 hens build frames that are 10 x 20 inches and 2 inches deep using on the bottom common lath far enough apart to allow the water to trickle through but near enough to prevent the oats from dropping through. Soak the oats twelve hours in warm water. Spread them on a tray one inch thick. This is for Monday. Tuesday prepare the second tray in the same way and following with a tray each day of the week until he has the full seven. Place these in a frame work as drawers would be in a common bureau. Sprinkle with water at 65 degrees temperature every morning. Keep them near the furnace in the furnace room. By the following Monday the first tray will be ready to feed the sprouts. They should be from 1-4 to 1 1-2 and well matted with roots. We recommend one cubic inch per hen per day but two cubic inches would not be out of the way. After the tray has been emptied spray it with a weak solution of formaldehyde to prevent moult and start over again.—*C. H. Burgess, Professor of Poultry Husbandry, M. A. C.*

Will you kindly advise me how much a cord of stone should weigh? —J. B.

It is very difficult for us to state the weight of a cord of stone, as different stone are composed of different substances which cause them to very greatly in weight. However, one cord of stone composed of bed rock weighs 22, 240 pounds.

SENSE AND NONSENSE



NOBLE BIRD

Hen—My I certainly am helping to lower the cost of living.

His Identity

"Permit me, sir!" suavely said a distinguished looking stranger in Wayoverbehind to the owner of the balky mule. "I fancy I can start the stubborn but useful animal"

Approaching the varmint from the front he addressed a few words to him in low, well-modulated tones, whereat the mule flapped his ears in pleased acquiescence and marched onward with his load.

"Well, I'll be dod-swizzled!" exclaimed an innocent bystander. "Did you see that? Who is that feller, anyhow?"

"He is a representative of a large Eastern publishing house who calls upon and sells to prominent citizens valuable literary works that they do not want and haven't got any use for," replied another and somewhat more sophisticated bystander

His Likely Fate

"I hear your hired man has mysteriously disappeared," said Farmer Bentover. "What do you s'pose has become of him?"

"I don't know," replied Farmer Hornbeak, "but I kinda suspect he yawned and fell down his own throat."

Not Censored!

Women should not be censured for wearing narrow skirts—it may be their only safeguard against jumping at conclusions.

"What do you think of the two candidates?"

"Well, the more I think of it the more pleased I am that only one of them can be elected."

Men employ speech only to conceal their thoughts.—*Voltaire*, 1778

COULDN'T MAKE HIS FEET BEHAVE

Bug — I just can't help dancing when they beat this drum.

A lady passenger, on a train going through the country, saw a wind-mill for the first time. Upon her return to her home city, she told some of her friends how kindhearted the farmers are. "Just think of it," said she: "They have electric fans for their cattl."

In Bad Shape

John, aged four, came downstairs one morning with a very bad cold in his head. Running to his mother, he exclaimed: "Oh, mother, both my eyes is leaking and one of my noses is frozen up."

A Quick Shave

A man came running into a barber shop and said to the barber, who happened to be an Irishman:

"Shave me as quick as you can; I want to catch the next car."

Pat, the barber, hustled and soon had the man shaved, when he said:

"Well, you did a quick job!"

"Yes," says the barber, "but I could have shaved you quicker than that if I had had a little more time."

According to Orders

The doctor consulted his thermometer and looked startled. Then he hurriedly tested his patient's pulse.

"Good gracious, man!" he gasped. "What have you been doing? Your temperature is up to danger point and your pulse is terrific. Have you been limiting yourself to infant diet, as I told you?"

The patient nodded feebly.

"Yes, doctor, I have," he whispered. "During the last twenty-four hours I have eaten three apple cores, over a dozen match stalks and various buttons; but I find considerable difficulty in chewing the coal."

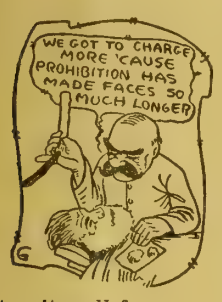
BLISS

Fish — My, my, I do believe that fellow is going to drop in for lunch.

Uncle Rube Spinach Says:

JEST FINISHED

SAY! Do y' know, I got quite a s'prise las' week an' for a little spell was a feelin' purty dum good—got a raise in wages—hadn't 'zactly asked fer it neither; jest kinda hinted that I'd sort a like it ya know. Well I got it; we all did, an' by gosh! I was figgerin' on what a lot of things I was goin' to do with all that extra money, 65 cents a day extra means quite a bit in a year ya see. Well I didn't have to figger very long, hardly atall ya might say, 'cause the other fellers, the business fellers heard of it 'bout as soon as I did an' they had everything planned to git that money, an' they're gittin' it all right too, believe me! they know how to git it all right.



First thing, my meals went up, 5 and 10 cents. I'm takin' 'em at a restaurant now, my reg'lar boardin' mistress bein' in a hospital tryin' to git well from an operation—5 and 10 cents—an' many of the things I eat was gittin' cheaper, eegs, butter, likes o'that. Not only meals went up but the pesky barbers, they heard about the raise an' up went their prices, 5 and 10 cents on a shave an' 15 cents on a hair-cut. They had to live they said, an' I said mebbe they did but I didn't see no real reason for it, safety razors an' everything bein' so cheap, but they stuck an' so more of my money found a outlet.

Then socks went up, an' clothes, sugar and flour; doctors raised their rates an' ice took an upward jump; jest think of it, ice goin' up, when we got more of the darn stuff than we know what to do with. Well, I soon found that I wuz worse off with the raise than I was without it, financially speakin', an' so I can't see where a raise in wages has helped me a darn bit, can you? 'Course, I wuz glad to git it an' appreciated it all right, but the things I wanted to do with it I can't 'cause it all goes for livin' an' breathin' an' clothes any way, so what's the use?

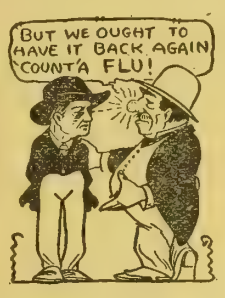
An' speakin' 'bout clothes! They wuz a feller blew into this town the other day—quite a oldish feller—sed he come in to see the sights of a big city; sed things wuz purty dull to home, not much goin' on. He said, "Why," he said, "a feller dropped dead in the postoffice over there last week an' they didn't find him for three days;" "gosh!" he sed, "I'd hate to drop dead on the streets back home," "I swan!" he sed, "they would not discover me 'til they had 'nother band concert." I asked 'im where he hailed from an' he sed, "from Marshall, Mich., b gosh!" Then, being a former resident of that thrivin' city, I kinda got in conversation with the ol' feller an' asked 'im how he liked our town, "O, fine," he sed; "Hot dog! but there's some purty sights here." He sed, "Why, you got the swellest women, classy an' right up to date dressers, too." "Why," said he, "I stood right there by the bank corner an' watched the young women go by; stood there 'bout a hour," he sed, "an' then went an' give half my money to a blind man sellin' led pencils, an' if the wind had been blowin' a little harder," he sed, "I'd a gin him every darn cent I had."

Well, I left 'im an' went an' stood on that same corner fir quite a spell an' 'though I didn't give away any money, by ginger! I've got a lot of sympathy fer them that can't see.

Yes, this a darn nice town all right, as towns go—lots of work an' reasonably fair wages—but as I have off'en sed before I don't think young men can save as much money here or in any other city as they can workin' on a farm, an' in the city you're a nobody 'less you've got a good big bank account an' live high; you're jest a part of a machine, only one of the cog wheels, so to speak, an' ain't sure of your job 15 minuits.

'bout the quickest work that has been done here in some time, happened the week bginnin' Fb. 15, 1920. On Monday night, by holdin' a hammer over her head an' threatenin' to kill her, a feller named McCauley, compelled a young widow of a month or two, to promise to marry him; Tuesday they were married; Friday morning he beat her head in with an ax; Friday afternoon at 3 or 4 o'clock they found him dead in a roomin' house, he havin' committed suicide by the pizen route. The woman left three children by a former husband, with no one, apparently to look after them.

Oh, yes, things seem to be swift in the city, any city, thievin' an murderin', everything happens; hold-ups an' marriages, which is only another name for hold-ups sometimes, an' divorces, gosh! more divorces, purty dum nigh than marriages or births, ain't it awful how some folks jest love to git into the divorce courts; oh, well, lawyers are supposed to have to live, same as barbers or ice men, pickpockets or bootleggers; mebbe they have to be here but not on my account they don't.



Speakin' of bootleggers brings up the question of booze, a feller got a talkin' to me 'h'other day an' he sed, "Don't you think doin' away with licker has a good deal to do with this influenza epedimic?" "Dunno's I do," I sez, "Why?" "'Cause," he sed, "I notice I never had any such thing when there wuz plenty of likker to be had." "Well," I sez, "neither did I, an' so far, I ain't a havin' it now, be you?" "Well, no,' he sez, "not yit I aint, but gosh, all hemlocks! I might have it enny time, an then what?" he sez. I sez to 'im, "My dear sir, the probabilities are, you won't, but if you did git it your chances for recovery are a darn sight better than they would a been two or three years ago when you kept so full of booze you looked like a puffed-up warty toad an' if a rattle snake had bit ya he'd met a instant an' horrible death." Cordially, *Uncle Rube.*

A Few Gloom-Chasers From Today's Mail

We have confidence in M. B. F.—*G. S. M., Cass County.*

Can't farm without M. B. F.—*C. P., Mecosta County.*

I think your paper is all right. I take quite a few papers but I think yours the best.—*W. E. R., Saginaw County.*

Am reading your farm paper and hope you will keep right on and not get cold feet. We farmers need a paper that will stay by us.—*R. L., Cass County.*

I do not want to miss any issues of M. B. F. By the way, we have another name for the paper at our house which is "Honest Abe". —*Jay Miller, Shiawassee County.*

You are doing a good work for the farmers. Best paper I receive—*W. A. E., Saginaw County.*

Please send me your paper for which I will enclose one dollar for one year. I think it is a fine paper, one that we all ought to take.—*W. H., Wayne Co.*

Dear Sir —Enclosed find our straw vote. There are four voters at our house and all boosters for Johnson. The man that did a lot to get the boys out of Russia and we think that every soldier should boost for Johnson. Now a word about M. B. F. the only farm paper in Michigan worth reading because it always takes the side of the farmer. Hurrah for Johnson for President.—*A. F. R., Osceola County.*

More Work in Less Time

IF THE farmer is ever to enjoy a reasonable leisure such as nearly all city people now have—he must do more work in less time.

12 H. P. on Draw-Bar

25 H. P. on Belt Pulley

THE HUBER Light Four

"THE TRACTOR DEPENDABLE"

Draws Three Bottoms

Turns an Acre an Hour

goes a long way toward making the 8-hour day possible on the farm. But it can work any amount of overtime. So it's easy to get whole days off to go fishing or make a trip to town.

The work costs no more—usually less—than it would if you did it by the old slow methods.

That is possible because the Huber Light Four is the "Tractor Dependable". It works all day every day. And it gets the most out of every hour and every gallon of fuel.

The Huber Light Four is powerful enough to pull three plows and a steady stream of power flows from its mighty motor through all spur gear direct to the draw-bar. Light tractor weight combined with great traction power; high wheels that roll easier and increase the amount of surface "grip;" center draft on all loads, preventing loss of power from side pull. The combination of all these—with a dozen other Huber features—makes the Light Four the last word in tractor dependability—and fuel economy, too. And everywhere the Huber is known as the "Tractor that Always Keeps Going".

Weight 5,000 lbs; Waukesha, four-cylinder motor, oversize; Perfex Radiator; Hyatt Roller Bearings; burns gasoline, kerosene or distillate; center draft; two speeds 2½ and 4 miles per hour.

Write for booklet "The Foundation of Tractor Dependability".

FARM FOR SALE AT AUCTION

MARCH 11, 1920

LOCATION: Five Miles from Center of Grand Rapids, Michigan

THE ANNADALE FARM consists of 120 acres on the Grandville, cement paved road, five miles from the center of Grand Rapids. Five minutes' walk from Interurban Station. The buildings consist of a ten-room house, 60-stall cow barns, 12-stall horse barns, 2 silos, 3 calf barns, large and airy henhouse, two tool sheds, pigsty, milkhouse, icehouse, employees' rest room, corncrib (capacity 1,000 baskets), grainery, workshop and hay storage (capacity 120 tons). Also about 50 tons of ensilage in silo, 100 loads of manure in barnyard, and 25 tons of alfalfa hay.

There is an ample supply of water furnished by a deep well and tank in the barnyard and a stream flows through the pasture. The land is sand loam, well fertilized, with 20 acres planted in wheat, about 26 in alfalfa, 30 in pasture, and the balance under cultivation.

The above property together with ample farm equipment and household goods will be sold by public auction on March 11th, 1920, at 10 a. m. Easy terms of payment can be arranged. For additional information, address Henry T. Heald, 531 Michigan Trust Bldg., Grand Rapids, Michigan.

If you want to sell or trade just talk about it. Our Business Farming Farmers' Exchange gets results. Address Michigan Business Farming, Adv. Dept., Mt. Clemens.

INCREASE YOUR INCOME

and help your friends by selling them Michigan's own farm weekly. Liberal commission and all supplies free. Write today. Michigan Business Farming, Mt. Clemens, Mich.

County Crop Reports

CALHOUN—Farmers are not doing much as it takes all of the well to take care of the sick. Hay is bringing a good price for there is not much to be had. Potatoes are high and scarce. There is no building in the county. Lots of auctions, five or six a week.—C. E. B. The following prices were paid at Battle Creek:—Wheat, $2.30@$2.33; oats, 85; rye, $1.47; hay: No. 1 timothy, $30; No. 1 light mixed, $30; potatoes, $3; springers, 27; butter, 60; eggs, 53; lambs, 10@17; hogs, 14; beef steers, 8@10; beef cows, 7; veal calves, 10.

MISSAUKEE (S)—Practically all that the farmers are doing is their chores. Some are hauling gravel on a three and a half mile road. There are still some potatoes left in this neighborhood which the farmers are holding for higher prices. Hay is very scarce. Other feed is also scarce. Many farmers are buying feed. No coal can be gotten here. The supplies are about all run out. Farmers buying wood, others getting pine stumps and burning them. Are having plenty of cold weather this winter. The coldest we have had was 20 below zero. We also have a large supply of snow this winter. Anybody not having enough, come and get some. The following prices were offered at Falmouth on Feb. 23: Wheat, $2.20; corn, $1.60; oats, $1; rye, $1.45; No. 1 light mixed, $35; rye straw, $16; beans (C. H. P. Pea) $6 cwt.; potatoes, $3.50; butter 55c; eggs, 45c.—J. S.

MANISTEE—The farmers are cutting and hauling wood; some are hauling hay and doing barn work. Weather has taken another slight change to cooler with some snow. Quite a number of people are sick with the grip or pneumonia and influenza again. Farmers are not selling very much now for it is too cold. No potatoes hauled and no cars. They say beans are cheaper. Not much building here; some are buying seed and feed.—H. A. The following prices were quoted at Bear Lake:—No price is quoted on potatoes and few, if any, are being bought on account of the shortage of cars. Navy beans are $5.25 per cwt. Red Kidney beans $10 per cwt., rye $1.30 per bushel, wheat $2 per bushel; butter, 50; eggs, 45, butterfat, 45; beef, 5@7c on foot, 10@13 dressed; pork 11@13 on foot, 15@17 dressed; veal, 10@13 alive, 18@22 dressed; chickens, 20@25 per lb., alive, 25@29 dressed. Hides are 16@20c per lb.

MONROE—(N.E.)—Very fine weather now; had a slight thaw; snow about gone and the roads are good. Wheat appears to be in poor condition, but cannot tell till spring how it will come through. Lots of sickness and some deaths. Hay and fodder of all kinds high and very scarce, not much grain left to ship out. Lots of auction sales with poor attendance. Many farms for sale, no help what is left going to the city to work leaving farm idle, as they can earn more than farming and be at home for board and nights, as the Interurban goes through this territory. The following prices were offered at Newport, Mich on Feb. 24, 1920:—Wheat, $2.20; corn, $1.80 on ear; oats .85; hay no 1 timothy $32.00; no 1 light mixed $30.00; wheat oat $8.00; potatoes $7.00 per 150 lbs.; onions .06; cabbage .06; poultry hens .30; springers .30; butter .50; eggs .56; live stock (live wt.) sheep changing every day; hogs, 10@11c; beef steers, 8c; beef cows, 6c; veal calves, 17c.—W. E. M.

WEXFORD—We have had a few days of nice weather. Trains were hung up for a few days last week on account of the severe blizzard, worst that has been known for many a moon, but at present things have resumed their normal stage. Quite a number of flu cases throughout the county. There have been three or four cases in this vicinity. The entire family of Tony Kerzich was down with it, and Miss Slagle had to officiate as nurse and do the chores at the barn for nine haed of cattle, and two horses. Mr. Volf's family were also sick with the flu and John Dehu's but all are getting better now. Quite a number were obliged to leave camp on account of sickness in their families.—S. H. S. The following prices were paid at Cadillac:—Wheat, $2.14@$2.20; corn, $1.35, shelled; oats, 80; rye, $1.30; buckwheat, $2.50 cwt.; beans: C. H. P., $6; red kidney, $8.50; hay, $31; potatoes, $3 cwt.; hens, 22@25; springers, 22@25; ducks, 25@30; geese, 2528; @butterfat, 62; eggs, 45; apples, $3.50 per cwt.; veal calves, 16@32; hogs, 16@18.

SANILAC (N.E.) — Lots of snow, making the roads in bad condition. The Flu also is taking its toll in this locality, nearly every home having more or less to do with it, many homes have been saddened by its effects. But in spite of the fact, the farmers have organized around Croswell, and hereafter they expect to do their own shipping and buying of farm produce, also coal and many other things if the local dealer do not come out and play square.

Through this association will let you know in future reports how things are running. The Croswell Milling Co. is trying to sell out to the Gleaners. That is the report and we all hope it is true. Some hay and stock is moving but most farmers are waiting for a raise in prices. Heavy horses in good condition are in big demand and sell at a fair price. The following prices were offered at Croswell, Mich., on Feb 24, 1920. Wheat $2.80 bu.; corn $2 65 cwt.; oats .84 bu.; rye $1.44 bu.; hay no 1 timothy 25-26; no 1 light mixed 23-25 beans (C. H. P. pea) $6.00 cwt.; potatoes $2.50; geese .20; torkeys .30; butter .60; butterfat .60; eggs .50; hogs $15.00 cwt.; veal calves .16; fruits apples $1.50.

MIDLAND—The following prices were paid at Midland by the Orr Bean & Grain Co.:—Wheat, fall, $2.35, spring, $2.40; corn, shelled, $1.45; oats, 84; rye, $1.40; buckwheat, $2.85; beans, $6; barley, $2.85; peas, $3.90.

MECOSTA—Farmers are busy getting ice, cutting wood and doing odd jobs. Some are selling beans and potatoes, others are holding for a change in the market. Weather has been very cold. There was a meeting in Evart this week for the purpose of buying a Gleaner elevator. The following prices were offered at Hersey, Mich. Wheat 228@230; Corn 135;oats 90;rye 110; hay-no 1 timothy 30; no 1 light mixed 26; beans, (C. H. P. pea) $6; red kidney, $7; eggs, 43.

MUSKEGON—Farmers are busy getting wood and putting up ice. Not very much being sold at present. About two feet of snow. A great many farmers are holding beans for higher prices. Not much encouragement for next year. The flu has claimed several in this neighborhood. The following prices were offered at Ravenna on Feb. 20: Corn, $1.60; oats, $1.00; No. 1 timothy, $30; No. 1 light mixed, $30; beans (C. H. P. Pea) $5.50; potatoes, $2.25.—E. E. P.

MONTCALM—The farmers are cutting logs and buzzing wood. Some are putting up ice which is 21 inches thick. The school is closed on account of the teacher's illness. The snow is about 24 inches deep in the woods. The people of Lakeview are suffering for the want of coal and wood.—G. B. W. The following prices were paid at Lakeview:—Wheat, $2.50; corn, $1.60; oats, 90; rye, $1.68; hay: No. 1 timothy, $30; No. 1 light mixed, $30; straw-rye, 15; wheat-oat, 15 beans: Pea, $8; red kidney, $13.75; potatoes, $3.50; onions, $2.50; hens, 22; springers, 20; ducks, 24; geese, 20; turkeys, 40; butter, 65; butterfat, 65; eggs, 48; sheep, 60; lambs, 8; hogs, 15; beef steers, 8; beef cows, 5; veal calves, 15@23.

INGHAM—Cold weather and snow. Very good sleighing with very little thaw since fore part of December. Farmers in this place are getting in logs to saw. Two new barns to be built in the spring. Lots of sickness here still. Ten auction sales billed for next week all within a few miles of here. Some are tired of farming, others getting older, and no help. Not much selling of stock at present. Outlook good for co-operations buying two elevators, one at Eden and one at Mason. Expect to close deal soon. What has become of Foster's Weather Guide? We miss it.—C. I. M. The following prices were paid at Mason—Wheat, $2.20@$2.25; corn, $1.40; oats, 80; rye, $1.40; barley, $2.50; hay: No.1 Timothy, $25; No. 1 light mixed, $25; wheat-oat, $12; beans, Pea, $8; potatoes, $2.25; butter, 52@55; butterfat, 63; eggs 45@52; lambs, 18; hogs, 14; beef steers, 10@11; beef cows, 5@8; veal calves, 19.

GENESEE—Farmers are working up wood, doing chores and attending auction sales. The weather has been very cold and we have had quite a bit of snow. The main roads are opened for automobiles but they are far from being in good shape for any kind of travel. There is good sleighing on most country roads and considerable teaming is being done. The fields are covered with a layer of snow which makes a good protection for crops. Farmers are selling potatoes, hay, wood and live stock. A meeting of the milk producers of this vicinity was held at Fenton on Saturday, Feb. 28. Auction sales are very plentiful and prices received are lower than formerly. A number of the farmers are selling out and moving to the cities. Farm help will be very scarce this year.—C. W. S. The following prices were paid at Flint:—Wheat, $2.35; corn, $1.50 oats, 93; rye, $1.45; buckwheat, $3 cwt.; beans: C. H. P., $6; red kidney, $11; hay, $25@$30; potatoes, $2.40@$2.50; onions, $6.50; cabbage, $8 bbl.; cucumbers, $2.50 doz.; hens, 32; ducks, 32; geese, 32; turkeys, 40; butter, creamery, 62@63; dairy, 55@58; eggs, 50@52; apples, $2.50@$3.50; beef steers, $11@$12; beef cows, $8.50@$9; veal calves, $21@$22; sheep, $12@$13; lambs, $19@$20; hogs, $14.25@$14.50.

MANISTEE—There is not much doing except chores, getting wood and breaking roads, as it has stormed most of the time this last week and is cold. Lots of snow but not good sleighing. Some are buying straw and rye-straw at that. There is nothing doing with potatoes; too cold and car shortage is the cry. Not much building going on here this winter.—C. H. S. The following prices were paid at Bear Lake:—Wheat, $2; corn, $1.40; oats, $1.60; rye, $1.30; beans: (C. H. P.) $5.75 cwt.; (red kidney), $10; hay, $33@$35 ton; rye-straw, $10; hens, 20@25; butter, 50; butterfat, 45; eggs, 45; beef steers, 5 to 7 alive; veal calves, 10 to 18 alive; hogs, 11 to 13 alive.

M. B. F. best farm paper published. Keep it coming.—*W. A., Huron Co.*

Enclosed find $1 for which please keep M. B. F. coming to my address for another year. Don't forget to send this week's copy. I admire the way M. B. F. goes after things. Just keep right on fearlessly and also keep the farmers posted as much as possible on all the markets and I think you will not lack for subscriptions.—*H. T. W., Kalamazoo County.*

What the Neighbors Say

(*Continued from page* 17)

they did not dare to say anything in this free country of ours.

One of the main causes of the so-called unrest in this country is that our people are realizing more and more that we have been used as a tool to take the chestnuts out of the fire for dear old England, the great empire which is built up by land grabbing and piracy.

We had to fight against "militarism and autocracy" and at the present time, our 100 per cent Americans are trying hard to saddle these same things on this country. Mr. Crosby says, "awful tales of Hun atrocities, made up in English newspaper officers," that is just where most of these stories did originate and a very large number of Americans did realize this fact during the war but our pro-English element which had brought us into the war, continued to spread these lies broadcast over the country for two easons viz: to help out dear old England and to prolong the war so that they might make millions and billions of war profits.

Not every one believes the old chestnut that Germany would have come over here to conuer us after fighting England and France. If Germany had been so land hungry why is it that she did not go to war with her small neighbors like Holland, Switzerland, Luxemburg and others and why is it that these small nations did not join the allies when they realized for certain that Germany would lose the war?

The following is taken from the Winnipeg Evening Bulletin, a Canadian paper:

"Captain A. A. Cameron, assistant professor of the Manitoba University in a lecture held in this city ast night made the statement that the British army never encountered any difficulty in regard to poisoned wells —Mr. Cameron who was an officer of the first water tank Co. R. A. M. C. during the war asserted that he did not know or hear of a single case where a well had been intentionally poisoned by German soldiers."

The above statement is made by a Canadian officer who certainly had no object to defend the Germans.

How different were the "awful tales" we read in our pro-English papers during the war.

No wonder the president suffered a nervous breakdown, he probably realized at last that he fell in with a bunch of hypocrites and land grabbers at Pais which has the Huns beaten ten to one.

Where are the fourteen points which were accepted as a basis for peace? How about self determination which was so loudly proclaimed before the shameful conference at Paris.

I am not a pro-German in any sense. I was born here in Michigan over 50 years ago and am generally able to consider things from both sides but I would like to ask the question. What did we gain by our entering the war?—*Theo. Bengal, Fowler, Mich.*

Will some of our readers tell Mr. Bengal what we gained by entering the war?—Editor.

M. B. F. PAVES WAY FOR ORGANIZATION

Will you please outline in your valuable paper the steps necessary to be taken in a county not yet a member of the Michigan State Farm Bureau in order that it may become a member.

Sanilac is one of the best agricultural counties of the state and there is none that needs the services of the bureau more than do we. Yet so far as I know there has been no move made to organize us and there is no application in.

The farmers here are all talking organization. All we lack is leadership. I believe that a few dollars spent in advertising the Farm Bureau in the local papers of this county would awaken the farmers so that at least 95 per cent would sign up at once. There are always a few dead ones but they can be converted or squeezed out of business later. This may sound rather rough but is the method that has been successfully employed by the other two big organizations, labor and capital.

I have been a reader of your paper for years. I believe that it is doing, or at least is attempting to do a greater service to society than is any other paper in Michigan. I am not saying this to tickle your ears, but because I sincerely mean what I say. I figure it like this: an ideal democracy such as we wish ours to be is the greatest producer of human happiness that has ever been devised by man. This republic can not become ideal nor can it remain as good as it now is without it be the home of a contented intelligent and happy people. The people of this country cannot remain contented and happy unless there is a reliable and continuous supply of food of honest quality and honest quantity and a reasonable supply ahead for a rainy day. This supply of food cannot come from a race of economic slaves but must be furnished by a self-respecting, intelligent and contented class of farmers.

Intelligent men will not stay on the farm unless farming can be made to pay well enough that his wife need not be a slave, that he need not work his children to an extent which would not be allowed anywhere else but in a country community and where he himself may have some time for recreation and mind development.

Such a profitable mode of farming can never be reached without an organization that can meet at the conference table on equal terms with organized capital and organized labor.

Your paper is doing more than is any other paper in Michigan to build up such an organization.

Therefore, I say, your paper is doing more than is any other paper in Michigan, to keep this old ship of state off the rocks of discontent which leads to all sorts of social disaster.

Anything that I can do to help with the good work will be cheerfully done. I am in favor of Wood for president and Campbell for governor. Am in favor of the treaty with the reservations. But NEVER without them.—*A. Y., Tuscola County.*

If you will write to Mr. C. S. Bingham, secretary Michigan State Farm Bureau, Birmingham, he will advise you of the Bureau's plans for organizing Tuscola county. To better the economic condition of the farmer, and bring about that era of happiness, contentment and universal justice which you so will describe is the ambition of every man who has a hand in the making of this publication. No greater encouragement could come to us than the showing that they understand and appreciate these efforts. —Editor.

THE NEWBERRY TRIAL

While attending the Newberry trial (voluntarily) I had "one sweetly solemn thought," i. e., the protoplasmic Newberry cannot destroy what Ford can build up. Let us get some satisfaction out of that.

The vital question is not the guilt or innocence of the man. The important thing is—why these vast expenditures were made. When we find out what business interests in New York really financed the deal we will gain a more comprehensive view of the machinery of our "self government."

Why do we call it self government when we sell the majority of our votes for a cigar or a circular letter. People who do so are as guilty as Newberry. If each man would make a business of writing—letters of praise or condemnation to public officials he would be well repaid for his trouble. The influence of the public would then be very great. Why not use this influence instead of being influenced by the self-advertisement of the official before election and then allowing him to do as he pleases afterward.

The Newberry case shows up the need of an initiative, referendum and recall in this state.—*S. W., Barry Co.*

Michigan already has initiative and referendum laws, but not the recall. Your suggestion for keeping our public officials advised of our views is a fine. —Editor.

Dr. Hess Stock Tonic

A Spring Conditioner and Worm Expeller

Spring Is Here. Soon the litters of pigs will be coming, the calves, the lambs, and the colts will be dropped. Feed your brood sows Dr. Hess Stock Tonic before and after farrowing. It makes the bowels active, relieves constipation, promotes good health and good digestion which means healthy pigs and a mother with a milk supply to nourish.

Condition your cows for calving by feeding Dr. Hess Stock Tonic before freshing. Then feed it regularly to increase the flow of milk. It lengthens the milking period.

Give your brood mares a course of Dr. Hess Stock Tonic. And your work horses. It puts your team in fine fettle. You cannot afford to plow, harrow, sow, mow, reap or team with a team out of sorts, low in spirits, rough in hair, blood out of order, or full of worms. Dr. Hess Stock Tonic is good for sheep—especially good for ewes at lambing time.

Why Pay the Peddler Twice My Price?

You buy Dr. Hess Stock Tonic at an honest price from a responsible dealer in your town. Get 2 lbs. for each average hog, 5 lbs. for each horse, cow or steer, 1 lb. for every sheep. Feed as directed and see the good results. Guaranteed.

25-lb. Pail, $2.25; 100 lb.-Drum, $7.50
Except in the far West, South and Canada

FRANCO

POCKET ELECTRIC .....FLASH LIGHT FREE

For Two NEW Subscribers to M. B. F.

Every man, woman or child in the country ought to carry an electric flash-light at night and here is the handiest size of all. Flat, just-a-hand-full yet throws a powerful light, brighter than a clumsy lantern. We have secured a limited number of these lamps from one of the best makers in America. They are never sold at retail for less than $1.50, some dealers charge $2, but until our supply runs out we will send one complete flash-light, including nitrogen bulb and Franco battery for only two NEW subscribers to Michigan Business Farming at $1 each. Send $2, two new names and the lamp will come by prepaid parcel post. Address, Premium Manager, Michigan Business Farming, Mt. Clemens, Mich.

For Cows Only

KOW-KURE

Stop Losing Calves

Abortion is unnatural, and denotes a run-down condition of the genital organs. Strengthen these organs and they will resist the ravages of the Abortion germ.

KOW-KURE is a medicine that acts directly on the genital and digestive organs, giving them the vigor of perfect health. Cows treated with KOW-KURE before calving *do not* abort. You save both the calf and the cow's health by using the KOW-KURE preventive treatment.

KOW-KURE is also invaluable in the prevention and treatment of Retained Afterbirth, Barrenness, Bunches, Scours and Milk Fever. Sold by feed dealers and druggists; 60c and $1.20. Write for free book, "The Home Cow Doctor."

The Live Stock Situation for 1920

(*Continued from page* 5)

curity. Packers, however, say they are unable to handle this paper and need the assistance of the banks if it is to be carried out.

Hog supplies at all markets have been gradually deminishing since the first of the year. Arrivals for the first two months will show a sharp decrease when compared with export business should fade away, the the previous year. Allowing that the increased demand in this country must be taken into consideration. Labor is well employed at the present time and wages are the highest ever known and some traders are promised further increases this spring. The laboring class is the meat buying power of this country. When workers have the money they have liberal portions of meat at every meal. This is noted in the butcher shops where they do their buying. Then with supplies falling off and the domestic demand the largest ever known, it seems that the export question should not be taken into consideration too seriously and it should be used less as propaganda by the packers when they wish to carry out a bear campaign in the market.

The sheep and lamb market of course needs no bolstering because a more profitable season was never before noted in the history of the trade. No matter what a feeder handled he was able to make money because for more than three months prices enjoyed an unbroken advance. This really put lamb and mutton in a class by itself. Even at the present time, this class of offerings is selling comparatively high when compared with others. Low prices a year ago last fall and winter caused many men to clear out the big range owners of the west trimming their herds closely which resulted in the small arrivals and naturally prices advanced. Most sections of the west are still short of foundation stock and it is the belief that relief from small receipts will not be possible for some time to come.

The general situation in live stock matters has been very uneven and moreso uncertain for some time past. It is such conditions that have caused the feeders to become skeptical and doubt the sincerity of the packers. But men in the country state that the affect will be noted in the future. They claim that the hog supplies at the present time are smaller than generally expected and the low prices last fall and winter will be a gauge for the next crop of pigs.

On that account, it is the belief that arrivals of stock during the summer months will be relatively small and regardless of present conditions, prices are looked upon as subject to advance. An arrangement of some kind that would allow export business to be carried out, is looked for. If this materializes, it is plainly seen that the small surplus of stocks in this country will not last long and the meat business will be carried out on a cash basis moreso than ever before.

A New Electric Milking Machine

A SMALL electric milking machine mounted on wheels so it can be moved from cow to cow has just made a considerable stir in the dairy world. The new Moto-Milker requires no pipe line or installation, is ready to use when unboxed, and is so simple and handy that is is suitable for the vast number of dairies having from 8 to 20 cows.

Cups with rubber linings fit over the cows' teats and a gentle suction sucks the milk out. Then, intermittently, compressed air squeezes and massages the teats to keep them in perfect condition. The milking is done almost exactly as the calf does it, and the method is really far more natural and calf-like than squeezing the teats by hands.

The gentle massage by compressed air is comfortable to the cow and makes her let her milk down faster. Fast milking is generally believed to increase a cow's milk production as time goes on, and government and other tests have proved it to be the case with this milker.

The same milking priciple in exactly similar teat cups with the compressed air squeeze is now in use on over one million cows, many of them pure breds that have been milked in this way for six and seven years running. Hence the good effect on the cows is well established and is recognized by most agricultural colleges.

The new electric milker is simple in the extreme. An electric motor drives a slow moving piston which makes suction on the back stroke and compressed air on the forward stroke. This piston gives the slow pulsation of suction and pressure which milks the cow so comfortably. Rubber tubes connect the pump to the milk pail and teat cups. No gas engine is necessary and most of the parts needed on pipe-line milkers are eliminated. There are no pulsators, no gauges, no tanks, no belts, no pipe lines, no stall cocks, no springs, and the high speed pump and gas engine are eliminated. Any 3-4 K. W. farm lighting plant will run the milker, the power cost being about 2c per day.

Two cows (eight teats) are milked at a time, and one man can milk about 18 to 20 cows per hour. Thus one man does the work of about three, not only releasing the other men for other work, but making the owner entirely independent of hired help so far as the dairy is concerned. The labor saving usually amounts to between $300 and $400 yearly. In a rush time or if the help should leave, the farmer can order one of these machines during the day and be using it the same evening.

Additional information regarding this wonderful little machine will be supplied by M. B. F. to any reader upon request.

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent

A Free Trial Package is Mailed to Everyone Who Writes

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powdrpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof, sanitary and durable for outside or inside painting. It is the cement principle applied to paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manufacturer, 1 North Street, Adams, N. Y., and he will send you a free trial package, also color card and full information showing you how you can save a lot of money. Write today.—(Adv.)

BREEDERS DIRECTORY

Feed Some Steers Next Winter

By T. JAMES SHERIDAN, Farmer, Kent County, Mich.

ALL FARM markets have been in such an unsettled condition these last couple of years that the farmer hardly knows what to do. And the livestock market has led the list in breaks and slumps just at the critical time. The average farmer can't afford to take many chances until conditions settle somewhat. The man who can invent a way to take all chance out of farming has not yet appeared. So we must do our best under the conditions at hand.

On a good many Michigan farms it will pay to plan to produce a little extra doughtage in this seasons crops. Put in an extra five acres of corn this spring if possible. And plan to have the silo full and a little to spare this fall if you can. Then in November or December, according to the market conditions and your best judgment, get a couple of your neighbors to go in with you and buy a carload of steers. That will give you six or seven each and save freight by buying in carload lots.

Get light, thin stock. What are termed "canners" is about the grade you want. They will weigh about six hundred pounds each and sell near the bottom of the market; probably under ten cents per pound. It doesn't matter that they are quite thin so long as they are healthy. The thinner they are the cheaper you can buy and the greater gain per pound youn will make in fattening them. And the gain in the price per pound is where your profits lay, not in the number of pounds they gain. The gain in weight will cost all it brings in most cases.

When you get them home don't attempt to see how fast you can fatten them. Start them in easy on ensilage and hay; no grain. A good feed of ensilage twice a day with a feed of hay once or twice depending upon the supply you happen to have. If you feed them hay at noon, feed straw mornings and nights with the ensilage. Give them as comfortable quarters as you can. But don't try to make it frost proof. Frost won't hurt them if it is dry and the wind is shut out. A good tight shed with an open south or east door will do nicely if you use lots of bedding.

Do not look for sudden gains with this method of handling or you will be disappointed. For the first month or six weeks you will not see much if any gains, but keep at it. It has these merits: it is easy and inexpensive. The extra work the half dozen feeders will make you won't amount to more than two hours each day. And as the feed consists entirely or nearly so, of such roughages as the best farming practice teaches that you can't afford to sell off the place anyway it is surely inexpensive.

If your ensilage and hay are of good quality by March first your steers will begin to show some roundness of form. You will begin to see that they are actually getting fat on that ration and are growing nicely. But if for any reason one or two of them seem to be falling behind the others a bit and their hair seems tight on them, feed a couple of ears of corn broken, or its equivalent, once or twice a day to the backward ones, beginning about March first.

Don't expect to fatten them to a marketable condition on this ration. That isn't the intention. Though we have more than once turned off good beef during February and March using just the ensilage and hay ration, without one pound of grain, and they were cattle that went onto winter feed pretty thin in flesh at that. But the whole idea in the present case is to get them into good, thrifty condition by the time pasture comes on in the spring.

When the pasture season opens turn your feeders into the best pasture you can procure. And be sure it isn't over-stocked. If you are hiring the pasture pay an extra dollar per head to make sure the owner doesn't take in too many head in the early part of the season while your feeders are there, if necessary. If it is your own pasture and you are in the habit of taking in a few head for your neighbors make arrangements for them to keep their stock at home until July first so as to give your steers all the pasture they can use. It won't inconvenience your neighbors so much as it might seem to at first glance.

Their pasture that carries their dairy herd during the dry season of midsummer and fall will carry the young stock too for a month or two in the spring in pretty fair shape. Then after your steers go to market you can take care of their young stock when the dry spell comes on. That plan works good for both parties.

When you put your steers in pasture is when you really expect them to put on meat. If the pasture is good, with lots of water at all times and a little shade, they won't disappoint you. By July first if not sooner they will be ready for market. And if they have done reasonably well they will have gained from one hundred and fifty to two hundred pounds each. Watch your cattle and the markets and use your own best judgment about when to market them.

I would add this much: as a general practice I do not think it will pay you to ship them to the packing house markets. Light, grass fed cattle do not find favor there as a rule. And they shrink a lot on the way. But they are just prime for your own local butchers summer trade. So sell them to him if you can. You don't have to sell them all the one day. Turn them in as fast as he can use them. It doesn't cost you much to keep them an extra week on grass and you avoid all the shrinkage. But again, use your own best judgment. If the packing house markets are high on light cattle ship them. If the three of you ship together again it will save freight by making a car lot. Either way the cattle should turn you a profit and the expense and chance is small.

HOG RHEUMATISM

I have a bunch of shoats that weigh about 90 or a 100 lbs., and they are all getting lame; appear to be stiff and very sore for when I move them they just squeal awful. I have been feeding corn in the ear and all the milk they would drink twice a day. I wish you could send me word at once how to treat those shoats for I fear I will lose the whole bunch.—L. F. S., Remus, Mich.

Your hogs are affected with rheumatism, either muscular or articular. Th elatter is far more common and the attacks more severe. About the only way you can distinguish the difference between the two; in the articular form the onset of the trouble is more sudden. The affected articulations become swollen and are very sensitive; the animal refuses to place weight on them or, if compelled to do so, expresses pain. If articulations of more than one leg are simultaneously affected, the animal remains lying down, arising only after considerable urging. There is usually some rise of temperature and a diminished desire for food. The disease runs a variable course, the attacks being intermittent. An attack usually continues for about two weeks, then the animal apparently recovers, but sooner or later the attacks recur. The treatment for both is practically the same; provide good, dry quarters and give twenty grains Sodium Sulphur three times a day. The outcome of the disease is uncertain, and if the animals are in butcher condition they can and should be slaughtered as soon as the symptoms disappear.

Senator Cummins, on the floor of the Senate, recently said that the $900,000,000 a year rental paid the private interests of the railroads by the government was so exorbitant as to "shock the moral sense of mankind." He said $700,000 would have been a fair rental. This is where $400,000,000 (two years' excess) of the $700,000,000 alleged "loss" under government operation went. Director General Hines says that if rates had been raised when the government took over the roads instead of six months later, the operating revenue would have been increased $494,000,000. This accounts for a total "loss" of $894,000,000. In reality government operation produced a profit on these figures alone, of $194,000,000—but the government didn't get it.—*Detroit Forum.*

REO

Figure This for Yourself

How much more would it have meant to you in the past if you had been able to deliver your crops, your garden truck, your dairy produce or your live stock—hogs, cattle, sheep—to market in time to take advantage of the highest quotations?

Figure back—you'd have been a very rich man by now.

Add to that what you would have realized from a greater acreage seeded each year, and crops harvested in prime condition so as to command the highest prices.

This extra efficiency—this extra profit—is now possible to the Country Business Man.

A Reo "Speed-Wagon"—on pneumatic tires—will enable you to rush your produce to market within a few hours after you have gotten the top quotations—and to deliver the most perishable fruits or live stock in prime condition and with the minimum of depreciation in weight and value.

Free yourself from a non-competitive, small-town market!

The "Speed-Wagon" brings several markets within reach and stimulates competitive bidding.

No matter what your specialty or the nature of your produce you can have a body that exactly suits your needs, by mounting on the basic body below any of the attachments shown at left. The adaptability of this "Speed-Wagon" is almost limitless.

Two standard types are shown at bottom—the standard basic (express) body and the canopy express—and you can buy from your Reo dealer any or all of the attachments for a few dollars extra—either at time of buying the "Speed-Wagon" or any time thereafter.

Electric starter and lights are standard equipment.

There is a Reo Dealer in your Vicinity.

"How Can We Keep the Boys and Girls on the Farm?" Asks Fred Cressey

Mecosta County Farmer, After 27 Years Experience, Working for Himself aud the "other fellow" will Stick to the Farm.

AS I SETTLE myself back on the davenport this Sunday morning to read the M. B. F., I see the headlines in big letters, "The Farmer and His Hired Man." After reading this page and also the editor's earnest appeal for help to solve this problem I thought that perahps after 27 years' experience working for myself and the other fellow, (the other fellow mostly) that perhaps my experiences might help a little.

In the first place I am going to tell you the answer to the problem as I see it, and then I am going to try to prove it. It isn't the hired man problem that is staring us farmers in the face any more than it is the question of keeping our boys and girls at home. I claim that it is practically all the same question. Mrs. Stockman has answered the question very good so far as this one man is concerned; her figures are all very true and should have a great bearing on a married man with four or six children, but how about the single man with no responsibility, no one to support but himself? How about your boy and my boy, your girl and my girl? That is the question that has gotten a lot of us up a tree.

The Farm or City?

FRED CRESSEY has had enough of the city's grind. He has been through the "mill" and was considerably worse off when he got through than when he started. He has found that the average city job does not pay, that high wages and easy hours are a snare and delusion. He writes his experiences here in response to the complaints of farmers and hired men who are tired of the hard work and small income on the farm and are planning to go to the city. Read his story. You'll agree that he ought to know what he is talking about, and perhaps it may change your viewpoint toward the city. Let us hear from others who have found from actual experience or that of a neighbor that "the old farm isn't such a bad place after all."—Editor.

Today, our boys and girls are leaving us and going to the city, with a few exceptions of course. The hired man is dissatisfied. Some have gone and others are thinking about going. Can we blame them? No! Why? Because we do not; we can not, offer the wages and the pleasures and the opportunities that they get in the cities. There you have the whole thing in a nut shell. Now in order to keep them on the farm, we have got to offer them something near what they get in the city. The city has the street cars, the Y. M. C. A., the moving pictures, and among other attractions is the excitement of mingling with the crowd, the whirls of the street and the shop.

There is something about it that I am unable to explain but nevertheless it is a fact that when the boy or girl comes home for a vacation they are glad to see you and all that. You drive to town, meet them at the train, take them home, fill them up with fried chicken and the best of good things to eat, then you start talking about the farm, things that are nearest to your heart; they give you a blank stare. When you have run down and sit back to give them a chance to say something, they commence to talk shop, base ball, basket ball, what they have learned to do in the shop and the wages they are making. You wake up to the fact that they are not interested at home; things are altogether too slow and in a few days they are ready to go back. Someone is going to jump up and say "Keep them at home. Don't let them get a taste of that city life." I would like to see you do it.

I have a neighbor with five children. His oldest girl finished her 10th grade when she was 16 years old. She wanted to take up commercial bookkeeping. The father was not able to send her to college but he made her this proposition. He gave her $75 to take a six-weeks' course. In that time she would find out what it was going to cost; how long it would take; in short how much she would have to have to put her where she wanted to be. She took the six-weeks' course and came home all "lit up." Then she was going to work and earn the money with her father's help and she would go back to school. She started in picking beans in the elevator at home. When that shut down she got on the train and went to Flint to look for work. She got it and after six months came home to rest. Her father commenced to talk about how much money she had saved and when she was going back to school shook her head and with a shrug said, "There is nothing stirring. Why, father, I am making as much money now as I will after I have gone to school. I am making more than your local teachers are making," and no argument that that father could put up would change her mind. That isn't all of it. She has a brother and sister who will be through school in a year or two. The father has thrown up his hands. He told me just the other day that as soon as the other children are out of school they will go to town. She came home loaded with poison and they have swallowed it.

Now you can figure your head off but here is the situation. The automobile manufacturers want the help. They have got millions of dollars invested and they are making from 25 to 60 per cent on their investment. They know that all they have to do is to dangle good wages, good times, plenty of excitement before the eyes of the young people and they are going to get them. The managers and heads of the manufacturing companies are sitting in cool offices with their feet under a mahogany table smoking 25-cent cigars, figuring these things out, and what are you and I doing? We are plodding around the field, following a plough or drag under a hot sun, the perspiration streaming down our backs, figuring. Figuring what? Figuring how in the name of the good Lord we are going to pay our taxes and 7 per cent interest on the mortgage along with other expenses too numerous to mention.

Now about the farmer that pays his help $500 bonus each year. How many men does this farmer keep and how much of a farm does he work? It is a pretty safe bet to say that he is a big farmer; that he has other interests outside of the farm, and that he does not depend on the farm for his bread and butter; also that he had his tools and machinery before these high prices came into effect. Another thing, he has the money to take advantage of every opportunity that comes his way. Now we may say, for example: I hire one man while the big farmer hires five or six men and possibly more. He makes a specialty of one or more articles. He can advertise or handle in large quantities thereby making a bigger profit on any one man than I can on my one man. Again, if he has an article to sell and the market does not suit him he can hold it until such times as he sees fit to sell it. Can we little fellows do that? No. When the interest on taxes come due we have got to sell.

Now I want to say this to my hired man friend, with a family of six on his hands, as I have already stated, I

PENINSULAR FIRE INSURANCE COMPANY OF AMERICA

Peninsular Fire Insurance Company of America

Grand Rapids, - - - - Michigan

CAPITAL, $1,000,000.00

A BIG, new, red-blooded stock company, with ample capital, that will insure *farm property* on the same basis that city property is insured--rated according to fire preventive construction and location of buildings.

It is the opinion of conservative business men that most farm property is not adequately protected against fire. Much farm property does not carry fifty per cent. of its present value.

If the farmer's buildings should be destroyed now, it would be a catastrophe for him---meaning years of saving and scrimping to replace them.

Very few farmers have increased their insurance since the World War, (city property owners have) yet it would cost one-half to two-thirds more now to replace their buildings.

No farmer—no business man—can afford to be *underinsured.*

Why not *increase* your present insurance by placing an additional policy with the *Peninsular Fire Insurance Company of America?*

Ask our agents or *write us* for our rate schedule on farm property. You will be surprised at our low rare for three and five year term policies.

J. FLOYD IRISH, Sec'y and Managing Underwriter.

COLON C. LILLIE, President.

Michigan Milk Prices Reported Below Average

On a Par With Eastern Prices, Less Than Southern, but Higher Than Western

FARMERS of Michigan who sell their milk to a distributing company are receiving less than many farmers in the eastern and southern states but slightly more than the farmers of the central and western states. These are facts gleaned from a rcent report of the U. S. Bureau of Markets, covering nearly every state and important city in the United States.

It is generally supposed that the farmers in the Detroit area are receiving an exceptionally high price for their milk as compared with prices elsewhere. But this is not true. The Detroit price for February was $4.05; the average of the principal markets for the entire country was $4.36. This figure is a little misleading, however, as it covers the southern states where there is little dairying, and where, in some instances the price of milk at this time of the year goes as high as $6 per cwt. But let's compare the Detroit price with that of other industrial cities located in or near dairying sections.

The following cities have a higher wholesale milk price than Detroit: Hartford, $4.14; Sioux City, Iowa, $4.-10; Kansas City, $4.93; Boston, $4.65; Newark, N. J., $4.12; New York, $4.12, (8 per cent milk); Cincinnati, $4.25; Columbus, $4.20 (4 per cent milk); Pittsburg, $4.21; Providence, R. I., $4.-65.

Cities which have a lower wholesale price than Detroit: Milwaukee, $3.85 Seattle, $3.52; Grand Rapids, $3.48; Cleveland, $3.95; Toledo, $3.85; Philadelphia, $3.94; Buffalo, $3.78; Los Angeles, $3.76; Chicago, $3.78.

February Cost and Selling Prices of "Standard Grade Milk"

The following table presents the prevailing prices of "standard grade milk" in various markets of the United States. The term "standard grade milk" is used to refer to that grade of milk which is most generally sold within the particular city for which prices are quoted. This grade of milk may be either raw or pasteurized but in case of most of the larger cities it is pasteurized. The "dealer's spread" or the difference between cost and selling prices for both wholesale and retail transactions, can be ascertained if the butter fat test of milk as delivered to different classes of trade is known. To reduce prices per hundred weight to either a gallon or a quart basis divide by 11.63 or 46.53 respectively.

Markets	Price to Farmer	Price to Consumer
San Francisco Cal.	$4.04	$0.16
Denver, Col.	3.15	.13
Hartford, Conn.	4.14	.17
Washington, D. C.	4.18	.17

Columbus, O.	4.20	.14
Harrisburg, Pa.	3.65	.13

Milk Prices for February

Table A presents a comparison of the prices offered to producers by milk dealers, or concerns whose chief business is the market distribution of fluid milk. These prices are to be paid producers who make deliveries in their own cans either at local plants or at country shipping stations.

The states making up the several geographic divisions are as follows: New England: Maine, New Hampshire, Massachusetts, Rhode Island and Connecticut; Middle Atlantic: New York, New Jersey and Pennsylvania; East North Central: Ohio, Indiana, Illinois, Michigan and Wisconsin; West North Central: Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska and Kansas; South Atlantic: Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia and Florida; East South Central: Kentucky, Tennessee, Alabama and Mississippi; West South Central: Arkansas, Louisiana, Oklahoma and Texas; Mountain: Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah and Nevada and Pacific: Washington, Oregon and California.

In most of the important milk consuming centers of the United States the prices of natural milk, bought and sold for direct consumption, are determined in advance of delivery. Price changes do not generally occur oftener than once a month. Usually the leading city milk dealers send notices to their patrons several days in advance of a change from the schedule of prices then in effect. The particular schedule of prices in effect during any month of the year is usually the result of an agreement reached between representatives of producers and the leading city distribution concerns. In some of the larger markets, dealers negotiate with representatives of producers' marketing companies which have the exclusive agency for the sale of a large percentage of the producers supplying those markets.

The prices agreed upon are usually based upon estimates of producers' production costs, modified by the dealers contentions with regard to the operating costs and the probable demands for fluid milk estimated on the basis of the proposed schedule of prices. If dealers agree to handle the entire production of all of their regular patrons, and if a surplus production seems probable, then the basis of the dealers' buying prices is complicated by considerations regarding the probable value of the surplus.

Unless otherwise qualified the prices given in the first column in the above table show the cost of milk delivered to dealers at either city railroad terminals or at the dealers' distributing plant where deliveries are made direct by producers. When the price paid by dealers to producers applies to deliveries at country receiving stations and does not include payment for transportation to the city, the average transportation cost of some dealers has been added to the country station price in order that the cost to the dealer (not including country station expenses) may be shown.

TABLE "A"

Sections	Standard or Grade "B" Milk (3.5 per cent butterfat)		Comparing January and February Prices for the same Markets			
	Range of Prices per cwt.	Average price	Number of Markets	Average Jan. prices	Average Feb. Prices	Increase or D'crease
United States	$2.55—6.16	$3.76	501	$3.83	$3.76	-7c
New England	3.50—4.65	4.15	68	4.23	4.15	-8c
Middle Atlantic	3.19—4.18	3.63	109	3.76	3.63	-13c
E. North Central	2.90—4.31	3.67	189	3.71	3.67	-4c
W. North Central	2.55—4.63	3.41	81	3.80	3.42	-38c

Pacific	2.67—4.20	3.62	89	3.66	3.65	-8c

Evansville Indiana System of Determining Milk Prices

In this market dealers pay producers twice monthly. The semi-monthly changes in prices are dependent upon the prevailing prices paid for butterfat in that territory during the current month, the changing market prices of shorts, and an agreed upon schedule of allowances for seasonal changes in market supply and costs of production. The following formula is used for determining the prices to apply to milk delivered in any half monthly period.

The average of butterfat prices paid by creameries for the preceding 15 days multiplied by the average butterfat test of milk, plus the price of 30 pounds short (on a ton basis) to cover value of skim milk for feeding purposes, plus premium of 40 cents per cwt. of whole milk for extra costs of producing good quality of market milk, plus or minus the seasonal allowances to encourage more uniform production. The seasonal additions or subtractions are as follows:

January, add 15 cts. per cwt.; February, add 15 cts. per cwt.; March, add 15 cts. per cwt.; April, subtract 20 cts. per cwt.; May, subtract 20 cts. per cwt.; June, subtract 30 cts. per cwt.; July, subtract 20 cts. per cwt.; August, add 10 cts. per cwt.; September, subtract 10 cts. per cwt.; October, subtract 15 cts. per cwt.; November, subtract 15 cts. per cwt.; December, subtract 15 cts. per cwt.

Applying the figures as they were for the first fifteen days in December, we have: 4 lbs. butterfat at $.745 is $2.986; (For the first 10 days the price paid for fat in cream was 76 cents a pound. For the next five days the price was 72 cents per pound, making an average price of $.745 per pound). Skim milk in 100 lbs. milk (30 pounds shorts at $2.65 per cwt.), $.795; premium for production of clean market milk, $.400; addition for December, $.150. Total, $4.330.

If any producer delivers milk in quantities 20 per cent in excess of the amount called for by his contract, no allowances are made for the value of skim milk or for extra production costs but such surplus is paid for by the dealer on a straight butterfat basis. If a producer falls more than 20 per cent short of the amount called for by his contract with dealer, he is paid on the same basis that applies to the normal supply but a reduction of 5 cents per lb. of butterfat is made in such a case.

Boston Price Agreement

Dealers in the Boston market agree to pay the price given in the first column of Table III for 3.5 per cent milk delivered in Boston with a flat deduction of 3.72 cents per cwt., for can service and graduated deduction for dealers' station expenses, freight and war tax on freight ranging from 22.9 cents to 64.6 cents per cwt. for the nearest and fartherest zones respectively.

For January the dealers agreed to pay the above price for 18 per cent of their sales of whole milk. Where milk is bought by weight and test the dealer will pay 4c for each $1 of 1 per cent above 3.5 per cent and deduct 4c per cwt. for each $1 of 1 per cent below 3.5 per cent butterfat contents. Where farmers furnish cans between the farms and R. R. or milk station a premium of 2.3c per cwt. shall be paid.

For balance of milk purchased, the dealers will pay the average Chamber of Commerce price for creamery extra butter for the month of February 1920 for the butterfat in each cwt. of such milk plus 32 1-2c for each cwt. of such milk. This price applies to such milk delivered at the railroad station, milk station or usual point of delivery in the country.

The dealers shall report to the New England Milk Producers' Association or to some person acceptable to it, under oath, the amount of milk purchased and the test thereof and the amount of milk sold as fluid milk. Such report to be subject to verification by the association.

Has Co-Operative Milk Distributing Arrived?

THERE ARE a score or more Producers' Co-operative Milk distributing companies in the United States. Some of them are very successful. Others are yet in the experimental stage, and one or two have decided that they can more cheaply market their product through independent concerns. Grand Rapids has tried the co-operative plan, and the farmers are now ready to sell out. Berrien county farmers have tried it and are satisfied. In succeeding issues we will tell the experiences of farmers who have tried the co-operative plan.—Editor.

The March 20th Issue of Michigan Business Farming Will Contain—

1. Learning how to Boss the Farmer's New Hired Man,—the Tractor,—at the M. A. C.
2. Uncle Jasper's Pump—A Case of Mistaken Economy.
3. Is there Need for the Michigan Potato Growers' Association?
4. Construction of a Practical Sheep Barn for Central Michigan.
5. How Gov. Lowden reduced the Illinois Tax rate. This is the plan which Milo Campbell will carry out in Michigan if elected.
6. Corn Production in Michigan.
7. The Problem of the Country Church—by Mrs. George E. Innis, a farmer's wife.
8. The Milk Surplus Problem.

Soil Composition as Bearing on Productivity

What Science Has Done to Determine Causes of Soil Depletion and Restore Essential Plant-Food

By M. M. McCOOL
Professor of Soils, Michigan Agricultural College

IT IS AGREED that the composition of soil and its bearing on soil productivity and its exhaustion is of vital importance to this and other nations, whose welfare depends largely upon agriculture. Soil depletion is a subject that has been much discussed and studied, and although opinions may differ, an abundance of experimental evidence tends to show that the maintenance of soil fertility is in the main based upon mathematical principles; that is to say, if the composition of a soil is known, and also the rate at which the essential elements are added to and removed, the length of time required to deplete the soil of its fertility, can be approximated. It is impossible to do more inasmuch as it is not known just what constitutes the lower limits to which plants may remove the mineral plant food constituents from soils.

The composition of soils is determined by means of chemical analyses. The methods in use are very refined and only an expert analyist can obtain reliable results and to make a complete anlysis of a sample of soil requires many hours of rather exacting work. This means, of course, that this is a matter that must be considered more from the point of view of kinds of soil on large areas than from that of the individual field or farm. The results of chemical analyses are criticized by some on the ground that they have certain shortcomings and are, therefore, of little value. I am led to conclude, as a result of discussions by others and from an abundance of experimental data and correlations, that I have been able to make between the results of laboratory and field investigations, that the chemical studies of soils are of great value and have thrown much light upon the problems pertaining to soil productivity. Unquestionably, our present knowledge of soils and soil fertility would be much less comprehensive if chemical studies had never been resorted to.

The question at once arises wherein lies the value of soil analyses. In order to answer this question we must first see what an analysis shows. The reaction of the soil is determined, that is, whether or not it requires lime; the humus or vegetable matter content, as well as the total nitrogen, and amounts of the essential mineral elements as well as others are determined. A knowledge of these amounts, to be sure, is important information which aids greatly in planning permanent systems of soil management. We are safe in saying that at present we have no laboratory method by means of which the immediate fertilizer needs of the soil can be determined, but that the chief value of the analyses, lies in the fact that they afford a foundation upon which to base rational system of soil management. It is true that a knowledge of the amounts of the raidly soluble matter in a soil may, and has, thrown some light upon the soil problems, but inasmuch as there are a number of factors that influence the available plant food in soils, this method is somewhat limited in its usefulness.

The chemical composition of soils varies markedly. Such factors as the method of formation, the nature of the material from which derived, and also its age or stage of decomposition, or disintegration, as well as the climatic condition, profoundly influence the composition of soils. The results of studies of various investigators show in an uncontrovertible manner that residuary soils formed in humid regions, as a general rule, contain less soluble plant food than those formed in arid regions. A summary table of the average results of analyses of over 500 samples of soil from arid regions and about 700 from humid regions throws much light upon this subject.

Oxides of	Arid Soils	Humid Soils
Silicon	75.87	88.21
Aluminum	7.21	3.66
Iron	5.48	3.88
Phosphorus	.16	.12
Calcium	1.43	.13
Magnesium	1.27	.29
Sodium	.35	.14
Potassium	.67	.21

The seven essential elements of crops removed from the soil are widely but not uniformly distributed. Indeed, if they were, the much discussed and studied soil fertility problems would be of less importance.

The separates, that is, sand, silt, and clay, vary in composition. These were isolated from several soils and analyzed. The results show that the coarser particles contain more silica and less of the important minerals, and also less of the essential elements, especially is this true of residuary soils in humid regions. There are, however, less differences in this respect between the separates of soils formed in arid regions and those deposited by glaciers, inasmuch as less leaching has taken place because of less rainfall under the former and the younger deposits of the latter.

Industry, commerce and education rely upon agriculture for their support. Improvement of agriculture is the basis of all general prosperity. The fertility of the soil is the greatest of the natural resources and is the supporter of all agriculture. Better seed, disease control and tillage, although essential cannot materially increase the productivity of depleted soils. Fertility may increase it several hundred per cent.

I shall now discuss the amounts of certain of the elements of plant-food that soils carry. The composition of soils may be expressed on the percentage basis and as the number of pounds per acre. In making the latter calculation the precentage is multiplied by 2,000,000 or the weight of the surface layer of soil over one acre to a depth of seven inches. Nitrogen is derived from organic matter that has accumulated in the soil since its formation. Moreover, when the organic matter goes out of a soil so does the nitrogen. Since this is true this important element varies tremendously with soil texture or kind of soil drainage conditions and the management of the land. It may be increased somewhat by certain methods which are to be discussed in more detail subsequently, but since the vegetable matter decays constantly during the warmer portions of the year provision must be made to constantly renew it in the soil. Chemical analyses of a large number of samples of soils taken from the older farms in Cass county show that in many instances the amount in the surface seven inches of soil has decreased from about 4,000 lbs. to about 1,200 lbs. An examination of census reports and interviews with numerous farmers reveal that this can be attributed to a comparatively low acreage of clover especially during the last quarter of a century, as well as to losses by leaching from manure before it is applied to the soil. One tenth of one per cent or 2,000 lbs. of this element is considered to be a pair supply for light soils and for the heavier ones about fifteen hundreths of one per cent or 3,000 lbs. Michigan's soils vary tremendously in their nitrogen content. We have found many light soils that contain less than 1,000 lbs. per acre, other sands much more while the fine textured soils range from about 1,200 lbs. to more than 4,000 lbs. per acre.

There is a shortage of phosphorus in the soils of the world and many soils in the humid areas respond to its application. With the exception of sulphur, soils in general are more deficient in this element of plant food than all others. One tenth of one per cent or 2,000 lbs. per acre is considered to be a desirable amount.

The phosphorus content of representative soils from several counties is given in special bulletin No. 284. This may be obtained by writing to Dean, R. S. Shaw at East Lansing. In general we have found that our prairie soils are highest in this element, some carrying more than 1,800 lbs. per acre, the pine and scrub oak lands lowest or about 750 lbs. while other timbered lands usually lie between.

Soils must release large amounts of potassium to crops. It is usually present in soils in rather large amounts and is needed in smaller amounts than phosphorus, yet there is a wide range in the quantities that they carry. Some peat and muck soils contain less than five thousand pounds per acre and it is generally understood that sandy lands contain much less than do the fine textured ones. A soil that has about 3,000 lbs. or more is well supplied with it, however, some heavy soils possess more than 100,000 lbs. per acre.

We have made fewer postassium determinations than nitrogen or phosphorus on Michigan soils yet the indications are that the sandy loams, loams and clay loams contains as much or more than the above standard. In addition we have not found that Michigan sandy soils are not strikingly low in this substance, in fact very few samples have shown less than 20,000 lbs. per acre and many of them carry almost as much as the heavy soils. This work is being pursued in our laboratories and at a later date the results of our investigations will be ready for distribution.

The sulphur content of soils in general does not run as high as phosphorus. It is carried in both the vegetable matter and mineral portion of the soil mass. Recent investigations in some regions show that the application of materials that contain this element results in greatly increased yields of several crops. However, I shall discuss this matter in detail in another article.

Lime or calcium may exist in the soil in several forms but as a rule the most of it is united with the silicates as calcium silicate. About seven hundred samples of soils taken in the humid region averaged 13 per ecnt. It is desirable to have sufficient lime in the soil as the carbonate to give a clear cut test for it. Our studies of the southern half of Michigan reveal that aside from the old Maumee lake bed the areas that contain sufficient lime are small indeed. We are provided with less definite information of the soils of the northern counties, especially with the light phases of hardwood lands. The pine lands that we have been able to test are deficient in it.

In the next article I shall discuss available plant food in soils.

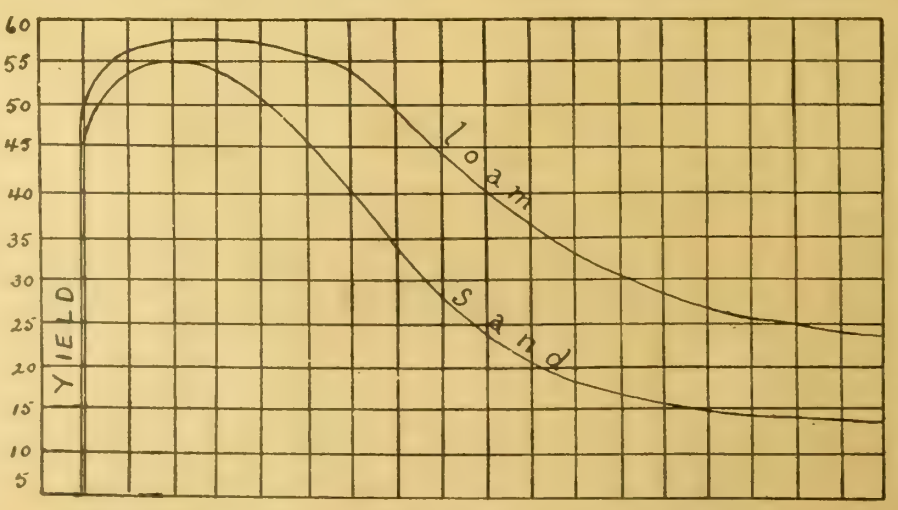

Chart showing the decline in yield of crops on fine and coarse textured soils when improperly handled.

PREPARING FOR ALFALFA

I would like some information about alfalfa and how to start it. I have some high sand ground, not the poorest in Michigan, but I have tried clover of every kind except sweet clover. It will do well until the hot dry mid-summer, then kill out. Now I hope to place alfalfa on this ground and wish to know if it is necessary to inoculate with clover first if so, will sweet clover act the same as another?—F. N. Coleman.

Alfalfa is a very exacting crop. It requires an abundance of lime in the soil and all the available mineral elements, especiall phosphorus and potash. In addition it makes its best growth where the soil contains and appreciable quantity of active vegetative matter. Unless one has a soil that is in a pretty good state of fertility or is able to purchase lime and apply an abundance of plant-food it certainly is not advisable for him to attempt to grow this crop.

If you will send us a sample of soil we shall examine it for lime content and advise you relative to its use. As a general rule, however, it is essential that not less than two tons of pulverized limestone or about four or six cubic yards of marl should be applied to soils that are to be seeded to alfalfa. In addition not less than six loads of stable manure which will furnish some nitrogen to the start of the crop and especially some potash, and also at least 300 pounds of 16 per cent acid phosphate per acre.

Sweet clover and alfalfa may be inoculated with the same organisms. If one is to prepare the land for alfalfa by growing the sweet clover previous to this it is essential that the sweet clover be inoculated before it is planted. If the owner of the land does not wish to precede the alfalfa by the sweet clover it is advisable that a few pounds of this clover be sown with it inasmuch as its presence will increase the yields of the first appreciably.

It should be borne in mind that sweet clover is about as exacting with respect to lime as the alfalfa. We have found that phosphates pay when used on soils that are to grow this clover. Last year the only seeding that remained on our experimental plots was the sweet clover where lime was used; where lime was absent it failed and June clover perished on both limed and unlimed sandy land.—*M. M. McCool.*

Speculators Are Blamed for High Land Values

U. S. Dep't of Agriculture Defends Farmers Against Charge of Profiteering From High Land Values

A METROPOLITAN newspaper recently printed on its front page an article by one of its staff correspondents, devoted to what purports to be an exposure of profiteering by farmers in Iowa. The article is full of inaccurate statements and misinterpretations of facts by farm management specialists of the United States Department of Agriculture. These inaccurate statements and misinterpretations are not peculiar to the particular newspaper in question. They have been made or insinuated by a considerable number of newspapers and other publications. But the staff of this particular newspaper very accommodatingly chose, as the scene of his story, the one place in the United States where his statements could be most definitely disproved by the Department of Agriculture. The division of Land Economics, Office of Farm Management, has just completed a study of the recent increase in land values in Iowa and is in position to indicate the conditions that actually exist in that state.

Here is a typical paragraph from the newspaper article:

"Land values all over this agricultural region have been inflated to a preposterous extent. The big boom started in Iowa last summer and has been booming ever since. Last year there was an unprecedented turn over in Iowa farm lands and values were artificially increased by speculators to such an extent that land formerly selling at $30 an acre found willing purchasers at $400, $500, up to $800 an acre."

THOSE WHO profess to believe that all the farmers are getting rich at the expense of their fellow men, point to increasing land values as an evidence that farming pays big dividends. Now what is the truth about the present values of farm lands? Have they advanced in proportion to the value of other commodities. Do the present productive capacity and rent value of Michigan farm lands warrant the assertion that these lands are worth twice as much as they were ten years ago. Is it not a fact that the land speculator, playing upon the credulity of the city folk, have placed a value on farm lands which is all out of proportion to their productive worth? And isn't it a fact that assessing officials use this speculative value as a real basis upon which to figure their assessment? It would be fine if every farmer could sell his farm at this speculative value. But we know what would happen after a few thousand of them had passed into the hands of the city gullibles. They would be thrown back onto the market and the bottom would go out with a thud. Tell us, Mr. Farmer, what you think of the matter.—Editor.

"Formerly" was 30 Years Ago

The most interesting and apparently the most agile word in that paragraph is "formerly." Land was "formerly" selling at $30 an acre in Iowa. But "formerly" was 30 years ago. Not since about 1890 have farm land values in the state ranged anywhere around that figure. And these lands are not now selling at $400, $500 and up to $800 an acre," as the correspondent says. The average selling price of Iowa farm land is not higher than $250 to $275 an acre. Out of 1,500 instances of actual sales on which the Department of Agriculture gathered information, less than a dozen represent prices of $500 and less than 5 per cent represent as much as $400 an acre.

The impression is created all the way through the article that the high prices of food are caused by the high price of land. The fact is, however, that the prices of foods rose and the rise in land values followed. The further fact is that if the government were to take from the Iowa farmers by taxation nearly all of the net earnings of farm lands, as single taxers advocate, prices of farm products would still be as high as they are now, unless lowered by some other cause. Prices of food products have moved up in approximately the same proportion as general prices in response to the same world-wide causes—war scarcities and currency inflation. If prices of farm products were to any degree lower than they are, they would be entirely out of line with the prices of other products.

How Land Values are Based

Every economist knows that farm land values are based on the earning power of land as manifested, largely by its rent and that the earning power and rent are the result of prices of products in relation to the expense of production. During the war prices of food products rose rapidly, and expenses of production, for a time, did not rise with the same rapidity. The result was that farmers made somewhat larger net earnings than formerly and, consequently, found it possible to pay more for land than before.

Here are other statements from the article:

"The farmers in this region are richer today than they have ever been in their lives, and this means that nowhere on earth before has the man who tills the soil profited as these folk are profiting.

"Today it is the east which is paying tribute to the money barons of the western farms.

"Moreover, unless the east keeps on being held up by the prairie speculators who have driven the cost of farm lands up to these absurd figures, and continues to pay interest on the watered stock or fictitious values now represented in these farms, in the form of abnormal and outrageous prices for wheat and corn and meat, the western bubble will break.

"So long as the consumers stand for being robbed, existing values can be maintained. When the consumers revolt and refuse to pay, the bubble will be pricked, and when the explosion comes, great will be the casualty list among those arrogant agricultural gentlemen who now levy tribute upon the whole world. High prices of land must be maintained or else the bubble of fictitious values will burst.

"Riches," "tribute," "robbery," and like words are short enough to serve and ugly enough for anything, but they have the disadvantage of being rather too indefinite. Fortunately the facts are available. One of the studies made by the Department of Agriculture included a group of 324 farms in the richest portions of Iowa. The average net income of these farms in 1918, with no allowance whatever for interest on the investment in land and equipment, was $3,480. If 5 per cent be allowed for interest on the investment at the value of the land before the recent "boom," there is left on the average, only $1,124 to pay for the labor of the farmer and for the risk to the business. On the basis of average values of land in August, 1919, there would be left an average of only $151 to pay the interest on the value of the land and equipment—the interest, as the correspondent says, "on the watered stock or fictitious values now represented in these farms in the form of abnormal and outrageous prices for wheat and corn and meat." After all, $151 does not seem rather "abnormal and outrageous."

City People Get 2-3 of Increase

"Wildcat speculators," these Iowa farmers are called. But the facts show that nearly one-half of the people engaged in buying and selling farm lands in Iowa during the recent "boom" were city people, and this one-half who lived in the cities got about two-thirds of the money represented by the increase of sale value in farm lands during 1919.

In the light of these facts and of the almost universal prevalence of what might be called profiteering, the Department of Agriculture thinks it is unfortunate to single out as a profiteer the farmer—the man who sells his goods in an open market characterized by intense competition and free, so far as the farmer himself is concerned, from any element of monopoly or price control.

There can be no question, the department believes that the recent increase in the price of Iowa farm lands is unfortunate, even in relation to farm earnings, under the favorable conditions of production and prices in 1918, and that it is doubly unfortunate if the world faces the period predicted by many economics prophets. The land economics specialists of the department say, however, that the increase was an inevitable result of the present industrial system and that the farmers were no more to blame for it than any other class of people.

What Organization Has Accomplished for the Beet Farmers of the West

THE CORRESPONDENCE printed below shows how the sugar trust sought to cover up its actual profits, and what methods it followed to spread propaganda in its interest. Nor have these tactics been entirely abandoned by the sugar men. Numerous articles have recently appeared in Michigan papers giving the difference that the beet growers are getting exceptionally good returns, and these articles all bear the earmark of having been written or inspired by the manufacturers. The letters and the concluding information showing what organization has accomplished for the western beet growers are submitted and vouched for by Mr. Albert Dakan, Longmont, Colo.

W. B. Thomas, President American Sugar Refining Company, 117 Wall St., New York.

"My Dear Mr. Thomas: Enclosed herewith I hand you a copy of our financial Exhibit and Income Statement. This is the form in which we expect to publish these statements.

"You will notice that this year, in addition to the regular 2 1-2% depreciation which we have been deducting for the last three years, we have set up $1,000,000 in Depreciation Reserve. I did not put this year's earnings to appear as large as they would if we had not made this entry.

"You will note that our total surplus is shown by these statements as a little over $5,000,000. This does not include any surplus from the Billings company; the Great Western Ry. Co. and other corporations which really add nearly $2,000,000. Our sugar is invoiced at 4c, and judging from the present market indications, there is at least $1,000,000 profit that will show up next year's business. The value of our real estate and railroad over and above the amount at which they are carried is at least $500,000, so that our actual surplus is nearer $6,000,000 than $5,000,000.—C. S. MORSE, Gen. Manager.

"The above letter was written, it should be noticed, at the end of the 1909-10 campaign. So the Great Western had been organized five years and in those five years had piled up a surplus of $9,000,000, besides besides paying regular dividends and high salaries; had done that with sugar selling at an average of $4.57 per 100, over that period and beets at $5.00 per ton.

"At the end of the 1918-19 campaign the company's surplus is estimated at approximately $50,000,000.

"That the farmers have the true basic facts on the cost of producing beet sugar will be admitted by any interested party upon reading the following:

((New York, June 6, 1909.

"Mr. Robert Oxnard, 32 Nassau Street, N. Y.

"Dear Sir: Agreeable to your request I herewith tabulate the cost of producing 100 lbs. of granulated sugar by the American Beet Sugar Company and that of a typical plant.

	Am. Beets	Typical Plant
Cost of Beets	$2.170	$2.045
Operatinfi Expenses	.952	.810
Maintenance	.603	.810
Interest	.072	.038
Sugar in Process	.097	.000
General Expenses	.091	.043
Total	$3.985	$3.211

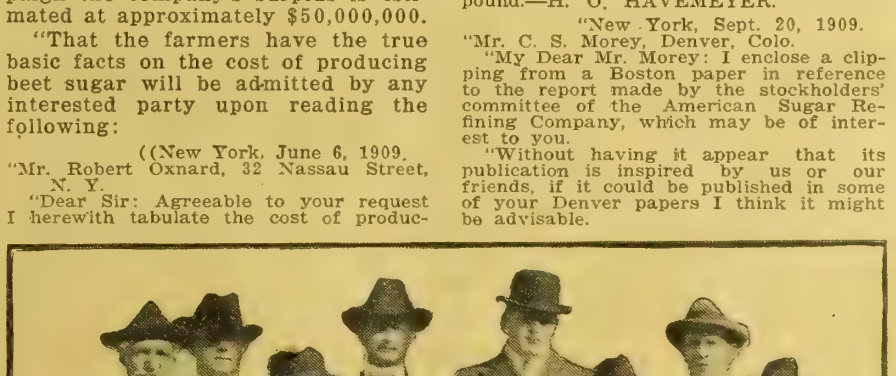
Invite your attention to the difference and hope that during your administration the cost of producing 100 lbs. granulated will not exceed 3 1-4 cents a pound.—H. O. HAVEMEYER.

"New York, Sept. 20, 1909.

"Mr. C. S. Morey, Denver, Colo.

"My Dear Mr. Morey: I enclose a clipping from a Boston paper in reference to the report made by the stockholders' committee of the American Sugar Refining Company, which may be of interest to you.

"Without having it appear that its publication is inspired by us or our friends, if it could be published in some of your Denver papers I think it might be advisable.



Delegates to the National Board of Farm Organizations, a convention of which were in session in Washington last week. Lower row, L to R: Gifford Pinchot, Director N. B. F. O. C. S. Barrett, President National Farmers Union. J. H. Kimble, Sec'y Farmers National Congress. E. P. Cohill, Md. Agri. Ass'n. C. O. Drayton, Pres. Farmers Equity Union. Back Row: L. to R.: J. W. Batcheller, Pres. So. Dakota Farmers Union. Leroy Melton, Sec'y Farmers Equity Union. Dr. T. B. Symons, Md. State Agri. College. Chas A. Lyman, Sec'y, N. B. F. O.—Copyright Keystone View Company.

The interesting features are—that the investments are considered conservatively valued; that the plants are placed at a conservative figure; that there is keen competition in the sugar business; that the Affairs of the company are more open, and that the company is not owned by a few rich people.—W. B. THOMAS. (p. 1982, Vol. 4.)

Enormous Benefits Result From Beet Growers Organization

"Slowly, slowly, the beet growers of Northern Colorado, Nebraska, Wyoming and Montana have builded their organization. In 1909 beets were $5 per ton. Now, for the crop of 1918, the farmers have through their organization secured $10 per ton. Many of the factory towns of Northern Colorado have experienced a change of heart and have appointed a business man to go with the farmers' committee before the sugar officials and fight for a fair price. The farmers appreciate this and advise efforts to secure the moral support of all the towns for what is fair to the growers.

"Counted in dollars the gain to the growers through organization is very much beyond what any one on the outside realizes. For several years past the Great Western Sugar Co. has been securing annually two million tons of beets. In February, 1917, the company had put out its contracts for that year. The growers were not satisfied, held mass meetings, sent a big committee to Denver and secured not only a flat raise of 50 cents per ton but a written agreement from Mr. Morey to that effect and also an agreement for a conference before the 1918 contract was put out. That 50 cent

American Farm Bureau Federation Becomes Permanent Organization

Tariff, Strikes, Reciprocity, Freight Rates, Credits and Foreign Exchange Receive Scrutiny of Farmer Delegates

BEFORE an enthusiastic assemblage of 300 representative farmers of 28 leading states at the La Salle hotel March 3rd, the American Farm Bureau Federation was swept into a permanent organization.

In the election which followed, J. R. Howard, of Clemons, Iowa, who has served as temporary president since the last November convention, was elected president for the coming year by an unanimous vote. No other nomination was made. S. L. Strivings of Castile, N. Y., who has served as vice president, was continued by a full vote of the delegates. Each responded amid wild applause with a brief talk acknowledging their appreciation of the honor and responsibilities of their positions.

Howard Promises All Sections Co-operation

In a brief speech accepting his office, Howard said he wouldn't promise not to make mistakes, but he would try not to make the same one twice. He promised full co-operation to all sections and in all problems. Calling attention to the fact that there was no more rich farm regions to develop he declared that agriculture was entering a new period where greater stability of farming as a business was demanded and must be fostered.

When Strivings was nominated vice president, a dozen states seconded it. Mr. Strivings said the problems of farmers demanded the best thought of every one. He admonished patience among the states and said there must be built out of the federation a fabric as solid as oak.

He declared the big task ahead is to make the country see that farming is made reasonably prosperous without selfish purposes. Bartering away the farm products to the rest of the world to give a market for our manufactured products must not be allowed to be carried on as in the past.

Touches on Tariff

Indirectly the speaker touched on tariff problems by saying that we must be very careful in opening wide the portals of this country to foreign grown foods. The federation, he declared, must stand for a square deal to all citizens of the nation, however, as well as to farming.

With typical farm enterprise the assembly plunged into the business at hand and reconvened after supper worked late into the night. It is the talk among all that the federation is to be a business organization and not educational in its activities. It shall devote itself to develop the business and economic side of farming. It will not dabble in politics.

Six women delegates were present, Mrs. M. E. Judd, of Dalton, Ga., president of the Whitefield county fair of her state, is one. The other five were Mrs. L. E. McClung, Rupert, W. Va.; Mrs. C. H. Savage, Storrs, Conn.; Miss Gertrude M. White, Andover, Conn.; Mrs. John C. Ketcham, Hastings, Mich., and Mrs. Charles Cchuttler, Farmington, Mo.

Following the naming of a resolution committee resolutions were recommended for the protection of farm products from foreign competition, milk and potatoes being cited, also on the farm income tax, wood pooling, collective bargaining and an international conference on production.

Dept. of Agriculture Official Speaks

Dr. A. C. True, director of the states relations service of the United States department of agriculture, was called on for a talk, in which he said that it was vital not only to agriculture that it be prosperous, but to the entire nation. A new condition which farmers must consider and profit by was the grouping of workers and industries for efficiency.

He traced the growth of agricultural education the latest development being the extension service provided for under the Smith-Lever act. Education must be thought of henceforth as relating to all features of farm life, with especial emphasis on the economic aspects.

The American Farm Bureau Federation had the promise of a wonderful and useful career, he declared. Under wise and intelligent leadership and the backing of American farmers there was every reason to believe the organization would flourish and do a great constructive work.

Budget of $200,000 for Year

An extended discussion in the afternoon of the lines along which the federation should carry out its work brought up the resources available.

Acting Secretary, John W. Coverdale, of Ames, Iowa, stated that $200,000 was in sight for 1920.

The president's salary came up for discussion first and vice president Strivings stated the executive committee after considering the loss which any man qualified for the job would have to suffer in leaving his farm decided on $15,000 a year. The president is elected annually. Traveling expenses were estimated at $3,000. It was the general opinion that the president should be "the man" in the federation and the management of the general office placed in the hands of a competent executive. The expenses of the office, salary of secretary and clerks was estimated at $10,000 to $14,000 depending on where the office was located.

Members of Executive Body

The temporary executive committee was elected, viz:

Northeastern region—B. B. Cornwall, Middlebury, Vt.; E. F. Richardson, Millis, Mass.; H. E. Taylor, Freehold, N. J.

Middle states—O. E. Bradfute, Xenia, Ohio; Howard Leonard, Eureka, Ill.; C. H. Gray, Nevada, Mo.

Southern region—Gray Silver, Martinsburg, W. Va.; J. W. Morton, Athens, Ga.; George Bishop, Cordell, Okla.

Far west region—W. H. Walker, Willows, Cal.; W. J. Jamieson, La Veta, Colo.; J. F. Burton, Garland, Utah.

An amendment to the constitution offered by Prof. Crenshaw of Kentucky and supported by O. E. Bradfute of Ohio, E. H. Cunningham, of Iowa and others was passed after much discussion pro and con. The amendment reads, viz.:

"Effective Jan. 1, 1921, the annual dues of each member state in the American Farm Bureau Federation shall be 50 cents per capita of the individual county farm bureau memberships affiliating with the state organization, providing that in states not having a membership the executive committee of the American Farm Bureau Federation fix a reasonable sum for same.

The present membership of the federation is 485,000 farmers and the per capita fee averages 40 cents.

Some of the features of the program which is now under consideration for the coming year are:

National legislation that will prevent strikes and unnecessary suffering.

Investigation of the tariff in relation to farm products.

Kill the clause offering reciprocity with Canada.

Investigation of marketing, live stock prices and foreign competition.

Lower freight rates.

Investigation of foreign trade relations.

Investigation of credits and foreign exchange.

Establishment of a Washington office, with experts to watch and report on legislation.

Those who attended from Michigan were: C. A. Bingham, A. J. Rogers, A. E. Illenden, Mrs. J. C. Ketcham, R. Blemhuber, R. Montieth, M. L. Holbrook, O. D. Hagerman, Dr. Ebel Mumford, A. M. Berridge, Roland Morrill, R. G. Potts, James Nicol, the last named being voting delegates. —*By L. E. Troeger, in Chicago Live Stock Drovers' Journal.*

Upper Peninsula Farmers Protest Against Attacks on Farm Loan System

EDITOR MICHIGAN BUSINESS FARMING: An article in the Feb. 26th issue of your magazine has aroused considerable concern not only to myself but to a number of farmers in this locality, and it is gratifying to feel at liberty to advise you regarding the same, and to ask a favor of you in the way of granting space in the columns of your magazine for the publication of a resolution by our farm loan association, which is herewith enclosed and is self explanatory.

The article above referred to is the article by W. G. McAdoo and the editor's note of warning accompanying same. Will say at this time that the members of our association wish to extend to M. B. F. their appreciation and thanks for that note of warning, and beg to ask one more small favor, as we are not in possession of the correct address, and ask that you forward same to proper address of the following named officials at Washington; namely, Rep. Scott, Senator Townsend, J. W. Fordney and the Secretary of Agriculture. Trusting you may see fit to grant these favors we are sincerely yours for better conditions.—*Thompson-Inwood National Farm Loan Association by Dell Smith, Mgr. of Board.*

Resolution of Protest

By Thompson-Inwood National Farm Loan Association of Manistique.

"Whereas, it has come to the observation of this association that attacks have and are being made on the Federal Farm Loan System, and whereas an appeal was taken to the Supreme Court of the U. S. to overrule the decision of Judge Van Valkenberg in favor of the constitutionality of the Federal Farm Loan Act. And whereas, speeches are reported to have been made by the Hon. J. W. Fordney, chairman of the Ways and Means committee of the house of representatives and by Rep. McFadden, a member of the Banking and Currency Committee of the House, in opposition to the tax exemption clause in the act, which speeches are said to be given a wide circulation by the mortgage brokers of America, and whereas bills has been introduced in both the Senate and House to force liquidation of the Joint Stock Land Banks, and whereas it is reported that threats that the tax exemption on farm mortgages and land bank bonds would be knocked out by the present congress have been made by the mortgage brokers of America. All of which go to indicate that the force of the efforts to cripple the farm loan system is not yet spent, and whereas the federal farm loan act was devised and enacted for the express purpose of supplying a generally recognized and long felt need in the agricultural program of the nation, namely, the creating of a system of farm credit that would enable the farmers of the nation to borrow money on farm land security on long time loans at a low rate of interest to aid them in carrying out their part of the great agricultural program of the nation, namely, providing food and clothing for the people of a nation, and, whereas, the commercial end of this great enterprise was already taken care of by a system of commercial credit as represented by the Federal Reserve Banks, the stocks of which is owned by the National Banks of the U. S. and are exempt from all federal, state and local taxation, as is also all state, county and municipal bonds in the hands of wealthy people and whereas, under the present workings of the farm loan system, borrowers are required to pay the taxes on the mortgaged properties, the removal of the tax exemption clause from the act would leave the borrower subject to double or even triple tax on the value represented in the mortgage executed against it. First, by direct tax on the property; second, by a tax on the mortgage, held by the land bank, and third, by a tax on the bond issued against the mortgage, and yet further without the tax exemption clause it would be impossible to dispose of the bonds of the land banks at the low rate of interest at which they are now sold, and borrowers would be compelled to pay, in addition to taxes on his acknowledgement of indebtedness (for what is a mortgage but an evidence of indebtedness) an increased rate of interest on that debt

"Now, therefore be it resolved, that the tax exemption clause in the federal farm loan act is nothing more than right and just, in the light of the foregoing facts, and was so conceded but three years ago by the congress of the U. S.

"Be it further resolved, that the removal of that clause or the passage of any bills now pending or hereafter introduced in congress that might cripple or injure the present workings of the farm loan system could only be looked upon as a willful discrimination against the agricultural interests of the U. S. and a disposition on the part of congress to yield to the pressure and influence of farm mortgage brokers and money lenders who seek to destroy the farm credit system and again place the farmers of the nation in a position where they can again dictate rates of interest and terms on which farmers may borrow money and to cast on him an unequal portion of taxation.

"Be it further resolved that any act as above mentioned by the congress of the U. S. should and would be met by disapproval, resentment and protestations, not by this association alone, but by the thousands of farmers throughout the U. S. who are finding refuge in this great system from the Shylocks of old who seem to be again in evidence in such force as to again demand that pound of flesh, the taking of which they must know would necessarily mean the spilling of the blood of this great credit system.

"Be it further resolved that a copy of this resolution be sent to our representative in congress with our request that he use his efforts and influence to defeat any and all measures tending to injure the farm loan system, and also a copy to the Secretary of Agriculture with a like request, also that a copy be sent for publication to MICHIGAN BUSINESS FARMING, a farm magazine published at Mt. Clemens and having a wide circulation. Submitted and adopted this 24th day of February, 1920, by the Thompson-Inwood National Farm Loan Association of Manistique, Mich.—*By Board of Directors, Albert Huber, Albert Hucbscher, Angus Eachern, Dell Smith.*

Bankers' Ass'n Approves Loans on Warehouse Wool

AT THE RECENT meeting of the Agricultural Committee of the Michigan State Bankers' Association, we are advised by Comfort A. Tyler, they unanimously endorsed the pure fabric law, also endorsed the proposition to finance pure-bred lamb clubs in the state of Michigan, also approved of assisting the new Wool Growers' Association of this state by advancing individual farmers 75 per cent of the estimated value of the wool on the association warehouse receipts.

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL

THE LIVE STOCK AND MEAT SITUATION

The Institute of American Meat Packers has issued the following statement:

Absence of foreign demand for American pork continued throughout February to be a vital influence upon the market. Export business continued virtually at a standstill. This situation was summarized in a special bulletin issued February 17.

Heavy shipments of pork last fall have apparently put a stop to any further demand from Europe for some time to come. In many continental ports there are consignments of American pork which are not being sold on account of the depreciated value of foreign xechange.

There seems to be some prospect of British buying in limited quantities for the March period through their appointed agency in New York.

At home there was a good volume of pork trade throughout the month, but consumers seemed to want the choice and higher-priced cuts. High wages in the south have led to the purchase of choicer cuts of pork than in former years, and the result is a lack of sale for the heavier cuts of salt pork.

These heavy meats are being made in good quantity, and greater consumptive demand will necessarily have to be developed.

Hog prices were higher the last of January and the first of February than at any time during the winter's packing. With a strong demand for light hogs, the spread between prime light and prime heavy hogs widened until the difference amounted to about one cent a pound.

A significant factor is that hog receipts from the first of January until the present time have been from 15 to 20 per cent lighter than last year. There is some difference of opinion among those in close touch with the situation as to what this means.

One view is that farmers have been slow to market their hogs, probably because of price conditions, because they wished to carry on further feeding, or because of difficulty in obtaining cars for shipments. Taken in conjunction with the Government report of January 1 which showed only about two per cent fewer hogs in the country than one year ago, this would suggest that there is a large surplus on the farms. Consequently, receipts from now until summer may be as heavy or heavier in numbers and also in weight than they were in the corresponding period of 1919.

Another view is that the lighter receipts so far this year indicate actual decrease of hogs upon farms.

In the beef markets the supply of dressed beef is considerably in excess of that available for home consumption one year ago. The Government, in 1919, was still buying beef in rather large quantities. Absence of any such demand this year leaves a great deal more beef to be absorbed by consumers.

With demand no more than fair, a further depressing factor continues in the Government's disposal of considerable so-called Army beef.

Another factor which has had great influence upon the beef trade has been the relatively strong demand for hind quarter beef and the poor demand for forequarter beef. A more even demand would be an economic gain to the consumer and to the meat industry.

Receipts of sheep and lamb have been less than those one year ago. A smaller number of stock is on feed, a situation brought about largely because Colorado producers stayed out and did not buy for feeding purposes at prevailing prices. Iowa, Illinois and other central states bought freely of lambs, but these animals have for the most part been marketed.

Practically the entire supply from now until the first of June must come from the Scott's Bluff territory in Nebraska and Colorado.

A larger demand from the housewife for cuts from the shoulder and stew meat would help in equalizing the prices of all cuts. It would lower the cost of more fashionable cuts and would lead to a better consumptive demand for the carcass.

Previous to the war, the United States was not an exporter of beef, and the situation can probably adjust itself to a basis of domestic consumption on a line of prices which we hope will be equitable both to producer and consumer.

The pork situation, we believe, is quite dependent on the foreign demand. The situation is, of course, complicated by foreign exchange.

Lapeer Farmers Endorse Bureau

The following resolution was submitted and unanimously adopted at the Burnside Township Farm Bureau meeting, Burnside, Feb. 20, 1920:

Whereas, we, the farmers of Burnside township, knowing the conditions that have existed so long, have organized the Farm Bureau for the betterment of the same. Therefore be it

Resolved, that we demand a reasonable margin of profit over and above the cost of production of our products.

Be it further resolved, that this organization declares it to be its earnest desire and purpose to co-operate with other state federations of farm bureaus and other agricultural organizations in efforts for improvement of agricultural conditions not only this state, but other states of our nation. Signed—*Anthony Esper, D. McNary, W. B. Wilson, Committee on Resolutions.*

Will Detroit Develop as Live Stock Market?

SOUTH MICHIGAN growers of high grade beef, in the years in which they assiduously have been building up their herds in numbers and quality, have seen the city of Detroit grow from a population center numbering a few hundreds of thousands to more than a million. Meantime firstclass Michigan grown beef has been going to the Chicago market, and still goes—away from this population center of a million, just as it always has done. And to the Chicago market go Detroit wholesale dealers through their agents, there to buy Michigan grown beef and bring it back to Detroit for sale to retailers and their customers in this city.

Why this diversion to a far market of a food product from Detroit's gateway? and what justifies such a transaction involving two long hauls, first of the live stock o the Chicago yards, then of the dressed beef back to the market so near its origination? Who pays the shot?

George B. Smith, of Addison, Lenawee county, probably knows as much about conditions and their causes as any man in Michigan. He is secretary of the Tri-State Beef Growers' Association, composed of owners of high grade herds in this state, Indiana and Ohio. He is an Angus breeder and grower.

"The reason," said Mr. Smith, incidental to a recital of a plan to correct conditions, "the good beef goes to Chicago is the lack of a competitive market in Detroit and the fact that top prices invariably run from four to five cents a pound under the Chicago price for the very same animals. The one fact is the cause of the other, no doubt."

"In the first place," said Mr. Smith, "get the fact that more than 75 per cent of all the meat consumed in Detroit is beef. I have been told by packers that it amounts to 95 per cent but that seems a large estimate. Then the second fact, which is that Detroit beef, the product manufactured and sold in this city, is not in the bulk prime beef, but the product of dairy herds cows and the progeny of milch cows. Prime beef, grown for its food value, solely, is a minority factory in the Detroit market.

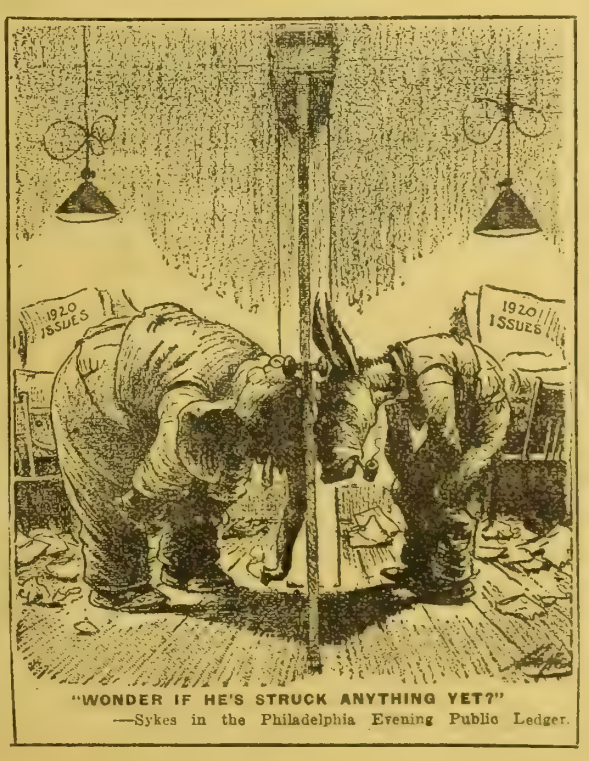
"At the same time that the Detroit packers pay 20 cents a pound for Angus beef in Chicago the best they will pay for the same cattle in Detroit is about 16 cents a pound, and this in spite of the fact that the haul to Chicago and the haul back to Detroit would be a saving, deducing only the cost of the haul from the farm in Michigan to the yards in Detroit. The low price for poor beef, ruling the Detroit market rules price for high grade cattle—and there you are."

Mr. Smith acknowledged that it didn't sound logical, but it was the fact. And as practical business men the members of Tri-State Association of Angus growers have tackled the situation. This is their plan, now in course of operation:

They have procurred from Detroit packers, all the important ones, aconcession of Chicago prices. They are to ship their stock to Detroit and get for it the top price which the local packers are accustomed to pay in the distant market. Arrangements are being made to distribute this high grade beef, after "manufacture" by the packers, to a selected list of retailers. This list will be advertised. Housewives in Detroit, according to the plan, will be enabled to ask for and get Michigan grown, first class beef, from these advertised dealers.

The saving is not planned to be in the form of a reduction in price paid to the grower, in the reduction of price paid to the packer by the retailer, or in margin of profit made by the retailer. In none of these, but in a saving of transportation charges, handling and shrinkage incidental to long hauls and delayed slaughter.

Mr. Smith and other members of the Ass'n are at work on sales plan. Meantime, first shipments of high grade Michigan beef cattle is being made from Manchester by L. Whitney Watkins, from his herd of Angus cattle. This is a shipment which under the old arrangement would have gone to Chicago, and part of it, no doubt have been brought ultimately to Detroit, at much unnecessary added expense, for sale to distributing patrons of Detroit meat markets.—*Fred Janette, in the Dctroit News.*



"WONDER IF HE'S STRUCK ANYTHING YET?"
—Sykes in the Philadelphia Evening Public Ledger.

BIG RESULTS FROM N. E. MICHIGAN LANDS

Northeastern Michigan scored heavily at the Shorthorn Congress Show and Sale, held at Chicago in February when 10 head of shorthorns from the Prescott ranch sold for an average of $1,477.50 each, a figure considerably above the average of all sales at the congress. Three of these Prescott hifers sold for $3,300, I3,050 and $2,250 respectively. The figures show not only what sort of cattle Northeastern Michigan can produce but they also show that it pays to raise thoroughbred stock.

From Comins, Mich., located in the center of the Northeastern Michigan district, little known to the outside world because it is not reached by a railroad, but containing thousands of acres of fine farm lands, comes a letter from Meno Steiner in which he says that from 19 acres of alsike clover he received $2,236.89 for seed and chaff last year and that in 1918, from nine acres of this same piece, he received $676.12 for the clover seed and chaff. He says: "We bought this land 15 years ago at $8 per acre and the more it is cultivated the better it gets.

A 21-acre tract of reclaimed muck land near Pinconning, which was planted to sugar beets last year brought the owner $3,722, which paid the $2,800 which the owner paid for his farm and the remainder went into a house on the property.

The booklet on "Ranching in Northeastern Michigan," which the Development Bureau published a few weeks ago, is attracting wide attention among stockmen. Prescott & Son distributed a number of them at the Shorthorn Congress last month, many of them going to stock breeders from Dakota, and the result has been that they are receiving requests for many more copies from neighbors of these people.

Back From Europe; Talks Prosperity

Trade with Europe will soon assume many pre-war characteristics, with the added feature of being many times more brisk, in the opinion of A. C. Frank, export manager of the Firestone Tire & Rubber Co. Frank recently return to New York City after a trip of three months in England and continental Europe.

"Although they are still suffering from the industrial difficulties which were the inevitable inevitable result of the war, the European nations will soon regain their old-time commercial aggressiveness, I believe," Frank said. "The resourcefulness they showed in the war will reassert itself in peace and they will again demonstrate their stamina by reclaiming a share of world's trade.

"The industrial activity of Belgium is particularly noteworthy. This plucky country, undaunted by its tremendous hardships, is now rapidly placing its factories on a quantity production basis, and is doing much toward the rehabilitation of the devastated districts.

"International trade, after the resumption of European industries, should develop, I believe, to a degree heretofore considered impossible. I look for an unparalleled era of trade among all nations."

$1,300 Worth of Potatoes From $400 Worth of Land

A year ago Wellington Rouse, of Greenbush, bought the old Burton place, paying $400 for it. This property is located in the sand west of the village and had been in disuse for many years. Last week Mr. Rouse sold $1,200 worth of potatoes raised on this cheap land and has $100 worth of spuds left, besides the crop from five acres of millet.

Let's see now—$400 from $1,200 leaves $800 in cash to pay for seed and labor and the land. He has the extra potatoes and millet for good measure—all in one season.

Looks like a pretty good profit and furnishes an object lesson for boosters for the light lands that are to be found in some sections of Northeastern Michigan.—*Alcona County Review*

MARKET FLASHES

WEEKLY TRADE AND MARKET REVIEW

A slight improvement in the money exchange, a report that England would shortly begin to export gold to this country to take care of purchases and stabilize her credit, increased building activity, increased demand for steel, stiffening of grain prices—these were the features of the past week's trade and market situation. The money shortage is acute in some sections and industrial corporations are selling liberty bonds to secure money to carry on their operations. To all appearances those who need money and have ample credit are experiencing no difficulty in securing loans. This is taken as indication of soundness and the general feeling throughout the country the past week has been one of greater confidence that has prevailed for some time.

Grains were generally firm thruout the week. Cattle were in poor demand the first of the week but picked up some as the week advanced. Hogs were steady for the most part, though there was little improvement in the demand. Beans were firm and potatoes advanced. Butter and eggs were on the decline. Taken as a whole the conditions were fairly satisfactory and gives us reason to believe that most of the farm products have reached their low level.

LAST MINUTE WIRES

DETROIT—Corn and oats are firm despite bearish reports of supplies. Hay in better supply but good demand. Cloverseed 25c higher.

CHICAGO—Exception of wheat grains in fair demand, supplies short and markets firm. Predictions freely made higher prices despite light foreign demand. Hogs strong and higher; cattle firm; mutton firmed up after week of declines.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

WHEAT CONTINUES IN POOR DEMAND

WHEAT PRICES PER BU., MAR. 1, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.42		2.60
No. 2 White	2.40	2.40	
No. 2 Mixed			
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.30	2.30½	2.36
No. 2 White	2.26	2.28	2.34½
No. 2 Mixed	2.26	2.27	2.33

Not even the announcement that England was in the market for a large quantity of flour checked the slump in wheat and the week opens with a decidedly weak condition in that market. A good many terminal markets are over-supplied, mills are making flour for the government and are not for the time being interested in purchases of wheat for independent trade. J. Ralph Pickell, publisher of the Rosenbaum Review, opines that wheat will go to $3.50 before the government's guaranty is removed, June 1st, but the market will have to get a hump on itself to make J. Ralph's prediction come true.

CORN GOES UP

CORN PRICES PER BU., MAR. 7, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow		1.61	1.78½
No. 3 Yellow	1.62	1.59	1.76½
No. 4 Yellow	1.58	1.56	1.74
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.62
No. 3 Yellow	1.44	1.43	1.60
No. 4 Yellow	1.41	1.40	1.57

Not even a government report which showed a higher supply of corn in farmers' hands than generally supposed had any effect upon the strength of the corn market at the opening of the week. Supplies on both the Chicago and Detroit markets were considerably short of demands, and as a result the price advanced. The spring break-up of the country roads is expected to still further decrease supplies for the next three or four weeks and a firm market is expected to rule.

OATS FIRM

OAT PRICES PER BU., MAR. 7, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 White	.97	.92½	1.02½
No. 3 White	.96	.91	
No. 4 White	.95	.89¾	
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
Standard	.65	.63	.73
No. 3 White	.64½	.62	.72
No. 4 White	.63½	.60	.71

Oats were firm on the Detroit and Chicago markets with no changes in price. Export buying which had been rather active the past week was slower and the government's report of oats remaining in farmers' hands was higher than the bulls had reckoned with. Nevertheless, there were no bearish tendencies to the market, and it is confidently expected that the oat market will continue on its upward trend.

RYE AND BARLEY

Rye has recovered its firmness and it quoted at $1.73 on the Detroit market. Barley has advanced 25 cents per cwt., and is jobbing at $3 @3.25 per cwt.

BEANS STILL LOW

BEAN PRICES PER CWT., MAR. 7, 1920			
Grade	Detroit	Chicago	N. Y.
C. H. P.	6.75	7.25	8.00
Red Kidneys	14.25	14.00	14.75
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.25	6.75	7.75
Prime	6.75	6.00	7.25
Red Kidneys	10.25	11.50	11.50

There is nothing new to report on the bean market. The market is easy at $6.75@6.90, and there is talk of still lower prices. We are informed that there will be some real news to announce on this market within another week or two.

POTATOES HIGHER

Potatoes reached their highest level of the season last Saturday on the Detroit market when a few cars of

SPUDS PER CWT., Mar. 7, 1920		
	Sacked	Bulk
Detroit	5.35	5.30
Chicago	5.25	5.10
Pittsburg	5.15	5.10
New York	6.00	5.90
PRICES ONE YEAR AGO		
Detroit	1.70	1.60
Chicago	1.75	1.70
Pittsburg	2.00	2.00
New York	2.08	2.00

choice stock sold for $8 per 150-lb. bag. This is 5 and one-third cents per pound or $3.20 per bushel. No other markets were quite so strong, although nearly all reported higher prices. Unquestionably the reason for these abnormal prices was the continuance of the severe weather. The principal barometer of this market the next sixty days will be the weather. If cold weather continues throughout March, and according to the weather prophets it will, prices will be sustained, but a couple weeks of warmer weather would certainly mean lower prices. The same farmer who bet us a year ago that potatoes would go to $2 per bushel takes issue with our views on this year's potato markets and holds that many farmers might have lost money had they followed the advice given in our December 27th issue. If our readers will refer to all the issues for that month they will note that we predicted higher prices, and when prices reached their highest level the last of December we advised our readers to begin marketing their spuds. The price at that time was good. The average farmer could have made money, and we still claim that the farmer who sold one-fourth of his holdings during the month of January as we suggested was acting the part of a good business man. The time to market potatoes is when the price is going up. Those who wait for the top-notch price seldom get it, for they fail to recognize the top-notch price until after the crest has passed and the market recedes. Then, as in thousands of instances in the past, they sell on a declining market and lose money. If I had a thousand bushels of potatoes today I would sell at least one-half of them and if the price went up another dollar a bushel in the next month I would have no regrets. For my common sense would tell me that in nine years out of ten when prices are abnormally high the market would go the other way. We want our readers to have the highest possible prices for their products, but in the average years these are best secured by a gradual marketing of their crops during the period when demand is strong and prices pay a profit.

Receipts of hay are on the increase in nearly all markets and there is a slightly easier tone as a consequence. Demand however, continues good and no materially price changes are anticipated during the next thirty days.

LIVESTOCK MARKETS

Detroit.—Cattle: receipts, 723; canners steady; all others strong, to 50c higher; best heavy steers, $11.50 @12; best handy weight butcher steers, $10@11; mixed steers and heifers, $9.25@9.75; handy light butchers, $8.50@9; light butchers, $7@8; best cows, $8.50@9; butcher cows, $6.50@8; cutters, $5.50@6; canners, $4@5; best heavy bulls, $8 Z8.50; bologna bulls, $7.50@8;

stock bulls, $6.50@7; feeders, $8.50 @9.50; stockers, $7@8; milkers and springers $65@115. Veal calves. receipts, 315; market slow, best, $20 @21; others, $8@15. Sheep and lambs: receipts, 967; market steady; best lambs, $19@19.50; fair lambs $18@18.50; fair to common lambs, $15@16; yearlings, $16@17; fair to good sheep, $12@13.50; culls and common, $6@8.50. Hogs: receipts, 2,042; market strong; pigs, $15@ 15.25; mixed hogs, 16.65.

Chicago—Receipts 39,000; steady to 10c higher; closed weak; bulk, $14.65@15.50; top, $15.65; heavy, $14.25@15.15; medium, $14.90@ 15.60; light, $15.10@15.65; medium, $14.90@15.60; light, $15.10@ 15.65; light light, $14.50@15.40; heavy packing sows, smooth, $13.25 @13.75; do rough, $12.50@13; pigs, $13.50@14.75. Cattle: receipts 14,000; strong; beef steers, medium and heavy; choice and prime, $14.50@16; medium and good, $11.85@14.50; common, $9.75@ 11.85; light, good and choice, $12.75 @15.40; common and medium, $9.50 @12.75; butcher cattle, heifers, $7.35@13.75; cows, $7.10@12.75; canners and cutters, $4.90@7; veal calves, $15.25@16.75; feeder steers, $8.75@12; stocker steers, $7.25@ 10.75. Sheep: receipts, 17,000; strong; lambs, 84 lbs. down, $17.25 @20; culls and common, $14@17; ewes, medium, good and choice, $11 @14.25; culls and common, $6@ 10.75.

LIGHT BEEF TONNAGE AIDS CATTLE VALUES

An advance of about $1 per cwt. in live stock cattle values since the recent period of demoralization is attributed to various causes, but that beef consumption has expanded is not admitted in packing circles. Chicago has received only about 150,000 cattle during the past three weeks and at other markets supply has been light. Cattle are going to market deficient not only in weight, but beef yields, few dressing over 55 per cent. At a conservative estimate beef tonnage is 20 per cent less than a year ago, when every market in the country was full of mature steers finished in anticipation of a broad post-war European demand that never materialized. This winter feeders made few heavy cattle, a fact on which they are now congratulating themselves, as demand centers on cheap light grades.

Market opinion differs as to what is likely to happen during the next 30 days. The probability is that a further advance of $1 per cwt. would dislodge many cattle now munching corn as the feed bill is prohibitive of profit.

Two sources of cattle supply promise seasonal volume for the next ninety days. One is south Texas, which has approximately 300,000 fat grassers ready to go to the shambles, and the Lancaster section of Pennsylvania credited with 150,000 winter-fed bullocks. Iowa has liquidated, other sections of the corn belt report a substantial deficiency compared with a year agon and there will be no distillery-fed cattle this year, prohibition having killed that industry. If beef consumption, repressed artificially during the war, revives, this crop can be readily absorbed. but the beef market is an invalid concern. Adverse factors to an active, if not higher, cattle market are a crash in hides, grease and other by-products.

Hog Values Recuperate

Hog values have recuperated materially since the bear drive late in February, when average cost at Chicago was depressed to $14.06. Last week late it reached $15.04, or practically $1 per cwt higher. This is a meritorious performance in view of prostration of export trade, owing to an adverse rate of foreign exchange, and has strengthened the growers' position. Packers still profess doubt as to the deficiency in the winter crop that has been apparent for two months, but buy hogs freely on every break. Nobody at the stockyards is bullish on anything but an impression is gaining ground that pending the June break present prices will be maintained.

Announcement that the British government will dump 300,000 frozen New Zealand lamb carcasses into the North American market to be followed by another consignment if this gets a good reception broke the dressed lamb market $6 per cwt. and the live market 75c last week. Frozen stuff will probably not sell freely through regular channels, but can be used advantageously by hotels and restaurants and the innovation means competition for the domestic producer. Lambs have declined about $2 per cwt. since the recent high spot, and if Colorado crowds the residue of its winter crop into the market hopper further depreciation is probable.

DETROIT PRODUCE MARKET

Firmness in the leading lines of farm stuff and in many cases higher prices are quoted owing to activity in buying and a small movement of produce to market. Scarcity felt in potatoes and the market made a large advance without attracting an increase of shipments. The country is taking little interest in the market at he presen level of prices and demand is incrasing. It is about the same with poultry, although the market has not shown much advance. Receipts are small and consumers are taking everything promptly. Hogs are scarce and calves easy. Receipts of butter are not sufficient for the wants of the market and an advance is quoted. Consumers have been active buyers all week. Eggs are in good supply and consumers take everything. There is no chance for an increase in stocks with the present conditions. Fruits show no activity. Prices are considered very high and consumers are practicing economy.

Apples—Western, boxes, $3@4; Spy, $3.25@3.50; Baldwin, $3@3.25; Greening, $3.25@3.50; Steel' red, $3.50@4 per bu.

Popcorn—Shelled, 10c per lb.

Honey—White comb, 32@35c per lb.

Cabbage—Home grown, $5@6 cwt.

Cauliflower—$2.75@3 per case.

Potatoes—$8 per 150-lb. sack.

Onions—Indiana, $5.50@5.75 an 100-lb. sack.

Calves, (dressed)—Fancy, 26@27c a lb.

New potatoes—Bermudas, $15@16 per bbl.

Dressed Hogs—Best, 19@20c; heavy 17@18c lb.

Live Poultry—Spring chickens large 36@38r; Leghorns, 35@36c; hens, 38 @40r; small hens, 36@37c; roosters, 23@24c; geese, 30@35c; ducks, 40@ 45c; turkeys, 44@45s per lb.

1,500 BEET GROWERS SWEAR LOYALTY

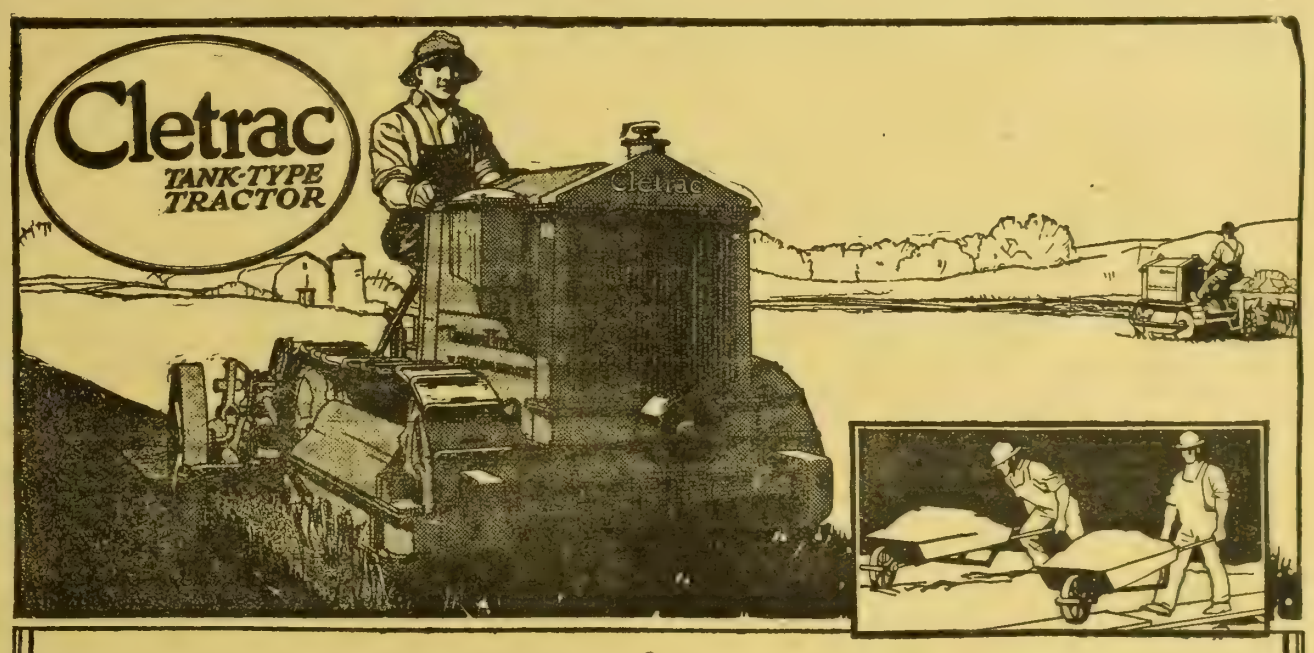
Fifteen hundred beet growers—one out of every seven beet growers in Michigan—thronged the big auditorium at Saginaw Monday and in an enthusiastic demonstration, stated their determination to stand loyally by the position taken by the executives of the Michigan Sugar Beet Growers' Ass'n, and grow no beets this year unless the sugar manufacturers granted their representatives a conference. Speakers included Mr. Thos. Price, president of the Saginaw Beet Growers' Ass'n; G. E. Ackerman, manager of the Michigan Sugar Beet Growers' Ass'n; John C. Ketcham, president of the State Association; C. G. Patterson, acting secretary of the United States Beet Growers' Ass'n; Forrest Lord, editor M. B. F., Dr. W. W. Diehl, agricultural field worker of the Methodist church in Michigan, and Ashley M. Berridge, member executive committee Michigan State Farm Bureau. There was no mistaking the sentiment of the farmers present, and it is fair to say that they represented 90 per cent of the beet growers. It was the largest single meeting of real farmers that has been held in Michigan in recent years, a fact which sugar company representatives who sat quietly throughout the meeting, and were apparently very much impressed with, later commented upon. Full details of this important meeting will be presented in our March 20th issue.

HOW CAN WE KEEP THE BOYS AND GIRLS ON THE FAR?

(Continued from page 2)

have had 27 years' experience working out most of the time. I was working for the C. H. Sheep Construction Co., of Kansas City, Mo., craning a steam shovel in New Mexico on the A. T. & S. F. R. R., getting $100 a month and that was good money in 1906 and 1907. I was trying to pay for a home here in Michigan. I had a family of five; had to buy everything of course. One morning in November, 1907 we woke up and were out of a job. Anyone can remember those times when the banks were all closed. I had $450 in checks on the Bank of Commerce of Kansas City under my belt, and the government examiners closed the doors. By a little streak of good luck I got my money and came home. For 16 months money would not buy a job. You can guess where my savings went. Again, during the winters of 1917 and 1918 I was working for the Mason Motor Co. at Flint, Mich., making from $5 to $6 per day and I had a family of seven by this time, and just when I commenced to think we were going to get through the winter in good shape, what happened?—everything shut down—no coal. There were hundreds of men in that shop, many of them making $8 to $10 per day and when they could not get thru the gates that morning they were down and out. Why? Well, there are a dozen reasons why, but that is another chapter.

I want to tell my friend, that if he is making anything like a good living with that family on a farm by all means stay there. You cannot save a penny in the city and you are not sure of a living. You might say that others live there. No, sometimes they live, and the rest of the time they just stay. I know what I am talking about. I have been there. I may say in conclusion that the city is no place in which to raise a family of children.—*Fred Cressey, Mecosta County.*



Don't Wait for the Spring Rush— Get Your Cletrac Now

SPRING'S almost here! A few weeks more and you'll be faced with loads of work, limited time, unsettled weather—with help scarce and costly.

Put a Cletrac on the job! It replaces six or eight horses, works longer hours and more days, saves time and cuts costs.

It speeds up plowing—and fast plowing now means less work later, because it pulverizes the soil and cuts down work of preparing the seed bed. Travels easily over soft and sticky ground, turns short, gets the corners and swings back to the furrow quickly. Puts more acres under cultivation and helps produce bigger crops.

And the Cletrac not only plows—it prepares the seed bed, harvests, hauls. In winter when the horses are laid up, eating expensive feed and getting daily care, the Cletrac is busy clearing roads and sawing wood.

The quick popularity of the Cletrac has led to a bigger output, with lower manufacturing costs. That's why we can offer you an *improved* Cletrac *—and at the same time lower the price from $1585 to $1395, f.o.b. Cleveland.*

Don't wait until the Spring rush hits you—be ready for it. Get your Cletrac *now.*

One of the more than 1200 Cletrac dealers is near you. See him today or write for the helpful booklet *"Selecting Your Tractor"*

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

Synopsis of Preceding Chapters

FRANCIS MORGAN, son of a New York millionaire, who has just died, becomes bored with society and decides to take an extensive fishing trip. Regan, Francis' broker and a former colleague of young Morgan's father, plans to ruin Francis through his Wall Street holdings. Regan pays Torres, a dark-skinned visitor from the Carribean Islands who knows of a treasure buried by a pirate ancestor of Francis, to lure young Francis away. The lure works and Francis starts out alone. He lands on an island whither he has been beckoned by a girl on the shore. The girl mistakes Francis for a lover with whom she has quarreled. He is chased from the island by her father and brothers. Francis explores another island where a young man threatens his life and then saves it from savages who attack young Morgan. Francis and the young man discover they are related. The young man, whose name is Henry Morgan, is also hunting for the treasure. They form a partnership. Francis discovers that Henry is the lover of the girl on the island and that her name is Leoncia Solano. Francis returns to the first island to ask Leoncia to forgive Henry which she does. .He is captured by Torres and the Jefe Politice of San Antonio who proclaim him to be Henry, whom they wish to hang for a murder he did not commit. They are about to hang Francis when Henry appears and is thrown into prison. Leoncia finds she loves both men. The Solanos and Francis plan to release Henry.

"THAT'S what I am arriving at. You, Senor Solano have plenty of saddle horses? Good. And you, Alesandro, does it chance you could procure me a couple of stick of dynamite from around the plantation? Good, and better than good. And you, Leoncia, as the lady of the hacienda, should you know whether you have in your store room a plentiful supply of that three-star rye whiskey?

"Ah, the plot thickens," he laughed, on receiving her assurance. "We have all the properties for a Rider Haggard or Rex Beach adventure tale. Now listen. But wait. I want to talk to you, Leoncia, about private theatricals. . . . "

CHAPTER V.

IT WAS in the mid-afternoon, and Henry, at his barred cell-window stared out into the street and wondered if any sort of breeze would ever begin to blow off Chiriqui Lagoon and cool the stagnant air. The street was dusty and filthy because the only scavengers it had ever had known since the town was founded centuries before were the carrion dogs and obsence buzzards even then prowling and hopping about in the debris. Low, white-washed buildings of stone and adobe made the street a furnace.

The white of it all, and the dust, was almost achingly intolerable to the eyes, and Henry would have withdrawn his gaze, had not the several ragged mosos, dozing in a doorway opposite, suddenly aroused and looked interestedly up the street. Henry could not see, but he could hear the rattling spokes of some vehicle coming at speed. Next, it surged into view, a rattle-trap light wagon drawn by a runaway horse. In the seat a gray-headed, gray-bearded ancient strove vainly to check the animal.

Henry smiled and marveled that the rickety wagon could hold together, so prodigious were the bumps imparted to it by the deep ruts. Every wheel, half-dished and threatening to dish, wobbled and revolved out of line with every other wheel. And if the wagon held intact, Henry judged, it was a miracle that the crazy harness did not fly to pieces. When directly opposite the window, the old man made a last effort, half standing up from his seat as he pulled on the reins. One was rotten and broke. As the driver fell backward into the seat, his weight on the remaining rein caused the horse to swerve sharply to the right. What happened then—whether a wheel dished, or whether a wheel had come off first and dished afterward—Henry could not determine. The one incontestable thing was that the wagon was a wreck. The old man, dragging in the dust and stubbornly hanging on to the remaining rein, swung the horse in a circle until it stopped, facing him and snorting at him.

By the time he gained his feet a crowd of mosos was forming about him. These were roughly shouldered right and left by the gendarmes who erupted from the jail. Henry remained at the window and, for a man with but a few hours to live, was an amused spectator and listener to what followed.

Giving his horse to a gendarme to hold, not stopping to brush the filth from his person, the old man limped hurriedly to the wagon and began an examination of the several packing cases, large and small, which composed its load. Of one case he was especially solicitous, even trying to lift it and seeming to listen as he lifted.

He straightened up, on being addressed by one of the gendarmes and made voluble reply.

"Me? Alas senors, I am an old man, and far from home. I am Leopoldo Narvaez. It is true, my mother was German, may the Saints preserve her rest; but my father was Baltzar de Jesus y Cervallos e Narvaez, son of General Narvaez of martial memory, who fought under the great Bolivar himself. And now I am half ruined and far from home."

"Prompted by other questions, interlarded with the courteous expressions of sympathy with which even the humblest moso is over generously supplied, he managed to be politefully grateful and to run on with his tale.

"I have driven from Bocas del Toro. It has taken me five days, and business has been poor. My home is in Colon, and I wish I were safely there. But even a noble Narvaez may be a peddler, and even a peddler must live, eh, senors, is it not so? But tell me, is there a Tomas Romero who dwells in this pleasant city of San Antonio?"

"There are any God's number of Tomas Romeros who dwell everywhere in Panama," laughed Pedro Zurita ,the assistant jailer. "One would need a fuller description."

"He is the cousin of my second wife," the ancient answered hopefully, and seemed bewildered by the roar of laughter from the crowd.

"And a dozen Tomas Romeros live in and about San Antonio," the assistant jailer went on, "any one of which may be your second wife's cousin, Senor. There is Tomas Romero, the drunkard. There is Tomas Romero, the thief. There is Tomas Romero—but no, he was hanged a month back for murder and robbery. There is the rich Tomas Romero who own many cattle on the hills. There is . . . "

To each suggested one, Leopoldo Narvarez had shaken his head dolefully, until the cattle-owner was mentioned. At this he had become hopeful and broken in:

"Pardon me, senor, it must be he or some such a one as he. I shall find him. If my precious stock-in-trade can be safely stored, I shall seek him now. It is well my misfortune came upon me where it did. I shall be able to trust it with you who are, one can see with half an eye, an honest and an honorable man." As he talked, he fumbled forth from his pocket two silver pesos and handed them to the jailer. "There, I wish you and your men to have some pleasure of assisting me."

Henry grinned to himself as he noted the access of interest in the old man and of consideration for him, on the part of Pedro Zurita, and the gendarmes, caused by the presence of the coins. They shoved the more curious of the crowd roughly back from the wrecked wagon and began to carry the boxes into the jail.

"Careful, senors, careful," the old one pleaded, greatly anxious as they took hold of the big box. Handle it gently. It is of value and it is fragile, most fragile."

While the contents of the wagon were being carried into the jail, the old man removed and deposited in the wagon all harness from the horse save the bridle.

Pedro Zurita ordered the harness taken in as well, explaining, with a glare at the miserable crowd: "No a strap or buckle would remain the

nly Cure for High Cost Epidemic

A BACK TO the farm" movement is the only sure cure for the "high costs" epiic that is disturbing the whole try and unless it begins soon on xtensive scale foodstuffs are apt ualify as a luxury, Roland Morof Benton Harbor, president of Michigan State Farm Bureau,

Mr. Morrill has been gatherstatistics on the shortage of lain the rural districts of the counand his summary is startling: many farmers are being drawn the country by big industries he nation's good, he points out. r. Morrill says, "The problem of ily supply of good food is imant to the successful operation ny or all industry. The country ot get by quite so easily as sugd by a worthy Detroit lady who recent ladies' club meeting calls kill "high cost" eggs and butemarked that she saw no reason aste time discussing the farmer ll present bought their butter eggs of the grocer.

ut attention must be focused on farmer. A careful canvass of shows a shortage of farm hands his spring of more than 50,000 which means that Iowa must not less than 500,000 people er feeding list. It appears that 10 principal middle western s will show a shortage this g of half a million farm hands; that the country-wide shortage be between 1,000,000 and 1,000 which means the cutting off upplies for between 15,000,000 20,000,000 consumers. Of e these figures are approximate. od season will not produce such ic conditions. On the other , adverse weather conditions make the situation more alarm-

nd this shortage will not be first by the farmer, who by the of the life game must provide he sustenance of his own famefore providing for others. stics show that the average er can market only 35 per cent s products after feeding his own family, but that he can market about 90 per cent of products produced by his employes. In other words, if there are 20,000,000 farm owners in the country who support at home 55,000,000 people, they can do so without employes and can supply about 20,000,000 others or possibly 75,000,000 in all with food and clothing materials. Food and clothing supplies and materials for the other inhabitants of this country must be produced by hired labor on the farm.

"Just at present there is a lot of fool propaganda going the rounds about farmers going on strike. That word "strike" is as obnoxious to the average farmer as a rattlesnake and the idea is pure bunk. The farmer knows his place and will fill it as a good citizen, but his power to save the nation from hunger and worse is limited to the industrial support of those who must depend on him for their existence, a matter which in the present crazy industrial rush is being overlooked."

"There must be a readjustment of labor. Ten years ago the automobile, the phonograph, the player piano and the movies would have been classed as luxuries; now they are called essentials. In manufacture, sale and maintenance these industries now employ one third of the labor of the country. This labor is of the highest class drawn from other industries who in turn replenished their farces from the farms. The farmers have no reserves to fall back on. The war has virtually stopped immigration.

"The situation is just this—a 'back to the farm' move must start quickly or thousands of people in this country are going to go hungry. And this move must be started in the cities. The remedy for the conditions we are facing today lies in the hands of big industries, and also their employes. The demand for men from the country must cease and the continuing strikes for higher wages and shorter hours must stop. Otherwise the cost of living will be a game with the sky as the limit."

, Seulke, Cornell, to Aberdeen-Angus Field

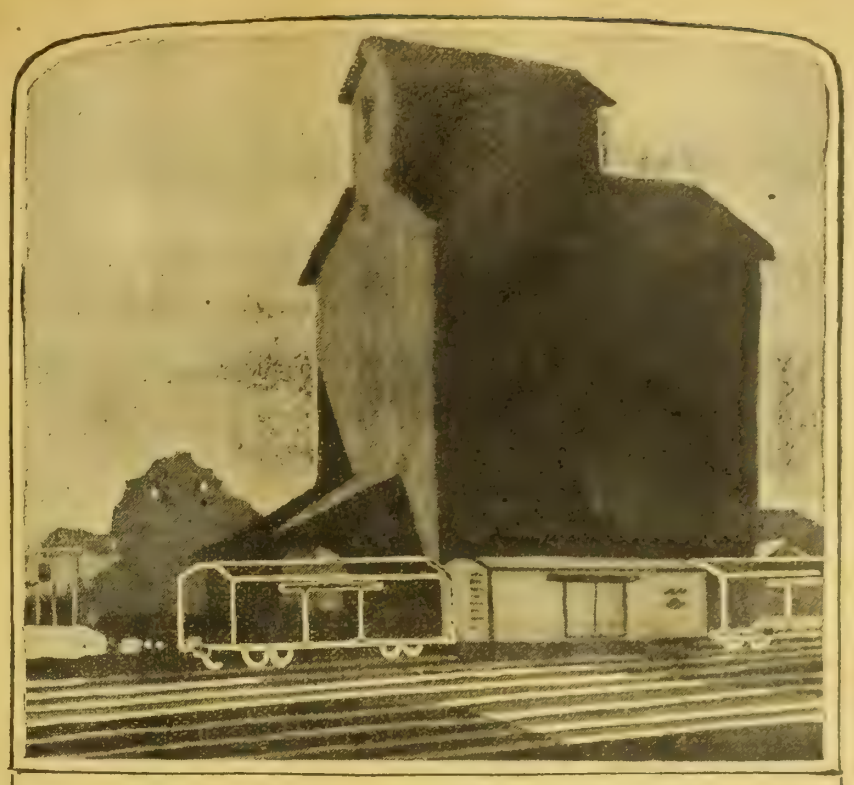
DR. K. J. Seulke, professor of the Animal Industry at Cornell University, N. Y. took up his new duties as Eastern fieldman for the American Aberdeen -Angus Breeders' Association, Feb. 15. Dr. Seulke's field extends from the Ill.-Ind. boundary east to the At- north of the Ohio river and Virginia.

Seulke was chosen as the best for the new field and comes gly recommended by breeders, e and experiment station people usiness men. He was raised on diana live stock farm; is a grad- of Purdue University, from ce came two Aberdeen-Angus l champion steers at the Inter- nal Exposition, and he has de- from both Pennsylvania State ge of Agriculture and Cornell. onducted a live stock survey of na a few years back, and his at Cornell is almost wholly responsible for a beef herd at that institution. His beef bulletins from Cornell Station are standard for that territory.

The addition of Dr. Seulke to the Aberdeen-Angus corps, gives this breed one of the strongest field forces carried by any pure-bred live stock association Dr. C. D. Lowe, Knoxville, Tenn., has charge of the south, and E. T. Davis, veteran breeder, showman and importer, the middle west. An additional man will be appointed for the territory west of the Rocky Mountains soon. Some hundred and twenty-five public sales of Aberdeen-Angus pure-breds will be held by breeders under the management of these men the coming season, Dr. Seulke already having arranged to give New York its first sale, at Albany, April 1, while Michigan's first sale will be held at Saginaw, March 25. Ohio will also have a spring sale, as will district associations in Indiana, at Miami, Kentland and Logansport, in March and April.

Some $2,500 in prize money will be offered for shows in connection with these sales of state and district associations, the American Aberdeen- Angus Breeders' Association contributing sums of $50 to $100, depending on the number to be sold.

Arnold F. Knoop, of Monee, Ill., with his tractor, the mechanical construction and operation of which he learned at the Michigan State Auto School.



There is one freight car today where three are needed

How the Railroad Situation Affects Your Farm

Every Spring brings an enormous demand for Solvay Products. Thousands of farmers call for Solvay Pulverized Limestone, Arcadian Sulphate of Ammonia and "U-S" Potash during the months of March, April and May. Naturally, they want immediate deliveries.

While in the past, the railroads have handled their burden of the season's excess shipments more or less adequately, conditions this year are entirely different.

Railroad Congestion This Spring Will Be Serious

Few new box cars or locomotives have been supplied to the railroads for over two years. At the same time, depreciation of rolling stock has been enormous, and the percentage relegated to the scrap heap abnormally large because there has been no replacement to offset this increased depreciation. There are fewer operatives, fewer box cars, fewer locomotives. Yet, in the face of these conditions the country's industries are planning to do more shipping in 1920 than ever before.

This situation will have a serious effect on your plans if you fail to provide against delayed shipments.

Ordering in Advance is Absolutely Essential

This year, as in the past, we are making effort to deliver our enormous amount of spring shipments into the consumer's hands as promptly as possible. But it will be absolutely impossible to satisfy all our customers on deliveries unless we can obtain their cooperation.

You may be one who will not be satisfied if you neglect this warning. We want you to appreciate the seriousness of the situation—to visualize the effect of delayed shipments upon your crops—so that you will not delay a moment your orders for Solvay Pulverized Limestone, Arcadian Sulphate of Ammonia and "U. S." Potash.

Paying the County Agent

COMMENTING upon the successful efforts of an Indiana congressman to prevent a cut in the appropriation for the county agents from $1,500,000 to $1,000,000, the Price Current Grain Reporter says:

"County agents now receive pay from the federal and state governments and from the county funds, but the county agents, or many of them, do not seem to realize that there is any impropriety whatever in accepting money from county funds and then making it a large part of their business to as far as possible destroy or interfere with the business of the merchants and others in the towns who are compelled to pay taxes for their support. Rep. Purnell says the country needs more county agents and not fewer, which is probably true, if they are of the right sort and tend strictly to their business of farm advisers and do not act as commercial agents to disrupt the mutual relations of farmers and traders in villages. In this respect a great many county agents are getting to be a public nuisance, not because their activities are improper if paid for by the farmer himself but are if paid for by the people of the towns."

The complaint is justified. We are acquainted with a hardware merchant who spent weeks of valuable time drumming up sentiment among the citizens of his town for a county agent. The board of supervisors made the appropriation and the county agent was hired. He was a hustler from the word go, and in less than six months' time the co-operative associations which he had formed were selling lime, fertilizer, fencing and other farm supplies in direct competition with the merchant who was instrumental in getting the county agent and with all the hardware merchants who helped to pay his salary. The merchant looked upon this as a case of rank ingratitude. Can you blame him?

On the other hand, the county agent was but doing his duty to the farmers. He was hired to work for them, and anything that would advance their interests was a part of his job. No rules were laid down for him to work by; no stipulations were made as to what he should and should not do. He was but one figure in a great system, the methods of financing which and the work of which has become established and approved by the country at large. True, there have been and still are some county agents who try to walk the chalk line and please everybody who through taxes contribute a part of their salary. As a result they please nobody, not even themselves.

The trouble is that the method of financing the county agent system is all wrong. Who wants a hired man, anyway, who gets part of his wages from a third party, and doesn't dare to milk the cow, for instance, unless the party approves. Which is the wiser thing to do—let the cow go dry, discharge the hired man, or remove him from obligations to the other party? If the county agent has proven his worth, and we doubt if any farmer longer questions that, the farmer ought not to expect that he shall be paid from the public funds, even though a large part of them are contributed by agricultural interests. The county agent cannot be entirely free and independent to study and improve the conditions of agriculture, if he is in anyway tied up to commercial interests. The same applies to farm organizations who receive financial support from others than farmers. The sooner all such bonds of financial obligations are severed the better it will be for the farmer, his organization and his county agent.

Reaction

IT WAS Hiram Johnson who said, "What I fear is not revolution, but reaction." Revolution in the United States is remote, improbable, if not impossible, but reaction is upon the nation. In our struggle to recover our balance from too much leaning to radicalism we stand in danger of falling the other way.

During the war we frowned upon free speech if it was against the war. That was entirely proper, as much of the freedom of speech at that time was designed to give aid and comfort to the enemy. But now that the war is over and there is no enemy to aid, those who stand in fear of honest criticism would muzzle the country with an anti-free speech law. That is reaction.

From the day when our forefathers conceived this nation, we have prided ourselves upon being a peaceful, unwarlike people, holding institutions of militarism in distrust and dislike. Wars have forced us to raise volunteer armies and conscript those who would not volunteer. In every conflict we have been successful. We are at peace with the world and have no immediate need for a large standing army and strong naval force. Nevertheless our Congress is being importuned to create a large standing army and fasten a military system upon the country, that is a counterpart of the system which brought ruin to Germany and damnation to the rest of the world. That, also is reaction.

In times past labor has not had a square deal. The war created a shortage of men and an abnormal demand for the things which are made by men. Necessity forced employers who could not be moved in any other way to pay higher wages and improve labor conditions. Just as employers have taken advantage of labor when there were two men for every job, labor is now trying to take advantage of the employer when there are two jobs for every man. The public resents the attitude of labor and would crush the organizations which labor has built up to protect their interests. The attempt to embody in the railroad bill a provision which would deprive labor of its weapon of protection was another example of the reaction of the times.

Most lamentable of all is the fact that a large body of people have caught this contagion of reaction and do not recognize its manifestations when they appear. Some simple people would believe that the anti-sedition bills before Congress are aimed only at the anarchists and the communists. A careful reading of the bills will soon convince them that no matter at whom the bills are aimed they are full of buckshot which will hit the honest critic as well as the preacher of violence. As for military training, the good people are asked to believe that its prime object is to make us a nation of healthful, red-blooded citizens. And labor, we are told, is flirting with the reds and must be rendered powerless. We are asked to deprive labor of its right to organize, its right to set a price on its commodity, and its right if need be to strike.

We have scant sympathy for the professional agitator or propagandist whether he represents labor, manufacturing, commerce or agriculture. But we deplore the tendency to judge all the great bodies of people wrapped up those enterprises by the acts of a few. For t reason we question the wisdom and justice the resolutions adopted by the American Fa Bureau Federation against the right of la to strike. Resolutions aimed against the ri of capital to withdraw its money from en prise, or the right of farmers to decrease acreage of certain crops or to collectively gain would be equally as indefensible. Of w value is organization to labor if labor can set a price on its commodity and enforce price when necessary by striking? Of w value is organization to farmers if it will permit them to bargain collectively and ref to sell their crops or grow more if they can get a fair price for them? The cases are id tical. What is sauce for one is sauce for other.

We cannot take from labor or any ot class of people the right to bargain collectiv fix prices based on value, and to withdh their commodities from the channels of tr if they so desire. Providing, however, that the exercise of such right no effort is made coerce others to take similar action. Lab only weapon of protection is the strike. Th is a better way to settle industrial dispu but until the employer or the government p vides the better way, we must be content w the poorer way. The same truth applies disputes of every name and nature which volve the industry and the agriculture of country.

LINCOLN ON LABOR

THE PRUDENT, penniless beginner in the world labors for wages awhile, saves a surplus with which to buy tools or land for himself, then labors on his own account another while, and at length hires another new beginner to help him. This is the just and generous and prosperous system which opens the way to all, gives hope to all, and consequent energy and progress and improvement of condition to all.—Abraham Lincoln.

Standards for Farm Products

IF "HONESTY is the best policy" would it not be well to apply it to transactions? The government and the sumer insist that the farmer be honest. they have established certain standards what he is getting, is it not also in the s ard for grains; if a certain percentage of grade is found in grain of otherwise high q ity, the whole is graded low. There is a st ard for wool; a standard for potatoes; a st ard for beans. Now if it is in the interes the public welfare to standardize farm pr ducts and tag them so the purchaser may k what he is getting, is it not also in the s interest to standardize and tag manufact articles so that the farmer may know wha is getting? Take clothing, for example. man who buys a suit of clothes nowadays t as much chance as the fellow who gets a through a matrimonial bureau. Both look good but what about the wearing qu ies? That is what counts. The suit of clo may be all shoddy and in six weeks' tim all shabby, and the wife may prove a lemon in less than six weeks' time sour her husb But at the present time there is absolutel way in which to distinguish between looks quality. Clothing ought to be standard marked and sold according to the amoun virgin wool they contain. And matrimo bureau wives ought to be classified, and ad tised according to looks, health and tem Otherwise there is fraud and deception.

The same is true of seeds, feeds, gasoline derwear, paints, and a score of other art which the farmer buys. He has no wa of knowing whether he gets his money's wort or not until after he tries them, and then it's too late. Who can in justice say, that the th the farmer buys should not be as scrupul sold on their merits, as the things he produ

---

The State Constabulary seems to have put their foot in it, in a raid on the homes of tw brothers in Iron City; after the state co said there was no violation of the prohib laws. The raid was undoubtedly intende for an argument for the retention of the us organization which has been saddled on he state.—*Hastings Journal-Herald.*

"It's no time for new ideas," says Leo rd Wood. Mebbe this explains why some of presidential aspirants haven't any.

Take up the slogan. "The Campbells are com ng."

WHAT THE NEIGHBORS SAY

OPPOSED TO GOV'T CONTROL

In answer to your request as to my opinion whether or not the government should have control of the railroads two more years, my answer is "No." We have had hell enough the last two years and don't want any more such "d—" foolishness when people are suffering for the want of all the necessaries of life. Even if we have the money to buy coal we can't get it for no other reason than the miserable way of all business being under government control. Take for instance sugar. They say the government set the price, and still the price is going higher every day. It's nothing but graft and our measly government officials uphold it. Now, I am a farmer producing grains of all kinds and also milk and I saw in the last issue of M. B. F. you ask for all farmers' opinions as to whether or not we want the governor to appoint a three-man commitee to fix the price of milk. I should say "not." We don't want to support three more political suckers, as that is all it would be. Talk about the Reds that we hear so much about. My opinion is that if we could send 99 per cent of our government officials to Russia we could then expect to set up a government for the people and by th people which it should be. I think this will give you my opinion of government control of everything that the farmer raises.—*F. Markel, Macomb County, Mich.*

We "get" you. But consider. What would have happened had the government not taken control of the railroads at the beginning of the war, and run them at public expense since then? Speaking before the United States Senate last December, Senator LaFollette said: "The truth is that the railroad system of this country had broken down prior to the war, and if there had been no war the roads would have been infinitely worse off than they are today unless the government had taken them over to operate them or had financed them. The point I am making at this time is that the railroads of the country were wrecked, not by government operation during the war but private operation prior to the war." These assertions are frankly substantiated by railway executives themselves. You have cited sugar prices. In the face of the greatest shortage of sugar of the last half century, have you thought what prices might have been had not the government taken control? There are instances, it seems, when circumstances make government control necessary and wise. There are other instances when it is indefensible. Apparently no rule can be established that will always apply. The government which you criticize is your government, and the officials who direct its affairs are your officials. If you do not like them, you have the power, with the aid of other farmers, to change them in any way you see fit. Why not exercise that right? —Editor.

AS A CITY CONSUMER SEES IT

I am enclosing subscription price of your farm paper, and in my judgment if more city people would invest a few nickels in taking and reading a reliable agricultural paper, they could judge more intelligently the situations between the grower and consumer, and who is at fault for conditions as they now exist. I believe it is very unwise for farmers to leave their farms for city life, and will regret it after seeing the white lights for a short time as conditions will change in a few years and the farmer has his good living first hand, and the crumbs go to the city. So, farmers, stick to your farms and live a life worth living. I am not financially interested in farming, but interest myself in things necessary. —*G. E. Waterman, Washtenaw Co.*

Yes, unquestionably it would do the farmer's cause much good if some of the leading agricultural papers could be placed in the hands of city dwellers. The present attitude of the consumer toward the farmer is largely the result of misunderstanding.—Editor.

APPROVES BEET GROWERS' STAND

I have been very much interested in the stand taken by you in behalf of the farmers not only of Michigan but the whole country, and am pleased to see that we have one editor that has got some lime in his spine, and not a rubber tube.

I was one of the members of the executive committee of the state grange that started the fight three years ago for a raise in the price of sugar beets. While I don't grow beets I am glad to see the good work go on.

I am also glad to see the farmers get together to make the effort to elect not only a governor but they should go right down the line, and elect the legislature. While Milo Campbell was not my choice for governor I am going to support him to the best of my ability.

I am sending in a vote for McAdoo as my first choice for president, I believe that his record in financing the railroads shows him to be a big man, eminently qualified to handle the affairs of the nation, Wm. J. Bryan would be my second choice, and Herbert Hoover third, I think it would be a good idea to have each give first, second and third choice. I will now close with the best wishes for your paper.—*W. H. Welsh, Manager Farm Sales Dept., Civic and Commercial Ass'n, Sault Ste. Marie, Mich.*

Your attitude toward the farmer's interest and their candidate for governor is most commendable, and shows that you are indeed a true friend of agriculture. —Editor.

WILL NOT STAND BY OLD PARTIES

If you will allow me a little space in your paper I would like to pass my opinion with regards to a farmer's view on the political issue in Michigan. I would not support any candidate for office that does not come out independently from the two old parties. Milo Campbell may be a good man, but he says that he is running on a Republican ticket and if elected will stand by that party's principles. I think we have had too much of one party now in Michigan. You need never expect very much good from any party where the people will continue to roll up a hundred thousand majority. We have got to keep elections more even. I believe in an independent farmer's state and congressional ticket in Michigan this fall. Yours for success.—*John S. Beng.*

I am very sorry to see you take this stand. What have the principles of either of the great national parties got to do with out local and state issues?—Editor.

COLLEGE QUESTIONS VALUE OF LUPINE AND SERRADELLA

As one of Michigan's most widely read farm papers, the MICHIGAN BUSINESS FARMING exerts a powerful influence on Michigan agriculture. This influence is reflected just now by the numerous inquiries coming into this office on the use of lupine and serradella from the reading of a very interesting article in one of your recent issues on the use of these crops by Mr. Carl Schmidt of Serradella Farm, Oscoda County.

I have not personally visited this farm but have received a full report from Mr. J. W. Nicolson of this department in regard to Mr. Schmidt's operations. I understand that considerable success has been met with in improving the quality of very light land through the use of lupine and serradella by Mr. Schmidt. However, in the estimation of Mr. Nicolson, and others who have visited this farm, there is no indication that this use has been practical nor did I note in the article of the MICHIGAN BUSINESS FARMING any cost accounts or estimates.

I believe it would be of great interest to all those who read the article, describing Mr. Schmidt's farming methods, to see a second article written by a competent investigator from your staff, who will make a careful study of Mr. Schmidt's methods from a practical standpoint as well as the standpoint of general interest.—*J. F. Cox, Professor of Farm Crops, M. A. C.*

Michigan Business Farming was possibly in error in publishing the results obtained by Mr. Carl Schmidt with lupine and serradella before consulting competent advice upon the matter. Acting upon Prof. Cox's suggestion, we are seeking to establish the practicability of these legumes or determine under what conditions, if any, they may be used profitably as soil builders. Until this investigation is completed, it might be well for our readers to proceed slowly in seeding these crops. We feel that the opinion of the farm crop leads of the M. A. C., should be the determining factor.—Editor.

THE RAILROADS

I read in the paper some time ago that the heads of the Farm Bureaus, Gleaners and Grangers sent a petition to government to hold the control of the railroads for two more years. I have talked with a good many farmers and failed to find one in favor of it. I have 2,500 bushels of beans and am interested in your articles in your paper on beans. I think your paper a very good farm paper.—*E. O. Walker, Supt. Bliss Farm, Swan Creek, Mich.*

The Farm Bureau did not join in the petition that was sent to Washington in the straw vote we are conducting upon the subject, the majority of farmers seem to favor government control. But there's no use arguing the point any further as the roads went back to the private owntrs March 1st. Under the guaranteed dividend clause in the railroad law, the roads will have to have higher rates which you and every farmer in the United States will help to pay, and which, it has been estimated, will add $4,000,000,000 annually to the already high cost of living.—Editor.

THE FARMER AND THE FOOD SUPPLY

The practical question arises as to the food supply in the near future. The soil, being its source, the necessity for its thorough and complete cultivation is imperatively demanded. But this cannot be accomplished without adequate labor of man and this is difficult, if not absolutely impossible to obtain because of so large a portion of our population being gathered into city homes, until house-room is difficult to obtain, while, yet in the rural districts, many houses are left uninhabited, it being estimated that in one state 24,000 houses are standing empty. Will the pendulum of migration swing back to the rural districts? One of two conditions is sure to result in the near future, more help must be provided for tilling the soil, or more people will be obliged to restrict their appetites to a limited supply of food. The farmer and his family will not be of the latter class, for it is their privilege to satisfy their own needs first. "Back to the Farm," must be the slogan if adequate supply of food products is provided. American farmers are now producing but a portion of what they can be made to produce, if cultivated as the soil is cultivated in the thickly settled portions of Europe.

The discussion of this question in MICHIGAN BUSINESS FARMING of Feb. 21st, is interesting reading and Mrs. Dora Stockman has shown very clearly the situation which the hired man will be obliged to meet, who leaves the farm and moves to the city. The writer has a neighbor who keeps two hired men, paying $65 per month for the entire year, furnishing house-rent, fruit, ground for a garden and one man has remained with my neighbor for several years.

As a nation we have become extravagant in our demands; only the best will satisfy us and a return to the less expensive ways of former years is the remedy needed. But this can hardly be expected in this age of automobiles, telphone, phonograph, flying machines wireless telegraph and prospective communication with the moon.

An earnest and courteous discussion of this question can but be helpful, provided we are broad enough in our views to look broadly at both sides of the question.—*J. T. Daniells, Shiawassee County.*

True as gospel! If the farmer has made both ends meet or laid something aside for a rainy day, it is because he has practiced thrift. When the people of the cities have acquired this simple habit, they will cease their wailing about the H. C. of L.—Editor

WOULD PATTERN AFTER NON-PARTISAN LEAGUE

I am an interested reader of your paper and on most, or many subjects can endorse your opinions, but will say I cannot endorse your opinions on political action. If I get your correct ideas they are in opposition to the farmers and labor uniting in an organization outside the two old parties.

You advocate co-operation in buying and selling of products and condemn profiteering. You condemn the Newberry method of buying office in state and national legislatures. You condemn the yearly increase of taxation but we seem to come to the parting of our ways at about this point.

You think to elect a farmer governor is the main thing and to accomplish that, that his name should be placed on the Republican ticket. Now as I see it, when we vote that ticket we are, indirectly, endorsing the Newberry iniquity, also endorsing the high cost of living and profiteering, and thus lend our influence against co-operation and endorse indirectly the merchants' and manufacturers' organizations and, as is clear to everyone, that organization is fighting the co-operative system to the death.

A large proportion of the voters of Michigan are studying carefully the accomplishments of the North Dakota Non-Partisan League, which is really doing something for the people. In six years they have taken peaceful possession of both legislative assemblies through the ballot, inaugurated a state banking system, state-owned elevator; provided for furnishing flour, feed, etc.; passed state insurance laws and many other relief measures for the whole people and all without profit, or raising of taxes. No other state has equaled, or, at least

(*Continued on page* 17)

The Week's Editorial

PITY THE POOR BEAR

The bear in corn this season has had a hard pull and a disastrous one financially. Ever since the crop was harvested he has been predicting a decline and working hard to bring it about, only to see the market recover after every attack and emerge stronger than ever. In past seasons the farmer has played into the hands of the bear by selling liberally on a declining market. It was one of the truisms of the trade that the farmer would hold his grain until the price began to break and then rush to sell, but he appears to have gained wisdom and now shuts off the supply the moment the price declines to a certain level. This has been the undoing of the bear. Relying on the grower to supply the goods he has several times sold freely at declining prices, but the farmer has not come to his assistance by loading the market with grain and the result has always been a prompt recovery and the bear scrambling to get in out of the wet.

In other years the discomfiture of the bear has always been a delight to the average citizen and especially to the farmers whose goods were depressed, but this year finds the bear in great favor owing to the general desire of the public to see lower prices. The fact that he is popular, however, is not helping much. The bear loses at every turn and the farmer keeps his head and holds back the grain when the price is not to his liking. The latest example of this has just been witnessed. The bear predicted that the farmer would sell, in fact, had to sell because the season is far advanced and the time for selling corn is almost past. The railroads promised a good supply of cars to move the corn and the bear saw fortune only a little way off. He grasped opportunity by selling the farmer's goods and forcing the price down, but the farmer again stood pat and now the bear has another sore paw to nurse. After a short period of decline the market came back as strong as ever owing to the smallness of offerings and the seller was forced to settle.

A feature of the market that is greatly in favor of the farmer is the high quality of the corn, which makes it safe to hold. A soft crop must be harvested, but not so with fine grade of the past harvesting. There is every prospect of a short corn crop this year owing to the shortage of farm labor and the farmer feels quite safe in carrying his grain over. For this reason he is not worried over the passing of the usual time for marketing. Recent reports showing the quantity of corn back in the country are not such as to cause the holder much anxiety. The supply is less than supposed and the farmer is in a position to hold the grain over to the next crop if he is not satisfied with the price.—*Detroit Free Press.*

The Farm Home
A Department for the Women

Edited by MABEL CLARE LADD

HEALTH AND WEALTH

THE WOMAN in town who plays tennis or the man who follows a golf ball around miles of ground is simply seeking health by exercising in the open, and this may be necessary and very wise for townspeople, but for the women of the farm, there is more profit to be gotten from her out-of-door exercise, if she will spend it in her garden—whether that garden be a vegetable of flower garden. Recently we took up the subject of popcorn raising for profit, and now in this issue we shall consider the possibility of the flower garden.

Every woman loves flowers, but some haven't the so-called "knack" of making them grow. All this "knack" really is, is a knowledge of the needs of the flowers as to soil, time of planting, amount of moisture required, the right kind of fertilizer, etc., and any woman who sets about her task with a determination to make of it a paying proposition instead of just a haphazard posy bed, will find that there is much to learn, and that the study and work are both absorbingly interesting.

There has been a shortage of flowers, and this shortage promises to continue. First it came about by the government requisitioning all coal not needed for absolute necessities, and so a lot of greenhouses were closed, and many of these will never be opened again. And of course they were depended upon for flowers for decorations for summer as well as winter.

If you decide upon this as an investment proposition it is well to take only a limited number of varieties of plants at first and make a success of their culture before attempting a large number.

And if you desire the flowers to bloom early, which means that you can command the best price, then you should plant the seeds in the house, so that about Decoration Day your plants will be large and sturdy enough for transplanting. In planting in boxes, be sure that your boxes are provided with proper drainage, so that the soil will not sour.

Asters are perhaps one of the hardiest plants; have a profuse bloom and are very easy to cultivate. Because of their long stems and beautiful foliage, they are much sought after as a decoration in the late summer.

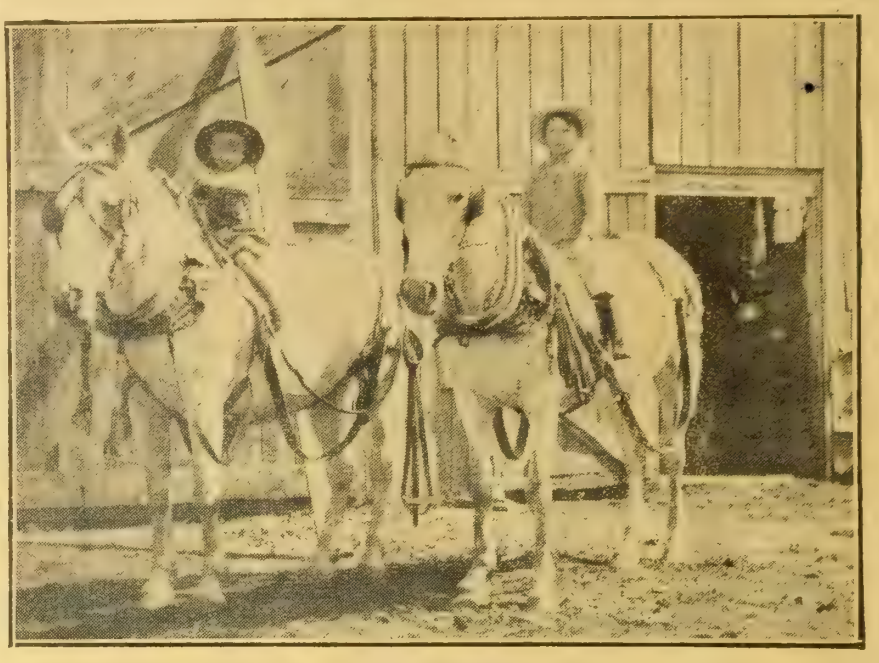
Sweet peas and roses are lovely for the June weddings, graduations, etc., and although they require a little more care, will pay one for the time spent. In order to have roses productive, they must be well mulched in the winter and the stalks tied with straw to quite a height. Sweet peas do not require very rich soil, a clay sub-soil with a sandy top is best. They are planted in a trench about six inches deep. They must be planted where they will not get too much sun and they require a great deal of moisture. The trench in which they are planted is only lightly covered with earth until the plants are about three inches high, when the ground is filled in around them.

As to marketing your product. A line in your county paper stating what kind of flowers you have, and that you are prepared to fill orders for all occasions will undoubtedly bring you all the orders you can care for the first year. Another scheme if you have more than your townspeople will buy is for you to secure the names of the florists in your nearby city. Write them a letter, telling them that you have, say for instance, asters which will be ready for market, beginning such a date, and that from that date on you will be able to furnish them with three dozen per day during the season, or as many as you can be sure that you can send. Advise them as to the colors you have, and also tell them how long the stems are. This all has a bearing on the price they will pay. In shipping it will be necessary for you to sort them as to length of stems.

The florist will undoubtedly be willing to supply you with the knock-down paper boxes, marked "flowers" in which to send them to him.

The most important step at this stage of the game is to prepare them for shipment in such a way that they will reach the florist fresh. In order to do this, you should pick your flowers with shears, after sun-down the night before making shipment. Cut the stems a little on the slant. Place the flowers in a deep crock or other receptacle so that they will be in water up to their heads, and set these crocks right on the cool cellar floor and let them remain there until morning. Then take your boxes in which you are to ship them into the basement. Have plenty of oiled paper. Tie your flowers in bunches of a dozen; wrap them in the oiled paper, so that a little air as possible will reach them and also line the box with the paper. Then so plan it that the boxes will reach the express or postoffice just in time to catch the train so that they will go through as quickly as possible.

The woman who spends her spare moments in the house crocheting or embroidering, may complain that "She could just fly she is so nervous" but did you ever hear such a statement from the woman who spends all her spare time in the open air?



FUTURE FARMERS

The craze for motors is ever increasing, but when the snow, sand or mud are deep, faithful horses supply the dependable motive power. J. L. and Ivan are the children of Anna and John L. Stark, and reside at Fountain, Mich.

Sunrise in Wintertime

By C. Shirley Dillenback.

Ho! Come with me to the sleeping farm—
Far from the city's man-made charm,
Would you see a picture the eye to please
Just gaze while the hoar-frost is on the trees.
The scraggly poplar has changed somehow,
Gone are its imperfections now
As it stands like a princess with arms outstretched,
Showing intricate patterns so finely etched
With the wintry sky like an azure sheen
Filling the vacancies in between.
See the ermine drifts piled row on row—
Where the gentian and golden-rod used to grow
Light up and glisten with rainbow tints
As the winter's sun, like an errant prince,
Laughs at you o'er the snow clad hills
Have you ever experienced such splendid thrills,
In princely hall with music's chime
As you do at sunrise in wintertime?

WOMEN IN POLITICS

MATTHEW ARNOLD said: "If ever the world sees a time when women shall come together purely and simply for the benefit of mankind, it will be such a power as the world has never known."

And right now, women in Michigan are coming together armed with the most powerful weapon in a democracy—the vote. And in order to intelligently use that weapon we must study the questions presented and the qualifications of the men who ask for our vote. Then, once having elected a man we should stand by him. He may make mistakes—but who doesn't—and it's a sure thing that he will make more mistakes if he is not given a substantial backing than he will if you give him your confidence.

There is only one kind of criticism that is helpful and that is constructive criticism. When you say a man is wrong and yet suggest no remedy; when you knock behind his back and do not face him squarely with your complaints, it is indeed striking from the back. Petitions signed by a sufficient number of voters cannot help but have a bearing on the question at issue, but just neighborhood talk against a measure will hurt the administration without doing a particle of good.

Bainbridge Colby, the new secretary of state, has defined loyalty to America as "loyalty to her chosen servants" and I believe our readers will be interested in the following excerpts from an address given by that new official recently at a "loyalty week" meeting held in New York:

"We must stifle the voice of hatred and faction," added Mr. Colby. "We must realize that there is not a man in America who does not hold office as a result of the free choice of our citizens. It is a high patriotic duty that we should support and sustain the men who have been placed in positions or difficulty, burden, responsibility and even danger, as the result of our suffrage.

"An intelligent and conscientious opposition is a part of loyalty to country, but we must not, if we are loyal, seek to disperse our energies in a partisan warfare that is waged without regard to its consequence to the well being, security or honor of the country."

The speaker referred to General Pershing as the "true American" who is "a lesson in loyalty to country, which makes all spoken words seem weak and futile."

Declaring that the "social and industrial structure" of America is founded on "enlightened citizenship," Mr. Colby asserted he "was deeply concerned with the diminution of the teaching strength of the country as a result of the disproportionately low salaries being paid to teachers thruout the country.

"We must look to this right promptly," he added. "It is a condition that must not be suffered to continue."

SLEEVELESS SWEATERS

IN REPLENISHING the wearing apparel the sleeveless sweater is found to be indispensable for the coming spring and summer seasons.

Back—Cast on 81 stitches with No. 6 needles and knit 12 ribs plain; knit one, purl one, for 44 rows or 22 ribs being careful to begin and end each row with knit one. With No. 3 needles knit 12 ribs plain. With No. 6 needles knit one and purl one, 20 rows or 10 ribs. "HEARTS OF THREE"

(*Continued from page* 10)

second after our backs were turned."

Using what was left of the wagon for a stepping block, and ably assisted by the jailer and his crew, the peddler managed to get astride his animal.

"It is well," he said, and added greatefully: "A thousand thanks, senors. It has been my good fortune to meet with honest men with whom my goods will be safe—only poor goods, peddled's goods, you understand; but to me, everything, my way upon the road. The pleasure has been mine to meet you. To-mormorow I shall return with my kinsman, whom I certainly shall find and relieve from you the burden of safeguarding my inconsiderable property." He doffed his hat. "Adios, senors, adios!"

He rode away at a careful walk, timid of the animal he bestrode which had caused his catastrophe. He halted and turned his head at a call from Pedro Zurita.

"Search the graveyard, Senor Narvaez," the jailer advised. "Full a hundred Tomas Romeros lie there."

"And be vigilant, I beg of you, senor, of the heavy box," the peddler called back.

Henry watched the street grow deserted as the gendarmes and the populace fled from the scorch of the sun. Small wonder, he thought to himself, that the old peddler's voice had sounded strangely familiar. It had not been because he had possessed only half a Spanish tongue to twist around the language—the other half being the German tongue of the mother. Even so, he talked like a native, and he would be robbed like a native if there was anything of value in the heavy box deposited with the jailers, Henry concluded, ere dismissing the incident from his mind.

In the guardroom, a scant fifty feet away from Henry's cell, Leopoldo Narvaez was being robbed. It had begun by Pedro Zurita making a profound and wistful survey of the large box. He lifted one end of it to sample its weight, and sniffed like a hound at the crack as if his nose might give him some message of its contents.

"Leave it alone, Pedro," one of the gendarmes laughed at him. "You have been paid two pesos to be honest."

The assistant jailer sighed, walked away and sat down, looked back at the box, and sighed again. Conversation languished. Continually the eyes of the men roved to the box. A greasy pack of cards could not divert them. The game languished. The gendarme who had twitted Pedro himself went to the box and sniffed.

"I smell nothing," he announced. "Absolutely in the box there is nothing to smell. Now what can it be? The caballero said that it was of value!"

"Caballero!" sniffed another of the gendarmes. "The old man's father was more like to have been peddler of rotten fish on the streets of Colon and his father before him. Every lying beggar claims descent from the conquistadores."

"And why not, Rafael?" Pedro Zurita retorted. "Are we not all so descended?"

"Without doubt," Rafael readily agreed. "The conquitadores slew many——"

"And were the ancestors of those that survived," Pedro completed for him and aroused a general laugh. "Just the same, almost would I give one of these pesos to know what is in that box."

"There is Ignacio," Rafael greeted the entrance of a turnkey whose heavy eyes tokened he was just out of his siesta. "He was not paid to be honest. Come, Ignacio relieve our curiosity by letting us know what is in the box."

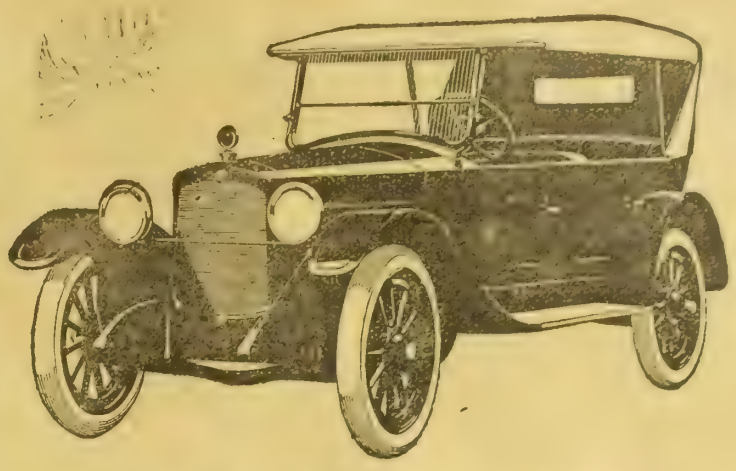
"How should I know?" Ignacio demanded, blinking at the object of interest. "Only now have I awakened"

"You have not been paid to be honest, then?" Rafael asked.

"Merciful Mother of God, who is the man who would pay me to be honest?" the turnkey demanded.

"Then take the hatchet there and open the box," Rafael drove his point home. "We may not, for as surely as Pedro is to share the two pesos

(*Continued on page* 19)



GRANT SIX

FOR a number of years the Grant Six has been one of the most popular cars selling to farmers, because it has always been remarkably good value at a reasonable price.

This year's car is by all odds the finest Grant Six that has ever been built. The high radiator and hood with aluminum molding give a new touch of distinction and with the long, low body lines, make a decidedly handsome and stylish car.

The famous Grant Six overhead valve engine has been steadily refined and improved until it is one of the most flexible and responsive motors ever put into a car. It has power and speed beyond what most men will dare to use.

The Grant Six is an ideal car for farm use because of its remarkable spring suspension. The rear springs are underslung and 56½ inches long—the longest springs ever used in a car of 116 inch wheel base. When the rear seat is filled the springs are flat so that the full spring action is obtained and the car travels over rough, bumpy roads with utmost comfort.

This model exceeds in wheel base and in size any former Grant Six.

In buying the Grant Six you get a car you can be proud of, a car that will satisfy you completely—a powerful, roomy, speedy, comfortable car of unusually fine appearance.

Write for new illustrated catalogue and name of Grant Six dealer in your community.

Sick Baby Chicks?

There is only one way to deal with baby chicks and that is to keep them well. Doctoring a hundred or more chicks is mighty discouraging work.

It's pure carelessness to lose more than 10 per cent of chicks, from hatching to full growth. Many lose 40 per cent to 60 per cent, and even more. No profit in that.

Our book, "Care of Baby Chicks" (free) and a package of Germozone is the best chick insurance. WITH BABY CHICKS YOU MUST PREVENT SICKNESS—NOT ATTEMPT TO CURE. "I never had a sick chick all last season"—C. O. Petrain, Moline, Ill. "Not a case of white diarrhoea in three years"—Ralph Wurst, Erie, Pa. "Have 800 chicks now 5 weeks old and not a single case of bowel trouble"—Mrs. Wm. Christiana, Olive Ridge, New York. "Two weeks after we started last spring we were a mighty discouraged pair. Every day from three to six chicks dead. A neighbor put us next to Germozone and we are now sure if we had had it at the start we would not have lost a single chick"—Wm. E. Shepherd, Scranton, Pa.

GERMOZONE is a wonder worker for chicks, chickens, pigeons, cats, dogs, rabbits or other pet or domestic stock. It is preventive as well as curative, which is ten times better. It is used most extensively for roup, bowel trouble, snuffles, gleet, canker, swelled head, sore head, sores, wounds, loss of fur or feathers.

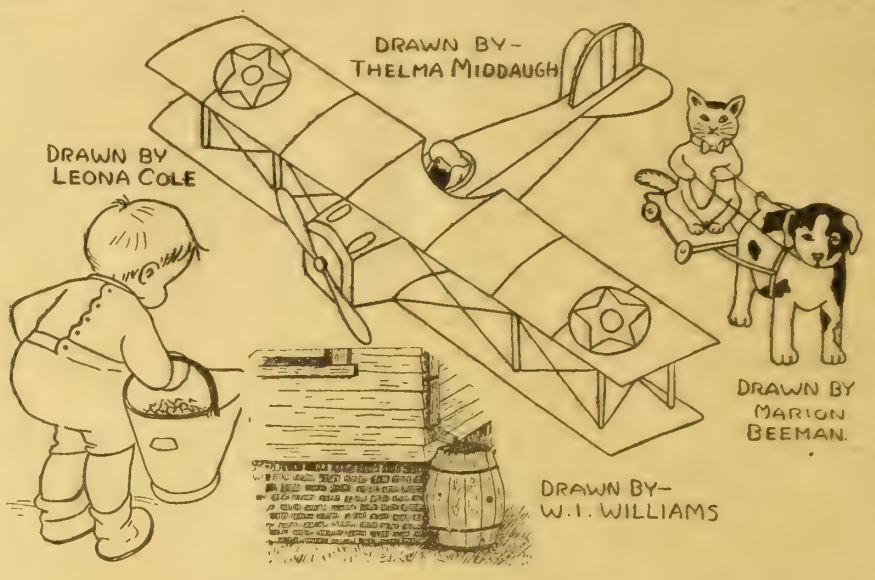
The Children's Hour

DEAR CHILDREN:—I know that a whole lot of you little folks who have submitted original drawings have been anxiously awaiting to see them in the papers and to receive your prizes, and I am very glad to be able to print the drawings this week and award the prizes.

The four drawings published this week were awarded the prize of a "Trip Around the World" in postal cards, but greater than the actual value of the prize you receive is the fact that your drawing was good enough to be reproduced in the paper. I am sure that you will be glad to cut them out and preserve them and that you will be encouraged to try harder than ever and that others will also try for the prizes and to have their pictures given honorable mention in our paper.



The names and addresses of the four who drew the pictures on this page are, Leona Cole, of Webberville, Mich.; Walter Williams, of Sencea, Mich.; Marion Beeman, of Empire, and Thelma Middaugh, of Nessen City, Michigan, and there is an additional one which will be published next week and the winner announced.

And I am still getting inquiries relative to prizes for securing subscriptions to M. B. F. One little girl asks how many subscribers it will take to secure a wrist watch and also how many to secure a camera. It will require ten new subscriptions at $1 each to secure either of these prizes. Both prizes are well worth working for. The boys have been very successful in earning Boy Scout Knives which are awarded for only one new subscriber and also flash lights which take only two subscribers.

One of our little girls sent me a picture of the home which she drew, and while it is very good, our artist tells me that it is out of "perspective," and therefore we cannot publish it. I wish that Beulah would take another subject and submit another drawing as she has talent and with something not so difficult as a house, it might not be difficult for her to win a prize. Remember these prizes for original drawings will be awarded just as fast as we receive enough drawings to warrant it and every time there are four prize drawings they will be published. Affectionately yours,—*Laddie.*

The Adventure of Practice

MARY LOUISE had such a big family it was a wonder she could keep track of them all. There was the French doll, Suzanne, that brother Tom brought home from France; and the Scotch doll that Aunt Margaret had sent over from the old country when Mary Louise was three years old; and the rag doll Mary Jane that the farmily suspected Mary Louise loved the most of all. Those three had been the favorites for many a day. But when Christmas came the family was increased by four more and then the nursery was full to overflowing.

One morning, not very long after Christmas, the house was so cold that Mary Louise's mother said everybody should bring their work or their play and sit in the living room where a big, cheerful log fire made things warm and comfortable. Mary Louise was willing enough for she loved to play in front of the fire, but moving as you know, is hard work. Especially when one has such a big family.

Mary Louise took one trip for the old dolls, Suzanne, Peggy (the Scotch lassie) and Mary Jane; then she went again for their chairs and extra clothes. The third trip was for the four new dolls, Elizabeth, Georgia, Bessie and Practice. Practice had that queer name, by the way, because he was given Mary Louise by her mother to keep her company while she did her practicing every day. Mary Louise liked the idea of having him sit on the piano in front of her while she practiced scales and finger exercises. She didn't get lonesome and yet he didn't bother by talking as a person might.

Now just how or why it happened Mary Louise didn't know. Probably because she had taken two trips upstairs before she was getting a little tired. Or maybe it was because she had such a big family; maybe folks with big families don't count their children till bed time. But however it happened, Practice got lost. When Mary Louise loaded up her arms to go down stairs he was tucked tight under her elbow just as cozily as could be. And when, that night, after the house was again nice and warm, Mary Louise went to put her family to bed, Practice wasn't there!

"Have you seen Practice?" Mary Louise asked her mother.

"No, I haven't, dear," replied Mrs. Brown, "didn't you bring him down with the rest of the family?"

"I did," said Mary Louise, "but he's gone."

"Have you seen Practice?" she asked her brother Ned. But he had not seen the doll either, so Mary Louise had to go to bed with one of her family missing and every mother knows that's a very painful feeling.

But it wasn't painful for Practice. He was having the time of his young life. He had slipped out from Mary Louise's arms right by the window box in the big upstairs hall. And there he lay, in the shadow, till night time.

When the house was dark as midnight, he heard a little wee, wee sound, close by and a tiny little voice whispered, "Please may I take a bit of your soft warm jacket? I need some yarn to line my nest. My babies like soft warm things."

Practice, much interested, replied, "Help yourself! My little mother likes to knit and I know she'll make me a new one! But tell me all about your family."

While the stranger nibbled at the dark blue jacket he told Practice about his family up in the attic and about the cousins in the basement and Practice was so interested he almost wished the night would never end.

In the morning, Mary Louise spied Practice and she's wondering to this day how in the world he got that awful hole in the back of his brand new jacket. But, of course, she made him a new one. Such a pretty one that it seems a shame Practice can't tell her all about his adventure, and what happened to the jacket with the hole.

THE SLEEPYTOWN EXPRESS

Just beyond the rainbow's end a river ripples down
Beneath a bridge, around a bend and flows through Sleepytown—
Through Sleepytown, where goblins toil to fashion wondrous toys
And make up fascinating games for little girls and boys.
And automobiles, just the size for little hands to drive
Await to whirl you all about as soon as you arrive.
But no one ever is allowed in Sleepytown unless
He goes to bed in time to take the Sleepytown Express!

I know a foolish little boy who always starts to whine
When he is asked to trot upstairs before it's half-past nine.
And often he will stamp his feet and shake his tousled head.
And make a racket, even then, when he is sent to bed.
Of course, when he has said his prayers it always is too late
To catch the Sleepytown Express,—it starts at half-past eight,
And so, in all his long, long life—he's five years old this fall—
That little boy has never been to Sleepytown at all.

But other wiser little boys, and little girls as well,
As soon as 8 o'clock has struck rush right upstairs, pell-mell,
Get off their clothes and say their prayers, just of their own accord,
And, when the train comes rolling in, they're there to climb aboard.
Then, through a long, delightful night they wander up and down.
And have a most exciting time in queer old Sleepytown;
And not for cake or anything that children could possess
Would any of them ever miss the Sleepytown Express.

—JAMES MONTAGUE.

OUR BOYS AND GIRLS

Dear Laddie:—This is the second time I have written to you. I am a girl 9 years old and in the 5th grade. I have been looking for the Doo-Dads. My little brother, Clayton, cried because they were not in. I have four sisters and two brothers. Their names are Louisa, Luella, Naomi, Helen, Clayton and Freddie. I am going to get some chickens and the money I get is mine. I am writing a verse.—Herlandra Ewald, Elkton, Mich.

A Mouse

A little mouse sat down to spin.
Puss came by and she peeped in.
What do you make my good little man?
Making a coat as fast as I can.
Shall I come in and wax your thread?
No thanks, Mrs. Puss, you'll bite off my head.

Dear Laddie:—This is the second time I have written to you but I did not see my first letter in print. We live on an 80-acre farm. We intend to have 10 acres of beets this year. We have four horses, Jess, Charley, Maud and Tobias. We have six cows, Flora, Bell, Rose, Bess, Aggie and Margarete. I am a girl 11 years old in the 5th grade. My teacher is Miss Alice Russell. For pets we have three cats. Mother said that was the last incubator full of eggs we could have; our incubator holds 110 eggs. I have two brothers and five sister. What is the matter with the Doo-Dads that they are not in the paper? Perhaps they are having a war with the Brownies or other small people. I will close, hoping to see my letter in print. I wish some of the girls of the M. B. F. would write to me.—Naomi Ewald, Elkton, Mich.

Dear Laddie:—This is the first time I have written to you. We take the M. B. F. and like it very well. I like to read the stories and letters very well. I am 10 years old and in the 4th grade. I have one sister, Amber, and three brothers, Tracie, Russell and Chester. My teacher is Miss Cowin. I like her very well. I used to live on a 40-acre farm but last fall we rented our land and moved to town. I don't like the city at all. I want to go the farm again. My father is the Rawleigh man. I like to see chickens, and I like to take care of them; they are so pretty. I hope to see my letter in print. As my letter is getting long I will close.—Reva M. Loomis, Cadillac.

County Crop Reports

GRAND TRAVERSE—We are having fine weather at present. Farmers are hauling in corn and getting wood. Still lots of sickness. Auction sales will begin soon.—C. L. B. The following prices were paid at Williamsburg:—Wheat, $2.25; corn, $1.40; oats, $1; rye, $1.50; hay, $36; potatoes, $3.50; cabbage, 12; butter, 45; butterfat, 70; eggs, 50.

ALLEGAN—Farmers are busy doing chores and attending sales, of which there are a plenty. Good grade cows at sales are selling for $100 and up. Corn, oats and hay also are in great demand, judging by the prices paid. We have had very mild, pleasant weather the last few days, and a few days more will put an end to our sleighing. Very few potatoes have been sold in this section during the past two months.—W. F.

MONROE, (West)—We are having some warmer weather at present. The snow and ice are almost gone from the fields. The wheat looks bad, but a good warm rain would make it look better. Some farmers have been drawing manure forenoons while the ground is frozen. The roads are getting bad and most of the farmers who had to move took advantage of the good roads while they were frozen. A lot of farms are changing hands.—W. H. L., Dundee.

MONTCALM—Farmers are hauling produce when the weather permits. The weather is very unsettled; rain turns to snow and freezes. The soil is frozen to a depth of about four feet. Farmers are selling potatoes mostly.—G. B. W. The following prices were paid at Lakeview:—Wheat, $2.10 bu; corn, 55; oats, 70; rye, $1.50; hay: No. 1 timothy, $30 No. 1 light mixed, $35; straw-rye, $12; wheat-oat, $14; beans: $6.75; red kidney, $12; potatoes, $4; hens, 27; springers, 25; ducks, 22; geese, 25; turkeys, 38; butter, 60; butterfat, 65; eggs, 45; apples, $2.

JACKSON, (South)—Weather cold and windy. The long-looked-for rain made the roads almost impassable in places where the snow was deep, and then freezing again made travel difficult. Farmers busy getting up wood and marketing their grain before the rain. Hay brings $30 per ton at the barn. Help very scarce and the farmers with few exceptions are arranging their work and planning to put in no more crops than they can take care of alone. Month hands, when they can be secured, are demanding $50 to $70 a month, including board and washing.—G. S. The following prices were paid at Hanover:—Hay, $30; hens, 30; butterfat, 70; eggs, 55.

INGHAM—The first rain for three months came yesterday; it rained all day and took the snow except drifts; turned cold at night and is frozen solid again. Farmers looking over tools, harnesses, etc., making repairs where needed, but cannot accomplish much yet. A little stock, some scattering bunches of hogs were sold this week. Auction sales are still numerous. Farmers say not many acres of beans this year and it looks like few acres of everything with the help so scarce.—C. I. H. The following prices were paid at Mason:—Wheat, $2.20@2.25; corn, $1.40; oats, 80; rye, $1.40; hay; No. 1 timothy, $25; No. 1 light mixed, $25; barley, $2.50; beans, $6; potatoes, $2.25; butter, 50@55; butterfat, 65; eggs, 45; lambs, 18; hogs, 14; beef steers, 10@11; veal calves, 19.

SHIAWASSEE, (East)—The cold winter and heavy snow storms have put all farm work at almost a standstill. The roads are almost continually blocked by snow and snowplows are being used constantly on all the main roads, but without much success, as the high winds cause the snow to drift and make the tracks worse than before. There are many changes in real estate owing to the high prices paid for farm lands paid by parties coming in from other states, a good many from Illinois.—D. H. M. The following prices were paid at Corunna:—Wheat, $2.25; corn, $1.45; oats, 85; rye, $1.50; hay: No. 1 timothy, baled, $25; No. 1 light mixed, baled, $23; straw-rye, $10; wheat-oat, $8; potatoes, $1.75@$2; onions, 9c lb.; cabbage, 8; hens, 25; springers, 28; butter, 50; butterfat, 65; eggs, 48; sheep, $12@14; hogs, $15; beef steers, 75; beef cows, $25; veal calves, 11@12; apples, $2.50.

JACKSON, (N. E.)—The past week brought us good weather until Thursday when it rained all day and turned colder, making the roads almost impassable except for sharp-shod horses. The fields are bare and the fall grains are exposed for thawing and freezing. No damage can as yet be noticed. Some beans moving at $5.75 per hundred and many report it to be the last ever drawn. What difference does it make what is sold, grain, produce or live stock price considered either high or low to the farmer, if the profiteers and speculators have a chance at the commodity? The farmer will get the small end of it on the windup. I believe that a complete 'farmer slate" in local, state and national elections will do more to right matters in time, and particularly, if voted regardless of present political parties. Auctions are the order of the day; prices fair except grains. Corn in the ear at $1; oats, $1; hay and roughage being at about fair market price.—A. F. W.

GENESEE—Farmers are working up wood and attending auction sales, besides doing their regular chores. Some teaming was done during the first part of the week, but none is being done now on account of the poor roads. We had warmer weather with rain this week which has left most of the fields bare and the roads in bad shape with neither sleighing nor good wheeling. Last night and today it was much colder and everything is covered with ice. Unless we get snow to cover the crops again they will surely be injured considerably by this kind of weather. Farmers are selling some hay, potatoes, wood and live stock and are buying coal, feeds, flour and clover seed. Some beans are in the farmers' hands and are being held for higher prices. Potatoes are about all sold. Indications point to a considerable decrease in the acreage of all crops this year. Most farmers are planning on working what they can do themselves, and letting the rest go.—C. W. S. The following prices were paid at Flint:—Wheat, $2.35; corn, $1.50; oats, 93; rye, $1.55 buckwheat, $3 cwt.; beans: C. H. P., $6; red kidney, $11; hay, $28@30; rye, wheat and oat-straw, $10@15; potatoes, $2.50@2.65; onions, $6.50; cabbage, $8 bbl.; cucumbers, $2.50 doz.; hens, 32; springers, 32; ducks, 32; geese, 32; turkeys, 40; butter: dairy, 55; creamery, 60@62; eggs, 50@52; apples, $2.50@3; beef steers, $10.50@11.50; beef cows, $7.50@8.50; veal calves, 19@20; sheep, $12@13; lambs, $18.50@19.50; hogs, $12.50@14.50.

WOULD PATTERN AFTER NON-PARTISAN LEAGUE

(*Continued from page* 13)

surpassed them in improvement of their school system, justice to returned soldiers, peacefully settling the coal trouble and in every way illustrating true democracy. Now why should not the people of this state be able to elect men to our highest offices who will go and do likewise?—*P. P. Miner, Saginaw County, Mich.*

The Non-Partisan League is not a political party, in the strict sense of the term. It endorses and elects candidates on both the Republican and Democratic tickets. Moreover, it is not in sympathy with the third party movement, preferring to support men for office who will purge and perfect the existing parties. The attitude of the League on this subject will be explained in a later issue.—Editor.

WHAT ORGANIZATION HAS ACCOMPLISHED

(*Continued from page* 5)

raise meant a million dollars gained by organized efforts from the company, on the 1917 crop, and Morey admitted the raise to be the result of a conference in the following letter: (Letter to J. A. Hicks—3-7-18.)

"Then in September, 1917, the farmers' organization sent another large delegation to Denver for a conference with the company. The farmers asked $10 for 1918 beets. The company after several weeks of study concluded it would be very patriotic to give an average of $9 and covered acres of newspaper space telling of its patriotic action. The farmers' organization again got into action, raised about $2,000 and sent a committee to Washington to lay the matter before Mr. Hoover. The committee performed its duty to such good purpose that Mr. Hoover was convinced that the company should pay still more for its beets. He appointed a commission to get sworn testimony at factory towns on the cost of beet raising. That commission made its investigation, reported back to Mr. Hoover, recommending an alternative price of $10 flat per ton, or $9 minimum with 64 cents advance for each 1 per cent increase of sugar content above 14 per cent, and many other vitally important improvements in the treatment of the growers by the sugar company, as the report will convince any man. Ten dollars was accepted by the company.

"The average price of beets in 1917, was $7.50, the farmers by means of their organization got a raise of $2.50 per ton for 1918. On the basis of a two million ton crop then, the Great Western Sugar Company will pay $5,000,000 to its growers as a result of their organized effort for the 1918 crop.

Enclosed find check for $3 for my renewal and two of my neighbors. We like M. B. F. and think you are working for the farmers' interest, first, last and all the time—E. V. S., Kent County.

Plant Clover Right

Do not plant clover unless you plant it right.

Lime, good seed, and a good seed bed make the difference between a stand and failure.

Plant with a drill if you have one; if not, cover the seed with a harrow.

SEE that beautiful field of tasseled corn? Hear the cool rustle and swish of the blade-like leaves and the sturdy stalks as the breeze roves through the even-standing forest of green and gold?

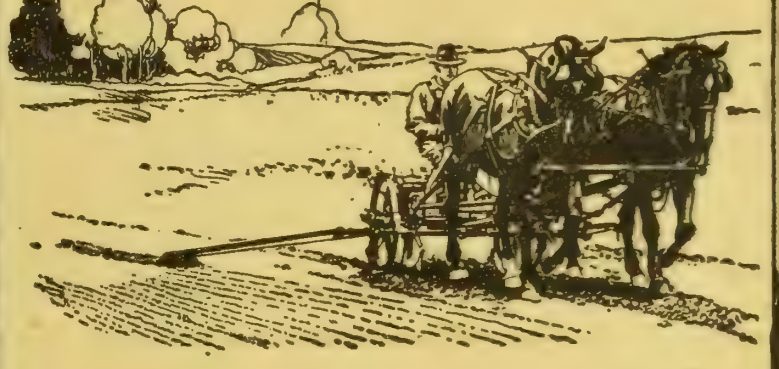
Bright prospects for some one! That field of corn may belong to you. If the stand is regular and heavy it is just the kind that grows where an International Corn Planter has been at work earlier in the season. Bright crop prospects go hand in hand with these planters because—

The variable drop clutch will deposit 2, 3, or 4 kernels to the hill, as desired, and it works with a high degree of accuracy. Correct planting is an essential to good crops.

The tongue is adjustable to height of team and, together with the quick action check spring, results in an evenly checked field that can be cross cultivated without digging up any of the hills. Insures healthy, even stand of corn.

A foot drop lever is provided for planting head rows or dropping hills without wire. Makes a nicely completed, full field when used the first way and enables you to make use of every foot of ground in "patchy" fields.

If you are interested in bright corn prospects it will pay you to scribble your name and address along the margin of this advertisement and mail to us so that we can send you an illustrated pamphlet telling all about International Corn Planters. Later—see the International dealer.



INTERNATIONAL HARVESTER COMPANY
OF AMERICA INC.

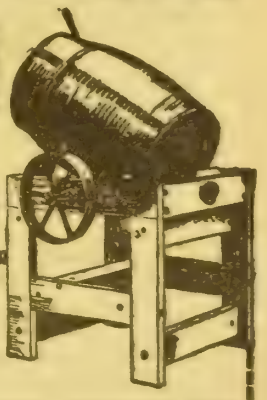
Every Farm Needs a Concrete Mixer

Concrete improvements have saved money for so many farmers that their Sheldon Farm Concrete Mixer has become as important a piece of farm equipment as their corn sheller or cultivator. Do away with the old-fashioned, expensive, back-breaking, unsatisfactory hand and shovel method. Mix your concrete the Sheldon way and get a uniform mix every time; save labor, save time and save the cost of the Sheldon on the first job.



SHELDON CONCRETE MIXER
does the same high grade work as a $300 mixer, yet costs only a fraction as much. Solidly built to stand strain and vibration for years. Easy to operate—easy to move—mixes two wheelbarrowful at a batch—a 1½ H. P. engine will run it.

MAIL COUPON TODAY
and get our 1920 Book on Concrete. It will tell you how you can save money on your concrete work. Shows all types of Sheldon Mixers and gives our direct-to-you low prices. It's FREE. Get your copy today.

WANTED—BOY 16 TO 18 YRS. WITH some experience, to work on farm. Write ERNEST A. DEAN, South Lyon, Mich.

Uncle Rube Spinach Says:

WOMEN AN' CLOTHES

WE'RE A'HEARIN' a good deal these days 'bout the immodesty of women—in their ways of dressin' I mean—that they are exposin' 'most altogether too much of what should or't to be hid an' a lot of things like that. Preachers are wailin' from the pulpits—the older preachers ya understand—the younger an' more up-to-date ones ain't sayin' much about it yet their eyesight bein' clearer an' mebbe better, but the ol' fellers! Gosh! They jest about go into tantrums about it. "Why it's absolutely indecent" says one; "it's ree-diculous an' outrageous," sez another, an' they keep howlin about it til I git to thinkin' mebbe they been lookin' closer'n a mere man, 'specially a preacher, ort to look.

Jest this mornin' I've been readin' an article by Rev. Lucien Johnston, taken from the *Baltimore Catholic Review*, an' what he sez is a plenty, believe me. Why Lucien sez; I will not quote his exact words, they're too durn high falutin' for me, but here's the substance of it: "If women leave certain parts of their bodies undraped, (meanin' undressed) because they think they have beautiful forms, then men should wear no clothes at all, for men have much more beautiful forms than women," and that neither man nor woman has as beautiful an' symmetrical forms as almost any other member of the animal world, even the caterpillar an' some species of beetles, has got us beat a-thousand ways when it comes right down to hard tacks. An' accordin' to the Rev. Lucien, 'bout the only thing the human family can claim superiority over is the hog an' an' the parrot. Gereusalem crickets! Would not that git ya? Why Lucien claims that men realize this fact and cover their bodies with suitable clothes to beautify 'em, but women have not reached that high standard of mentality an' like the ostrich, consider themselves safe if their heads are covered an' they have a string of beads around their necks. Now as I said before, these ain't exactly his words but it's 'bout what he means an' so much for that.

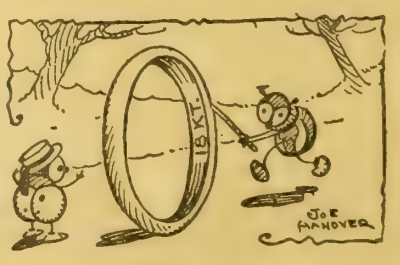
Well, now comes one from Elinor Glynn—you all know Elinor, she's quite a success as a writer—well, she ort not to be quite so plain spoken about her own sex seems to me, but lissen to her now: "A friend insisted on my going to a ball last week, and after my quiet months at Versailles I was startled at the nakedness of evreyone. What is causing this almost universal desire to expose the person to view? The standard of decency in such matters has always been only geographical, but in all countries where the later christianity held sway morality had caused a set of instincts which experienced horror at any undue exposure of any part of the body but the face, neck and hands. The result of this was that a woman's figure was a thing of mystery and fascination because it was hidden and imagination had to be called in to picture it. Now hardly anything is left to the imagination; almost everything can be stared at boldly, and the eye forced to realize that five women out of ten are ugly, misshapen creatures, often with coarse skins. Have you ever remarked how much finer and whiter men's skins are than women's, as a rule?"

Now I've given Elinor's exact words an' I'll admit she's handin' it to women purty darn strong but she's capable of doin' things like that so you can blame her an' not me for what she sez. I know an' you know that hundreds of women appear on the streets of every city in the land every day in the week in dresses that make them look perfectly silly—some of 'em so tight the wearer can hardly walk in 'em, others so short, top an' bottom, they'e nothin' much but a girdle—every manner an' kind of dress; seems as if the more exposure the better the wearer wuz suited—an so with all'ts bein' said an' printed I've jest been doin' a little thinkin' of my own an' I come to the conclusion that women an' young girls don't go an' tog up in them sort o' duds to please themselves, nor to please old preachers nor reformers of any kind b'gosh! It is every woman's desire to be attractive; she lives for that, an' dresses for it. She thinks because a lot of addlepated, cigarette weakened, bow-legged young molly coddles stand around on the street corners and gaze at 'em in awe-struck wonderment they are showing admiration for them, poor silly little girlies! If they could only hear the remarks that were being made by these same non-essentials, by gosh! they'd go home an' yank off such rediculous gowns, put on some sensible clothes, wash the paint an' powder off'n their faces, wash the back of their necks an' behind their ears an' then an' there resolve to be what the Creator intended them to be, good, true, natural, lovable women, women who were created to be mothers, in due time, not painted dolls nor subjects for morbid and half-baked 'sight' seers on the city streets.

Preachers may preach; reformers may rave until the world ends, but women will not change their mode of dress as long as they think they are in style and the style is attractive. The question of morality never enters into the question of dress, not with women it doesn't and the only thing that will change her views in regard to the way she dresses is for the one an' only young man to tell her she doesn't look good in that costume. It will never be worn again, take it from me!

Well, this a longer letter than I intended to write, but like all great writers, the things I know least of I write most about. Cordially yours—*Uncle Rube.*

Sense and Nonsense



PINE SPORT

Little Bug—My what a fine hoop this makes.

MacHennery came out into the kitchen one Sunday night to find his hired man lighting the lantern.

"Where are you going," he asked.

"Goin' out to see my girl," answered the hired man.

"Heck!" snorted MacHennery. "When I done my courtin' I never carried a lantern. I went in the dark."

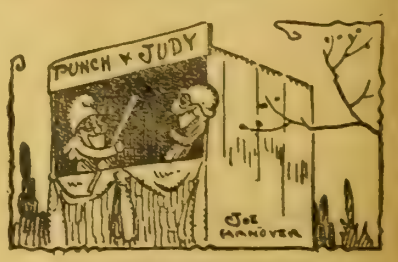
"Yeah," retorted the hired man. as he took up the lantern and started for the door. "Yeah, and look what you got!"

Proved it Five Times

Mrs. Jones read from her evening paper that John Smith died Saturday.

"But he died Friday," interposed her husband.

"He died Saturday," interposed his wife; it says so here. I thought it was Friday myself, but I went out and bought five copies of the paper to be sure, and it was the same in all of them, and they wouldn't make the same mistake six times."



A POPULAR SHOW

Mr. Judy—Do you know my dear that this show of ours has had the longest run in the dramatic art.

"HEARTS OF THREE

(*Continued from page* 15)

with us, that surely have we been paid to be honest. Open the box, Ignacio, or we shall perish of our curiosity."

"We will look, we will only look," Pedro muttered nervously, as the turnkey pried off a board with the blade of the hatchet. "Then we will close the box again and—Put your hand in, Ignacio. What is it you find? . . . eh? what does it feel like? Ah!".

After pulling and tugging, Ignacio's hand had reappeared, clutching a cardboard carton.

"Remove it carefully, for it must be replaced," the jailer cautioned.

And when the wrappings of paper and tissue paper were removed, all eyes focused on a quart bottle of rye whiskey.

"How excellently it is composed," Pedro murmured in tones of awe. "It must be very good that such care be taken of it."

"It is Americano whiskey," sighed a gendarme. "Once, only, have I drunk Americano whiskey. It was wonderful. Such was the courage of it, that I leaped into the bull ring at Santos and faced a wild bull with my hands. It is true, the bull rolled me, but did I not leap into the ring?"

Pedro took the bottle and prepared to knock its neck off.

"Hold!" cried Rafael. "You were paid to be honest."

"By a man who was not himself honest," came the retort. "The stuff is contraband. It has never paid duty. The old man was in possession of smuggled goods. Let us now gratefully and with clear conscience invest ourselves in its possession. We will confiscate it. We will destroy it."

Not waiting for the bottle to pass, Ignacio and Rafael unwrapped fresh ones and broke off the necks.

"Three stars—most excellent," Pedro Zurita orated in a pause, pointing to the trade mark. "You see, all Gringo whiskey is good. One star shows that it is very good; two stars that it is excellent; three stars that it is superb, the best, and better than beyond that. Ah, I know. The Gringos are strong on strong drink. No pulque for them."

"And four stars?" queried Ignacio, his voice husky from the liquor, the moisture glistening in his eyes.

"Four stars? Friend Ignacio, four stars would be either sudden death or translation into paradise."

In not many minutes, Rafael, his arm around another gendarme, was calling his brother and proclaiming that it took little to make men happy here below.

"The old man was a fool, three times a fool, and thrice that," volunteered Augustino, a sullen-faced gendarme, who for the first time gave tongue to speech.

"Viva Augustino!" cheered Rofael. "The three stars have worked a miracle. Behold! Have they not unlocked Augustino's mouth?"

"And thrice times thrice again was the old man a fool!" Augustino bellowed fiercely. "The very drink of the gods was his, all his, and he has been five days alone with it on the road from Bocas del Toro, and never taken one little sip. Such fools as he should be stretched out naked on an ant heap, say I."

"The old man was a rogue," quoth Pedro. "And when he comes back tomorrow for his three stars I shall arrest him for a smuggler. It will be a feather in all our caps."

"If we destroy the evidence—thus?" queried Augustino, knocking off another neck.

"We will save the evidence—thus" Pedro replied, smashing an empty bottle on the stone flags. "Listen, comrades. The box was very heavy—we are all agreed. It fell. The bottles broke. The liquor ran out, and so were we made aware of the contraband. The box and the broken bottles will be evidence sufficient."

The uproar grew as the liquor diminished. One gendarme quarreled with Ignacio over a forgotten debt of ten centavos. Two others sat upon the floor, arms around each other's necks, and wept over the miseries of their married lot. Augustino, like a very spendthrift of speech, explained his philosophy that silence was golden. And Pedro Zurita became sentimental on brotherhood.

"Even my prisoners," he maundered. "I love them as brothers. Life is sad." A gush of tears in his eyes made his desist while he took another drink. "My prisoners are my very children. My hearts bleeds for them. Behold! I weep. Let us share with them. Let them have a moment's happiness. Ignacio, dearest brother of my heart. Do me a favor. See, I weep on your hand. Carry a bottle of this elixir to the Gringo Morgan. Tell him my sorrow that he must hang tomorrow. Give him my love and bid him drink and be happy today."

And as Ignacio passed out on the errand, the gendarme who had leapt into the bull ring at Santos, began roaring:

"I want a bull! I want a bull!"

"He wants it, dear soul, that he may put his arms around it and love it," Pedro Zurita explained, with a fresh access of weeping. "I, too, love bulls. I love all things. I love even mosquitoes. All the world is love. That is the secret of the world. I should like to have a lion to play with . . . ."

The unmistakable air of "Back to Back Against the Mainmast" being whistled openly in the street caught Henry's attention, and he was crossing his big cell to the window when the grating of a key on the door made him lie down quickly on the floor and feign sleep. Ignacio staggered drunkenly in, bottle in hand, which he gravely presented to Henry.

"With the high compliments of our good jailer, Pedro Zurita," he mumbled. "He says to drink and forget that he must stretch your neck tomorrow."

"My high compliments to Senor Pedro Zurita, and tell him from me to go to hell along with his whiskey," Henry replied.

The turnkey straightened up and ceased swaying, as if suddenly become sober.

"Very well, senor," he said, then passed out and locked the door.

In a rush Henry was at the window just in time to encounter Francis face to face and thrusting a revolver to him through the bars.

"Greetings, camarada," Francis said. "We'll have you out of here in a jiffy." He held up two sticks of dynamite, with fuse and caps complete. "I have brought this pretty crowbar to pry you out. Stand well back in your cell, because real pronto there's going to be a hole in this wall that we could sail the Angelique through. And the Angelique is right off the beach waiting for you—Now, stand back. I'm going to touch her off. It's a short fuse."

Hardly had Henry backed into a rear corner of his cell, when the door was clumsily unlocked and opened to a babel of cries and imprecatitions, chiefest among which he could hear the ancient and invariable war cry of Latin-America, "Kill the Gringo!"

Also, he could hear Rafael and Pedro as they entered, babbling, the one: "He is the enemy of brotherly love;" and the other, "He said I was to go to hell—is not that what he said, Ignacio?"

In their hands they carried rifles, and behind them surged the drunken rabble, variously armed, from cutlasses and horse pistols to hatchets and bottles. At sight of Henry's revolver, they halted, and Pedro, fingering his rifle unsteadily, maundered solemnly:

"Senor Morgan, you are about to take up your rightful abode in hell."

But Ignacio did not wait. He fired wildly and widely from his hip, missing Henry by half the width of the cell and going down the next moment under the impact of Henry's bullet. The rest retreated precipitately into the jail corridor, where, themselves unseen, they began discharging their weapons into the room.

Thanking his fortunate stars for the thickness of the walls, and hoping no ricochet would get him, Henry sheltered in a protecting agle waited for the explosion.

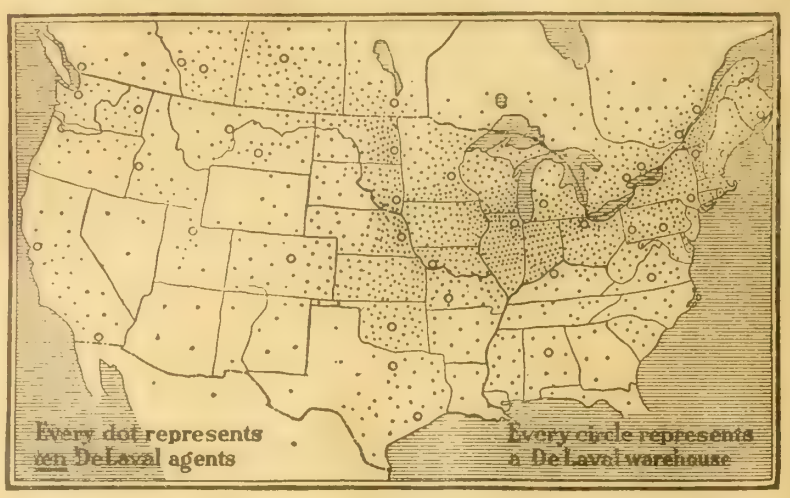
De Laval Service covers the continent



This map shows how completely the service of the De Laval organization reaches every community

Every separator user realizes the importance of having his separator in use every day. Delays waiting for parts, with a separator out of use, mean great inconvenience and loss of product.

Every dot on the map represents ten De Laval agents, and every De Laval agent is individually trained to assist his customers in setting up and operating their machines, to furnish and put in place repair parts, and to insure prompt service and satisfaction to De Laval users.

Not only is the De Laval Cream Separator superior in all points of separator efficiency, but every user of a De Laval is assured of prompt and competent service for all the years to come.

It is therefore not surprising that there are more De Laval Separators in use than all other makes combined. Now is a good time to begin saving time and product by securing a De Laval.

The nearest De Laval agent will be glad to demonstrate a De Laval. If you do not know his name, write to nearest De Laval office

MUCK LAND FOR ONIONS

I have five acres of low muck land to put in crop this spring. I am planning on putting in eight pounds onion seed. Would it pay to put in carrots or beets to ship for stock This land is well drained. Three acres have not been cropped; been plowed three times; been too wet. I ditched it last fall and plowed it. Potatoes do well on it; had 1-2 acre last year and got $2 a bushel.—C. E. S., Glennie, Mich.

If you are planning to grow onions 8 pounds on five acres are hardly sufficient. You should plant at least three pounds to the acre. The soil should be thoroughly prepared, rolled and fertilized. I don't believe that onions are a profitable crop considering an average number of years, unless you have arrangements for storage. There is always a time in the year in most seasons when the onions can be sold at a profit but in years of over production the fellow who is not in shape to store his onions is caught. It is true that carrots and beets are valuable when you are feeding on your own farm but the lack of demand and the cost of the handling makes it a doubtful proposition as to raising stock carrots or beets to sell. In general, I would say that if this is connected with the high land farm with stock to feed, it might be well to try carrots and mangels. Oats and peas, are a practically sure crop on muck, where hay is needed and labor is short. In Osceola county last year in a muck demonstration, Canada field peas were green, alive and growing long after the frost had killed everything else. The hardiness of the Canada field peas and the fact that it is a legume makes it a very valuable feeding crop to grow on muck.

If you will write me as to what kind of farming you practice, I will be able to advise you more fully. The complications of labor shortage and the type of farm management practiced would have considerable bearing on the crops to plant.—*Ezra Levin, muck land specialist, M. A. C.*

BARBED WIRE LAWFUL FENCE

Can the owner of a farm compel owner of adjoining farm to build line fence that will stop sheep? Is barbed wire a lawful fence if either party objects? How early in the spring can I compel a family to move from my house if there has been no agreement as to when they should vacate?—B. W., Fremont, Mich.

The owner of a farm can be compelled to build only a "lawful" fence such has been several times described in these columns. He is not bound to build such a fence as will turn any animal but must build of the kind and dimensions designated in the law. If he builds such a fence the owner of an animal whatever it is, is responsible for its breaking thru such a fence and for all the damage it commits. I believe that properly built barbed wire fence is lawful fence regardless of objections by adjoining owner. A person may be removed from a house as soon as his time of occupancy expires whatever time of year it happens to be. If no time was specified for the occupancy you would have to give notice required by law.—*W. E. Brown, legal editor.*

RETAIL SUGAR PRICES

We have to pay 17 cents a pound for sugar. Is this right?—Subscriber

You are lucky. In some towns in Michigan sugar is as high as 19 and 20 cents. Your letter was referred to the Department of Justice and the following reply has been received: Permit me to assure you that the Department of Justice is deeply concerned in this matter. Extensive investigations of refiners, wholesalers and retailers have been conducted to apprehend profiteers, and action is being taken in cases where the facts warrant prosecution. Generally speaking(the high prices have been found to be attributed to the increased prices paid to planters or to the dealers in Cuba, who are not amenable to the law. Where you have reason to believe that a merchant is profiteering, the matter should be promptly reported to the fair price committee, or, if no committee is functioning in the particular locality, the facts should be presented to the district U. S. Attorney, who should be furnished with a memorandum of sale, if possible, and such other data or information as is available.—*Howard Figg, Special Assistant to Attorney General.*

COLLECTING NOTE ON TRANSFERRED PROPERTY

A is owing B a note which is due next month. A being old and disabled signs over his property both real and personal to C, a neighbor, for his care the remainder of his life, with the understanding that C shall pay all debts accumulated before and after the transaction. Now C refuses to pay B's note. Is it collectible? Also how can it be collected?—Mr. F. M., Merrill, Mich.

If "A" transferred his property to "C" for the consideration stated, which is a lawful consideration, "C" can be compelled to pay the note, if "A" will not. I think the usual practice would be for "B" to take judgment against "A" and afterwards take a judgment creditor's proceedings to reach the property transferred to "C."—*W. E. Brown, legal editor.*

THE POISON IN AMERICA'S CUP

Will you please advise me where I can procure Philip Frances book. "The Poison in America's Cup?"—D. E. C., Fremont, Mich.

This book is published by the Little Books Library, 61 Washington Square, New York City. Price 25 cents postpaid.—

THE RENTER'S RIGHTS

What is the law in regards to a renter holding a meadow? The renter rents from year to year and has seeded a meadow to clover and timothy. The following spring a new renter finds that the seeding has failed to catch, and wishes to plow the ground for corn. The old renter says the ground belongs to him just the same as if his seeding has caught, and intends to crop the field himself. What is right and what redress can be had?—W. B., Hartford, Mich.

The renter's time usually expires at the end of the year and he has no right to hold longer unless specially provided in the lease. The new renter would have the right to plow the field for corn.—*W. E. Brown, legal editor.*

CATTLE

HOLSTEIN-FRIESIAN

Ten Purebred Holstein Cows Against 20 Scrubs

Two neighbors, on adjoining farms—one milks 20 scrub cows—the other 10 purebred Holsteins. They care for their cows in the same way; they get almost the same amount of cream and the same sized check from the factory where both sell their milk. Though both men take in the same amount of money, the man with the scrubs uses the whole of his receipts to pay running expenses, while the Holstein man lays aside nearly half. Another item: The Holstein man feeds his skim milk to purebred calves; the other man feeds his to scrub calves. It costs no more to raise a $100.00 purebred than to raise a $30.00 scrub.

HATCH HERD
(State and Federal Tested)
YPSILANTI, MICHIGAN
Offers young sires out of choice advanced registry dams and King Korndyke Artis Vale. Own dam 34.16 lbs. butter in 7 days;; average 2 nearest dams 37.61, 6 nearest, 33.93, 20 nearest 27.83.

"Breeding--Individuality--Production"

That's our motto. We make it possible through our two herd bulls—one a 38 lb. son of the $30,000 sire, King Korndyke Pontiac Lass, the other a 36 lb. son of King Korndyke Sadie Vale, "the greatest sire of his generation." Our matrons are stong in King of the Pontiacs, King Segis, Hengerveld DeKol and Ormsby blood. We've been at it since 1906. Usually something to sell. Write us.

J. CARL JEWETT, R. 5, Mason, Michigan

Rations, by Dept. of Agriculture

CALVES to be finished on pasture may be handled in the same way as those to be fattened in the dry lot. The grain allowance may be smaller at first but after the calves are turned on pasture it should be increased as they become able to utilize greater quantities of concentrates.

Calves that are to be "fed out" as long yearlings or two-year olds or sold as stockers and feeders may be fed considerably more cheaply during the first winter. The winter ration may consist principally of silage and cheap roughages, but some concentrates should be used to keep the calves growing and in a thrifty condition. They should be run on pasture the following summer and sold in the fall as feeders or fattened out the following winter as long yearlings. If it is desired to keep them longer, the cattle may be "roughed" through a second winter and fattened the next year.

Feeding the Cattle Herd

When feeds are high in price the use of cheap rations is especially desirable for the maintenance of the breeding herd. Cows raised for the production of calves only can be fed very cheaply on silage and dry rougrages combined with a small quantity of protein-rich concentrates. By the use of leguminous roughages the protein-rich concentrate may be omitted.

Dual-purpose cows kept for dairy products as well as calves should receive feeds nearly identical with those for dairy cows, for best results. Considerable quantities of concentrates must be used if the cows are to produce the maximum of dairy products. The cost of the feeds in the ration should be considered and home-grown feeds utilized whenever possible. Cows that are milked should receive 1 pound of concentrate for every 3 to 4 pounds of milk produced, depending upon the fat content of the milk. This is the customary grain allowance and is satisfactory.

The purchase of feeds is not to be discouraged but should be reduced to a minimum. A successful cattle raiser must grow the necessary roughages and not rely upon their purchase.

During the summer months the cow herd should be maintained largely on pasture. Should the pastures become very short a supplemental feed should be provided. This can best be supplied by silage if availuable; otherwise forage crops, or even hay, may take its place. In the fall the cows may be maintained on meadows and aftermath, and later in the fall on stalk fields in regions where a considerable part of the corn crop is not cut or used for silage.

For the reader's convenience in working out winter rations for breeding cows in various sections of the country the United States has been divided into several sections, viz., Far West or Coast, Western Range, Southwestern, the Corn Belt, East, and Southeast, and a few general rations prepared for each. These rations are only suggested and must be varied according to local conditions.

The rations suggested are per thousand pounds of live weight and are only for beef cows in calf. Cows that are producing milk should have considerably more concentrates for best results.

Ration 1.

	Pounds.
Corn silage	35
Corn stover	10
Cottonseed meal or oil meal	1

Ration 2.

Alfalfa or clover	10
Corn stover or straw	15

Ration 3.

Corn silage	40
Straw	5
Oil meal or gluten feed	¾

Ration 4.

Corn silage	35
Clover hay	10

Rations for Wintering Stockers

Ration 1.

	Pounds.
Corn or sorghum silage	15
Alfalfa, clover, soy bean or cowpea hay	4

Ration 2.

Corn or sorghum silage	15
Oat, rye, or wheat straw	8
Cottonseed meal or oil meal	1

Ration 3.

Corn or sorghum silage	10
Lespedeza hay	3
Oat or wheat straw or stover	3
Cottonseed meal, oil meal, or peanut meal	1

Ration 4.

Corn or sorghum silage	15
Lespedeza or pea-vine hay	10
Velvet beans in pod	4

Ration 5.

Corn or sorghum silage	15

Michigan Jersey Makes a Fine Record

Majesty's Iris 265701, owned by Mr. Edwin S. George, of Pontiac, Mich., recently completed her year's authenticated test, as a seven year old, with 17,469.7 lbs. of milk, 955.87 lbs. of fat, equivalent to 1,171.6 lbs. of 85 per cent butter, to her credit. Her average fat per centage for the year was 5.47. She holds two previous records, one as a three year old of 589.2 lbs. of fat from 11,250.8 lbs. of milk and the other as a four year old of 678.97 lbs. fat from 12,905 lbs. of milk. Iris is the second highest Jersey ever tested in Michigan. She is the ninth highest fat producer and the tenth highest milk producer of the breed. She is a daughter of Royal Majesty, one of the many noted Jersey sires.

HOG SITUATION FOR 1920 LOOKS DISCOURAGING TO FARMER

Editor, M. B. F. In reply to Mr. G. I. Christie's statement regarding the hog situation and farm products for 1920, will say this: Just tell him that the farmers of Michigan have listened to that kind of hot air until they are getting about tired of it. There is not a man feeding hogs this winter that is going to any more than play even. I know of two men who went to Chicago last fall and bought a carload of cattle each. One of them has already shipped his and got returns and he lost just $2,000. I was talking with the other man not long ago, and he told me that he was looking for his cattle to lose him about $50 per head. Now just ask Mr. Christie if he can give any reason why these men lost so heavily. I will tell you my opinion as to why they lost.

Last fall they went over to Chicago, swallowed a lot of that hot air they have there; bought those cattle for 12 and 13 cents; shipped them about three or four hundred miles; put them in and fed them this $60 to $80 a ton grain and $30 per ton hay; then had to ship them back and take almost the same money they paid for them last fall. Now here are two men I know of who were trying to help the nation out with its low production of food stuff, and what premium have they got for it? They got what Paddy shot at.

Now, with the farmer facing a situation of this kind, I think the farmers of Michigan would like to see Mr. Christie's figures showing them just where the great fortune in the 1920 hog crop is going to be. I will admit that hogs will be a good price along in June and July, but where will hogs be then, Mr. Christie? They will be just where they were the July after the armistice was signed, in the packers' hands. Then next September when the farmer gets ready to put the spring crop of hogs on the market, you have not told us what price to expect. I think if you were going to try to tell us, and tell us the truth, you would say, around 12 or 13 cents for you would not want to hurt our fellings telling us we should have 20 cents.—*S. E. Welch, Melvin, Mich.*

Boys' and Girls' Sheep Clubs

You hustlers start right now raising pure bred registered sheep. Our clubs have done it for lots of boys and girls and their dear mothers too. You have choice of several breeds and won't have to borrow from dad or any one or run any risk. Write today; just ask for particulars and "Nature and Care of Sheep."

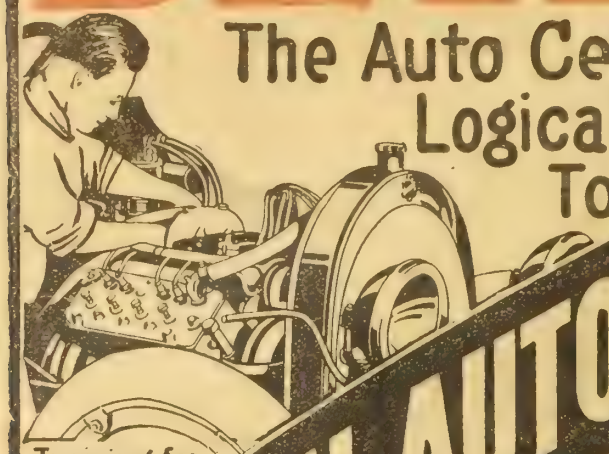
DETROIT



The Auto Center is the Logical Place To

LEARN AUTO AND TRACTOR BUSINESS

Training for Head and Hand

Detroit, with more than 180 Auto and Accessory factories, is indeed the **Heart of the Automobile Industry.** No other city offers such advantages to the student who would know the Auto, Truck and Tractor business thoroughly. Of all the automobiles manufactured today, 71% are made in Detroit. Think of that!—and these same manufacturers heartily endorse our school and furnish us with their latest chassis.

The Factory Endorsed School

The thoroughness of our methods and the completeness of our equipment are well known in the Auto Industry. The biggest factories in the country heartily endorse our Course. In fact, many of the leading Auto Manufacturers assisted in outlining our Course and they give our Students the fullest co-operation possible. These factories are constantly calling on us for graduates because they know the type of men we turn out. Everywhere in the Automobile Industry, M. S. A. S. graduates are given the preference because ours is the Factory Endorsed School.

Earn $100 to $400 Monthly

Really, there is no limit to your earning capacity after you have mastered this business. This can be made the stepping stone to a most successful business career. The training you get here will fit you to hold positions which before were out of your reach. Factories, Garages, and Service Stations all over the Country are continually asking for our men. They know the value of the training we give and do not hesitate to give our graduates the preference. Your success in the Auto Business depends upon your training—what you are taught and trained to do correctly. Here at the M. S. A. S. you are thoroughly instructed in every phase of the Auto Industry. You learn every part of the work by actually doing it.

Many Train at Detroit and Return to the Farm.

This is your chance! Come to Detroit, the Heart of this great industry. If you don't care to engage in the garage business, prepare to operate, adjust and repair your machines yourself—save thousands of dollars in repair bills as well as avoid costly delays at busy seasons. Think, too, of the money you can make in your spare time adjusting and repairing your neighbors' machines, either in a small shop on your own farm or at some conveniently located place nearby.

Unlimited Opportunities for Men Who Know.

The coming year will be the greatest in the history of the auto industry. Producers and distributors of every kind of Auto, Truck and Tractor will be tremendously busy. Garages and Service Stations will be rushed to the limit. Everywhere there is an insistent demand for men—trained men who **know** how to adjust, repair and care for these thousands of machines.

HUDSON MOTOR CAR COMPANY
DETROIT, MICH. U.S.A.

The Michigan State Auto School in our opinion, is the finest institution of its kind in the country. In fact, we endorse its method of instruction.

We have recommended a great many students to them and the results were satisfactory.

The Michigan State Auto School ranks highest in the standard of schools. Its equipment and personnel is second to none. This school is thought very highly of by the automobile men of Detroit and is considered one of the most efficient schools in the country.

If you intend to visit any school then by all means choose the best one. The Michigan State Auto School, so far as we know is the best. You will make no mistake by entering for a course.

Yours faithfully,
HUDSON MOTOR CAR COMPANY,
Service Department.

MAXWELL MOTOR COMPANY
DETROIT, MICH.

Wish to say that this is one of the best schools in the country, and would not hesitate to recommend it to any one who is desirous of learning the automobile business. It is a recognized institution among the automobile factories of this city.

Their methods of instruction, their lectures and theories are 100 per cent perfect. With all of their equipment and with the practical work that the students are able to get in their own organization, I really believe that mechanics throughout the country are missing one great opportunity if they do not take advantage of their course. I do not know of another place in the country that has the number of different type motors, chassis, and the thoroughness of going into various electrical appliances and equipments as used on modern motor cars, that I found in their school.

MAXWELL MOTOR CO. INC.
A. E. Richmond,
Superintendent of Service.

Packard Motor Car Company
MADE IN AMERICA
DETROIT, MICH. U.S.A.

The Michigan State Auto School enjoys a very enviable reputation and is probably one of the best of its kind in the United States. Have no hesitation in recommending it in every particular.

Yours very truly,
PACKARD MOTOR CAR COMPANY.

Complete Training in Auto Electrics

Our course in Auto Electrics is thorough and complete. Standard electric equipment for autos, trucks and tractors is in actual operation for students to work on. Students are taught to quickly and easily locate electrical troubles. Hundreds of graduates are filling high salaried positions in electrical service stations. Every quarter of the globe recognizes our school as the world's training place for Auto, Truck and Tractor Mechanics.

Complete Tractor Course Included

You are given complete instruction on care and operation of Farm Tractors in our regular Auto Course. Constantly increasing use of tractors calls for trained tractor men. Manufacturers have placed machines with us to give our students the benefit of practical instruction. Hundreds of students are completing our course and returning to the farm, competent to care for their tractors and the tractors of their neighbors.

Brazing, Welding and Tire Repairing

These two subjects are taught in separate courses. Hundreds of students take them with the Complete Auto Course. Others take them separately. Competent men are in big demand in both fields. Brazers and Welders are needed in every field—Tire Repair men are always in big demand.

Read What Graduates Say of the M. S. A. S.

Thanks to the M. S. A. S. I have been getting along fine since I left Detroit. I have spent most of my time at auto repair and haven't been stalled on a car yet. I am ready to go in company with one of your graduates, Ed. Pursey, who is buying a garage. You have surely made a good repairman out of me.

I would like one of your new catalogs and The Auto News.

Hoping this will find you all well, and thanking you again, I am,

Yours truly,
HERBERT FUHRWERK,
Harbor Beach, Mich.

I am making good (thanks to the "Old Reliable" M. S. A. S. faculty, par excellence), with every job that happens along, which is to say that I am kept more than busy, although I haven't opened a garage yet. I am out on the road nearly every day, starting autos and gas engines, locating electrical troubles, etc., etc. So you can see that I am busy.

I can truthfully say that I have never regretted one minute of the time that I spent in the M. S. A. S. and would advise anyone who wanted a thorough training in the Auto Industry by all means to go to the "Old Reliable" M. S. A. S. and there they will find just the place for them.

I intend to start a garage in this town, Vineland, next spring as I now own a nice large building 36'x60' and intend to fix it up this winter when I have a little time.

One of your satisfied graduates,
FRED. HAIST,
Vineland, Ont., Canada.

I am just getting along fine. Working in a Chandler Garage have more work than I can do, not just on Chandlers, but all makes. I have charge of the garage, am making $300 per month at the least, have made $375 but as an average between $350 and $375. That is pretty good, but will do better. Yes, and by the way, I rather hear a motor hit keen than eat.

Your western M. S. A. S. friend and booster,
ED. WAMHOF.
Alva., Okla.

Not A One Man School.

This school is founded on the best, newest and most practical principles in the Auto, Truck and Tractor business. Our course is built on the most liberal and closest co-operation of Manufacturers, Garages, Service Stations and Owners. It is not one man's ideas, but the the combined ideas of the biggest and most successful men in each field.

Money Back Guarantee

We guarantee to qualify you for a position as chauffeur, repair man, demonstrator, auto electrician, garage man, automobile dealer or tractor mechanic and operator, paying $100 to $400 monthly or refund your money, provided you do your part and attend our classes.

FREE—176 Page Catalog

Also latest copy of "Auto School News" both absolutely free. They tell about courses—show hundreds of pictures of equipment—give letters from big auto factories and graduates. Our courses are reasonable in price. In fact, they are so reasonably priced that many students write us when to expect them, jump on a train and come to Detroit without writing for Catalog. Come start training at once. ACT NOW! Get the coupon in the mail TODAY.

Open All Year—Start Any Time

Our school is open the year 'round. Enter the classes any day. You can get started the same day you arrive. Our welfare department will assist you in finding a good room and splendid meals.

The Michigan
BUSINESS FARMER

An Independent
Farmer's Weekly Owned and
Edited in Michigan

Vol. VII, No. 28 | MT. CLEMENS, MICHIGAN, SATURDAY, MARCH 20, 1920 | $1 PER YEAR

OFFICERS AND EXECUTIVE COMMITTEE, MICHIGAN STATE FARM BUREAU

(Left to right) Robert Blemhuber, Marquette county; Mrs. Cora E. Ketcham, Barry county; Roland Morrill, President, Berrien county; R. G. Potts (standing) Vice-President Macomb county; A. J. Rogers, (standing) Benzie county; C. S. Bingham, Secretary, Oakland county; A. E. Illenden, Lenawee county; Jas. Nicol, Allegan county; Ashley M. Berridge, Montcalm county.

A Business Organization for Business Farmers

THE FARM BUREAU has well been called "the farmer's business organization." It recognizes that farming is a business and the farmer a business man and proposes to assist the farmer in the solution of his business or economic problems. The responsibilities of the Michigan State Farm Bureau rest for the time being upon the shoulders of the folks shown above. They have got a big job ahead of them, a greater job perhaps than many realize. It is the job of making good. Promises are easily made. Pictures of the future are easily painted, but their realization means hard work, good judgment and courage to blaze the untried trails. The first year or two of the Farm Bureau's life, as a full-fledged farmers' organization will be trying ones to both officers and members. Farmers who expect an immediate return on their investment are going to be disappointed and perhaps become a little impatient. But all should remember that Rome was not built in a day. It takes time to lay the foundation for any great work. A certain amount of experimentation is necessary; there will have to be some cutting and trying, and despite the utmost care mistakes will be made. As we have said before we cannot afford to let the Farm Bureau fail. Too many farmers have pinned their faith to it. Too many farmers are looking to it to direct them to economic freedom. Failure of this great movement would set farm organization back a score or more of years and undo much of the work that has already been done. As long as the Farm Bureau is controlled by farmers for farmers it should have the support of all who have the farmer's interests unselfishly at heart. We hope those of our readers who have joined the Farm Bureau will give it a fair and square chance to make good, and not become too impatient of results.

"The Red Flag Never Flies Over the Farm House."---Wood

This is

LEONARD WOOD

The Man Who Has Pledged Himself to Solve the Farmers' Problems! He Has Always Made Good!

LEONARD WOOD, the man who won the unqualified endorsement of Theodore Roosevelt, greatest American of his time, is the man who should get your vote in the primaries April 5th.

A vote for Leonard Wood is a vote for Roosevelt's principles, for the very same things that Roosevelt would be advocating if he were alive today.

A vote for Wood is a vote for a candidate whose backers have pledged themselves to see that the voice of the Michigan people is heard in the state and national conventions. Wood is fighting for the nomination, not merely to gather up delegates to be transferred to some other candidate at a "psychological moment," to be decided by the party leaders.

Leonard Wood in his public utterances has shown a thorough understanding of the farmers' problem and a warm sympthy for the farmer. He says:

"Our stability rests largely in the agricultural population. The Red flag never flies over the house of the farmer who owns his farm. If the American farmers had not played the game as they did, we would have lost the war because we would not have been able to feed our allies in the field as well as ourselves. If the American farmer had struck, the Germans would have won the war. The farmers sent their sons to war and in spite of the shortage of labor, they, by tremendously increasing their efforts, gave the world the biggest crop in history. Agriculture is not only the principal source of our wealth, it is the groundwork of our most stable citizenship.

We must have a department of agriculture conducted FOR THE FARMER by men who really know farming from the furrow to the crop. It should be the intention of the national government at Washington to make farming conditions such that there would be fewer tenant farmers and more owned farms."

Theodore Roosevelt said of Leonard Wood: "He has made all good Americans his debtors by what he has done."

Let Us Keep Roosevelt's Spirit Marching Through Michigan!

Losses of Plant Food Elements From Soils

Leaching, Erosion, Volatilization and Cropping Held Responsible for Depletion of Fertility

By M. M. McCOOL
Professor of Soils, Michigan Agricultural College.

THE REMOVAL of elements of plant food from soils in numerous ways is to be reckoned with in permanent systems of agriculture. In some instances it becomes a serious menace to soil productivity in a surprisingly short period of time. The losses may be accounted for in a large measure by leaching, erosion, volatilization, cropping.

Under all systems of soil management in humid regions there are greater or less losses of the elements of plant food from the surface soil downward to an away with the drainage waters. In general, there are three ways of making determinations of such losses. Much available information has been obtained by means of lysimeter studies. Lysimeters are galvanized iron, cement, or wooden receptacles of various capacities usually sunken in the earth and filled with the soils to be studied. These receptacles are so arranged that the drainage water can be collected and analyzed. The oldest and most extensive lysimeter experiments are those conducted by the Rothamsted Experiment Station, England. There are, however, several experiment stations in this country that are carrying on such work.

Another method of determining some of the changes that take place in soils when variously treated are by means of tile or underdrains. It is more difficult to control the conditions by this method, but, on the other hand, the soils are studied in their natural condition and thus the results obtained are of fundamental importance. The composition of the water in streams and rivers may be determined and, to be sure, the results of such determinations are instructive.

There are several conditions that influence the amount of the various elements lost from the soil by leeching. Those that are not important are:

1. The time, amount, and distribution of the rainfall.
2. The texture of the soil.
3. The fixing capacity of the soil.
4. The composition of the soil.
5. The presence of growing crops.
6. The addition of fertilizers.

Other conditions being the same, the higher the rainfall the more plant food is lost from the soil by leaching. It is held by some that a given amount of rainfall during the summer months removes greater quantities from the soil than at other seasons of the year. This is doubtless the case under some conditions, but it seems that such is governed by the kind of crop grown, and nature of the soil, and to other conditions. It is probably true that a given precipitation, when uniformly distributed, removes less material from the soil than if not so distributed, since less water may pass through the soil.

It is generally held that less elements of plant food are lost in the drainage water from sandy soils than from silts, loams or clays. Usually, such is the case, the drainage water from sandy soils is so-called soft water, at least not so hard as it is from other soil classes, but there are exceptions. Some sandy soils are high in total and available mineral matter, and, therefore, the amount lost may be greater than is lost from many of the less fertile fine textured soils. When soluble substances such as nitrate of soda, ammonium sulphate and others are added to sandy soil the amount washed out by rain water may be much larger than it is from heavier soils.

Before discussing the influence of the fixing power of soils on the composition of drainage water from soils a brief explanation of this phenomenon is in order. It has long been known that solids includings soils will, to a greater or less extent, retain either on their surface, or within, or both, numerous gases, liquids and fertilizer constituents. In general, the amount as well as the tenacity with which the subsances are held, depend upon the fineness of division of the solid, the finer the subdivision the greater the amounts retained; and, in addition, the composition of the soil mass and the substances with which it comes in contact are important. This power of soil is spoken of as absorption.

The subject of absorption has received a great deal of study and any one can easily determine the power of the soils to remove mineral matter from solution by passing through a volume of sand, loam, or clay, a quantity of salt water. The first portions issuing are devoid of their salty flavor. It is well to note in this connection that there will be a larger amount free from salt coming from the fine textured soils than from the coarser ones. If barnyard liquid is passed through a layer of fine soil it will be colorless, or nearly so, when it appears in case of sands it will be somewhat colored. If ammonia, or other gases, are passed into, or come

Interior of lysimeter house at East Lansing. The drainage waters from lysimeters sunk in the ground outside the pit are collected in the larger containers, taken to the laboratory and analyzed for various elements of plant food. The effect of different systems of management on the losses of these are being studied at the College.

in contact with a layer of soil, appreciable amounts of these gases are retained by the soil particles.

Soil absorbs or fixes some substances far more firmly than others; for example, nitrogen in the form of vegetable compounds, such are urea or compounds of ammonia, are readily fixed or held by the soil, but, on the other hand, nitrogen in the form of nitrates is held less firmly by most soils. The loss of phosphorus and potassium from soils by leaching is almost negligible on account of the fact that they are firmly held by the soils. It is probable that applications of soluble phosphates and potash to sandy soils low in vegetable matter results in appreciable losses. It is well to note that calcium, magnesium and sodium are less firmly held by the soil, and therefore, the losses as above stated are quite large.

In most cases where salts, such as sulphate of ammonia, nitrate of potash, or in fact any of the ordinary fertilizer materials, or lime, or common salt, in solution are brought into intimate contact with the soil it gives up to the solution other bases in exchange for those held. This exchange often results in the release of some substances valuable in the formation of plant food, such as phosphorus or potassium. Thus, as previously discussed, the addition of such substances may increase plant growth in part by their indirect action. It should be noted, however, that the released base, or bases, may be taken up and held by the soil lower down. Fixed substances are very gradually released to the soil water and are generally considered to be available for crops. This phenomenon should be looked upon as being of a great deal of importance in the conservation of mineral plant food that are added to the soil.

Some compounds are more readily soluble, and, as above stated, more firmly held by the soil mass than others. It may be cited, for example, the chloride, or sulphate or nitrate of calcium and other bases are more soluble than the carbonates. Again, the greater the amount of organic matter in soils, other conditions being the same, the less the loss in this manner on account of the very high fixing capacity of this material.

It is of prime importance that soils occupied by crops lose less of the valuable elements than those uncropped or bare. Such differences are due in part to the fact that less water passes through soils that are occupied by crops, in part to the presence of small amounts in solution, and still further, to the removal of the solvent effect of certain compounds upon others.

Lyon and Bizzell of Cornell University determined the loss by leaching of different substances from cropped and uncropped soils. Certain of the results obtained are presented below:

Substances removed from one acre of land in one year.

	Bare Soil	Cropped Soil
Total substance	2584	800
Nitrogen	119	11
Potash	11	6
Phosphoric acid	trace	trace
Lime	726	264

At the Michigan Experiment Station it has been found that the amount of water that passes through four foot layers of an uncropped sandy soil is appreciably greater than that passing through the same volume of soil occupied by crops.

There are certain fertilizer constituents when added to soils that react with other compounds in the soil to form, in some cases, more soluble compounds and also those that are less strongly held by the soil, thus in some instances increasing the amount of the various substances in the drainage water. From a practical standpoint the increase in the loss of calcium or lime and nitrogen are of chief concern. It is well known and recognized that any condition or set of conditions that results in the increase of the amount of the chloride, sulphate, or nitrate of calcium, other conditions the same, result in greater losses of calcium or lime from the soil. However, the increased loss in most instances perhaps is due to the formation of the nitrates. In general there is a close correlation between the amount of calcium and nitrogen removed by drainge water in soil, inasmuch as the greater part of the nitrogen passes away as calcium nitrate.

The results of studies by the Rothamsted Experiment Station, England show in an uncontrovertible manner that the addition of large amounts of fertilizers and stable manure increase the losses of nitrogen and calcium. Cognizance should be taken, however, that rather excessive amounts of fertilizers were added to the soil and it is doubtful if similar results would be obtained from soils of different composition and under different climatic conditions.

There are on record results of experiments which show that the use of fertilizers, due to their stimulation of the root development and, therefore, a greater absorbing system and greater yields, may actually decrease the loss of some elements of plant-food from the soil through the drainage waters.

The loss of plant food elements by erosion or so-called "washing" of soils accounts for a greater loss on many sloping lands than leaching. In fact, one needs but to visit a hilly farm after a torrential rain to be convinced that more plant food may be removed from the surface soil within a few hours by this manner than is removed from the soil by several crops. Furthermore, it is the surface or the most valuable portion of the soil that suffers most in this respect. There are many fields that were once productive but are now unprofitable, due largely to erosion. The preventative methods were discussed previously.

Some nitrogen is lost from the soil in the gaseous state, or by volatilization. Under exceptional or abnormal conditions such as water soaked soils, or where excessive amounts of manure are applied to the soil, or where precautions are not taken to incorporate fresh manure with the soil, appreciable amounts of nitrogen may escape into the air and thus be lost. It is probable that appreciable amounts of nitrogen escape into the air from soils that are high in vegetable matter, that is when tilled.

The rate of soil depletion by cropping depends upon several factors, such as the kind of crop, yield of crop and the manner of disposal of the crops grown.

The composition of crops differ, therefore, the rate of depletion of soils varies somewhat with the kind of crops grown. Moreover, some parts of the crop contain more mineral matter than others. If part or all the high ash containing portions are returned to the soil the loss to be sure is less than if all is removed and none returned. We know as a result of a great deal of experimental data that soils long cropped in general contain less of the essential plant food elements than they did in the virgin state.

It is maintained by some writers that the surface soil may receive an appreciable amount of mineral plant food from the subsoils by the upward movement of film water. It is probable that a small amount of several of the elements, such as calcium, magnesium, sodium and potassium passes upward from the lower layers of the soil, that is when the surface soils are in part depleted of their soil moisture, but as stated the upward movement of film water is indeed very slow, and, furthermore, the results of dysimeter and drainage water studies as well as the composition of cropped and uncropped soils show in an uncontrovertible manner that undoubtedly the general trend of the various elements is downward rather than upward. It is probable that the deep rooted plants remove a certain amount of their mineral constituents from the lower layers of soil; thus when the upper portions of the plant decays, or are left on the soil, there may be an increase of mineral constituents in the upper layers.

Analyses of rainwater show that there is brought to the surface of the soil approximately six pounds of nitrogen per acre annually. This amount varies undoubtedly with the total rainfall and other conditions. In addition, it has been shown that approximately 15 lbs. of sulphur are added to the soil annually in this manner.

Standard Partition for Mixed Cars of Live Stock

Live Stock Federations Urge Adoption of Standard Gate by Co-operative Shippers of Stock

By E. J. TROSPER

Secretary, National Federation of Co-operative Live Stock Shippers.

LIVE STOCK shippers have long felt the need of a standard practical partition to be used in shipping mixed cars. The Michigan State Federation of Co-operative Live Stock Shippers have, through their state manager, C. E. Compson, found a solution for the trouble in the form of a standard gate partition.

Old Nailed-in Partitions Expensive and Troublesome

In the past each live stock shipper has been permitted to construct his own partition and as a direct result we have about as many types of partitions as we have shippers. This system has proven very unsatisfactory to both the railroad and the shipper for the following reasons:

1. The average man when permitted to construct a partition according to his ideals fails to construct one that will deliver his stock to market in proper condition. The local railroad agent knows less about partitions than does the shipper.

2. The old system of partition is expensive because in each instance it costs from three to four dollars to construct. The partitions are then torn out at the terminal market and smuggled away by the workers of the yards for kindling wood, etc.

3. Improperly constructed partitions have, according to the railroads been responsible for from twenty to forty per cent losses in transit; at any rate, railroads frequently refuse to pay claims using the poorly constructed partitions as their argument. So far the shipper has been the "goat" regardless of the merits of partitions constructed.

4. In the construction and tearing out of railroad partitions the stock cars are badly mutilated.

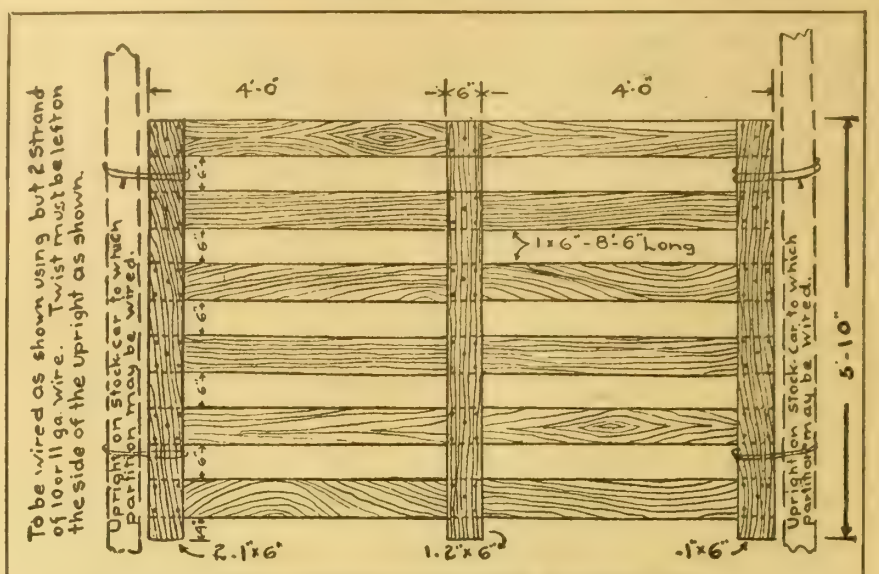
The Advantages of Standard Gate Partition

1. In standardizing the gate partition and getting the specifications before the local railroad agent and shipper there will be no excuse for the wide variations and disastrous results which have been so common by construction and use of the "old way" partitions.

2. It costs no more to buy or build a standard gate partition than it does the old kind. By stenciling name and address on the top board of the gates, they may be returned to their owners every few weeks. We plan to make arrangements through the state federations of co-operative shippers to have the gates returned. This plan has been working successfully in Michigan and is endorsed by the Michigan railroads and Detroit Live Stock Exchange.

3. There will be no excuse for shippers not being able to collect the majority of claims on live stock killed or crippled enroute when the "gate" has been approved of and accepted by both parties. The railroads will not be able to refuse to pay claims on the theory of a faulty partition.

4. Stock cars will not be mutilated because in using the standard gate not a nail is driven into the car except in case of heavy stock it may be desirable to place a 2 x 4 edgewise at center and run to the roof of car. The Michigan shippers have found that by using more wire the 2 x 4 may be eliminated.



4'-0"
6"
4'-0"
1x6"-8'-6" Long
To be wired as shown using but 2 Strand of 10 or 11 ga wire. Twist must be left on the side of the upright as shown.
Upright on Stock car to which partition may be wired.
Upright on Stock Car to which partition may be wired.
5'-10"
2-1"x6"
1-2"x6"
1"x6"

"PLAN FOR SINGLE DECK STOCK CAR PARTITION"

These specifications are for a partition for light weight stock. If partition is to be used for heavy stock it should be strengthened by adding a 2 x 4 placed edgewise at center and run to roof of car. This 2 x 4 to be cleated to top of car and at the floor. Also by an additional wire fastened to each side of car. Designed by C. E. Compson,, Manager of the Michigan Federation of Co-operative Live Stock Shippers and Vice President of the National Federation of Co-operative Live Stock Shippers.

5. The gate may be removed f feeding in transit or unloading the terminal twice as quickly as t nailed-in partitions.

6. The "gate" is simple in co struction and may be made or boug in quantities at the shippers leisu

7. All sections of the U. S. e cept our big feeder section ship large amount of mixed car lots. T average co-operative shipping ass ciation can save from $50 to $100 lumber alone in a year's time. Wh we stop to consider the decrease number of dead animals and t ability of the shipper to get prop action on claims it is easy to unde stand why the gate is proving popular.

Specifications for Standard Ga Partitions

The gate should be made of go sound 1 x 6 lumber such as Sout ern pine planed on both sides. should be nailed with 10s where the are three thicknesses and with where there are only two. All na should be well clinched. The gat are to be wired to the stock car u right at the top and bottom wi three wrappings of No. 10 or 11 fen wire. The gate may be reinforc by nailing a cleat in the middle the gate preventing boards from b ing knocked off. It is desirable build your gate so that the boar will be closer together at the botto The name and address of your ass ciation should be stenciled on the t board.

It is the ambition of the Nation Federation of Co-operative Li Stock Shippers to have the 3,500 l cal shipping associations adopt t gate partition. Details of supply a return of gates will be worked o through the state federations of li stock shippers. For further infor ation, write C. E. Compson, Remu Michigan, or E. J. Trosper. Room 9 Royal Insurance Building, Chicago

Important Live Stock Facts Brought Out at Packers' Legislative Hearin

Statistics Show Huge Waste and High Cost in Packers' Methods of Distribution

(Submitted by Farmers' National Council.)

THE HEARINGS on the Anderson bill to control the meat packers have shown beyond question and with strength enough to convince any doubting members of the committee on agriculture, that the people of America, producers of live stock, and consumers of meat products alike, demand promptly legislation to control the meat packers. There are twenty-one members of the committee on agriculture. Two members, William W. Wilson and John W. Rainsy, represent Chicago districts, while Illinois has in all three representatives on the committee, Pennsylvania two, and sixteen states are represented by one member each.

Congressman Anderson, who made the opening statement before the committee, outlined in a masterful way the results of the investigation made by the Federal Trade Commission and added information which he had secured from his own study of the packer situation. He emphasized the wastefulness of the packers' methods of slaughtering such large proportion of the meat supply of the country in twelve central points. He said that in 1918, 69 per cent of the cattle of the United States were produced west of the Mississippi river and 69 per cent of the people lived east of the river. In that year the section of the country east of the Mississippi and south of the Mason and Dixon Line, sent 1,000,000 cattle into the great slaughtering sections of St. Paul, Sioux City, Omaha, St. Joe, Kansas City, East St. Louis, Fort Worth, Oklahoma City, Chicago, Cincinnati, Buffalo and New York; and about 700,000 of these were moved back into the south in the form of meat. In 1918 about ten million cattle were marketed west of the Mississippi river and about five million, one one-half of the total were consumed west of the river.

Urges Legislation

Commissioner William B. Colver of the Federal Trade Commission gave the gist of the Commission's findings and answered the charge of the packers that they had not been permitted to put al the information into the record that they wanted, saying that "over and over again," the packers had been invited to put what they said had been omitted into the record and they had always declined to do so. Commissioner Colver called attention to the fact that the Trade Commission had recommended, to remedy the evils found to exist in the meat packing industry, that the stock yards and refrigerator cars be owned by the railroads, and operated as part of their service. While he ws discussing the bearer warrants of Armour & Co., which enabled the holders to draw dividends without having their identity disclosed, Congressman Dainey asked whether this was not a practice which was common among business corporations in European countries, and Commissioner Colcer replied, "I think so, I think it was invented in England to beat the income tax law." Asked whether there had been any communications between the Federal Trade Commission and the Attorney General on the latter's decree in regard to the packers, Mr. Colver said, there had been some but chiefly as to commodities, and expressed himself on this situation: "I do not think that government by decree or government by injunction is the orderly American way. I think government by legislation is proper." He also said, "if it is right to divorce wholesale groceries, it is right to divorce butter, eggs, cheese and poultry. If it is not right to divorce wholesale groceries, it is not right to divorce other things.

The members of the Committee on Agriculture were deeply impressed when Waren S. Stone, Grand Chief of the Railway Locomotive Engineers, appeared in favor of legislation which would adequately control the packers. Mr. Stone commented on the continuous increase in the cost of living, and the burden it is placing on the consumers and urged that the railroads acquire the stock yards and refrigerator cars, in order that there might be an equality of opportunity for distributing live stock and live stock products, and in order that the co-operative associations of producers and consumers might have a better opportunity for direct trading. Mr. Stone said that he appeared, not pimarily in his official capacity, although there are 2,100,000 members of the Railway Brotherhoods, but as a citizen concerned with the problem of the high cost of living.

Challenges Packers' Efficiency

Mr. Ed. C. Lasater of Falfurrias, Texas, member of the Farmers' National Council, a large live stock grower and dairymen of Texas, expressed himself without any quibbling on the packer legislation. Mr. Lasater said that we could not get legislation on the packers by "pink tea" hearings and that we must face the facts, that the live stock producers of America are getting discouraged and will not continue to raise live stock unless they have a better chance to market without pocketing a loss. He quoted the charge of the Federal Trade Commission that the joint legislative funds of the packers have been used to pay the unaudited expenses of lobbyists, and help elect friendly Congressmen. He turned over to the Committee the report on the cost of production of cattle on his ranch, compiled by Price-Waterhouse and Ernst a Ernst, and the figures of the Depa ment of Agriculture on the cost production. The Garfield Public A countant's figures covered the yea 1913 to 1917, and showed that t cost of production of a twelve mon calf on the average was $46.37. M Lasater sold three crops at a pri of $35 per head, at a net loss of ov $10 per head, figuring interest char es on his equity of about sixty p cent in the business, and he stat he got a little over 2 per cent, whi the banker got 8 per cent. The co of producing two year olds w $67.04, of three year olds, $89.5 An audit of his books by Price, W terhouse, and Ernst and Ernst sho ed for nine years operation a profi in round figures of $644,437, on a average investment of $2,563,90 which was an average of about 2 per cent. He had sold, however, re estate, for $737,170, so that has m loss on his nine years' work was in round figures, $98,733. To me the situation Mr. Lasater urged th the railroads be required to acqui the refrigerator cars, and all stock yards, which had a business in th last calendar year of over 100,00 head of cattle, on which may hav in the future calendar year. He al emphasized the need of securin cheaper credit for live stock produ ers who now pay about 8 per cen which is often nearly half the co of production.

Dr. T. C. Atkeson, Washingto representative of the Nation Grange said that "the packers hav the power to exploit the people, an if they have that power, whe he they exercise it or not, it is the dut of the public to protect itself again the possible exercise of this power o exploitation on the part of the pack ers or any other monopoly in th country."

Meat Production Drops; 1919 Still Ranks High

Department of Agriculture Records Show Heavy Decline in Beef—More Veal, Mutton, Lamb and Pork Slaughtered

THE UNITED States consumed several pounds less per person of beef in 1919 than in 1918. At the same time, its exports of beef declined 56.8 per cent from the previous year. The United States Department of Agriculture attributes the decline in domestic consumption to high retail prices and the falling off of exports to the fact that the European countries which took so much American beef during the war are returning to the cheaper sources of supply in South America and Australia. The decrease in beef was so large as to bring down the total meat production 4 per cent lower than in 1918, in spite of the fact that production increased greatly in pork and considerably in mutton and lamb and veal.

Exports of pork and lard in 1919 were unparalleled. The exports were equivalent to 18,000,000 hogs weighing 200 pounds each. A million more hogs were slaughtered than in 1918. Domestic consumption of lard declined to the extent of 2 pounds per person.

The slaughter of calves in 1919 was greater than ever before—1,250,000 head more than in 1918. The drought in the west is ascribed as one of the main causes of so many calves being marketed. Veal is not exported and domestic consumption increased about one pound per person.

Twenty per cent more mutton and lamb meat were produced in 1919 than in 1918, but the consumption of mutton and lamb is so small that the increase meant only one pound per person. This source of meat supply, which decreased steadily for many years, has been on the upward trend since 1917.

These facts are given by the Bureau of Animal Industry, United States Department of Agriculture, in its annual analysis of the meat situation recently made public.

The outstanding features of the meat situation during 1919 were a heavy decline in beef slaughter with corresponding loss in beef exports, and a great increase in the exports of pork products, although the swine slaughter was only slightly larger than the previous year.

The slump in beef was to some extent offset by substantial increases in the slaughter of veal and of mutton and lamb, and the increase in pork just mentioned. But on the whole the decrease in beef was so large as to bring down the total meat production to 4 per cent lower than in 1918.

By weight, in terms of dressed meat (without lard) the total slaughter in 1918 yielded a little over 18 billion pounds and in 1919 a little under 17 1-3 billion pounds. The difference was about 715,000,000 pounds.

This seems a large quantity of meat, but nation wide computations in these times are apt to be in colossal terms, and it must be remembered that the unprecedented total for 1918 was wrought under the impetus of a great war effort, when all production records were shattered. Considering that the armistice had been signed before the close of 1918 and that the conditions facing breeders and feeders were full of uncertainty, last year's production must be rated as a great achievement, since it far exceeded that of any other year previous to 1918.

Pork and Lard Exports Unparalleled

Exports of pork and lard in 1919 were unparalleled in the history of our foreing trade. Total shipments amounted to 1,897,198,000 pounds of pork (mostly bacon and hams) and 784,946,000 pounds of lard. The magnitude of this single branch of our export trade is not easy to realize. Stated in terms of live animals averaging 200 pounds in weight, this quantity of products would represent a herd of approximately 18,000,000 hogs, and therefore one such hog would be "deported" every 1 3-4 seconds throughout the entire year.

The two factors previously mentioned—restricted beef supply and heavy shipments of pork products—had some effect on the home meat consumption, which in total fell from 150 pounds per capita in 1918 to 142 pounds in 1919, a decline of 5.4 per cent. Last year's figure nevertheless was 12 pounds higher than that of 1917, when the people partly abstained from eating meat.

There was a sharp decrease in lard consumption during 1919, amounting to 2 pounds a person, but there was also a relatively large increase in the consumption of mutton and lamb. As a whole, however, the fundamental reason for the decreased meat consumption in 1919 may likely be found in the high retail prices which prevailed throughout the greater part of the year.

The Bureau of Animal Industry annually issues tables showing the salient facts connected with the meat industry of the nation. The information includes numbers and average weights of animals slaughtered under the Federal inspection and otherwise, quantity of each kind of meat produced and consumed, exports and imports, etc. Tables covering the calendar years 1914 to 1919 are now available and may be had on request.

Cattle Slaughter Fell 14 Per Cent

About 2,000,000 fewer beeves were slaughtered last year than in 1918. It is estimated that the cattle yielded 6,571,226,000 pounds of dressed beef in 1919 as against 7,640,712,000 pounds in 1918, which is a decrease of 14 per cent. The lowest yield in the last six years was 5,638,565,000 pounds in 1914, after which there was a gradual rise each year, culminating in the big record of 1918. Last year's total goes back to slightly below that of 1917. Approximately three fourths of the cattle slaughter is now conducted under government inspection.

Relatively the most striking item of all the meat exports in 1919 was obtainable, by which it is shown that the falling off in beef shipments. Compared with 1918 the decrease was 56.8 per cent, the respective totals being 728,236,000 pounds in 1918 and 314,381,000 pounds in 1919. Beef exports from the United States, however, have been almost wholly coincident with Europe's war needs. The trade, it is predicted will revert to the sources of cheaper beef from South America and Australia.

Home consumption of beef decreased 11.7 per cent in 1919.

Veal Production Increased

In sharp contrast with cattle the slaughter of calves in 1919 was greater than ever before. The drought in the west is ascribed as one of the main causes of the increased marketings. In round figures 9 million calves are estimated to have been marketed last year, which is a million and a quarter more than 1918 and represents an increase of 17 per cent.

As no exports or imports of veal are recorded, the consumption follows the production, and increased from 7 pounds to 8 pounds a head of the population.

Increase in Mutton and Lamb

Sheep and lamb slaughter reached the low point in 1917. About 1 1-4 million head more were marketed in 1918, and last year there was a further increase of more than 3 million head. The increased yield in meat in 1919 amounted to 103,486,000 pounds and was a gain of 20 per cent, but the consumption of mutton and lamb is so small compared with pork and beef that increase meant only 1 pound a person of the population. The trend, however, is upward.

In this connection an interesting comparison is made with mutton and lamb consumption in certain other countries, according to latest figures this class of meat is especially popular in Britain and largely consumed also in France. The countries for which such data are available and the proportion consumed of mutton and lamb as compared with all meats consumed are given as follows:

United Kingdom	21.8
France	11.4
Canada	6.6
United States	4.2

Thus the proportion ranges from upwards of one-fifth in England to about one twenty-fifth in the United States.

Our foreign trade in mutton and lamb is very small compared with other meats, and the imports generally exceed the exports.

Pork Still Plentiful

A million more hogs were slaughtered last year than in 1918 and 13 1-2 millions more than in 1917, and although 2 million more hogs were marketed in the record year of 1916 their average weight was almost 13 pounds less a head, so that 1919 stands easily first in pork production. The year's slaughter yielded the enormous total of 9,269,185,000 pounds of pork and 2,119,222,000 pounds of lard.

The record-breaking exports absorbed 20.5 per cent of the pork and 37 per cent of the lard. The large foreing demand helped to reduce the home consumption 3 per cent on pork and 14 per cent on lard, as compared with 1918.

Last year's per capita consumption of pork was, in fact, smaller than in any recent year except 1917.

Horses Slaughtered for Meat

As a sign of the times it is of interest to note the Federal inspection of horse slaughter, which began in September, 1919. Up to the end of the year 433 horses were so slaughtered, and about one-half of the resulting meat was certified for export.

There had been no previous Federal supervision of horse slaughter since 1903. At that time inspection was limited to a single establishment which had been in operation for several years. The inspection was necessary, as in the present case, to permit of consignments being made interstate and for export.

The consumption of horse meat is not uncommon in certain parts of continental Europe, and was in vogue long before the late war. The fact that horses are slaughtered in non-federally inspected establishments in the United States is perhaps not so well known. Inspectors of the Bureau of Animal Industry reported in 1918 that horses were being so slaughtered at six widely separated places situated in the East and Middle West and on the Pacific coast. The output of these places aggregated about 2,000 or more carcasses annually. As to the consumption of this horseflesh, it is known, of course, that zoological gardens, menageries, etc., account for a large part of it for the feeding of flesh-eating animals.

As before stated, consumers in 1917 refrained to some extent from eating meat. Pork products were especially desired for export, and the result for the year was a smaller total consumption than ever before recorded.

Producers came to the rescue in 1918 and provided such an abundance of animals that a large surplus was available for the home consumption after meeting the export requirements. In 1919 the shorter supply of cattle and augmented shipments of pork products brought the total consumption down 8 pounds a person.

The quantities of each kind of meat above given, it is explained, are figured from a "dressed," or butcher's meat basis, which includes the bones and butcher's waste. They include also such parts are are canned and cured—bacon, hams, canned meats, etc. On the other hand, there are considerable quantities of edible meat which are not included in the dressed weights of the animals, such as the liver, pluck, etc. Allowing the one to offset the other the figures used are considered as approximating the actual meat consumption.

PER CAPITA CONSUMPTION OF MEAT

THE FOLLOWING data are quoted from a table prepared by the Bureau of Animal Industry, showing the annual per capita consumption of meat in the United States. They present some interesting contrasts:

Meat	1917, pounds	1918, pounds	1919, pounds
Beef	61.23	66.74	58.95
Veal	6.39	6.90	7.96
Mutton and lamb	4.59	4.95	5.90
Goat meat	0.18	0.14	0.09
Pork (excl. lard)	57.59	71.35	69.08
Total meat	129.98	150.08	141.98
Lard	11.51	14.57	12.48
Total meat and lard	141.49	164.65	154.46

Johnson Still in Straw Vote Lead

HIRAM Johnson continues to hold a substantial lead over all other candidates in the M. B. F. straw vote. Henry Ford is second; Herbert Hoover, third; Wood, fourth; Bryan, fifth; Lowden, sixth. Because of the lack of interest in Borah, Clark, Goethals, Poindexter, Taft, Pershing, and because none of them except Poindexter are avowed candidates we are taking these names from our ballot. We are a little disappointed in the number of returns that have been received, less than 600 votes being recorded so far. Please clip the coupon this week, and mail it in.

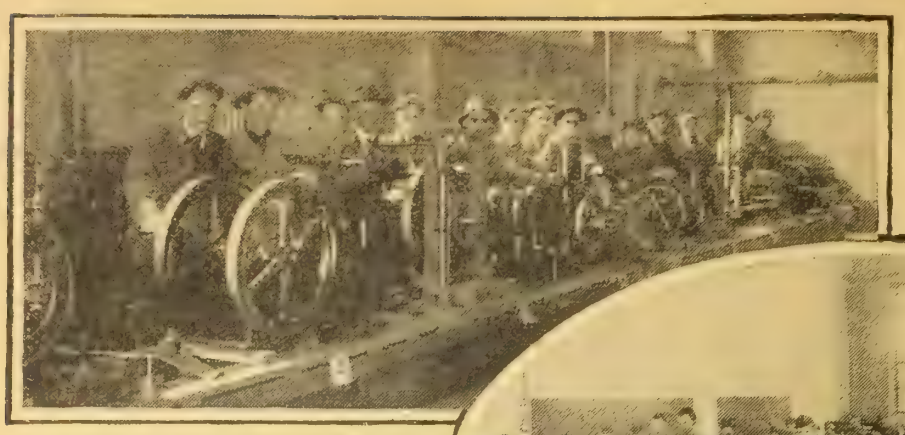
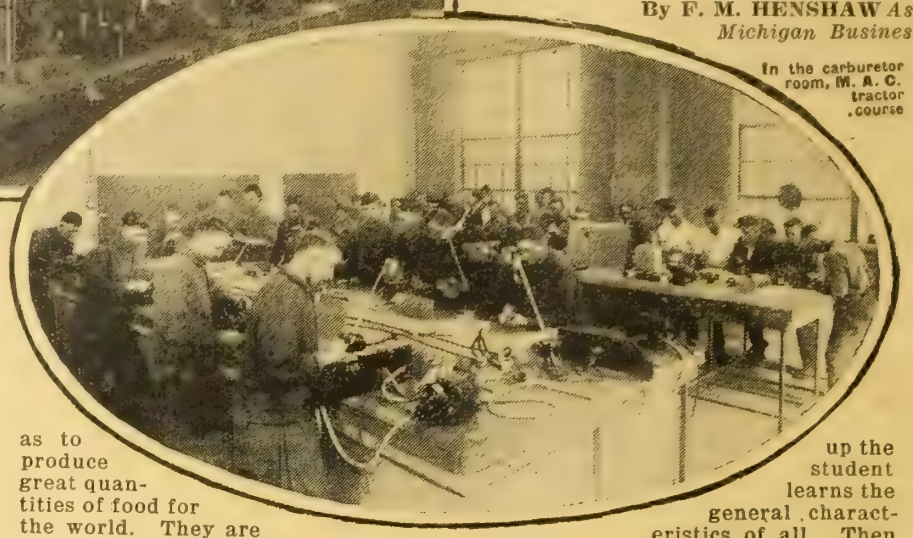
Tractor Study at M.A.C

Farmer Boys Learn How to Handle the New Hired Man, the Tractor

By F. M. HENSHAW *Associate Agricultural Editor*
Michigan Business Farmer, M. A. C.



Learning the first principles of the gasoline combustion engine.



In the carburetor room, M. A. C. tractor course

HAS THE tractor come to stay in Michigan? Has it filled the bill sufficiently well where it has been tried to warrant its wholesale use in developing the agriculture of the state and in opening up land hitherto untouched?

If you want to know, just ask the hundred odd Michigan farmer boys enrolled in the winter course in truck and tractor work at the Michigan Agricultural College. The tractor has fired the imaginations of these boys. They believe in it. To them it is the symbol of the day that is coming when the gas engine and power will eliminate much of the present arduous labor on the farm.

If you don't believe the tractor means romance to these boys, just visit the school and watch them at work. You will see them caress their favorites among the big machines at the college just as they fondle that pet driving horse at home. You will see them deeply absorbed while an instructor explains the workings of some type of motor. You will see them rapt in attention while a plow expert explains the adjustments for various kinds of soil-breaking. You will see them working in the blacksmith shop till their shirts are damp with sweat, while they accomplish nearly as much in a couple of days as the regular student does in a whole terms.

Interest in the M. A. C. tractor school, as interest in the tractor everywhere, is constantly increasing. Seventy men registered for the first course in February and the number is considerably greater in March. These men are learning all about the tractor not merely in order to start selling them or to obtain jobs at factories where they are made. They want to know how to operate and repair them because they expect to use them on Michigan farms. Replies to questions put to the tractor students show this is true.

But they are not going back with any false ideas about the tractor—not if O. E. Robey and the men who are aiding him with the course can help it. They are being shown the limitations of the tractor as well as its advantages, so that when they go home they will have a clear understanding of its place on the Michigan farm.

But there are others besides Michigan boys who are enthusiastic about the future of the tractor. When the second course opened on March 1 among the registrants were 50 men of Russian extraction from Detroit who expect to return to Russia with tractors which they will introduce among their fellow countrymen. These men forsee a rosy time when the vast area of eastern Europe will be developed by modern methods so as to produce great quantities of food for the world. They are the pioneers, but among such a people they believe the tractor needs only a strong foothold in order to make rapid headway.

As the course is arranged, one week is spent in the study of gas engines, one week in the study of the tractor itself, three and one-half days on carburetion, three and one-half days on ignition, and three days in the blacksmith shop. When the students register they are divided into groups, one of which begins on gas engines, one on tractors, etc. The groups change off as soon as one section of work is finished. In this way equipment and instructors' time are efficiently used.

By this arrangement it is also possible for a student to register at any time during the first four weeks and continue until he has passed through all departments. If he desires to familiarize himself still further with any particular branch or work he is permitted to remain.

A system of identifying by serial number similar to that prevailing in the army is used. Pins bearing the students' numbers are issued and thereafter Jim Jones becomes No. 86. This method is particularly happy as it affects the Russian students for many of them cannot speak English and some of the names probably would give instructors trouble to pronounce.

The schedule calls for two hours of lecture and six hours of shop work each day. The morning lecture from 8 to 9 o'clock is concerned with technical subjects and maps out the road to be followed during the next six hours. From 9 until 12 and from 1 until 4 students are busy in the shops and with the tractors. At 4 they assemble in one of the big lecture rooms of Agricultural Hall, where experts among the factulty of the college show them the significance and application of the course in its broader aspects.

The week of gas engine instruction in reality is a course in general power farming. On the opening morning students are requested to fill out a questionnaire showing the extent of their previous knowledge, and reference to this questionnaire tells the instructor which men are most in need of individual help. From the nine types of engines set up the student learns the general characteristics of all. Then he is kept at work upon one or two until thoroughly familiar with them. In the course of the week he experiments with timing, wiring and the Prony brake test to determine horsepower; he completely dismantles one engine and reassembles it; he makes all sorts of repairs; he learns to lace belts, to test batteries, to babbitt. Because ropes often must be used in connection with the use of power on the farm, he is taught how to splice them and how to tie various knots.

Problems which come up in actual operation of the tractor are met in the week spent with the machines themselves. The student is shown the workings of the magneto, clutch and transmission and spends two or three half days at curing troubles likely to occur, after which he takes one of the machines outside and drives it about the M. A. C. farm just as he would at home.

Practically every type common to Michigan users is among the tractors assembled especially for the course. There are little tractors and big tractors, factory tractors and home made tractors, two wheel tractors and four wheel tractors, tractors that steer from a seat directly above and tractors that steer from the seat of the plow or other implement behind. They include the Fordson, Sampson (General Motors) Port Huron and Titan (International Harvester) Case, Rumely Oil Pull, Huber, Heider, Bates, G. O., Universal Moline, International 8-16 and Chippewa Chief.

The Chippewa Chief is a big covered tractor built by E. J. Myers, of Shepherd, Mich., and driven overland 70 miles to East Lansing in January. Its builder spent 14 years perfecting his model. Its chief distinctive feature is a wide caterpillar rear which makes travel over snow drifts and very soft ground possible.

In general the students have shown great aptitude both in operation and repair. The ordinary troubles of the tractor have puzzled them little.

In taking up the study of carburetion the student attacks the subject first from a theoretical angle, in that his first day is wholly occupied with the laws of magnetism. When he is not busy at the blackboard he is busy at the bench, and at the day's close he writes an examination. On t following days he delves into t mysteries of magnetos, wiring coils; concentrates upon generato starting motors and batteries, finishes with a half day in review.

He next turns his attention points of ignition such as timing a adjusting, and easily gets at t heart of the matter through worki with a chassis set up for the purpo with the ignition system of a comm make of car exposed to view. He as in the tractor room the studen show quick perception of the pri ciples involved and troubles fail keep them guessing long.

Work at the forge is designed give the student an idea of the han ling of metal, so that in a pinch may resort to home remedies. working long periods at a time sh course men accomplish much mo in proportion than the regular st dent, but instructors say they sh unusual aptitude and contrast th eagerness with the indifferent spi shown by service men during the A. T. C. regime. Practice in maki bolts, hooks, rings and staples a in welding and tempering constitu the blacksmith course.

Men proficient in the operation tractors are in demand and the c lege fills a number of requests fr outside sources. A letter of reco mendation is given to each man w satisfactorily performs the requir work.

The course is rounded off with struction as to the manner in whi the tractor is related to common a ricultural problems. In one lectu on soils the student is given a su mary of the conditions which ma for good tilth and the part the tra or may play in keeping the soil There are certain times when r or other conditions are particula favorable for the working of the s and it is because the tractor is ava able at these critical occasions t it is especially useful. In the fall particular there is usually a peri most appropriate to plow for spri planting in this season the trac may be relied upon to pay for its u keep. However, there are certa times when the soil will suffer packed down with such a heavy m chine.

In spite of the tremendous a vantages of tractor farming, st ents are not given to understand will wholly replace the horse. two lectures by Ralph S. Huds superintendent of the M. A. C. far they are reminded that, in act farm usage, when the tractor g wrong on a rainy day or in the b forty its repair may not be so sim as in the shop at the college.

The horse is necessary to do s isfactory work in fields where th are wet spots, on steep hillsides, light sand, or among stones, bogs stumps. The horse still is need to market grain and livestock co veniently and economically. Hor may be grown on the farm and m be replaced readily and cheaply.

As to the convenience of the hor compared with the tractor, acco ing to Mr. Hudson horse work ne

Lining up in "battle formation." Twelve tractors are used in the course. They include the Fordson, Samson (General Motors,) Port Hurson and Titan (International Harvester,) Case, Rumely Pull, Huber, Heider, Bates, G. O., Universal Moline, International 8-16 and Chippewa Chief.

is seriously hindered by weather conditions, work may be planned and carried out with certainty, and substitute teamsters may be more easily obtained than substitute tractor drivers. The horse has an advantage in his reserve strength and the flexibility of his power is invaluable on the farm where the pull required varies with nearly every job.

In several ways the horse is economical as well, Mr. Hudson points out. The initial cost is not great, feed for horses is raised on the farm, horses produce valuable by-products such as manure, hides and colts, the cost of medicine for horses is much less than the cost of repairs for tractors and many farm tools are designed for use with the horse.

Although Mr. Robey as acting head of the farm mechanics department has general supervision over the course, actual details of its administration are in the hands of E. C. Sauve, another member of the same department.

"The interest manifest in the truck and tractor school," said Mr. Sauve, "is an evidence of the growing popularity of the gas tractor. The farm mechanics department is receiving more inquiries than ever regarding its practicability, and if the reports of tractor salesmen are true, a very prosperous year faces them.

"Men on the staff of the farm mechanics department are not agreed that all farms of reasonably large acreage can profitably support a tractor. We are agreed, however, that the man who attends a tractor school of merit is, in large measure, a determining factor in its success. Of course there are other factors, such as the first cost and the ability or inability to obtain repair parts and expert service when needed.

"It is my contention that it is a mistake for prospective tractor owners of Michigan to consider the purchase of a machine manufactured in a distant state unless such companies have established, or give promise to establish branches so as to meet the farmers' service needs. This is a vital question and these conditions must be met in order to prevent dissatisfaction among tractor users.

"The tractor is with us to stay. It does meet the need of greater production with less help. It supplements the horse during the peak load and in some instances permits of displacing one or more of them.

"Answers to questionnaires pertaining to the minimum acreage which would prove a profitable investment indicate that a large number believe a tractor of an 8-16 rating (that is, eight horsepower on the drawbar and sixteen horsepower on the belt) would be profitable on an eighty acre farm. In most cases such answers were received from first year tractor users and might differ from the facts through the lifetime of the machine.

"Actual figures to prove or disprove this statement are not available. It is quite generally believed that the average tractor should be made to work 50 days a year to prove a profitable investment. This statement is rather general, but as yet no specific instances are available. This year's farm census may throw some light on the question."

Examining the pulley on an "Oil Pull." The little pulley often gives the farmer his greatest service from the tractor.

If We Divided All the Money How Much Do You Think You Would Have?

By GEORGE E. ROBERTS
Vice-President of National City Bank, N. Y. City.

(Concluded from a previous issue)

LET US go back to the idea of not paying anything to invested capital, but of dividing all the profits among the workers. In 1918 the average earnings of all the employees of the United States Steel Corporation were $1,685 a year. The corporation's net earnings after taxes were deducted were $209,281,104 for that year. This was the amount before making any interest payments on bonds or dividends on stock.

Now imagine that no interest or dividends would be paid. Suppose that the thousands of men and women who have bought the bonds or the stock, of the Steel Corporation, allowed it to use their savings for nothing and were willing that all the profits be divided among the steel employees. In that case, the average pay of these employees would be $2,460 a year.

Of course, 1918 was a year of abnormally high profits; and therefore the employees would have received more than in ordinary years. Very many people make a serious mistake by looking only at the fat years, and forgetting all about the lean ones, when they talk of the dividends paid to capital. The only just way of estimating the return received by the capital invested in any business is to take the record of that business over a long period of years.

If you will do that, you find that the average return is moderate—except in cases of extraordinarily good mnagement. It is the brains and energy of the men at the head of a concern which are chiefly to be thanked for the consistent growth and prosperity of its business. On the whole, the other employees are about on a par with those in other organizations.

The great purpose, however, in most of the present discussions of industrial affairs is to find some way of stimulating all workers to have a greater share in promoting the prosperity of the business with which they are connected, and of seeing that they get their reward for this gain in prosperity.

A concern which can produce more goods at a lower cost than its competitors can make them will earn, and deserve to earn, greated profits. And if all the workers combine in the effort to accomplish this, they should benefit accordingly. But it is an incredible fallacy to think that a reduction of effort, with its inevitable corollary of lower production and higher cost, can possibly bring a reward to anybody at all.

The only sane method of trying to increase our reward is to increase our service. "Dividing up the money" won't do it; not perceptibly, at least.

In 1917, the number of persons in this country who paid taxes on incomes of over $10,000 a year was 161,996. Suppose you confiscated the amount of their incomes above $10,000 and distributed the money to the 110,000,000 people in this country. How much do you think your share would be. Just $32.37 for that year.

If you think $10,000 too much for any man to receive, cut all incomes to $5,000 and divide the amount thus saved. You would be able to give each person only $44.06 more per year. And if you make $2,000 the limit of any man's income, the distribution would then be $68.33 a year. These calculations are based on the 1917 report of the Commissioner of Internal Revenue.

But if you kept this up, if you continued to confiscate and parcel out the amount in excess of $10,000 you would soon have little enough to handle. Nobody would care much about working hard enough to earn more than $10,000 a year, just to see someone else get it.

You may think that if all the private wealth of the country could be divided among all the people, you would be a rich man. But Professor King showed that in 1910—the latest year for which he had figures—the active capital in this country, if divided among all the people, would be $521 to each of us.

Remember that this would not affect merely the people with fortunes. If you had saved a thousand dollars, it would take more than half your savings away from you and give them to someone who had saved nothing. What incentive to ambition, industry, and thrift would there be in such a state of society? It would be a calamity—not only industrially, but morally as well.

Certain theorists want to do away with leadership in industry. They have only to look at the countries where there is little such leadership, and little employment of capital in industry, to see that these are the very places where the conditions of life for the masses are the most hopeless and degrading.

Compare the Asiatic countries with the United States. In China, for example, there are guilds of laborers; but they do little to improve the lot of the wage earner. The people there live and work under conditions almost incredible to us.

Here in the United States we have the most wonderful development of machinery to be found anywhere. It makes life richer for us all, because it enables us to produce more of the things that elevate living conditions. Every man, woman and child in the United States benefits every single day by this development. And it has been brought about by individual leadership and ambition—and by the use of capital.

The old spinning wheel and loom represented a very small investment of capital and no industrial leadership. The modern textile mill represents a large investment and the work of energetic leaders. You can compare in the same way the village shoemaker and the modern shoe factory, the old time smithy and the modern steel mill, the old stage coach and the modern railroad, the homemade tallow candle and the modern electric light.

You must remember that it was not enough to invent these improvements. An invention is worthless until industry takes it up. Agriculture would be the primitive thing it was a hundred years ago if energetic men and invested capital had not made modern farm machinery available.

The progress in our standards of living has marched side by side with the growth of capital invested in industry. In 1899, the capital employed in manufacturing in the United States amounted to $1,770 for each person employed in the manufacturing industries. In 1904, it was $2,117 to each person; and in 1914 it was $2,848, showing that the increase in capital at work has been greater than the increase in human effort which has accompanied it.

It is absolutely necessary to the welfare of the people that this movement should go on. As our population increases it becomes more difficult to supply them with the necessaries and comforts of life. The only way to do this, and to give them still more of these necessaries and comforts, is to increase our power of economical production.

To do this, we must have capital. And capital as I said before is nothing but the combined savings of all the people. There are stockholders

(Continued on page 27)

Sugar--From Michigan to Montenegro!

FROM THE beetfields of Michigan to the mountains of Montenegro came a precious cargo. One day there could be seen on Lake Scutari, floating down through the Montenegrin mountains, a long, shallow, flat-bottomed boat loaded with yellow brown, heavy sack. A couple of boatmen guided the unwieldly craft while in the center of the boat, standing on one of the canvas sacks, was a tall mountaineer with a loaded rifle over his shoulder and a bandolier of cartridges around his waist.

This mountaineer was the police chief of the district and all the way from Scutari to the little dock at Plavnitza he guarded his precious cargo,—a cargo of American sugar. To the people of this wild little Balkan state this sugar was worth its weight in gold, for it was the first the natives had tasted for five years.

Think of that, Mrs. Housewife, when you are unable to obtain from your grocer this necessary commodity, or when you have to be content with two measley little pounds. No sugar for five years !

This cargo of sugar was a gift of the American Red Cross and was distributed among some of the remote mountain villages in Montenegro.

The shortage of sugar in the Balkans and also in France and Belgium, is appalling, when we consider what a large part it plays in the planning of our American menus. The children of war-torn Europe have suffered especially because of this lack of sugar and wherever possible, the American Red Cross has supplied this need to anemic little folks.

The Red Cross worker in Northern France obtained two tons of American sugar last Christmas, boiled it down and converted it into bonbons for 10,000 children, the first candy many of them had ever tasted.

This cargo of American sugar, photographed while floating down Lake Scutari through the Montenegrin mountains, came from the beet fields of Michigan. It was distributed by the American Red Cross among some of the remote mountain villages and was the first sugar the people had tasted fo five years.

The Organized Farmer

FARM BUREAU—FARMERS' CLUBS—FARMERS' UNIONS—GLEANERS—GRANGE

THERE are five separate and distinct general farm organizations in Michigan, in addition to a score or more organizations for the promotion of special branches of husbandry. Every member of these organizations is naturally interested in what both his own organization and all the others are doing for the farmers. We have established this department for the purpose of keeping our readers informed on the activities and progress of farm organization, and we ask the officers of both local and state units to send us brief news items of their meetings, etc., for publication in this department.—Editor.

CO-OPERATIVE MILK PLANTS

THERE IS a growing interest in the movement to reduce the costs of marketing fluid milk through co-operative city distribution. Increasing sanitary requirements of city milk inspection departments and mounting costs of market distribution have given a considerable impetus to this movement. The number of co-operative city milk plants in actual operation is not large when compared to the number operated for profit under private ownership and management, but such enterprises have been projected in practically every section of the United States, and considerable number of co-operative plants have actually been put into operation during recent years.

Co-operative milk plants are now being operated in cities ranging in size from 15,000 to over 600,000 in population, but generally the co-operative idea applied to city milk distribution has gained adherents more readily in the smaller sized cities where private initiative had failed to develop a satisfactory system of milk marketing. Action has usually been initiated by local dairymen who sought to obviate unnecessary costs by erecting a pasteurizing and bottling plant. These plants furthered more economical city distribution, either through routes operated by the association itself or through subdealers to whom it might sell.

Reference to index pages of trade publications would indicate that probably one of the first successful efforts along this line in the United States was that of the Erie County Milk Association of Erie, Pennsylvania. In 1899 approximately fifty local dairymen retailing milk in Erie organized a stock company for the purpose of engaging in the co-operative distribution of the milk produced by its members. At the outset this association consolidated the deliveries made from sixty-five routes into twenty-three. Although the original amount of stock issued ($30,000) had not been increased up to the year 1917, the current market value of this stock had increased to approximately $150,000.

Since the organization of that pioneer, co-operative milk distributing company, a considerable number of associations have been organized for a similar purpose in other cities. Not all of these however, have met with equal success. The beginning of many of them was beset with difficulties at the outset, owing to inadequate finances; and at least one, which had been operated profitably for approximately ten years, was forced into bankruptcy on account of an inadequate accounting system and lack of intelligent supervision by the association's board of directors.

NEW PLAN FOR CO-OPERATIVE FARM ELEVATOR

A committee consisting of B. B. Lincoln, Wm. Harwood and Warner Ramsey, appointed at the last meeting of neighboring farmers at the Rose Theatre has conferred with the directors of the Bad Axe Farmers' Elevator, and finds that the proposition as finally decided upon by the directors under which Harbor Beach farmers may purchase stock in the Bad Axe elevator, is in substance as follows:

The directors of the Bad Axe elevator state that they have a property valued at $70,000 beyond their indebtedness: that at the time the company was organized nine years ago, $1.00 invested in stock at that time was worth 100 cents; today a dollar is worth about 50 cents in comparison with 1911 dollars. That the elevator has issued $16,000 of stock, but is only paying interest on about $10,000 of stock. That for the above reasons stock in this elevator is worth a great deal more today than it was nine years ago; that the directors could sell their plant and equipment and realize $7.00 for every dollar originally invested.

The plan submitted by the directors is that Harbor Beach farmers buy $25,000 of stock in the Bad Axe elevator, which sum will be used to purchase or build an elevator in Harbor Beach, buy equipment and merchandise and have at least $10,000 for operating expenses. For every $100 paid in for stock, a share valued at $50 par will be issued and the interest to be paid on the $100 is to be $3.00 annually. To make a decision as to whether or not local farmers will accept this proposition a meeting will be called in the near future, at which the Gleaner plan of elevator co-operation and other plans will be submitted.

EATON COUNTY FARM BUREAU

The membership campaign now being conducted in Eaton county by the Michigan State Farm Bureau has to date resulted in securing 1,357 members in the county. This number will be increased every day as some were missed by the solicitors because of sickness or absence from their home.

CO-OP ASS'N HOLDS ANNUAL

The Grand Ledge Co-operative association held its annual meeting March 6.

The hall was filled to the doors with enthusiastic co-operative farmers. The financial statement was read by the secretary showing the association to be in fine condition, with a membership of 296. Forty-eight shipments of 96 cars or 118 decks, consisting of 9,158 head of stock as follows: 553 cattle, 3,419 hogs, 1,205 calves, 3,981 sheep and lambs; home weight 1,814,261 lbs. net or Detroit weight 1,185,001 lbs. Gross price $251,610.85.

Actual expense of doing business was $10,298.30.

Average selling price per car, $2,654.30. All expense per car $108.34. The cost per dollar for doing the business was four cents.

years. Meeting was adjourned

C. H. Barton, J. R. Lowell, Elmer Vigt, A. C. Benjamin were elected directors. Each for a term of 1 years. Meeting was adjourned to same Saturday in Jan. 1921.

E. E. Compson, state manager, gave a talk on taking more pains in preparing stock for market.

WALTON FARM BUREAU ORGANIZED AT OLIVET

The Walton Township Farm Bureau was organized at a meeting of the farmers held at the township hall in Olivet, about 40 men being present. Officers were elected as follows: Robert E. Dixon, president; A. C. Fisher, secretary and treasurer. The board of directors consists of these two officers and Frank Herrick, Austin Bradley, Matthew Shilts, Charles Bugbee and Frank Halsey. The delegates chosen to represent the bureau at the Eaton County Farm Bureau meeting to be held in Charlotte Wednesday are Carl Hitchcock and Earl Corey. Frank Halsey and Frank Etson were chosen delegates to the meeting of the wool growers' association, to be held Friday in Charlotte.

Is There Need for the Michigan Potato Growers' Association?

Advisability of Continuing This Organization Brought Into Question at Annual Meeting During Farmers' Week

By A. M. SMITH
President Michigan Potato Growers' Exchange.

NOW THAT the Michigan Potato Exchange and the Gleaners' Clearing House Association have become so well organized it has been suggested that these two organizations could take care of the work which the Michigan Potato Association has been doing in the past. On the surface that would appear to be possible, but in reality I believe that our first judgment regarding that is wrong. It is doubtless true, that out of the efforts along the line of co-operraive marketing instituted by the Gleaners in Michigan, the enthusiasm put into the potato growers by the stirring articles in M. B. F., and the great meeting held at Lansing Farmers' Week, 1918, by the Potato Growers' Association, then has evolved the Michigan Potato Exchange, and what has become a practically re-organized Greaners' Clearing House Association for selling potatoes. Marketing privileges for potato growers in Michigan are firstclass as we all know. Competition is keen in the potato markets of the state and with present high prices potato growers are well pleased with the splendid improvement in the whole potato situation. But let us not forget that in part the very gratifying condition has been due to some causes beyond the potato growers' control or rather independent of his efforts.

(1.) Consumption of potatoes the past season has been large, and even when shipments of potatoes were above the average of former years the markets readily absorbed the surplus.

(2.) Car shortage at times has undoubtedly boosted prices rapidly and held them high.

(3.) Doubt in the minds of growers and shippers as to the accuracy of the government report and a determination on the part of growers to hold their potatoes for a good price have also helped to stiffen the market and make it strong. These last two considerations may very largely account for some of the high prices which have prevailed. And so some potato growers, indeed, I fear too many, think they have things in a satisfactory condition for their interests, and that they do not need to bother their heads for the future. But after due consideration and a survey of all conditions and considerations, I have come to the conclusion that the Michigan Potato Growers' Association is needed today more than ever.

At present potato growers consist of three classes:

(1.) Those who market thru the Gleaners' Clearing House Association.

(2.) Those who market thru the Michigan Potato Exchange.

(3.) Those who market in the large cities direct to consumers.

(4.) The large growers who themselves ship in car lots to commission men and

(5.) The grower who sells his crop on the open market to the highest bidder.

We have no method of knowing what percentage of potatoes are sold outside of the Mich. Potato Exchange and the Gleaners' Clearing House Association but we would be inclined to estimate that more than half the potatoes raised in Michigan are marketed independent of these organizations, and this condition, we believe, will continue.

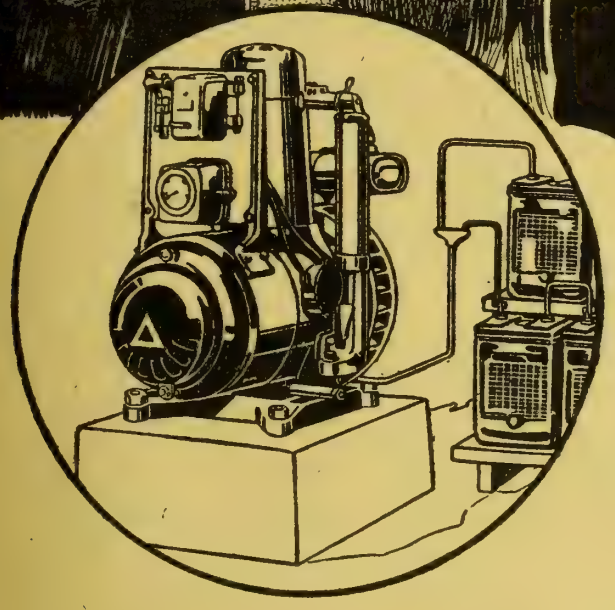
Therefore, it is evident that the growers of the state need an organization through which they may unitedly speak. And it should be an organization which is thoroughly representative, and also one which will not only consider the commercial commodity, but also be connected up in an official way with the splendid extension work of M. A. C., so efficiently carried on under Mr. C. W. Ward. There are a few things which the potato growers need right now in the way of legislation to enable them to reach out and profit by new opportunities.

It is a well-known fact that good seed potatoes are about half the crop or perhaps more, and there has been developing in recent years a tremendous demand for good northern grown seed. Such seed is in great demand in the south and in order that some guarantee as to quality might be given, some states have arranged thru legislation to authorize the "Certification" of seed potatoes. Michigan has been slow in moving to obtain the splendid profits obtainable for seed potatoes guaranteed by some responsible authority to be true to name and practically free from disease. It is high time that we got into this game and reap the golden harvest which comes to such progressive growers as have been and are producing a choice potato and for which they should receive a premium price. A selling organization could hardly consistently certify its own product satisfactorily to the purchaser. Neither can we expect that Mr. C. W. Ward alone and single-handed, can handle such an enterprise. But the Michigan Potato Growers' Association when it is given proper powers and authority and also sufficient funds through legislation, working with and properly connected by legislation with the Extension Department of M. A. C., can become an organization to inspect and certify seed potatoes in Michigan and such an organization will bring millions of dollars in extra profits to the potato growers of our state.

Now, Mr. Potato Grower, what we want of you is membership in the Michigan Potato Growers' Association. If you are a member of a county potato growers' association, we want such association to meet and talk over this whole matter and then if such an association is not already a member of the state association we want you to pass a resolution at once that you will join us. Then we want the Gleaners' local members of the Clearing House Association and the members of local potato marketing associations to connect up with us in some method to be devised so that the Michigan Potato Growers' Association will be a powerful central organization thru which every potato grower in the state can speak, and which will, we believe, be instrumental in bringing about new legislation in the interests of the potato indusry, which will be exceedingly profitable not only to potato growers but to the great state of Michigan.

This plan as briefly oulined can be modified and improved upon, but the basis for the enterprise proposed we believe, is sound. The need in Michigan for some concerted well-directed plans and movements in behalf of the great potato industry of our state we are just beginning to realize and also that this great industry, producing one of the most essential food products for man is just in its infancy. Not many states can produce potatoes profitably. Michigan has millions of dollars' worth of potatoes in her great tracts of virgin, cut-over lands as well as in her improved lands and the potato growers of Michigan should intelligently seek to secure these millions which will be the just reward of faithful labors, intelligently directed.

DELCO-LIGHT



A complete electric light and power plant for farms and country homes, self-cranking—air cooled—ball bearings—no belts—only one place to oil—thick plates—long-lived battery.

Valve-in-Head Motor
Runs on Kerosene

"DELCO-LIGHT is the Best Time and Labor Saver on My Farm"

Delco-Light users, everywhere—over 100,000 of them—think and say this about Delco-Light. Nearly every testimonial letter contains such a sentence. It is proof of the satisfactory service Delco-Light gives. It is an indication of the place taken by Delco-Light in the hearts of those who have installed it.

The clear rays of electric lights make the house, the barn or the barnyard bright as day, at the touch of a button. The electric current pumps and carries the water just where you want it, and performs a score of other jobs swiftly and silently while you do something else.

The experience of Delco-Light Users and their combined opinion is the best proof we have to offer, of two things—that Delco-Light is mechanically correct—and that it is a paying investment.

Hundreds of Sugar Beet Contracts Returned

Some of Biggest Growers in State Withdraw Their Acreage From 1920 Contract

WE WISH every beet grower in Michigan could have attended the mass meeting at Saginaw last week and heard Mr. C. G. Patterson of Salt Lake City, who is secretary of the .United .States .Beet Growers' Federation, and one of the big men in the beet growers' movement for recognition. Patterson is a Mormon, and has all the simple directness, keenness, ability, and love for a square deal for which the Mormons have become famous. He knows the sugar industry, both cane and beet,—from a to z, and is undoubtedly one of the best informed men of the day upon the development of the industry, its control and its future. He has been to Washington a dozen times in behalf of the beet growers of the west and is responsible for many of the victories that have come to the western growers.

Patterson claimed that Utah was slowly taking the lead over Michigan in the production of sugar beets. He said that Michigan had the lead up to a couple of years ago, but since that time his state has been gradually nosing ahead. The beet sugar industry in Utah had its inception way back in the fifties when Brigham Young first settled in that state. The Mormon leader bought a complete sugar plant in France, floated it up the Mississippi to St. Paul, and thence hauled it piecemeal by ox-cart to Salt Lake City. A member of the colony was sent to France to learn the art of sugar making. Although the initial venture failed, and it was many years later that Utah founded its first successful sugar factory with the financial backing of the Mormon church, the early impetus is given considerable credit for the later interest.

Mr. Patterson pointed out that organization in Utah had been severely handicapped because of the position held by the Mormon church, and although the beet growers of Utah have for many years been seeking better prices through organization, they are only just beginning to make appreciable headway.

It is the opinion of Mr. Patterson that both the cane and beet sugar industries of the country are dominated by the American Sugar Refining Company, through its intrepid head, H. O. Havemeyer. His contentions are largely borne out by testimony that was given in the suit of the United States government against the American Sugar Refining Company, et al, seeking the dissolution of the trust, such testimony consisting among other things of letters written by Mr. Havemeyer to Colorado and other western sugar men, and to such Michigan men as Chas. B. Warren, Worthy L. Churchill, Wm. H. Wallace, and others, showing a definite connection between these men and the sugar trust. The transcript of testimony is available and as the beet growers' campaign progresses we shall reproduce portions of it in these columns for the purpose of showing that the sugar managers of Michigan may be but the instruments of Wall street.

Mr. Patterson does not blame the sugar manufacturers for having an association to protect and advance their interests. Nor does he blame them for putting out contracts at the lowest possible basis. "That is business," he said, "good business, in accord with recognized business principles. The fault lies entirely with the farmer. If it is good business for the manufacturer to have his association and to make the contract as he sees fit, it is also good business for the farmer to have his organization and name his own terms of contract." He pleaded with the growers to stick to their association and to refuse to sign contracts this year that did not meet with the approval of their association.

C. E. Ackerman, the live wire manager of the Michigan Beet Growers' Ass'n, who with the aid of his associates has succeeded in organizing seven out of the ten thousand beet growers of the state, gave an enthusiastic talk upon the importance of agriculture, and stated that the success of all industry depended upon the success of this basic industry. Mr. Ackerman painted the future of agriculture in glowing colors and predicted that Michigan was destined to become the greatest agricultural state in the union, but that it behooved the farmers to organize in order to take the greatest advantage of the opportunities that were coming.

Mr. Ackerman stated that the present organization of farmers was as solid as could be built and that each local unit had ample funds in its local bank to carry on its part of the campaign. He reminded his hearers that even though the officers of the Association failed to perform their duties the farmers were in a position to go ahead with the work. In answer to the charge declared that he had done so at Owosso, in the presence of several farmers some of whom were present at the Saginaw meeting and vouched for his statement. Mr. Ackerman is a large grower of beets, his 1920 contract calling for 120 acres. It was disclosed also that other large growers, one a Shiawassee county farmer growing 200 acres of beets, had recently returned contracts, showing beyond a doubt that the big growers of beets were convinced of the justice of the present movement and would stay in the fight to the finish.

Forrest Lord, editor of Michigan Business Farmer, gave a brief talk, declaring his conviction that the present controversy involved a principle of right and square dealing which must be recognized and defended. He stated his belief that the all-important issue at stake was not merely the terms of the 1920 contract, but the manufacturers' recognition of the farmer as the most important party to the contract and entitled to a voice in the making of its terms. He stated his belief that if the farmers would be loyal to the organization they have perfected henceforth they would be invited into conference with the manufacturers, like one business man to another, and the contract be discussed and disposed of in a friendly spirit of compromise.

John C. Ketcham gave one of his forceful, pungent addresses punctuated with facts and figures which told a graphic story of the difference between the returns of the manufacturers and the farmers from the beet sugar industry. He quoted from an article published in a recent issue of the Saturday Evening Post which quoted the manufacturers saying before the Department of Justice that they could not afford to sell sugar for less than 10 cents a pound. Mr. Ketcham assumed from this statement that they could afford to sell it for 10 cents a pound and that consequently what they received above that figure was velvet. Other facts brought out by Mr. Ketcham are as follows:

"The high price being paid for granulated sugar and its reported scarcity and the probable higher price yet to be paid for it is leading many people to look into this question which so closely touches the pocketbook of every family in the state and nation.

"The Sugar Beet Growers' Committee representing the thousands of Michigan farmers who grow this important crop, is interested in producing a good supply of sugar and in securing a fair division of the proceeds of this great Michigan industry. Being offered a contract for 1920 which raises the labor cost to the farmer six dollars per acre without a corresponding increase in price for beets, the growers have instructed their committee to fight for an equal division of the net profits of the beet industry.

"That both the growers and the consuming public may know the facts upon the fight that is being waged the growers' Committee presents the case of the farmers based upon government reports and cost of production figures compiled from various sections of the state. Having been refused a conference by the sugar manufacturers and thus denied complete information on this side, the figures submitted in the following study of the manufacturing side are compiled from such 1919 factory reports, and from the government studies and reports of the sugar beet industry. The conclusions will be of interest to every beet grower and every sugar consumer. Who gets the millions?

"The January crop report for Michigan just issued jointly by the state and federal government shows a yield of 1,001,000 tons of beets for Michigan in 1919 so far reported. These, the report says, were grown on 110,448 acres. The price paid according to the report is $11.28 per ton, or $11,291,000. Estimating the average New York price of sugar at 12c, there will be a bonus of $1.72 per ton added to the reported price of $11.28 bringing it to a total of $13 per ton, or a total of $13,013,000 to be paid to the farmers for their 1919 crop of sugar beets. Production costs presented at the Saginaw convention of beet growers averaged $106 per aere, or a total of $11,707,488. These figures give the farmer no pay for his managerial ability—just brawn labor. The balance is $1,305,512 above cost of production for the farmers with larger investment of capital, greater risks and heavier labor costs than the manufacturer. This gives $118 profit per farmer counting an average acreage of ten per farm or $11.80 per acre.

"Turn now to the manufacturing side. The average of sugar extraction reports which the growers committee has seen for 1919 shows 225 pounds of sugar from each ton of raw beets, or a total of 223,223,000 pounds. At an average price of 12c this represents the tidy sum of $26,786,760. To this should be added the net value of the two important by-products of dried pulp and syrup, which according to such factory reports for 1919 as the Committee has seen, represents a net value of $2,038,025 or a grand total of $28,824,785.

"Owing to the above mentioned refusal of the sugar manufacturers to confer with the growers committee, dependence must be placed on the exhausted reports of the sugar beet industry by the Federal government to determine factory costs. According to government reports Michigan beets represent 75 1-2 per cent of the net factory cost of sugar. Allowing the 5 1-2 per cent for freight and field expenses, the price paid the farmers for beets would equal 70 per cent of the factory cost of sugar. If, therefore, the farmers receive $13,013,000 for their beets, and this is 70 per cent of the net cost of sugar, the total factory and beet cost for the 1919 beet sugar crop of Michigan would be $18,592,000. This pays for brain as well as brawn. Adding to this a 4 1-6 per cent selling charge which includes freight, commission, etc., we have a total of beet, factory, field, and selling expenses of $19,706,115. Deducting this from the receipts, we have the impressive total of $9,118,617 net to the factories in contrast with $1,305,512 net to the farmers.

"It is, therefore, evident that the factory profit is seven times the farm profit. The beet growers' committee contends that there should be a fifty-fifty division of the net prots in order to insure a large production of this important crop, and to encourage the growers to have a larger investment, greater risks, heavier labor and equal brain power invested. This is the fight of the sugar consumer as well as the sugar beet grower. It the consumer does not want the price to go still higher, he must join in securing the grower a fair division of the net proceeds so that the growers will be able to continue in the business."

Mr. John Shepherd, of Clinton County, member of the executive committee of the beet growers association adds that the committee estimates that 156,000 tons should be added to the government report to cover the quantity in transit and that not yet reported. Also, that 110,448 acres were harvested, which constituted 78 per cent of the acreage planted. The 31,139 acres that were abandoned because of the poor stands or unfavorable weather conditions, constituted 22 per cent of the entire acreage planted. This caused the growers a loss of $40 per acre or $1,245,560, which loss just about wipes out the $1,305,512 which the committee's figures show above cost of production for the farmer.

Profits of Columbia Sugar Company

EDITOR Michigan Business Farmer: In figuring a profit for the sugar beet companies, do you figure the value from the costs of the factory or from the amount the stock sells on the market now? To explain the question: The Columbia Sugar Co., of Bay City, Mich., sold stock at $10 per share when they built their factory. Some time ago they issued one extra share of stock for every share outstanding. A man having fifty shares of stock valued at $500 dollars now has a hundred shares. Instead of paying dividends on $500 they pay dividends on one thousand dollars. They pay 8 per cent per annum on the $1,000 and 1 per cent a quarter extra, making $120 dividend on the original $500 invested. They bought heavily of Liberty bonds and have lately purchased the Alma Sugar Company plant. Was this Alma plant purchased from the profits of the Bay City plant? The Columbia sugar stock seems to be a good investment as it is quoted at $18.50 per share.—Subscriber, Bentley, Mich.

"Save Money on Meat" Campaign

THE DEPARTMENT of Justice has announced its campaign to educate the consumer on purchasing the cheaper cuts of meat has began.

It is expected that retailers will stock the less costly cuts in adequate quantities to fill the demand. Only meat of unquestionable quality will be permitted to be sold. Undoubtedly

It is apparent from the tables given below that the saving in one week in the middle western states alone will run into prodigious sums. These tables embody quotations on some high-priced meat cuts and some relatively inexpensive meat cuts. The prices are per pound:

It is apparent from tables given below that the saving in one week in this territory alone will run into prodigious sums. These tables embody quotations on some high-priced meat cuts and some relatively inexpensive meat cuts in the middle western markets . recently. The prices are per pound:

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL

OPS ON FARMS, MARCH 8TH

The Crop Reporting Board of the reau of Crop Estimates makes the lowing estimates from report of correspondents and agents:

The amount of corn on farms rch 1, 1920, was about 1,092,095,- 0 bushels or 37.4 per cent of the 19 crop, against 855,269,000 bush- or 34.2 per cent of the 1918 crop farms March 1, 1919, and 1,253,- 0,000 bushels or 40.9 per cent of 1917 crop on farms March 1, 18. About 16.3 per cent of the p will be shipped out of the coun- s where grown, against 14.5 per t of the 1918 crop and 22.1 per t of the 1917 crop so shipped. The portion of the 1919 crop which he rchantable is about 86.9 per cent quivalent to 2,535,130,000 bush-) against 82.4 per cent (2,062, 1,000 bushels) of the 1918 crop d 60.0 per cent (1,837,728,000 shels) of the 1917 crop.

The amount of wheat on farms rch 1, 1920, was about 165,539,- 0 bushels or 17.6 per cent of the 19 crop, against 128,703,000 bush- or 14.0 per cent of the 1918 crop farms March 1, 1919, and 107,- 5,000 bushels or 16.9 per cent of e 1917 crop on farms March 1, 18. About 60.1 per cent of the p will be shipped out of the coun- s where grown, against 58.8 per nt of the 1918 crop and 51.1 per nt of the 1917 cop so shipped.

The amount of oats on farms arch 1, 1920, was about 422,815,- 0 bushels or 33.9 per cent of the 19 crop, against 590,251,000 shels or 38.4 per cent of the 1918 p on farms March 1, 1918, and 9,208,000 bushels or 37.6 per cent the 1917 crop on farms March 1, 18. About 25.7 per cent of the p will be shipped out of the coun- es where grown, against 27.4 per nt of the 1918 crop and 32.3 per nt of the 1917 crop so shipped.

The amount of barley on farms, arch 1, 1920, was about 38,010,000 shels or 22.9 pe cent of the 1919 op, against 81,746,000 bushels or 1.9 per cent of the 1918 crop on rms March 1, 1919, and 44,419,- 00 bushels or 21.0 per cent of the 17 crop on farms March 1, 1918. bout 34.8 per cent of the crop will e shipped out of the counties where own, against 39.0 per cent of the 18 crop and 39.7 per cent of the 17 crop so shipped.

PRICES OF CONTRACT PEAS

Three cents per pound seems to e about the average price paid for eas in Michigan, although a few anners are paying as high as 4 1-2 nts per pound. A number of com- anies are going to pay 3 1-4 cents is year. Have located one com- any in Michigan which is paying 2 -2 cents per pound, but a short time go this company had no contracts r acreage at all.

No canner in Wisconsin seems to e paying more than three cents per ound, flat basis, and a number are aying less.

There is a shortage of seed this ear, especially in Northern Michi- an. The average price charged the rmers last year was three dollars er bushel for the seed. A few com- anies charged only $2.50 per bush- l and a number $5 per bushel or ore.

The canners have to pay from $6 o $10 per bushel for the seed, mak- ng up this loss on the canned pro- uct. Six dollars seems to be about he average price paid. The seed ompanies are filling their contracts bout 75 per cent. The higher pric- s are paid for about 25 per cent of he seed in order to fill their con- racts.

Farmers both in Michigan and New ork are not making money grow- ng contract peas, but farmers in Visconsin are apparently doing a lit- le better. The state of Wisconsin eems to be particularly adapted to he growing of peas, as the climate s cool. One half of the peas packed n the United States are grown in Visconsin.

It is doubtful if there would be much profit in growing peas, especially in the lower part of Michigan even at four cents per pound, under the present conditions.

The canning industry is a profitable one as a rule. However, all companies claim they are not making money.

Many companies are finding it difficult to secure acreage this year. What is needed in Michigan is a state organization of the growers of contract crops. New York already has such an organization.

Would it be possible for these growers to join with the sugar beet growers? Kindly give us a good article on the need of a state organization.—*G. W. R. C., Kent County.*

MICHIGAN GETS TWO GREAT ABERDEEN-ANGUS

A cable just received from Scotland contains the news that Michigan is to get two of the greatest young Aberdeen-Angus bulls in the old country. These were bought by President Alex Minty of the Michigan Aberdeen-Angus Breeders' Association to head the Woodcote herd, at Ionia. One of them was reserve champion at Perth, early in February, and the other stood high in his class and is a half brother of the great breeding bull, Edgar of Dalmeny, at the head of the Wildwood herd, at Orion, owned by William E. Scripps, the Detroit publisher. This bull achieved the highest fame in the breeding world during the past year when his son was made grand champion at Perth and his crossbred daughter grand champion fat animal of Great Britain.

If the two bulls are released from the quarantine station in time they will be seen at Saginaw, at the Michigan Aberdeen-Angus Breeders' Association sale, March 26. Some sixteen of Michigan's leading herds including the Wildwood and Woodcote herds, have entered registered cattle, both bulls and female for the show and sale at Saginaw. Never have Michigan farmers and live stockmen been offered such an opportunity to get cattle with which to found pure bred beef herds. Mr. Scripps has generously offered Michigan an opportunity to get calves sired by his great bull by offering to breed two heifers to Edgar of Dalmeny that are to sell in this sale.

CREAMERY AT GRANT PAYS FARMERS $80,884

The annual report of the Grant Cooperative Creamery Association shows a large increase in the business conducted during the last year. It manufactured 157,837 pounds of butter, an increase of 8,000 pounds over 1918. It paid the farmers $80,884.85 for butter fat which was an increase of $17,300. The officers were re-elected and an accountant was engaged. J. C. Kritzer is president.

Watch Your Clover Seed

Insist on knowing whether the clover seed you buy is home grown or imported.

There is really a reason, just as there is a real reason for clover.

Here Is Still a 1918 Price!

Primrose Cream Separators Are Fighting the H.C.L.

PRIMROSE today presents a red-letter opportunity that no man interested in dairy profits can afford to ignore. Indulge your old habits of economy and buy a **Primrose Cream Separator,** which in this day of skyrocketing prices still sells as it sold two years ago. Primrose price today is but slightly more than the low price prevailing in 1914, instead of 60 or 100 per cent more, as in most cases where high-grade steel products are concerned. Buy Primrose now at the 1918 price. Why is so low a price possible?

Because:

The growing popularity of Primrose Separators has resulted in greatly increased demands;

The demand has resulted in greatly increased production;

Increased production means buying raw materials in greater quantities and keeping labor and manufacturing equipment operating at full capacity at all times;

Large-quantity raw material orders with quick turnovers into machine sales, means lower costs; active labor and equipment produce more for each dollar of operating expense than idle labor and equipment;

The increases in the general cost of raw materials and labor have been practically offset, in the case of Primrose Cream Separators, by the reduced costs of unit production and distribution, due to the increased demand.

Therefore the prices of **Primrose Cream Separators** still stand at the old figure of 1918—considerably less than the present high-priced separators. Make the most of this rare opportunity. See your International dealer.

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

FRANCIS MORGAN, son of a New York millionaire, who has just died, becomes bored with society and decides to take an extensive fishing trip. Regan, Francis' broker and a former colleague of young Morgan's father, plans to ruin Francis through his Wall Street holdings. Regan pays Torres, a dark-skinned visitor from the Carribean Islands who knows of a treasure buried by a pirate ancestor of Francis, to lure young Francis away. The lure works and Francis starts out alone. He lands on an island whither he has been beckoned by a girl on the shore. The girl mistakes Francis for a lover with whom she has quarreled. He is chased from the island by her father and brothers. Francis explores another island where a young man threatens his life and then saves it from savages who attack young Morgan. Francis and the young man discover they are related. The young man, whose name is Henry Morgan, is also hunting for the treasure. They form a partnership. Francis discovers that Henry is the lover of the girl on the island and that her name is Leoncia Solano. Francis returns to the first island to ask Leoncia to forgive Henry, which she does. He is captured by Torres and the Jefe Politico of San Antonio who proclaim him to be Henry, whom they wish to hang for a murder he did not commit. They are about to hang Francis when Henry appears and is thrown into prison. Leoncia finds she loves both men. The Solanos and Francis release Henry.

IT CAME. The window and the wall beneath it became all one aperture. Struck on the head by a flying fragment, Henry sank down dizzily, and, as the dust of the mortar and the powder cleared, with wavering eyes he saw Francis apparently swim through the hale. By the time he had been dragged out through the hole, Henry was himself again. He could see Enrico Solano and Ricardo, his youngest born, rifles in hand, holding back the crowd forming up the street, while the twins, Alvarado and Martinez, similarily held back the crowd forming down the street.

But the populace was merely curious, having its lives to lose and nothing to gain if it attempted to block the way of such masterful men as these who blew up walls and stormed jails in open day. And it gave back respectfully before the compact group as it marched down the street.

"The horses are waiting up the next alley," Francis told Henry, as they gripped hands. "And Leoncia is waiting with them. Fifteen minutes gallop will take us to the beach, where the boat is waiting."

"Say, that was some song I taught you," Henry grinned. "It sounded like the very best little bit of all right when I heard you whistling it. The dogs were so previous they couldn't wait till tomorow to hang me. They got full of whiskey and decided to finish me off right away. Funny thing that whiskey. An old cabellero turned peddler wrecked a wagon load of it right in front of the jail——"

"For even a noble Narvaez, son of Baltazar de Jesus y Cervallos e Narvaez, son of General Narvaez of martial memory, may be a peddler, and even a peddler must live, eh, senors, is it not so?" Francis mimicked.

Henry looked his gleeful recognition, and added soberly:

"Fancis, I'm glad for one thing, most damn glad . . . "

"Which is?" Francis queried in the pause, just as they swung around the corner to the horses.

"That I didn't cut off your ears that day on the Calf when I had you down and you insisted."

CHAPTER VI.

MARIANO Vercara e Hijos, Jefe Politico of San Antonio, leaned back in his chair in the courtroom and with a quiet smile of satisfaction proceeded to roll a cigarette. The case had gone through as prearranged. He had kept the little old judge away from his mescal all day, and had been rewarded by having the judge try the case and give judgment according to program. He had not made a slip. The six peons, fined heavily, were ordered back to the plantation at Santos. The working out of the fines was added to the time of their contract slavery. And the Jefe was two hundred dollars good American gold richer for the transaction. Those Gringos at Santos, he smiled to himself, were men to tie to. Surely they were developing the country with their henequen plantation. But, better than that, they possessed money in untold quantity and paid well for such little services as he might be able to render.

His smile was even broader as he greeted Alvarez Torres.

"Listen," said the latter, whispering low in his ear. "We can get these devils of Morgans. The Henry pig hangs tomorrow. There is no reason that the Francis pig should not go out today."

The Jefe remained silent, questioning with a lift of his eyebrows.

"I have advised him to storm the jail. The Solanos have listened to his lies and are with him. They will surely attempt to do it this evening. They could not do it sooner. It is for you to be ready for the event, and to see to it that Francis Morgan is especially shot and killed in the fight."

"For what and fo why?" the Jefe temporised. "It is Henry I want to see out of the way. Let the Francis one go back to his beloved New York."

"He must go out today, and for reasons you will appreciate. As you know, from reading my telegrams through the government wireless—"

"Which was our agreement for my getting you your permission to use the government station," the Jefe reminded.

"And of which I do not complain," Torres assured him. "But as I was saying, you know my relations with the New York Regan are confidential and important." He touched his hand to his breast pocket. I have just received another wire. It is imperative that the Francis pig be kept away from New York for a month—if forever, and I do not understand Senor Regan, so much the better. In so far as I succeeded in this, will you fare well."

"But you have not told me how much you have received nor how much you will receive," the Jefe probed.

"It is a private agreement, and it is not so much as you may fancy. He is a hard man, this Senor Regan, a hard man. Yet will I divide fairly with you out of the success of our venture."

The Jefe nodded acquiescence, then said:

"Will it be as much as a thousand gold you will get?"

"I think so. Surely the pig of an Irish stock gambler could pay me no less a sum, and five hundred is yours if pig Francis leaves his bones in San Antonio."

"Will it be as much as a hundred thousand gold?" was the Jefe's next query.

Torres laughed as if at a joke.

"It must be more than a thousand," the other persisted.

"And he may be generous," Torres responded. "He may even give me five hundred over the thousand, half of which, naturally, as I have said, will be yours as well."

"I shall go from here immediately to the jail," the Jefe announced. "You may trust me, Senor Torres, as I trust you. Come. We will go at once, now, you and I, and you may see for yourself the preparation I shall make for this Francis Morgan's reception. I have not yet lost my cunning with a rifle. And, as well, I shall tell off three of the gendarmes to fire only at him. So this Gringo dog would storm our jail, eh? Come. We will depart at once."

He stood up, tossing his cigarette away with a show of determined energy. But, half way across the room a ragged boy, panting and sweating, plucked his sleeve and whined:

"I have information. You will pay me for it, most high, Senor? I have run all the way."

"I'll have you sent to San Juan for the buzzards to peck your carcass for the worthless carrion that you are," was the reply.

The boy qua

nce I shall have. My jail! Our tice! Our law!——Horses! ses! Gendarme, horses!" He ried about upon Torres as if the er had spoken, shouting: "To hell h Senor Regan I am after my ! I have been defied! My jail lesolated! My law—our law, d friends—has been mocked. ses! Horses! Commndeer them the streets. Haste! Haste!"

Captain Trefethen, owner of the relique, son of a Maya Indian her and a Jamaica negro father, ed the narrow after deck of his ooner, stared shoreward, toward Antonio, where he could make his crowded long boat returning meditated flight from this mad erican charterer. At the same e he meditated remaining in or- to beak his charter and give a r one at three times the price; he was strangely torn by his con- ting bloods. The negro portion nseled prudence and observance Panamanian law. The Indian por- was urgent to unlawfulness and promise of conflict.

t was the Indian mother who de- ed the issue and made him draw jib, ease his mainsheet, and be- to reach inshore the quicker to k up the oncoming boat. When made out the rifles carried by the anos and the Morgans, almost he up his helm to run for it and ve them. When he made out a man in the boat's stern sheets, ro- ace and thrift whispered in him hang on and take the boat on rd. For he knew wherever wo- n entered into the transactions of a that peril and pelf as well en- ed hand in hand.

nd aboard came the woman, the l and the pelf—Leoncia, the rifles a sack of money—all in a amble; for, the wind being light captain had not bothered to stop on the schooner.

'Glad to welcome you on board, ." Captain Trefethen greeted ncis with a white slash of teeth ween his smiling lips. "But who this man?" He nodded his head indicate Henry.

'A friend, captain, a guest of e, in fact, a kinsman."

'And who, sir, may I make bold ask, are those gentlemen riding ng the beach in fashion so lively." Henry looked quickly at the group horsemen galloping along the d, unceremoniously took the bin- lars from the skipper's hand, and ed through them.

'It's the Jefe himself in the lead," reported to Leoncia and her men- k, "with a bunch of gendarmes." uttered a sharp exclamation, red through the glasses intent- then shook his head. "Almost I ught I made out our friend Tor- ."

'With our enemies!" Leoncia ed incredulously, remembering Tor- ' proposal of marriage and prof- of service and honor that very on the hacienda piazza.

'I must have been mistaken," ncis acknowledged. "They are ing so bunched together. But its Jefe all right, two jumps ahead the outfit."

'Who is this Torres duck?" Henry ed harshly. "I've never liked n from the first, yet he seems al- ys welcome under your roof, oncia."

'I beg your parson, sir, most grat- dly, and with my humilious res- ts," Captain Trefethen interrupt- suavely. "But I must call your at- tion to the previous question, sir, ich is: who and what is that cav- ade disporting itself with such nestness along the sand?"

'They tried to hang me yester- y," Francis laughed. "And to- rrow they were going to hang my sman there. Only we beat them it. And here we are. Now, Mr. pper, I call your attention to your d sheets flapping in the wind. u are standing still. How much ger do you expect to stick around e?"

'Mr. Morgan, sir," came the ans- r, "it is with dumbfounded re- ct that I serve you as the charterer my vessel. Nevertheless, I must orm you that I am a British sub- t. King George is my king, sir, d I owe obedience first of all to n and to his laws of maritime be- een all nations, sir. It is lucid to comprehension that you have oken laws ashore, or else the offi- s ashore would not be so assid- uously in quest of you, sir. And it is also lucid to clarification that it is now your wish to have me break the laws of maritime by enabling you to escape. So, in honor bound, I must stick around here until this little difficulty that you may have appertained ashore is adjusted to the satisfaction of all parties concerned, sir, and to the satisfaction of my lawful sovereign."

"Fill away and get out of this, skipper!" Henry broke in angrily.

"Sir, assuring you of your gratification of pardon, it is my unpleasant task to inform you of two things. Neither are you my charterer; nor are you the noble King George to whom I give ambitious allegiance."

"Well, I'm your charterer, skipper," Francis said pleasantly, for he had learned to humor the man of mixed words and parentage. "So just kindly put up your helm and sail us out of this Chiriqui Lagoon as fast as God and this failing wind will let you."

"It is not in the charter, sir, that my Angelique shall break the laws of Panama and King George."

"I'll pay you well," Francis retorted, beginning to lose his temper. "Get busy."

"You will then recharter, sir, at three times the present charter?"

Francis nodded shortly.

"Then wait, sir, I entreat. I must procure pen and paper from the cabin and make out the document."

"Oh, Lord," Francis groaned. "Square away and get a move on first. We can make out the paper just as easily while we are running as standing still. Look! They are beginning to fire."

The half breed captain heard the report, and, searching his spread canvas, discovered the hole of the bullet high up near the peak of the mainsail.

"Very well, sir," he conceded. "You are a gentleman and an honorable man. I trust you to affix your signature to the document at your early convenience——Hey, you nigger! Put up your wheel! Hard up. Jump, you black rascals, and slack away mainsheet! Take a hand there, you, Percival, on the boomtackle!"

All obeyed as did Percival, a grinning shambling Kingston negro, who was as black as his name was white and as did another, addressed more respectfully as Juan, who was more Spanish and Indian than negro as his light yellow skin attested, and whose fingers, slacking the foresheet, were as slim and delicate as a girl's.

"Knock the nigger on the head if he keeps up this freshness," Henry growled in an undertone to Francis. "For two cents I'll do it right now."

But Francis shook his head.

"He's all right, but he's a Jamaica nigger, and you know what they are. And he's Indian as well. We might as well humor him, since it's the nature of the beast. He means all right, but he wants the money, he's risking his schooner against confiscation, and he's afflicted with vocabularitis. He just must get those long words out of his system or else bust."

Here Enrico Solano, with quivering nostrils and fingers restless on his rifle as with half an eye he kept track of the wild shots being fired from the beach, approached Henry and held out his hand.

"I have been guilty of a grave mistake, Senor Morgan," he said. "In the first hurt of my affliction at the death of my beloved brother, Alfaro, I was guilty of thinking you guilty of his murder." Here old Enrico's eyes flashed with anger consuming but unconsumable. "For murder it was, dastardly and cowardly, a thrust in the dark in the back. I should have known better. But I was overwhelmed, and the evidence was all against you. I did not take pause or thought to consider that my dearly beloved and only daughter was

(*Continued on page* 21)

HUDSON SUPER SIX

Isn't This the True Mark Of Hudson Endurance?

No Stock Car Ever Equalled Its Official Records In Speed-Hill-Climbing, Acceleration, Endurance

In every performance asked of a motor Hudson's official records reveal greater ability than any other car has ever shown.

They have stood for five years. They are not held by hairs'-breadth, but by big, convincing margins, before which argument is dumb. They prove the master type, with limits of power speed, and endurance that none has matched to this day.

Yet if they stood for only contest supremacy, they would have small importance to you.

In all the years your Hudson serves, you will hardly require its full capacity. You do not want 80-mile-an-hour speed. You will scarcely encounter a situation to tax its limit of power.

These Qualities Count in Every Day Service

Of course, there is pride in possession of car qualities you know are unexcelled. And this performance mastery gives innumerable advantages. For instance, you travel faster within the speed limits. That is because you are away quicker. You pick-up faster. You have power that levels hills with ease. You have smoothness that makes the long journey comfortable and free of fatigue.

But you will have far more occasions to admire Hudson's superb riding ease, it's good looks, and its trustworthy dependability, than its more spectacular qualities of great speed and power.

So, it is chiefly as they reveal its basic principle of supremacy—the control of vibration—that the Super-Six's world famous records are important.

Endurance Gave It Mastery

The exclusive Super-Six motor adds no weight or size. Yet it adds 72% to power, and 80% to efficiency. It almost doubles endurance. It does this by converting to useful power the destructive force of vibration, which uncontrolled quickly undermines motor endurance.

That is why the Super-Six can go faster, farther and lasts longer.

These are official proofs. All can verify them.

By no possibility will all who want Hudsons be able to get them.

You should place your order now for your Hudson, even though delivery is not desired until summer.

Beans, Beets and Mr. Fordney.

IT HAS been suggested that the sugar barons of Michigan may have something to do with Congressman Fordney's sidestepping of the bean tariff proposal. Sounds logical, all right. Both beans and beets grow well in Mr. Fordney's district. The farmer who becomes dissatisfied with his returns from beans grows sugar beets. When he tires of growing sugar beets he turns to beans. The crops are, therefore, in a measure competitive. High priced beans mean less land planted to sugar beets, and high-priced sugar beets mean less land planted to beans.

It is a well known fact that Congressman Fordney is the sugar interests' "handy man" in congress. Indeed, it has been hinted that that the American Sugar Refining trust gave very material assistance in securing for Mr. Fordney the important position which he holds as chairman of the House Ways and Means committee. At least Mr. Fordney's political career has been closely identified with the sugar industry, and it is not to be supposed that he would take any action which would injure that industry.

As early as the first of last December the sugar manufacturers of Michigan were aware that they would encounter some difficulty in securing sufficient acreage for their 1920 operations. Naturally this difficulty would be increased if beans were high and offered the farmer a better inducement than sugar beets. The proposed tariff on bean imports was designed to stabilize the bean market and keep the price at a high enough level to pay the farmer a fair profit. None know better than the high protectionists like Mr. Fordney how a high-protective tariff stimulates the industry which is protected, and it would not be at all strange if the sugar men, fearing that a high bean tariff would add to their difficulties in securing beet acreage, got busy, and called Mr. Fordney off the job. If this is the case, both bean growers and sugar beet growers will suffer. With low priced beans, it means that more farmers will be willing to contract sugar beet acreage, and the more farmers there are bidding for acreage the less the sugar companies will have to pay for their beets.

If the above is not a true explanation of Mr. Fordney's remarkable shift on the proposed bean tariff, these columns are open for him to s[illegible]

The Farmer's Thrift.

"[illegible]E PEOPLE of the cities find it hard to [illegible]derstand [illegible]y, if the farming business is poorly remunerated as claimed, so many farmers own automobiles, phonographs, modern homes, etc. You have to patiently explain that only a comparatively few farmers own these things, and that you cannot judge the rule by the exception.

The great secret of farm prosperity is thrift, —constant, unstinting thrift,—three hundred and sixty-five days out of the year. The average salaried or business man of the city spends enough for his clothes alone in one year to clothe the farmer and his entire family for a similar period. He spends enough in theater tickets to buy that farmer's phonograph. He spends enough for other enjoyments to pay the upkeep on the farmer's automobile. Thousands of farmers are prosperous, to speak comparatively, but few are so prosperous that they can stand the gait which their city cousins set for them. Give a farmer a little prosperity, introduce him to the ways of the city, and in a year or two he will find that the profits of his business will not keep pace with the new demands which he makes upon it in order to ape his city cousin.

Another reason why farmers appear to be prosperous is because every member of the family ,—father, mother and all the children, from stalwart John to little Mary, help to perform the work for which they receive little if any pay. Were the prosperous farmer to pay all members of his household for their work at the same rate he would have to pay others, he could not continue in business at the present scale of farm product prices.

These are reasons why some farmers can buy automobiles, phonographs, electric lighting plants, and up-to-date machinery, and are the world's greatest purchaser of the commodities of industry.

The Business Farmer.

WE SURRENDER. We have tried our best to call this paper, "Michigan Business Farming," but our readers simply will not have it that way. We bow to their superior judgment. Henceforth it shall be "The (Michigan) BUSINESS FARMER."

As a matter of fact, the title "Business Farmer," was first adopted by the Rural Publishing Company six years ago when it established and published for one year a market paper called, "The Michigan Business Farmer". For various reasons the venture was not continued, although the first year's experience demonstrated beyond a doubt that there was a need and demand in Michigan for that kind of a paper. This demand became so urgent during the trying days of 1917 that the new Michigan Business Farming was founded, and has succeeded, so our subscribers tell us, in meeting this need and becoming a substantial power for the good of Michigan agriculture.

But folks found it easier to say "The Business Farmer", and this name has become so commonly used that it readily identifies us to any farmer who has ever heard of the paper. It's a great name, too. It is on the tongue of all who speak of the farmer. Writers, speakers and the press have fallen into the habit of referring to the farmer as the "business farmer." They are beginning to recognize that farming is a business and that the farmer is a business man. Moreover, the Farm Bureau, calls itself the farmer's "business organization." Members of the Farm Bureau should bear in mind that the MICHIGAN BUSINESS FARMER is the farmer's business farm paper. With this understanding, let us then get down to business.

Stay on the Farm.

THE MOST apparent result of the unrest on the farm is the stream of farmers that has been moving cityward for the better part of the past five years. We may theorize as we will; we may put our foot upon the soft pedal when we talk of farmer's problems; we may blind ourselves to the inadequacy of farm compensation by the pretty picture of farm environment, but we cannot altogether shut out or ignore this fact—that the farmers are going to the cities.

The high wages and pleasures of the city are like the pot of gold at the rainbow's end. It glitters from the distance but when it is approached it is seen to be but tinsel. When Farmer Fred Cressey wrote in the March 6th issue of the Michigan Business Farmer that perplexing as the problems were upon the farm, they were more complexing in the city, he wrote from experience and knew whereof he spoke. He had tried both, but looking ba[illegible] over the vicissitudes of his life from the f[illegible] side of fifty years, his advice to the landowni[illegible] farmer is, "stay on the farm."

The average farmer cannot make a succ[illegible] of business or life in the city. In the fi[illegible] place, he does not have enough money to inv[illegible] which will bring him sufficient returns to m[illegible] the higher cost of living. In the second p[illegible] he is unversed in city ways, and is no match f[illegible] the folks of the city whose wits have be[illegible] sharpened by much dealing. Moreover, li[illegible] the city becomes very tiresome and lonely [illegible] the man or woman who has become accusto[illegible] to the silences and the beauties of the coun[illegible] Once in a while you find a farmer who h[illegible] perhaps $50,000 which he is fortunate enou[illegible] to invest in a sound and well-paying prop[illegible] tion, but he is not by any means the ru[illegible] Those who have less than that to invest m[illegible] find other work to do, and usually that work[illegible] in the close confines of a factory where a m[illegible] born and reared out in the open spaces w[illegible] never meant to work.

Have you not seen in the smaller towns a[illegible] villages men well on toward the sunset of l[illegible] who lead a disconnected, discontented lif[illegible] They are retired farmers, men who have spe[illegible] many years of hard work at the plow and ha[illegible] reached the point in life when they think th[illegible] have earned a rest and can afford to "retire[illegible] But the most tired farmer of all is the "[illegible] tired" farmer, and usually the good wife is [illegible] lonely as he for the old farm home and t[illegible] chickens and the cows and the pigs and t[illegible] horses. Life in the town is indeed a sore d[illegible] appointment to the average man of the far[illegible] The novelty soon wears off, and life becom[illegible] a mere existence, consisting of a morning a[illegible] afternoon walk to the postoffice, a bit of g[illegible] sip at the barber shop or out on the streets [illegible] a Saturday when the old neighbors drive in[illegible] town. But the zest of life, that which com[illegible] with the performing of necessary work, t[illegible] keeping busy of the hands and mind, the g[illegible] ting up in the morning to perform a defin[illegible] task and finishing it at night,—is all gone.

Experience is a wise teacher and experien[illegible] has taught us that the best place for the farm[illegible] is on the farm. There with the help of u[illegible] selfish leaders he may be able to work out [illegible] problems and raise his profession to the level [illegible] dignity and compensation enjoyed by oth[illegible] professions.

Live Stock Losses

THE CATTLE feeder who went into t[illegible] market last spring and bought high-pr[illegible] ed feeders will not soon forget the slump [illegible] late 1919. The losses that were sustained [illegible] farmers from the totally unexpected decline [illegible] the hog and cattle market will run into ma[illegible] millions of dollars.

We are told that the reason for these [illegible] clines was the stoppage of exports due to [illegible] high rate of exchange. This may be true, b[illegible] we have heard nothing of the losses encou[illegible] ered by other industries of the country fr[illegible] the same cause. Food is not the only comm[illegible] dity we have been exporting to Europe, b[illegible] it seems that the producers of food were t[illegible] only ones to suffer when exports began to l[illegible] There must be a reason for this. Either t[illegible] packers of the country have deliberately l[illegible] to the farmers regarding the foreign mark[illegible] or have manipulated the market in order [illegible] depress it and fill up their storage plants w[illegible] low-priced meats. We think it would be e[illegible] tirely proper for Congress to appoint an a[illegible] ricultural commission to investigate the worl[illegible] meat and livestock situation, and ascertain [illegible] behalf of the farmers the exact reason for t[illegible] unusual decline in prices.

The losses of the livestock farmers ha[illegible] brought home to them in a forceful way t[illegible] great need for fuller information regardi[illegible] the world food supply and demand. At pr[illegible] ent such facts as are procurable by agenc[illegible] more or less handicapped by allegiance to [illegible] terests other than agricultural are fragme[illegible] ary and therefore of little value. If there [illegible] a way to bring light to those who now so bli[illegible] ly produce and market that way must [illegible] found, and it is the farmer himself who m[illegible] find it.

What the Neighbors Say

AN AMERICAN'S REPLY TO MR. BENGAL

In Mr. Bengal's communication of March 6th he takes the stand that this glorious old United States has been fooled and used as a tool by other allied nations. His reasons for coming to this conclusion are that we, as a nation have gained nothing by the late war. In taking this attitude in my opinion Brother Bengal displays a vast ignorance of American ideals. I do not believe that our country ever enters a war for material gross. If Mr. Bengal will cast his mind back over the aims of the United States. In every war, with possibly one exception, in which our country has engaged, he will find that honor and self-respect and not gold or territory were the objects of that war.

In the Revolutionary war our colonies fought against British greed and oppression and won. In the War of 1812 the United States fought against British arrogance as shown by their stopping our ships on the high seas and impressing our seamen into British service. In the Mexican war our soldiers fought for the rights of the small new republic of Texas. In the Civil war we fought for the unification of our country and incidentally the abolishment of slavery. In the Spanish war we took up arms because of the cruelty of the Spanish government to the people of Cuba lying at our very doors and finally, in our last great war we fought against the Huns and their appropriate ally, the "unspeakable Turk." Not to gain gold, not to gain land, not to gain a reputation as a military nation but to protect our citizens in all of their rights and as a protest against the most vile atrocities ever perpetrated by a so-called Christian nation.

In the course of his article Mr. Bengal states that not all people believe the stories of Hunnish cruelty. "There are none so blind as those who won't see." If all of the stories come thru British sources I would doubt them myself, but when our own country has sent reliable men as committees to investigate these reports and they confirm the report I think all reasonable doubts are past. Furthermore if he will look impartially on the conduct of the Hun all through the war from start to finish he will see the same indications of the cowardly bully. On commencing war the Huns were prepared so that for a time they swept everything. During that time what boasting, what conceit in the "supermen" of their army, but when in the end disaster threatened them how they grovelled like whipped curs before the very soldiers they professed to hold in contempt so short a time before.

In conclusion I would summarize our gains from this was as follows:

We have upheld our national honor; we have made an effective protest against barbarism; we have shown all people of the world that although we do not believe in militarism we have enough courage to fight to a finish for principles of right and justice.—*Patrick L. Gallagher, Clinton County.*

A very large number of people in this country were inclined to doubt the authenticity of the stories of German cruelty and torture to prisoners and non-combatants, but investigations conducted by the United States proved that many of them were true. It has never been claimed, to our knowledge, that this kind of "frightfulness" was a settled policy of the German government, altho it seems that German governors and military men in authority, were permitted to rule the localities over which they had charge as they pleased. Some German commanders were incredibly cruel; others were more humane and just. When men of naturally cruel natures are given positions of authority it is to be expected that they will rule cruelly. It will be recalled that in our own Civil War the commanders of some confederate prisons were notorious for the atrocities they practiced upon their prisoners, whereas others were kind and as forgiving as military men dare to be. Undoubtedly soldiers and officers in every army engaged in the Great War were guilty of atrocious deeds, many of which have never come to the public's attention. But it is fair to assume, in the light of such information as is available, that some of the German officers persistently preached and practised frightfulness in its most frightful forms. Looking back over the conflict, what did we gain by entering the war? Let us ask rather what we might have lost had we not entered it? No people ever gain anything by war. They think they do, but it is not until after the dead are counted, the financial loss ledgered and the burden of debt weighed that they realize their terrible mistake. Let us, for the sake of God and humanity, protect ourselves and our posterity from another such war as we have just passed through. —Editor.

A PLEA FOR BRYAN

For fifty-one years I have voted as a Republican, but not always for Republican candidates. And since, at a campaign banquet given at Chicago in honor of the two presidential candidates, Bryan and Taft, seated at the table side by side, and Bryan had the moral courage to turn his wine glass bottom up, that incident, coupled with the other incident in Roosevelt's administration of monetary panic, when Roosevelt called Bryan to Washington in council, requesting his advice as to the best relief measure for that and other monetary panics in this country, Bryan was the first one to advise a federal banking law that would secure disposition against loss by deposits in state and United States banks. And thus the elements of purity and righteousness, first, and a broad far-seeing mind in statesmanship, second, are elements that combine in the person of Wm. Jennings Bryan.

And he is the only living Democrat that can possibly poll enough Republican votes to win the next presidential election. I vote for Bryan for the next president, as a Republican voter, and for Campbell for governor.

A League of Nations? Yes, a league nations that shall contemplate immediate disarmament of all nations, both on land and sea, and provide an arbitration court that will settle all international disputes and a small international army under the control of this court, with which to enforce its decisions. But no league of nations that will involve a greater expense and equipment in our country than has ever been known before in times of peace, or that will make us sponsers for other European conflicts such as we have just emerged from. Nor a league of nations for us, such as has been fixed at Paris by our pro-English American autocratic president, who, through blundering statesmanship (or intentionally) brought about a seeming necessity for leading this nation into the world war at the sacrifice of this country to greater invasions of its rights by our neighbor, Mexico, than was experienced by us from the belligerent foe of the English allies.

Had Roosevelt or Bryan been president, this country would have maintained its neutrality. How? First: These men were very American. Second: They were both in policy Democratic and would not have permitted England to have interferred with our commerce with the central powers by her blockade of German waters and, hence, the counter U-boat blockade of English waters by Germany would never have happened.

Furthermore, there is no European power that ought to be permitted to reach the arm across the sea and grasp with its hand American soil. and Canada has lost her last and greatest opportunity of gaining her independence which she or her citizens, undoubtedly, would have done, had it not been for the power of autocratic rule which dominates her from the Imperial appointive rule of England's throne. When shall the world return and abide by divine Theocratic rule that shall imply disarmament of all Christian nations, except for defence.—*C. C. Thompson, Kent County.*

It's a sign that a new day is dawning in American politics when citizens can lay aside their partisan differences and cast their ballots for men whom they admire on opposite party tickets. We shall have better public officials and better government when all can bring themselves to do this.—Editor.

SWIFT & CO., TAKE EXCEPTION

We wish to compliment you upon the constructive article by O. M. Kile, "Where Do We Stand Today on Packer Question?" which appeared in the February 7th issue of the BUSINESS FARMER. We are especially interested in the broad and constructive stand taken by Mr. Kile in that section of the article "Objectionable Features in the new K-Bill."

The body of the article hardly supports that part of the headline which reads "Farmers Mistrust Palmer's 'Settlement' and Insist on a Finish Fight to Put Packers Forever Beyond Control of Life's Necessities." This is an example of one of our chief difficulties, namely, the broad conclusions and charges, without supporting facts, which are worked into newspaper and magazine headlines.

As a matter of fact, even when the individual businesses of the five larger packers are considered as one lump total it is found that they handle only about 40 per cent of the total meat supply of the country which can hardly be thought of as controlling the entire industry, especially when we consider that they are in keen and active competition with each other in handling even this 40 per cent. And the percentage of other commodities handled by the larger packers is even smaller. Thus although the wholesale grocers claimed that the packers were forcing them out of business evidence was presented at the Congressional hearings to show that the larger packers handle only about three per cent of the total grocery business of the United States.

As to the demand of the cattle growers' associations for legislation to prevent price fluctuations, we can only say that no one would welcome more than the packer some method which might lessen these market changes. But although both packers and producers have given this question a great deal of thought no one has arrived at a satisfactory solution, and no one has attempted to point out how legislation or government regulation could prevent these fluctuations which are the result of economic laws and conditions.

We shall be glad to have you publish this letter so as to bring these thoughts to your readers' attention. Very truly yours—*SWIFT & CO.*, per *L. D. H. Weld, Manager, Commercial Research Department.*

Sure! We always believe in letting the other fellow tell his side of the story even when he has an iron in the fire. We want our readers to know, however, that when Swift & Company placed their propaganda advertising in nearly all the farm papers of the country, they overlooked the Business Farmer. We suspect their oversight was the result of our demand that the packing industry be licensed and supervised, and they didn't want to encourage a farm paper that took that stand. Perhaps they also knew that any time they wanted to get a hearing in our reading columns they could have it free of charge. Oh, well, such is life.—Editor.

The Week's Editorial

MILITARY TRAINING

KEEP up the fight against compulsory military training. So writes Mrs. C. V. Simpson of Minneapolis, Kan. I might quote from dozens of similar letters from men and women in Kansas and Oklahoma. The advocates of compulsory military training do not understand the spirit of the American people. They keep reiterating the tiresome claim that military training will develop the young men of the country in a physical way and teach them respect for authority. The best citizen, in fact the only kind of a citizen worth having in a republic like this, is one who has an intelligent respect for proper and lawful authority but at the same time feels himself the equal of any other man no matter what position of authority the other may hold.

For instance, the ideal citizen has a high respect for the office of President of the United States and for the office of governor. He recognizes the right of either the president or the governor under certain conditions to call on him to leave his business and give his time and services to the general government or state, but at the same time he expects to meet either the governor or the president as his social equal. If he were required every time he went into the office of the governor to stand at attention, click his heels together, give a military salute and then wait until given permission to speak, he would have a feeling of hatred toward the governor or the president.

Our military system has been handed down to us from the time of the Prussian Van Steuben. It has all the faults of the Prussian system. It creates a military caste. Some years ago I was visiting Fort Riley. A cavalry officer was riding out over the reservation. Behind him at regulation distance rode his aide. Why did the regulations require the aide to ride so many paces to the rear? The natural place for the aide would seem to be at the officer's side where he could be addressed easily. The reason of course was to show that the aide was an inferior person. He must not presume to ride in commanding officer. At that the aide had many more privileges than the common soldier, who must hold communications with his commanding officer thru the medium of non-commissioned officers designated by the army regulations. For the soldier to approach his commanding officer as the citizen would approach the governor would subject him to severe punishment. Is it any wonder that the common soldiers came home from France sore on their officers? Is it any wonder that these men who served in the ranks are almost universally opposed to compulsory military training? It is this abominable system which the advocates of compulsory training wish to foist upon this country. As Senator Borah has well said: It is the very tap root of militarism against which the world war was supposed to be waged. There is a systematic propaganda being spread thru the country. The paid agents of the organization back of this propaganda have been traveling over the country for the past three years at least. I have been visited by several of these agents; well groomed and well fed; they have their arguments learned by rote as parrots learn to speak certain sentences. Who pays these men?

Evidently there is money and an abundance of it behind the movement. I confess that when I see one of these traveling distributors of military propaganda or when I read some of their literature it has a tendency to make me see red. I say now, as I have said before, I will not knowingly support any man for either president or congress who favors compulsory military training.—*Kansas Farmer*, (Topeka.)

POLITICAL PARTIES

Roosevelt, with all his bigness, represented but a faction of the Republican party. Its reactionary wing was, and is, numerous as well as forceful. A reactionary Republican is just as good a Republican as a progressive Republican. That is why "no definite political policy can command the support of all Republicans." They may agree on a platform of "safe and sane generalities," but when it comes to definite application of concrete principles the party is like the proprietor of Balaam's ass—"Doubleminded, unstable in all its ways." How can such a party "change its policies to meet changing conditions?"

But, "A new party formed today might easily outgrow its usefulness in twenty-five years." Sure, maybe in less time. Whenever the issues which called it into being are settled, and new ones arise on which its members cannot agree, it is time to scrap the old party and make a new one. Political parties are but scaffolding to support statesmen who build our Temple of Liberty.—*Stacy Brown, Ionia*

That's well said. But if a part of your scaffold broke down would you employ a gang of workmen to repair it, or would you tear the entire structure down and build anew?—Editor.

MARKET FLASHES

WHEAT IS WEAK

WHEAT PRICES PER BU., MAR. 8, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.42		2.60
No. 2 White	2.40	2.40	
No. 2 Mixed	2.40		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.35	2.31	2.36½
No. 2 White	2.33	2.29	2.35
No. 2 Mixed	2.33	2.28	2.33

Because of recent reports from the fall wheat sections of the west we shall have to revise our earlier estimate of the wheat situation. Indications as they are at present point to a shortage of this crop. Says the *Price Current Grain Reporter*: "A crop scare in winter wheat of no mean proportion is getting under way and a week or so of good growing weather will determine whether the crop is alive or not. The southwest continues to suffer from drought and Hessian fly reports from the soft wheat states are increasing rapidly. Reports indicate that the abandoned acreage this year may exceed the average of 3,000,000. Leading seed houses claim that there is very little demand for spring wheat for seed this season, and with a scarcity of labor in both the American and Canadian northwest, no material increase in the acreage is expected."

Despite the bullish crop reports the wheat market continues weak. But contrary to an opinion expressed in these columns a couple weeks ago, there are now good reasons for believing that wheat will be higher following the removal of the government guarantee in June. It will all depend upon the progress of the winter wheat crop the next month or six weeks and the acreage planted to spring wheat. There is a disposition on the part of the farmers of Michigan to plant more spring wheat, and while this is a risky crop and the Agricultural College has repeatedly advised against it for Michigan, we expect to see a record acreage planted in Michigan this spring.

CORN PRICES REACH HIGH POINT

CORN PRICES PER BU., MAR. 14, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.76
No. 3 Yellow	1.60	1.59	1.73
No. 4 Yellow	1.56	1.56	1.70
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.78½
No. 3 Yellow	1.60	1.58	1.77
No. 4 Yellow	1.57	1.60	1.75

Corn prices have again reached the high point of the marketing season, and all the efforts of the bears to depress them. Consumption, recent reports show, has been the largest on record. At least some such explanation must be given for the large dent made in the supposed corn supplies back on the farms. "Practically two-thirds of the corn crop," says one grain paper, "was consumed in four months." This journal continues in the following truthful fashion: "Scientific marketing on the part of farmers is now a recognized fact, and while heretofore every effort has been made to stimulate production little has been done until recent years to assist in marketing. The movements of grain this season has been relatively small per day, but the receipts were perisistent, reversing conditions of before the war, when there were several well-defined gluts at terminals, with consequent depressions. As a matter of fact, all the fluctuations earlier in the year were the direct result of the government propaganda to lower the cost of living. The farmer has simply beaten the government at is own game."

The first effect of the news of the overthrow of the German government was to depress the corn market, but most of the losses of last Thursday and Friday were recovered by the close of the market on Saturday. What we have said concerning the corn market, from the very beginning of the harvesting season, seems to bid fair to come to pass. We have persistently predicted a steadily advancing market, and except for occasional slumps as above mentioned, that has been the trend of the market all along, and will, we believe continue to be the trend.

LAST MINUTE WIRES

DETROIT, MARCH 16—Wheat quiet, rye up 1c, beans inactive; firm; live stock steady and dull, potatoes down 10c; receipts of grain large.

CHICAGO, MARCH 16.—Grain market strong; corn up, oats gain 1 3-4c; hogs lower; potatoes weak.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

Weekly Trade and Market Review

THE OUTSTANDING feature of last week's trade situation was the overthrow of the German government by the military leaders, which had a depressing effect upon marketing conditions. Prior to the announcement of this development the entire industrial situation looked good. In fact, quoting one publication, "developments of the past two weeks have been of a character to stimulate to a greater degree of confidence in the general situation than has obtained at any time since signing the armistice." The Foreign exchange situation improved slightly during the week, and was taken as an indication of greater confidence in Europe's financial condition.

The markets for the first part of the week ruled steady to higher, with one or two exceptions. The German debacle was freely used by the bears as an argument for lower prices which prevailed during the close of the week, but rallied again late Saturday. Argentine news was of a rather mixed character, some traders taking it bearish, others bullish. It is stated that growers have set $1.50 as the minimum for which they will sell their corn. Supplies of corn have not been coming to market freely, and the time for a strong crop movement is past. It is generally felt that supplies for the ensuing two months will be light, because of poor condition of the roads and the farmer being occupied with other duties.

Generally speaking the grain situation is good, and no immediate downward changes are anticipated.

OATS WEAKEN SLIGHTLY

OAT PRICES PER BU., MAR. 14, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 White	.96½	.92½	1.03½
No. 3 White	.95½	.91	1.03
No. 4 White	.94½	.89½	1.02
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
Standard	.67	.64½	.73½
No. 3 White	.66½	.63	.72
No. 4 White	.65½	.61	.71

Oats have declined slightly in the last week and at present the market is very easy. Attention is being attracted to a group of dealers in Canada who have been selling oats for a long time and are believed to be heavily short which if so will have a tendency to liven the market. Detroit markets report receipts of oats very small.

RYE AND BARLEY

Rye has advanced 1 cent and is the most active and strongest of the grains owing to heavy export buying. Rye is jobbing at $1.74. Barley is still firm at $3@3.25 per cwt.

BEANS STILL ASLEEP

BEAN PRICES PER CWT., MAR. 14, 1920			
Grade	Detroit	Chicago	N. Y.
C. H. P.	6.50	7.25	7.75
Red Kidneys		14.00	14.50
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
C. H. P.	6.75	7.35	7.50
Prime	6.00	6.50	7.00
Red Kidneys	10.25	11.50	11.50

There has been no activity in the bean market for many weeks, and the Detroit price is down to $6.50. You will remember that we cautioned you two weeks ago to look for a further slump, and so you cannot blame us for congratulating ourselves that for the first time in several months we have hit the nail on the head. There is news of a serious decrease in bean acreage this year which will certainly mean higher prices. California's 1920 crop will be way short of normal, and the acreage in Michigan will be cut at least a third. H. A. Arnold of the Michigan Potato Exchange reports very little demand for seed beans, most of the farmers who grow beans being in the market this year for grain seeds. We think it would be a serious mistake for the farmers of this state to turn entirely to some other crops. This bean market is going to come back before another crop and it's going to come strong. Nothing can prevent it, and if the cut in acreage in other ean states is to be as large as reported, we shall have another year of record-breaking bean prices.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for MICHIGAN BUSINESS FARMER

WASHINGTON, D. C., March 20, 1920.—Wa. n waves will reach Vancouver about Mar. 24. 30, Apr. 6, 11 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of 25, 31, Apr. 7, 12; plains sections 26, Apr. 1, 8, 13; meridian 90, great lakes, lower Mississippi vtlleys, Ohio-Tennessee valleys 27, Apr. 2, 9, 14; eastern sections 28, Apr. 3, 10, 15, reaching vicinity of Newfoundland about Mar. 29, Apr. 4, 11, 16. Storm waves will follow one day behind warm waves and cool waves about one day behind storm waves.

Including the storm predicted to reach meridian 90 near March 22 these disturbances will control North American weather from near March 20 to April 16. Severe storms are expected during the weeks centering on April 9 to 22. Last date will be most severe and will be followed by a northern cold wave that will carry frost further south than usual. The valuable warnings given thru these bulletins, of the severe storms to occur during the weeks centering on Jan. 19, Feb. 5 and March 8, are sufficient justification for the unusual, general interest being expressed by the thousands from middle Provinces of Canada to the Gulf of Mexico and from the Pacific to the Atlantic coasts.

The long cropweather period is now in full force and will continue to end of April. The general wet and dry spots are now fairly well located for April and the most excessive precipitation is expected around the great lakes and least to the northwestward of central Texas. Most precipitation is expected during the weeks indicated for most severe storms.

W. T. Foster

POTATOES CONTINUE IN GOOD DEMAND

SPUDS PER CWT., MAR 14, 1920		
	Sacked	Bulk
Detroit	5.35	5.30
Chicago		5.50
Pittsburg	5.65	
New York	6.00	5.90
PRICES ONE YEAR AGO		
Detroit	1.70	1.60
Chicago	1.75	1.70
Pittsburg	1.80	1.75
New York	2.08	2.00

The potato market still holds to the record it set last week and from the way it appears now will continue to until the cold weather breaks up as receipts of potatoes on all markets are very small and there is brisk buying by the consumers. It is a problem as to whether prices will go higher. If it were a month or so back, with potatoes in such demand as they are at present, the market would certainly go higher, however, with warm weather coming on soon when everyone will rush their surplus on to the market and with new potatoes coming on the market soon at a slightly higher price it does not look as if they would be much higher.

There is a great shortage of cars, especially refrigerators and if it continues into warm weather it will have a bad effect on the market as shippers will not buy at the present price and take chances of their rotting while waiting for cars.

The Chicago Packer reports the Chicago markets continue strong with prices ranging somewhat higher than a week ago. Some of the operators, who last week expected the strength to be short lived, have changed their opinion regarding the immediate future of the market and some have predicted a $6 market by the middle of next week. All agree, however, that next week's market will be made by the weather.

Although the peak of the market is passed and values have begun to decline, there is no great amount of hay moving in the East and markets are in a fairly good condition. Famine prices are over, however, and any further shortage in supplies can be due only to the condition of the country roads. In the West there is little hay loading due to this cause and markets are correspondingly firm. Reports of poor quality hay are almost universal and the best grades, when found, make quick sales. The shortage of hay in New England was very acute during the blizzard and there are many instances where feeders were compelled to slaughter their cattle because of the inability to secure hay or grain. This forced hay in some instances to fabulous prices and it will probably be some

weeks before a normal surplus can be accumulated.—*Hay Trade Journal.*

HIGHEST MARKET PRICES

The following table shows the highest prices, also the prices for No. 3 timothy in the market the past week:

	High	No.3
New York	$53.00	$49.00
Boston	48.00	42.00
Philadelphia	44.00	42.00

BOSTON WOOL MARKET

The Commercial Bulletin says: "Improvement in the wool market has been slow this week although the transportation situation is somewhat cleared. Transactions have been few and medium to low wools are rather easier.

"Conflicting reports are received on the goods situation as regards the distant future, although the mills are well occupied at the moment, so far as they can obtain supplies on the old orders in hand."

Ohio and Pennsylvania fleeces: Delaine unwashed, 97c@1; fine unwashed, 74@76c 1-2 blood, combing, 83@85c; 3-8 blood combing, 69@70c.

DETROIT PRODUCE MARKET

Consumers are taking potatoes freely and there are only moderate receipts. Out of 32 cars shipped from Michigan points Thursday, Detroit got only 5, which is far from enough to meet the ordinary consumption of the city. In other lines the vegetable market is firm and there is a firm tone in the fruit deal, with only moderate trading. Apple movement has been slow for a long time and shows no improvement. Poultry shows a gain in activity. Consumers took all the hens and chicks offered and the demand was not satisfied. In dressed calves and hogs there is a fair supply and moderate trade. Butter is not in heavy supply and the market holds steady. Eggs are coming in freely and the market is easy.

Apples—Steel Red, $3.50@4; Spy $3.25@3.50; Baldwin, $3@3.25; Greenings, $3.25@3.50; western, $3.50@4.25 per box.

Butter—Fresh creamery, 66@67c per lb.; fresh creamery in 1-lb. brick 64@68c.

Cabbage—Home grown, $5@6 per 100 lbs.

Dressed hogs—Choice country dressed under 150 lbs., 20@21c; over 150 lbs., 17@18c per lb.

Dressed calves—Fancy country dressed, 26@27c; choice, 24@25c per lb.

Dressed poultry—Chickens, 37@38c; geese, 28@30c; ducks, 40@42.

Eggs—Fresh, $44@44 1-2c per doz.

Live poultry—Spring chickens, large, 36@38c; small, 33@36c; hens 38@40c; small hens, 35@37c; roosters, 23@24c; ducks, 40@45c turkeys, 44@45c per lb.

Onions—Indiana $5.50@5.75 per 100-lb. sack.

Potatoes—Jobbing, Michigan, $8 per 150-lb. stack.

Popcorn—Shelled, 10c per lb.
